I think I have said that no part of the human race could present a more picturesque and thrilling appearance on horseback than a party of Crows rigged out in all their plumes and trappings--galloping about and yelping, in what they call a war-parade, I. e. in a sort of tournament or sham-fight, passing rapidly through the evolutions of battle, and vaunting forth the wonderful character of their military exploits. This is an amusement, of which they are excessively fond; and great preparations are invariably made for these occasional shows.

No tribe of Indians on the Continent are better able to produce a pleasing and thrilling effect in these scenes, nor any more vain, and consequently better prepared to draw pleasure and satisfaction from them, than the Crows. They may be justly said to be the most beautifully clad of all the Indians in these regions, and bringing from the base of the Rocky Mountains a fine and spirited breed of the wild horses, have been able to create a great sensation amongst the Minatarees, who have been paying them all attention and all honours for some days past.

From amongst these showy fellows who have been entertaining us and pleasing themselves with their extraordinary feats of horsemanship, I have selected one of the most conspicuous, and transferred him and his horse, with arms and trappings, as faithfully as I could to the canvass, for the

information of the world, who will learn vastly more from lines and colours than they could from oral or written delineations.

I have painted him as he sat for me, balanced on his leaping wild horse with his shield and quiver slung on his back, and his long lance decorated with the eagle's quills, trailed in his right hand. His shirt and his leggings, and moccasins, were of the mountain-goat skins, beautifully dressed; and their seams everywhere fringed with a profusion of scalp-locks taken from the heads of his enemies slain in battle. His long hair, which reached almost to the ground whilst he was standing on his feet, was now lifted in the air, and floating in black waves over the hips of his leaping charger. On his head, and over his shining black locks, he wore a magnificent crest or head-dress, made of the quills of the war-eagle and ermine skins; and on his horse's head also was another of equal beauty and precisely the same in pattern and material. Added to these ornaments there were yet many others which contributed to his picturesque appearance, and amongst them a beautiful netting of various colours, that completely covered and almost obscured the horse's head and neck, and extended over its back and its hips, terminating in a most extravagant and magnificent crupper, embossed and fringed with rows of beautiful shells and porcupine quills of various colours.

With all these picturesque ornaments and trappings upon and about him, with a noble figure, and the bold stamp of a wild gentleman on his face, added to the rage and spirit of his wild horse, in time with whose leaps he issued his startling (though smothered) yelps, as he gracefully leaned to and fro, leaving his plumes and his plumage, his long locks and his fringes, to float in the wind, he galloped about; and felt exceeding pleasure in displaying the extraordinary skill which a lifetime of practice and experiment had furnished him in the beautiful art of riding and managing his horse, as well as in displaying to advantage his weapons and ornaments of dress, by giving them the grace of motion, as they were brandished in the air and floating in the wind.

I have also secured the portraits of Ee-he-a-duck-chee-a (he who ties his hair before, and Pa-ris-ka-roo-pa (the two Crows); fine and fair specimens of this tribe, in both of which are exhibited the extraordinary instances of the natural hair reaching to the ground, peculiarities belonging almost exclusively to this tribe, and of which I have in a former Letter given some account. In presenting such instances as these, I offer them, (and the reader will take them of course) as extraordinary and rare occurrences amongst the tribe, who generally fall short of these in this peculiarity, and also in elegance of dress and ornament; although many others from their numbers might be selected of equal extravagance. The Crows are generally handsome, and comfortably clad: every man in the nation oils his hair with a profusion of bear's grease, and promotes its growth to the utmost of his agility; and the greater part of them cultivate it down on to the calf of the leg, whilst a few are able to make it sweep the ground.

In a former Letter I gave some account of the form of the head peculiar to this tribe, which may well be recorded as a national characteristic, and worthy further attention, which I shall give it on a future occasion. This striking peculiarity is quite conspicuous in the two portraits of which I have just spoken, exhibiting fairly, as they are both in profile, the semi-lunar outline of the face of which I have before spoken, and which strongly characterizes them as distinct from any relationship or resemblance to, the Blackfeet, Shiennies, Knisteneaux, Mandans, or other tribes now existing in these regions. The peculiar character of which I am speaking, like all other national characteristics, is of course met by many exceptions in the tribe, though the greater part of the

men are thus strongly marked with a bold and prominent anti-angular nose, with a clear and rounded arch, and a low and receding forehead; the frontal bone oftentimes appearing to have been compressed by some effort of art, in a certain degree approaching to the horrid distortion thus produced amongst the Flatheads beyond the Rocky Mountains. I learned however from repeated inquiries, that no such custom is practiced amongst them, but their heads, such as they are, are the results of a natural growth, and therefore may well be offered as the basis of a national or tribal character.

I recollect to have seen in several publications on the antiquities of Mexico, many rude drawings made by the ancient Mexicans, of which the singular profiles of these people forcibly remind me, almost bringing me to the conclusion that these people may be the descendants of the race who have bequeathed those curious and inexplicable remains to the world, and whose scattered remnants, from dire and unknown necessities of those dark and veiled ages that have gone by have been jostled and thrown along through the hideous and almost impenetrable labyrinths of the Rocky Mountains to the place of their destination where they now live. I am stopped, however, from advancing such as a theory, and much prefer to leave it to other hands, who may more easily get over difficulties which I should be afraid to encounter in the very outset, from the very important questions raised in my mind, as to the correctness of those rude and ignorant outlines, in truly establishing the looks and character of a people. Amongst a people so ignorant and so little advanced in the arts as the ancient Mexicans were, from whose tracings those very numerous drawings are copied, I think it would be assuming a great deal too much for satisfactory argument, to claim that such records were to set up to the world the looks and character of a people who have sunk into oblivion, when the heads of horses and other animals, drawn by the same hands, are so rude and so much out of drawing as scarcely to be distinguished, one from the other. I feel as if such rude outlines should be received with great caution and distrust, in establishing the character of a people; and for a fair illustration of the objection I am raising, I would refer the reader to a number of fac simile drawings which I have copied from some of the paintings of the Mandans, where most of the figures have the forehead and nose answering exactly to these Mexican outlines, and strikingly resembling the living Crows, also, when they have certainly borrowed nothing from either, nor have they any living outlines like them in their own tribe to have copied from,

Since writing the above I have passed through many vicissitudes, and witnessed many curious scenes worthy of relating, some of which I will scribble now, and leave the rest for a more leisure occasion. I have witnessed many of the valued games and amusements of this tribe, and made sketches of them; and also have painted a number of portraits of distinguished warriors and braves which will be found in my collection.

I have just been exceedingly amused with a formal and grave meeting which was called around me, formed by a number of young men, and even chiefs and doctors of the tribe, who, having heard that I was great medicine, and a great chief, took it upon themselves to suppose that I might (or perhaps must) be, a man of influence amongst the "pale faces," and capable of rendering them some relief in a case of very great grievance, under which they represented that they were suffering. Several most profound speeches were made to me, setting forth these grievances, somewhat in the following manner. They represented, that about five or six years ago, an unknown, small animal--not far differing in size from a ground squirrel, but with a long, round tail, shewed

himself slyly about one of the chief's wigwams, peeping out from under the pots and kettles, and other such things; which they looked upon as great medicine -- and no one dared to kill it; but hundreds came to watch and look at it. On one of these occasions, one of the spectators saw this strange animal catching and devouring a small "deer mouse", of which little and very destructive animals their lodges contained many. It was then at once determined that this had been an act of the Great Spirit, as a means of putting a stop to the spoliations committed by these little sappers, who were cutting their clothing, and other manufactures to pieces in a lamentable manner. Councils had been called and solemn decrees issued for the countenance and protection of this welcome visitor and its progeny, which were soon ascertained to be rapidly increasing, and calculated soon to rid them of these thousands of little depredators. It was soon, however, learned from one of the Fur Traders, that this distinguished object of their superstition (which my man Ba'tiste familiarly calls "Monsr. Ratapon") had, a short time before, landed himself from one of their keel boats, which had ascended the Missouri river for the distance of 1800 miles; and had taken up its residence, without introduction or invitation, in one of their earth-covered wigwams.

This information, for a while, curtailed the extraordinary respect they had for some time been paying to it; but its continual war upon these little mice, which it was using for its food, in the absence of all other nutriment, continued to command their respect, in spite of the manner in which it had been introduced; being unwilling to believe that it had come from that source, even, without the agency in some way of the Great Spirit.

Having been thus introduced and nurtured, and their numbers having been so wonderfully increased in the few last years, that every wigwam was infested with them -- that their caches, where they bury their corn and other provisions, were robbed and sacked; and the very pavements under their wigwams were so vaulted and sapped, that they were actually falling to the ground; they were now looked upon as a most disastrous nuisance, and a public calamity, to which it was the object of this meeting to call my attention, evidently in hopes that I might be able to designate some successful mode of relieving them from this real misfortune. I got rid of them at last, by assuring them of my deep regret for their situation, which was, to be sure, a very unpleasant one; and told them, that there was really a great deal of medicine in the thing, and that I should therefore be quite unwilling to have anything to do with it. Ba'tiste and Bogard, who are yet my daily and almost hourly companions, took to themselves a great deal of fun and amusement at the end of this interview, by suggesting many remedies for the evil, and enjoying many hearty laughs; after which, Ba'tiste, Bogard and I, took our hats; and I took my sketch-book in hand, and we started on a visit to the upper town of the Minatarees, which is half a mile or more distant, and on the other bank of the Knife River, which we crossed in the following manner. The old chief, having learned that we were to cross the river, gave direction to one of the women of his numerous household, who took upon her head a skin-canoe (more familiarly called in this country, a bull-boat), made in the form of a large tub, of a buffalo's skin, stretched on a frame of willow boughs, which she carried to the water's edge; and placing it in the water, made signs for us three to get into it. When we were in, and seated flat on its bottom, with scarce room in any way to adjust our legs and our feet (as we sat necessarily facing each other), she stepped before the boat, and pulling it along, waded towards the deeper water, with her back towards us, carefully with the other hand attending to her dress, which seemed to be but a light slip, and floating upon the surface until the water was above her waist, when it was instantly turned off, over her head, and thrown ashore;

and she boldly plunged forward, swimming and drawing the boat with one hand, which she did with apparent ease. In this manner we were conveyed to the middle of the stream, where we were soon surrounded by a dozen or more beautiful girls, from twelve to fifteen and eighteen years of age, who were at that time bathing on the opposite shore.

They all swam in a bold and graceful manner, and as confidently as so many otters or beavers; and gathering around us, with their long black hair floating about on the water, whilst their faces were glowing with jokes and fun, which they were cracking about us, and which we could not, understand.

In the midst of this delightful little aquatic group, we three sat in our little skin-bound tub (like the "three wise men of Gotham, who went to sea in a bowl," &c.), floating along down the current, losing sight, and all thoughts, of the shore, which was equal-distant from us on either side; whilst we were amusing ourselves with the playfulness of these dear little creatures who were floating about under the clear blue water, catching their hands on to the sides of our boat; occasionally raising one-half of their bodies out of the water, and sinking again, like so many mermaids.

In the midst of this bewildering and tantalizing entertainment, in which poor Ba'tiste and Bogard, as well as myself, were all taking infinite pleasure, and which we supposed was all intended for our especial amusement; we found ourselves suddenly in the delightful dilemma of floating down the current in the middle of the river; and of being turned round and round to the excessive amusement of the villagers, who were laughing at us from the shore, as well as these little tyros, whose delicate hands were besetting our tub on all sides; and for an escape from whom, or for fending off, we had neither an oar, or anything else, that we could wield in self-defense, or for self-preservation. In this awkward predicament, our feelings of excessive admiration were immediately changed, to those of exceeding vexation, as we now learned that they had peremptorily: discharged from her occupation our fair conductress, who had undertaken to ferry us safely across the river; and had also very ingeniously laid their plans, of which we had been ignorant until the present moment, to extort from us in this way, some little evidences of our liberality, which, in fact, it was impossible to refuse them, after so liberal and bewitching an exhibition on their part, as well as from the imperative obligation which the awkwardness of our situation had laid us under. I had some awls in my pockets, which I presented to them, and also a few strings of beautiful beads, which I placed over their delicate necks as they raised them out of the water by the side of our boat; after which they all joined in conducting our craft to the shore, by swimming by the sides of, and behind it, pushing it along in the direction where they designed to land it, until the water became so shallow, that their feet were upon the bottom, when they waded along with great coyness, dragging us towards the shore, as long as their bodies, in a crouching position, could possibly be half concealed under the water, when they gave our boat the last push for the shore, and raising a loud and exulting laugh, plunged back again into the river; leaving us the only alternative of sitting still where we were, or of stepping out into the water at half leg deep, and of wading to the shore, which we at once did, and soon escaped from the view of our little tormentors, and the numerous lookers-on, on our way to the upper village, which I have before mentioned.

Here I was very politely treated by the Yellow Moccasin, quite an old man, and who seemed to be chief of this band or family, constituting their little community of thirty or forty lodges, averaging, perhaps, twenty persons to each. I was feasted in this man's lodge -- and afterwards invited

to accompany him and several others to a beautiful prairie, a mile or so above the village, where the young men and young women of this town, and man!: from the village below, had assembled for their amusements; the chief of which seemed to be that of racing their horses. In the midst of these scenes, after I had been for some time a looker-on, and had felt some considerable degree of sympathy for a fine-looking young fellow, whose horse had been twice beaten on the course, and whose losses had been considerable; for which, his sister, a very modest and pretty girl, was most piteously howling and crying. I selected and brought forward an ordinary-looking pony, that was evidently too fat and too sleek to run against his fine-limbed little horse that had disappointed his high hopes; and I began to comment extravagantly upon its muscle, &c., when I discovered him evidently cheering up with the hope of getting me and my pony on to the turf with him; for which he soon made me a proposition; and I, having lauded the limbs of my little nag too much to “back out”, agreed to run a short race with him of half a mile, for three yards of scarlet cloth, a knife, and half a dozen strings of beads, which I was willing to stake against a handsome pair of leggings, which he was wearing at the time. The greatest imaginable excitement was now raised amongst the crowd by this arrangement; to see a white man preparing to run with an Indian jockey, and that with a scrub of a pony, in whose powers of running no Indian had the least confidence. Yet, there was no one in the crowd, who dared to take up the several other little bets I was willing to tender (merely for their amusement, and for their final exultation); owing, undoubtedly, to the bold and confident manner in which I had ventured on the merits of this little horse, which the tribe had all overlooked; and needs must have some medicine about it.

So far was this panic carried, that even my champion was ready to withdraw; but his friends encouraged him at length, and we galloped our horses off to the other end of the course, where we were to start; and where we were accompanied by a number of horsemen, who were to witness the “set off”. Some considerable delay here took place, from a condition, which was then named to me, and which I had not observed before, that in all the races of this day, every rider was to run entirely denuded, and ride a naked horse! Here I was completely balked, and having no one by me to interpret a word, I was quite at a loss to decide what was best to do. I found however, that remonstrance was of little avail; and as I had volunteered in this thing to gratify and flatter them, I thought it best not positively to displease them in this; so I laid off my clothes, and straddled the naked back of my round and glossy little pony, by the side of my competitor, who was also mounted and stripped to the skin, and panting with a restless anxiety for the start.

Reader I did you ever imagine that in the middle of a man’s life there could be a thought or a feeling so new to him, as to throw him instantly back to infancy; with a new world and a new genius before him—started afresh, to navigate and breathe the elements of naked and untasted liberty, which clothe him in their cool and silken robes that float about him; and wafting their life-inspiring folds to his inmost lungs? If you never have been inspired with such a feeling, and have been in the habit of believing that you have thought of, and imagined a little of every thing, try for a moment, to disrobe your mind and your body, and help me through feelings to which I cannot give utterance. Imagine yourselves as I was, with my trembling little horse underneath me, and the cool atmosphere that was floating about, and ready, more closely and familiarly to embrace me, as it did, at the next moment, when we “were off”, and struggling for the goal and the prize. Though my little Pegasus seemed to dart through the clouds, and I to be wafted on the wings of Mercury, yet my red adversary was leaving me too far behind for further competition; and I

wheeled to the left, making a circuit on the prairie, and came in at the starting point, much to the satisfaction and exultation of the jockeys; but greatly to the murmuring disappointment of the women and children, who had assembled in a dense throng to witness the “coming out” of the “white medicine-man”. I clothed myself instantly, and came back, acknowledging my defeat, and the superior skill of my competitor, as well as the wonderful muscle of his little charger, which pleased him much; and his sisters’ lamentations were soon turned to joy, by the receipt of a beautiful scarlet robe, and a profusion of vari-coloured beads, which were speedily paraded on her copper-coloured neck.

After I had seen enough of these amusements, I succeeded with some difficulty, in pulling Ba’tiste and Bogard from amongst the groups of women and girls, where they seemed to be successfully ingratiating themselves; and we trudged back to the little village of earth-covered lodges, which were hemmed in, and almost obscured from the eye, by the fields of corn and luxuriant growth of wild sun-flowers, and other vegetable productions of the soil, whose spontaneous growth had reared their heads in such profusion, as to appear all but like a dense and formidable forest.

We loitered about this little village awhile, looking into most of its lodges, and tracing its winding avenues, after which we recrossed the river and wended our way back again to head-quarters, from whence we started in the morning, and where I am now writing. This day’s ramble shewed to us all the inhabitants of this little tribe, except a portion of their warriors who are out on a war excursion against the Riccarees; and I have been exceedingly pleased with their general behavior and looks, as well as with their numerous games and amusements, in many of which I have given them great pleasure by taking a part.

The Minatarees, as I have before said, are a bold, daring, and warlike tribe; quite different in these respects from their neighbors the Mandans, carrying war continually in their enemies’ country, thereby exposing their lives and diminishing; the number of their warriors to that degree that I find two or three women to a man, through the tribe. They are bold and fearless in the chase also, and in their eager pursuits of the bison, or buffaloes, their feats are such as to excite the astonishment and admiration of all who behold them. Of these scenes I have witnessed many since I came into this country, and amongst them all, nothing have I seen to compare with one to which I was an eye-witness a few mornings since, and well worthy of being described.

The Minatarees, as well as the Mandans, had suffered for some months past for want of meat, and had indulged in the most alarming fears, that the herds of buffaloes were emigrating so far off from them, that there was great danger of their actual starvation, when it was suddenly announced through the village one morning at an early hour, that a herd of buffaloes were in sight, when an hundred or more young men mounted their horses with weapons in baud and steered their course to the prairies. The chief informed me that one of his horses was in readiness for me at the door of his wigwam, and that I had better go and see the curious affair. I accepted his polite offer, and mounting the steed, galloped off with the hunters to the prairies, where we soon descried at a distance, a fine herd of buffaloes grazing, when a halt and a council were ordered, and the mode of attack was agreed upon. I had armed myself with my pencil and my sketch-book only, and consequently took my position generally in the rear, where I could see and appreciate every manoeuvre.

The plan of attack, which in this country is familiarly called a “surround”, was explicitly agreed upon, and the hunters who were all mounted on their “buffalo horses” and armed with bows and

arrows or long lances, divided into two columns, taking opposite directions, and drew themselves gradually around the herd at a mile or more distance from them; thus forming a circle of horsemen at equal distances apart, who gradually closed in upon them with a moderate pace, at a signal given.

The unsuspecting herd at length "got the wind" of the approaching enemy and fled in a mass in the greatest confusion. To the point where they were aiming to cross the line, the horsemen were seen at full speed, gathering and forming in a column, brandishing their weapons and yelling in the most frightful manner, by which means they turned the black and rushing mass which moved off in an opposite direction where they were again met and foiled in a similar manner, and wheeled back in utter confusion; by which time the horsemen had closed in from all directions, forming a continuous line around them, whilst the poor affrighted animals were eddying about in a crowded and confused mass, hooking and climbing upon each other; when the work of death commenced. I had rode up in the rear and occupied an elevated position at a few rods distance, from which I could (like the general of a battle field) survey from my horse's back, the nature and the progress of the grand melee; but (unlike him) without the power of issuing a command or in any way directing its issue.

In this grand turmoil, a Cloud of dust was soon raised, which in parts obscured the throng where the hunters were galloping their horses around and driving the whizzing arrows or their long lances to the hearts of these noble animals; which in many instances, becoming infuriated with deadly wounds in their sides, erected their shaggy manes over their blood-shot eyes and furiously plunged forwards at the sides of their assailants' horses, sometimes goring them to death at a lunge, and putting their dismounted riders to flight for their lives; sometimes their dense crowd was opened, and the blinded horsemen, too intent on their prey amidst the cloud of dust, were hemmed and wedged in amidst the crowding beasts, over whose backs they were obliged to leap for security, leaving their horses to the fate that might await them in the results of this wild and desperate war. Many were the bulls that turned upon their assailants and met them with desperate resistance; and many were the warriors who were dismounted, and saved themselves by the superior muscles of their legs; some who were closely pursued by the bulls, wheeled suddenly around and snatching the part of a buffalo robe from around their waists, threw it over the horns and the eyes of the infuriated beast, and darting by its side drove the arrow or the lance to its heart. Others suddenly dashed off upon the prairies by the side of the affrighted animals which had escaped from the throng, and closely escorting them for a few rods, brought down their hearts blood in streams, and their huge carcasses upon the green and enameled turf.

In this way this grand hunt soon resolved itself into a desperate battle: and in the space of fifteen minutes, resulted in the total destruction of the whole herd, which in all their strength and fury were doomed, like every beast and living thing else, to fall before the destroying hands of mighty man.

I had sat in trembling silence upon my horse, and witnessed this extraordinary scene, which allowed not one of these animals to escape out of my sight. Many plunged off upon the prairie for a distance, but were overtaken and killed; and although I could not distinctly estimate the number that were slain, yet I am sure that some hundreds of these noble animals fell in this grand melee. The scene after the battle was over was novel and curious in the extreme; the hunters were moving about amongst the dead and dying animals, leading their horses by their halters, and claiming

their victims by their private marks upon their arrows, which they were drawing from the wounds in the animals' sides.

Amongst the poor affrighted creatures that had occasionally dashed through the ranks of their enemy, and sought safety in flight upon the prairie (and in some instances, had undoubtedly gained it), I saw them stand awhile, looking back, when they turned, and, as if bent on their own destruction, retraced their steps, and mingled themselves and their deaths with those of the dying throng. Others had fled to a distance on the prairies, and for want of company, of friends or of foes, had stood and gazed on till the battle-scene was over; seemingly taking pains to stay, and hold their lives in readiness for their destroyers, until the general destruction was over, when they fell easy victims to their weapons -- making the slaughter complete.

After this scene, and after arrows had been claimed and recovered, a general council was held, when all hands were seated on the ground, and a few pipes smoked; after which, all mounted their horses and rode back to the village.

A deputation of several of the warriors was sent to the chief, who explained to him what had been their success; and the same intelligence was soon communicated by little squads to every family in the village; and preparations were at once made for securing the meat. For this purpose, some hundreds of women and children, to whose lots fall all the drudgeries of Indian life, started out upon the trail, which led them to the battle-field, where they spent the day in skinning the animals, and cutting up the meat, which was mostly brought into the villages on their backs, as they tugged and sweated under their enormous and cruel loads.

I rode out to see this curious scene; and I regret exceedingly that I kept no memorandum of it in my sketch-book. Amidst the throng of women and children, that had been assembled, and all of whom seemed busily at work, were many superannuated and disabled nags, which they had brought out to assist in carrying in the meat; and at least, one thousand semi-loup dogs, and whelps, whose keen appetites and sagacity had brought them out, to claim their shares of this abundant and sumptuous supply.

I staid and inspected this curious group for an hour or more, during which time, I was almost continually amused by the clamorous contentions that arose, and generally ended, in desperate combats; both amongst the dogs and women, who seemed alike tenacious of their local and recently acquired rights; and disposed to settle their claims by "tooth and nail" -- by manual and brute force.

When I had seen enough of this I rode to the top of a beautiful prairie bluff, a mile or two from the scene, where I was exceedingly amused by overlooking the route that laid between this and the village, which was over the undulating green fields for several miles, that laid beneath me; over which there seemed a continual string of women, dogs and horses, for the rest of the day, passing and repassing as they were busily bearing home their heavy burthens to their village, and in their miniature appearance, which the distance gave them, not unlike to a busy community of ants as they are sometimes seen, sacking and transporting the treasures of a cupboard, or the sweets of a sugar bowl.

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

by George Catlin

(First published in London in 1844)

---

LETTER-- No. 26.

MOUTH OF TETON RIVER, UPPER MISSOURI.

Since writing the above Letter I have descended the Missouri, a distance of six or seven hundred miles, in my little bark, with Ba'tiste and Bogard, my old "compagnons du voyage", and have much to say of what we three did and what we saw on our way, which will be given anon.

I am now in the heart of the country belonging to the numerous tribe of Sioux or Dahcotas, and have Indian faces and Indian customs in abundance around me. This tribe is one of the most numerous in North America, and also one of the most vigorous and warlike tribes to be found, numbering some forty or fifty thousand, and able undoubtedly to muster, if the tribe could be moved simultaneously, at least eight or ten thousand warriors, well mounted and well armed. This tribe take vast numbers of the wild horses on the plains towards the Rocky Mountains, and many of them have been supplied with guns; but the greater part of them hunt with their bows and arrows and long lances, killing their game from their horses' backs while at full speed.

The name Sioux (pronounced see-oo) by which they are familiarly called, is one that has been given to them by the French traders, the meaning of which I never have learned; their own name being, in their language, Dah-co-ta. The personal appearance of these people is very fine and prepossessing, their persons tall and straight, and their movements elastic and graceful. Their stature is considerably above that of the Mandans and Riccarees, or Blackfeet; but about equal to that of the Crows, Assinneboins and Minatarees, furnishing at least one half of their warriors of six feet or more in height.

I am here living with, and enjoying the hospitality of a gentleman by the name of Laidlaw, a Scotchman, who is attached to the American Fur Company, and who, in company with Mr. McKenzie (of whom I have before spoken) and Lamont, has the whole agency of the Fur Company's transactions in the regions of the Upper Missouri and the Rocky Mountains.

This gentleman has a finely-built Fort here, of two or three hundred feet square, enclosing eight or ten of their Factories, houses and stores, in the midst of which he occupies spacious and comfortable apartments, which are well supplied with the comforts and luxuries of life and neatly and respectably conducted by a fine looking, modest, and dignified Sioux woman, the kind and affectionate mother of his little flock of pretty and interesting children.

This Fort is undoubtedly one of the most important and productive of the American Fur Company's posts, being in the center of the great Sioux country, drawing from all quarters an immense and almost incredible number of buffalo robes, which are carried to the New York and other Eastern markets, and sold at a great profit. This post is thirteen hundred miles above St. Louis, on the west bank of the Missouri, on a beautiful plain near the mouth of the Teton river which empties into the Missouri from the West, and the Fort has received the name of Fort Pierre, in compliment to Monsr. Pierre Chouteau, who is one of the partners in the Fur Company, residing in St. Louis; and to whose politeness I am indebted, as I have before mentioned, for my passage in the

---

Company's steamer, on her first voyage to the Yellow Stone; and whose urbane and gentlemanly society, I have before said, I had during my passage.

The country about this Fort is almost entirely prairie, producing along the banks of the river and streams only, slight skirtings of timber. No site could have been selected more pleasing or more advantageous than this; the Fort is in the center of one of the Missouri's most beautiful plains, and hemmed in by a series of gracefully undulating, grass-covered hills, on all sides; rising like a series of terraces, to the summit level of the prairies, some three or four hundred feet in elevation, which then stretches off in an apparently boundless ocean of gracefully swelling waves and fields of green. On my way up the river I made a painting of this lovely spot, taken from the summit of the bluffs, a mile or two distant, shewing an encampment of Sioux, of six hundred tents or skin lodges, around the Fort, where they had concentrated to make their spring trade; exchanging their furs and peltries for articles and luxuries of civilized manufactures.

The great family of Sioux who occupy so vast a tract of country, extending from the banks of the Mississippi river to the base of the Rocky Mountains, are everywhere a migratory or roaming tribe, divided into forty-two bands or families, each having a chief who all acknowledge a superior or head chief, to whom they all are held subordinate. This subordination, however, I should rather record as their former and native regulation, of which there exists no doubt, than an existing one, since the numerous innovations made amongst these people by the Fur Traders, as well as by the proximity of civilization along a great deal of their frontier, which soon upset and change many native regulations, and particularly those relating to their government and religion. There is one principal and familiar division of this tribe into what are called the Mississippi and Missouri Sioux. Those bordering on the banks of the Mississippi, concentrating at Prairie du Chien and Fort Snelling, for the purposes of trade, &c., are called the Mississippi Sioux. These are somewhat advanced towards civilization, and familiar with white people, with whom they have held intercourse for many years, and are consequently excessive whiskey drinkers, though constituting but a meager proportion, and at the same time, but a very unfair and imperfect sample of the great mass of this tribe who inhabit the shores of the Missouri, and fearlessly roam on the vast plains intervening between it and the Rocky Mountains, and are still living entirely in their primitive condition.

There is no tribe on the Continent, perhaps, of finer looking men than the Sioux; and few tribes who are better and more comfortably clad, and supplied with the necessaries of life. There are no parts of the great plains of America which are more abundantly stocked with buffaloes and wild horses, nor any people more bold in destroying the one for food, and appropriating the other to their use. There has gone abroad, from the many histories which have been written of these people, an opinion which is too current in the world, that the Indian is necessarily a poor, drunken, murderous wretch; which account is certainly unjust as regards the savage, and doing less than justice to the world for whom such histories have been prepared. I have travelled several years already amongst these people and I have not had my scalp taken, nor a blow struck me; nor had occasion to raise my hand against an Indian; nor has my property been stolen, as yet to my knowledge, to the value of a shilling; and that in a country where no man is punishable by law for the come of stealing: still some of them steal, and murder too; and if white men did not do the same, and that in defiance of the laws of God and man, I might take satisfaction in stigmatizing the Indian character as thievish and murderous. That the Indians in their native state are "drunk-

en", is false; for they are the only temperance people, lite rally speaking, that ever I saw in my travels, or ever expect to see. If the civilized world are startled at this, it is the fact that they must battle with not with me; for these people manufacture no spirituous liquor themselves and know nothing of it until it is brought into their country and tendered them by Christians. That these people are "naked" is equally untrue, an as easily disproved; for I am sure that with the paintings I have mad amongst the Mandans and Crows, and other tribes; and with their beautiful costumes which I have procured and shall bring home, I shall be able to establish the fact that many of these people dress, not only with clothe comfortable for any latitude, but that they also dress with some consider able taste and elegance. Nor am I quite sure that they are entitled to The name of "poor", who live in a boundless country of green fields, with good horses to ride; where they are all joint tenants of the soil, together; whet the Great Spirit has supplied them with an abundance of food to eat -- what they are all indulging in the pleasures and amusements of a lifetime of idle ness and ease, with no business hours to attend to, or professions to learn where they ]rave no notes in bank or other debts to pay-no taxes, no tithes, no rents, nor beggars to touch and tax the sympathy of their son at every step they go. Such might be poverty in the Christian world, but is sure to be a blessing where the pride and insolence of comparative wealth are unknown.

I mentioned that this is the nucleus or place of concentration of the numerous tribe of the Sioux, who often congregate here in great masses to make their trades with the American Fur Company; and that on my way up the river, some months since, I found here encamped, six hundred families of Sioux, living in tents covered with buffalo hides. Amongst these there were twenty or more of the different bands, each one with their chief at their head, over whom was a superior chief and leader, a middle-aged man, of middling stature, with a noble countenance, and a figure almost equaling the Apollo, and I painted his portrait. The name of this chief is Ha-won-je-tah (The One Horn) of the Mee-ne-cow-e-gee band, who has risen rapidly to the highest honours in the tribe, from his own extraordinary merits, even at so early an age. He told me that he took the name of "One Horn" (or shell) from a simple small shell that was hanging on his neck, which descended to him from his father, and which, he said, he valued more than anything he possessed; affording a striking instance of the living affection which these people often cherish for the dead, inasmuch as he chose to carry this name through life in preference to many others and more honourable ones he had a right to have taken, from different battles and exploits of his extraordinary life. He treated me with great kindness and attention, considering himself highly complimented by the signal and unprecedented: honour I had conferred upon him by painting his portrait, and that before I had invited any other. His costume was a very handsome one, and will have a place in my INDIAN GALLERY by the side of his picture. It is made of elk skins beautifully dressed, and fringed with a profusion of porcupine quills and scalp-locks; and his hair, which is very long and profuse, divided into two parts, and lifted up and crossed, over the top of his head, with a simple tie, giving it somewhat the appearance of a Turkish turban.

This extraordinary man, before he was raised to the dignity of chief, was the renowned of his tribe for his athletic achievements. In the chase he was foremost; he could run down a buffalo, which he often had done, on his own legs, and drive his arrow to the heart. He was the fleetest in the tribe; and is the races he had run, he had always taken the prize.

It was proverbial in his tribe, that Ha-wan-je-tah's bow never was drawn in vain, and his wigwam was abundantly furnished with scalps that he had taken from his enemies' heads in battle.

Having descended the river thus far, then, and having hauled out my canoe, and taken up my quarters for awhile with mine hospitable host, Mr. Laidlaw, as I have before said; and having introduced my readers to the! country and the people, and more particularly to the chief dignitary of the Sioux; and having promised in the beginning of this letter also, that I should give them some amusing and curious information that we picked up, and incidents that we met with, on our voyage from the Mandans to this place; I have again to beg that they will pardon me for withholding from them yet awhile longer, the incidents of that curious and most important part of my Tour, the absence of which, at this time, seems to make a "hole in the ballad", though I promise my readers they are written, and will appear in the book in a proper and appropriate place.

Taking it for granted then, that I will be indulged in this freak, I am taking the liberty of presuming on my readers' patience in proposing another, which is to offer them here an extract from my Notes, which were made on my journey of 1300 miles from St. Louis to this place, where I stopped, as I have said, amongst several thousands of Sioux; where I remained for some time, and painted my numerous portraits of their chiefs, &c.; one of whom was the head and leader of the Sioux, whom I have already introduced. On the long and tedious route that lies between St. Louis and this place, I passed the Sacs and Ioways -- the Konzas -- the Omahaws, and the Ottoes (making notes on them all, which are reserved for another place), and landed at the Puncahs, a small tribe residing in one village, on the west bank of the river, 300 miles below this, and 1000 from St. Louis.

The Puncahs are all contained in seventy-five or eighty lodges, made of buffalo skins, in the form of tents; the frames for which are poles of fifteen or twenty feet in length, with the butt ends standing on the ground, and the small ends meeting at the top, forming a cone, which sheds off the rain and wind with perfect success. This small remnant of a tribe are not more than four or five hundred in numbers; and I should think, at least, two-thirds of those are women. This disparity in numbers having been produced by the continual losses which their men suffer, who are penetrating the buffalo country for meat, for which they are now obliged to travel a great way (as the buffaloes have recently left their country), exposing their lives to their more numerous enemies about them.

The chief of this tribe, whose name is Shoo-de-ga-cha (Smoke), I painted at full length, and his wife also, a young and very pretty woman, whose name is Hee-la'h-dee (The Pure Fountain); her neck and arms were curiously tattooed, which is a very frequent mode of ornamenting the body amongst this and some other tribes, which is done by pricking into the skin, gunpowder and vermilion.

The chief, who was wrapped in a buffalo robe, n a noble specimen of native dignity and philosophy. I conversed much with him; and from his dignified manners, as well as from the soundness of his reasoning, I became fully convinced that he deserved to be the sachem of a more numerous and prosperous tribe. He related to me with great coolness and frankness, the poverty and distress of his nation; and with the method of a philosopher, predicted the certain and rapid extinction of his tribe, which he had not the poor, noble chief; who was equal to, and worthy of a He sat upon the deck of the steamer, overlooking the little power to avert a greater empire! He sat upon the deck of the steamer, overlooking the little cluster of his wigwams mingled amongst the trees; and, like Caius Marius, weeping over the ruins of Carthage, shed tears as he was descanting on the poverty of his ill-fated little community, which he told me, "had once been powerful and happy;

that the buffaloes which the Great Spirit had given them for food, and which formerly spread all over their green prairies, had all been killed or driven out by the approach of white men, who wanted their skins; that their country was now entirely destitute of game, and even of roots for their food, as it was one continued prairie; and that his young men penetrating the countries of their enemies for buffaloes, which they were obliged to do, were cut to pieces and destroyed in great numbers. That his people had foolishly become fond of fire-water (whiskey), and had given away everything in their country for it -- that it had destroyed many of his warriors, and soon would destroy the rest -- that his tribe was too small, and his warriors too few to go to war with the tribes around them; that they were met and killed by the Sioux on the North, by the Pawnees on the West; and by the Osages and Konzas on the South; and still more alarmed from the constant advance of the pale faces -- their enemies from the East, with whiskey and small-pox, which already had destroyed four-fifths of his tribe, and soon would impoverish, and at last destroy the remainder of them."

In this way did this shrewd philosopher lament over the unlucky destiny of his tribe; and I pitied him with all my heart. I have no doubt of the correctness of his representations; and I believe there is no tribe on the frontier more in want, nor any more deserving of the sympathy and charity of the government and Christian societies of the civilized world.

The son of this chief, a youth of eighteen years, and whose portrait I painted, distinguished himself in a singular manner the day before our steamer reached their village, by taking to him four wives in one day! This extraordinary and unprecedented freak of his, was just the thing to make him the greatest sort of medicine in the eyes of his people; and probably he may date much of his success and greatness through life, to this bold and original step, which suddenly raised him into notice and importance.

The old chief Shoo-de-ga-cha, of whom I have spoken above, considering his son to have arrived to the age of maturity, fitted him out for house-keeping, by giving him a handsome wigwam to live in, and nine horses, with many other valuable presents; when the boy, whose name is Hongskay-de (the great chief), soon laid his plans for the proud and pleasant epoch in his life, and consummated them in the following ingenious and amusing manner.

Wishing to connect himself with, and consequently to secure the countenance of some of the most influential men in the tribe, he had held an interview with one of the most distinguished; and easily (being the son of a chief), made an arrangement for the hand of his daughter, which he was to receive on a certain day, and at a certain hour, for which he was to give two horses, a gun, and several pounds of tobacco. This was enjoined on the father as a profound secret, and as a condition of the espousal. In like manner he soon made similar arrangements with three other leading men of the tribe, each of whom had a young and beautiful daughter, of marriageable age. To each of the fathers he had promised two horses, and other presents similar to those stipulated for in the first instance, and all under the same injunctions of secrecy, until the hour approached, when he had announced to the whole tribe that he was to be married. At the time appointed, they all assembled, and all were in ignorance of the fair hand that was to be placed in his on this occasion. He had got some of his young friends who were prepared to assist him, to lead up the eight horses. He took two of them by the halters, and the other presents agreed upon in his other hand, and advancing to the first of the parents, whose daughter was standing by the side of him, saying to him, "you promised me the hand of your daughter on this day, for which I was to give you two

horses." The father assented with a "ugh!" receiving the presents, and giving his child; when some confusion ensued from the simultaneous remonstrances, which were suddenly made by the other three parents, who had brought their daughters forward, and were shocked at this sudden disappointment, as well as by the mutual declarations they were making, of similar contracts that each one had entered into with him! As soon as they could be pacified, and silence was restored, he exultingly replied, "You have all acknowledged in public your promises with me, which I shall expect you to fulfil. I am here to perform all the engagements which I have made, and I expect you all to do the same." No more was said. He led up the two horses for each, and delivered the other presents; leading off to his wigwam his four brides -- taking two in each hand, and commenced at once upon his new mode of life; reserving only one of his horses for his own daily use.

I visited the wigwam of this young installed medicine-man several times, and saw his four modest little wives seated around the fire, where all seemed to harmonize very well; and for aught I could discover, were entering very happily on the duties and pleasures of married life. I selected one of them for her portrait, and painted it, Mong-shong-shaw (The Bending Willow), in a very pretty dress of deer skins, and covered with a Young buffalo's robe, which was handsomely ornamented, and worn with much grace and pleasing effect.

Mr. Chouteau of the Fur Company, and Major Sanford, the agent for the Upper Missouri Indians, were with me at this time; and both of these gentlemen, highly pleased with go ingenious and innocent a freak, felt disposed to be liberal, and sent them many presents from the steamer.

The ages of these young brides were probably all between twelve and fifteen years, the season of life in which most of the girls in this wild country contract marriage.

It is a surprising fact, that women mature in these regions at that early age, and there have been some instances where marriage has taken place, even at eleven; and the juvenile mother has been blest with her first offspring at the age of twelve!

These facts are calculated to create surprise and almost incredulity in the mind of the reader, but there are circumstances for his consideration yet to be known, which will in a manner account for these extraordinary facts.

There is not a doubt but there is a more early approach to maturity amongst the females of this country than in civilized communities, owing either to a natural and constitutional difference, or to the exposed and active life they lead. Yet there is another and more general cause of early marriage (and consequently apparent maturity), which arises out of the modes and forms of the country, where most of the marriages are contracted with the parents, hurried on by the impatience of the applicant, and prematurely accepted and consummated on the part of the parents, who are often impatient to be in receipt of the presents they are to receive as the price of their daughters.

There is also the facility of dissolving the marriage contract in this country, which does away with one of the most serious difficulties which lie in the way in the civilized world, and calculated greatly to retard its consummation, which is not an equal objection in Indian communities. Education and accomplishments, again, in the fashionable world, and also a time and a season to flourish and show them off, necessarily engross that part of a young lady's life, when the poor Indian girl, who finds herself weaned from the familiar embrace of her parents, with her mind and her body maturing, and her thoughts and her passions straying away in the world for some theme or some pleasure to cling to, easily follows their juvenile and ardent dictates, prematurely entering on that system of life, consisting in reciprocal dependence and protection.

---

In the instance above described, the young man was in no way censured by his people, but most loudly applauded; for in this country polygamy is allowed; and in this tribe, where there are two or three times the number of women that there are of men, such an arrangement answers a good purpose, whereby so many of the females are provided for and taken care of; and particularly so, and to the great satisfaction of the tribe, as well as of the parties and families concerned, when so many fall to the lot of a chief, or the son of a chief, into whose wigwam it is considered an honour to be adopted, and where they are the most sure of protection.

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

by George Catlin

(First published in London in 1844)

LETTER -- No. 27.

MOUTH OF TETON RIVER, UPPER MISSOURI.

WHEN we were about to start on our way up the river from the village of the Puncahs, we found that they were packing up all their goods and preparing to start for the prairies, farther to the West, in pursuit of buffaloes, to dry meat for their winter's supplies. They took down their wigwams of skins to carry with them, and all were hat to the ground and everything packing up ready for the start. My attention was directed by Major Sanford, the Indian Agent, to one of the most miserable and helpless looking objects that I ever had seen in my life, a very aged and emaciated man of the tribe, who he told me was be exposed.

The tribe were going where hunger and dire necessity compelled them to go, and this pitiable object, who had once been a chief, and a man of distinction in his tribe, who was now too old to travel, being reduced to mere skin and bones, was to be left to starve, or meet with such death as might fall to his lot, and his bones to be picked by the wolves ! I lingered around this Poor old forsaken patriarch for hours before we started, to indulge the tears of sympathy which were flowing for the sake of this goer benighted and decrepit old man, whose worn-out limbs were no longer able to support him; their kind and faithful offices having long since been performed, and his body and his mind doomed to linger into the withering agony of decay, and gradual solitary death. I wept, and it was a pleasure to weep, for the painful looks, and the dreary prospects of this old veteran, whose eyes were dimmed, whose venerable locks were whitened by an hundred years, whose limbs were almost naked, and trembling as he sat by a small fire which his Friends had left him, with a few sticks of wood within his reach and a buffalo's skin stretched upon some crotches over his head. Such was to be his only dwelling, and such the chances for his life, with only a few half-picked bones that were laid within his reach, and a dish of water, without weapons or means of any kind to replenish them, or strength to move his body from its fatal locality. In this sad plight I mournfully contemplated this miserable remnant of existence, who had unluckily outlived the fates and accidents of wars to die alone, at death's leisure. His friends and his children had all left him, and were preparing in a little time to be on the march. He had told them to leave him, "he was old", he said, "and too feeble to march." "My children", said he. "our nation is poor, and it s necessary that you should all go to the country where you can get meat, -- my eyes are dimmed and my strength is no more; my days are nearly all numbered, and I am a burthen to my children -- I cannot go, and I wish to die. Keep your hearts stout, and think not of me; I am no longer good for anything." In this way they had finished the ceremony of exposing him, and taken their final leave of him. I advanced to the old man, and was undoubtedly the last human being who held converse with him. I sat by the side of him, and though he could not distinctly see me, he shook me heartily by the hand and smiled, evidently aware that I was a white man, and that I sympathized with his inevitable misfortune. I shook hands again with him, and left him, steering my course towards the steamer which was a mile or more from me, and ready to resume her voyage

---

up the Missouri.

This cruel custom of exposing their aged people, belongs, I think, to all the tribes who roam about the prairies, making severe marches, when such decrepit persons are totally unable to go, unable to ride or to walk, -- when they have no means of carrying them. It often becomes absolutely necessary in such cases -- that they should be left; and they uniformly insist upon it, saying as this old man did, that they are old and of no further use -- that they left their fathers in the same manner -- that they wish to die, and their children must not mourn for them.

From the Puncah village, our steamer made regular progress from day to day towards the mouth of the Teton, from where I am now writing; passing the whole way a country of green fields, that come sloping down to the river on either side, forming the loveliest scenes in the world.

From day to day we advanced, opening our eyes to something new and more beautiful every hour that we progressed, until at last our boat was aground; and a day's work of sounding told us at last, that there was no possibility of advancing further, until here should be a rise in the river, to enable the boat to get over the bar. After laying in the middle of the river about a week, in this unpromising dilemma, Mr. Chouteau started off twenty men on foot, to cross the plains for a distance of 200 miles to Laidlaw's Fort, at the mouth of Teton river. To this expedition, I immediately attached myself; and having heard that a numerous party of Sioux were there encamped, and waiting to see the steamer, I packed on the backs, and in the hands of several of the men, such articles for painting, as I might want; canvass, paints, and brushes, with my sketch-book slung on my back, and my rifle in my hand, and I started off with them.

We took leave of our friends on the boat, and mounting the green bluffs, steered our course from day to day over a level prairie, without a tree or a bush in sight, to relieve the painful monotony, filling our canteens at the occasional little streams that we passed, kindling our fires with dried buffalo dung, which we collected on the prairie, and stretching our tired limbs on the level turf whenever we were overtaken by night.

We were six or seven days in performing this march; and it gave me a good opportunity of testing the muscles of my legs, with a number of half-breeds and Frenchmen, whose lives are mostly spent in this way, leading a novice, a cruel, and almost killing journey. Every rod of our way was over a continuous prairie, with a verdant green turf of wild grass of six or eight inches in height; and most of the way enameled with wild flowers, and filled with a profusion of strawberries.

For two or three of the first days, the scenery was monotonous, and became exceedingly painful from the fact, that we were (to use a phrase of the country) "out of sight of land", I. e. out of sight of anything rising above the horizon, which was a perfect straight line around us, like that of the blue and boundless ocean. The pedestrian over such a discouraging sea of green, without a landmark before or behind him; without a beacon to lead him on, or define his progress, feels weak and overcome when night falls; and he stretches his exhausted limbs, apparently on the same spot where he has slept the night before, with the same prospect before and behind him; the same grass, and the same wild flowers beneath and about him; the same canopy over his head, and the same cheerless sea of green to start upon in the morning. It is difficult to describe the simple beauty and serenity of these scenes of solitude, or the feelings of feeble man, whose limbs are toiling to carry him through them -- without a hill or tree to mark his progress, and convince him that he is not, like a squirrel in his cage, after all his toil, standing still. One commences on peregrinations like these, with a light heart, and a nimble foot, and spirits as buoyant as the very

air that floats along by the side of him; but his spirit soon tires, and he lags on the way that is rendered more tedious and intolerable by the tantalizing mirage that opens before him beautiful lakes, and lawns, and copses; or by the looming of the prairie ahead of him, that seems to rise in a parapet, and decked with its varied flowers, phantom-like, flies and moves along before him. I got on for a couple of days in tolerable condition, and with some considerable applause; but my half-bred. companions took the lead at length, and left me with several other novices far behind, which gave me additional pangs; and I at length felt like giving up the journey, and throwing myself upon the ground in hopeless despair. I was not alone in my misery, however, but was cheered and encouraged by looking back and beholding several of our party half a mile or more in the rear of me, jogging along, and suffering more agony in their new experiment than I was suffering myself. Their loitering and my murmurs, at length, brought our leaders to a halt, and we held a sort of council, in which I explained that the pain in my feet was so intolerable, that I felt as if I could go no further; when one of our half-breed leaders stepped up to me, and addressing me in French, told me that I must "turn my toes in" as the Indians do, and that I could then go on very well. We halted a half-hour, and took a little refreshment, whilst the little Frenchman was teaching his lesson to the rest of my fellow novices, when we took up our march again; and I soon found upon trial, that by turning my toes in, my feet went more easily through the grass; and by turning the weight of my body more equally on the toes (enabling each one to support its proportionable part of the load, instead of throwing it all on to the joints of the big toes, which is done when the toes are turned out); I soon got relief, and made my onward progress very well. I rigidly adhered to this mode, and found no difficulty on the third and fourth days, of taking the lead of the whole party, which I constantly led until our journey was completed.

On this journey we saw immense herds of buffaloes; and although we had no horses to run them, we successfully approached them on foot, and supplied ourselves abundantly with fresh meat. After travelling for several days, we, came in sight of a high range of blue hills in distance on our left, which rose to the height of several hundred feet above the level of the prairies. These hills were a conspicuous landmark at last, and some relief to us. I was told by our guide, that they were called the Bijou Hills, from a Fur Trader of that name, who had had his trading-house at the foot of them on the banks of the Missouri river, where he was at last destroyed by the Sioux Indians. Not many miles back of this range of hills, we came in contact with an immense saline, or "salt meadow", as they are termed in this country, which turned us out of our path, and compelled us to travel several miles out of our way, to get by it; we came suddenly upon a great depression of the prairie, which extended for several miles, and as we stood upon its green banks, which were gracefully sloping down, we could overlook some hundreds of acres of the prairie which were covered with an incrustation of salt, that appeared the same as if the ground was everywhere covered with snow.

These scenes, I am told are frequently to be met with in these regions, and certainly present the most singular and startling effect, by the sudden and unexpected contrast between their snow-white appearance, and the green fields that hem them in on all sides. Through each of these meadows there is a meandering small stream which arises from salt springs, throwing out in the spring of the year great quantities of water, which flood over these meadows to the depth of three or four feet; and during the heat of summer, being exposed to the rays of the sun, entirely evaporates, leaving the incrustation of muriate on the surface, to the depth of one or two inches. These

places are the constant resort of buffaloes, which congregate in thousands about them, to lick up the salt; and on approaching the banks of this place we stood amazed at the almost incredible numbers of these animals, which were in sight on the opposite banks, at the distance of a mile or two from us, where they were lying in countless numbers, on the level prairie above, and stretching down by hundreds, to lick at the salt, forming in distance, large masses of black, most pleasingly to contrast with the snow white, and the vivid green, which I have before mentioned.

After several days toil in the manner above-mentioned, all the way over soft and green fields, and amused with many pleasing incidents and accidents of the chase, we arrived, pretty well jaded, at Fort Pierre, mouth of Teton River, from whence I am now writing; where for the first time I was introduced to Mr. MCKENZIE (of whom I have before spoken), to Mr. Laidlaw, mine host, and Mr. Halsey, a chief clerk in the establishment; and after, to the head chief and dignitaries of the great Sioux nation, who were here encamped about the Fort, in six or seven hundred skin lodges, and waiting for the arrival of tire steamer, which they had heard, was on its way up the river, and which they had great curiosity to see.

After resting a few clays, and recovering from the fatigues of my journey, having taken a fair survey of the Sioux village, and explained my views to the Indians, as well as to the gentlemen whom I have above named; I commenced my operations with the brush, and first of all painted the portrait of the head-chief of the Sioux (the one horn), whom I have before spoken of. This truly noble fellow sat for his portrait, and it was finished before any one of the tribe knew anything of it; several of the chiefs and doctors were allowed to see it, and at last it was tallied of through the village; and of course, the greater part of their numbers were at once gathered around me. Nothing short of hanging it out of doors on the side of my wigwam, would in any way answer them; and here I had the peculiar satisfaction of beholding, through a small hole I had made in my wigwam, the high admiration and respect they all felt for their chief, as well as the very great estimation in which they held me as a painter and a magician, conferring upon me at once the very distinguished appellation of Ee-cha-zoo-kah-ga-wa-kon (The Medicine Painter).

After the exhibition of this chief's picture; there was much excitement in the village about it; the doctors generally took a decided and noisy stand against the operations of my brush; haranguing the populace, and predicting bad luck, and premature death, to all who submitted to so strange and unaccountable an operation! My business for some days was entirely at a stand for want of sitters; for the doctors were opposing me with all their force; and the women and children were crying, with their hands over their mouths, making the most pitiful and doleful laments, which I never can explain to my readers; but for some just account of which, I must refer them to my friends McKinzie and Halsey, who overlooked with infinite amusement, these curious scenes and are able, no doubt, to give them with truth and effect to the world.

In this sad and perplexing dilemma, this noble chief stepped forward, and addressing himself to the chiefs and the doctors, to the braves and to the women and children, he told them to be quiet, and to treat me with friendship; that I had been travelling a great way to see them, and smoke with them; that I was great medicine, to be sure; that I was a great chief, and that I was the friend of Mr. Laidlaw and Mr. McKenzie, who had prevailed upon him to sit for his picture, and fully assured him that there was no harm in it. His speech had the desired effect, and I was shaken hands with by hundreds of their worthies, many of whom were soon dressed and ornamented. prepared to sit for their portraits.

The first who then stepped forward for his portrait was Ee-ah-sa-pa (The Black Rock) chief of the Nee-caw-wee-gee band, a tall and fine looking man, of six feet or more in stature; in a splendid dress, with his lance in his hand; with his pictured robe thrown gracefully over his shoulders, and his head-dress made of war-eagles' quills and ermine skins, falling in a beautiful crest over his back, quite down to his feet, and surmounted on the top with a pair of horns denoting him (as I have explained in former instances) head leader or war-chief of his band.

This man has been a constant and faithful friend of Mr. McKenzie and others of the Fur Traders, who held him in high estimation, both as an honourable and valiant man, and an estimable companion.

The next who sat to me was Tehan-dee, Tobacco, a desperate warrior, and represented to me by the traders, as one of the most respectable and famous chiefs of the tribe. After him sat Toh-ki-ee-to, (The Stone With Horns), Chief of the Yank-ton band, and reputed the principal and most eloquent orator of the nation. The neck, and breast, and shoulders of this man, were curiously tattooed, by pricking in gunpowder and vermilion, which in this extraordinary instance, was put on in such elaborate profusion as to appear at a little distance like a beautifully embroidered dress. In his hand he held a handsome pipe, the stem of which was several feet long, and all the way wound with ornamented braids of the porcupine quills. Around his body was wrapped a valued robe, made of the skin of the grizzly bear, and on his neck several strings of wampum, an ornament seldom seen amongst the Indians in the Far West and the North. I was much amused with the excessive vanity and egotism of this notorious man, who, whilst sitting for his picture, took occasion to have the interpreter constantly explaining to me the wonderful effects which his oratory had at different times produced on the minds of the chiefs and people of his tribe.

He told me, that it was a very easy thing for him to set all the women of the tribe to crying; and that all the chief listened profoundly to his voice before they went to war; and at last, summed up by saying, that he was "the greatest orator in the Sioux nation", by which he undoubtedly meant the greatest in the world.

Besides these distingues of this great and powerful tribe, I painted in regular succession, according to their rank and standing, Wan-ee-ton, chief of the Susseton band; Tah-zee-kah-da-cha (The Torn Belly), a brave of the Yancton band; Ka-pes-ka-day (The Shell), a brave of the O-gla-la band; Wuk-mi-ser (Corn), a warrior of the Nee-cow-ee-gee band; Cha-tee-wah-nee-chee (No Heart), chief of the Wah-nee-watch-to-nee-nah band; Mah-to-ra-rish-nee-eeh-ee-rah (The Grizzly Bear That Runs Without Regard), a brave of the Onc-pa-pa band; Mah-to-chee-ga (The Little Bear), a distinguished brave; Shon-ka (The Dog), chief of the Ca-za-zhee-ta (bad arrow points) band; Tah-teck-a-da-hair (The Steep Wind), a brave of the same band; Hah-ha-ra-pah (The Elk's Head), chief of the Ee-ta-sip-shov band; Mah-to-eeen-nah-pa (The White Bear That Goes Out), chief of the Blackfoot Sioux band; Shon-ga-ton-ga-chesh-en-day (The Horse Dung), chief of a band, a great conjuror and magician.

The portraits of all the above dignitaries can be always seen, as large as life, in my very numerous Collection, provided I get them safe home; and also the portraits of two very pretty Sioux women. Wi-looh-tah-eeh-tehah-ta-mah-nee (The Red Thing That Touches In Marching), and, Tehon-su-mons-ka (The Sand Bar). The first of these women, is the daughter of the famous chief called Black Rock, of whom I have spoken, and whose portrait has been given. She is an unmarried girl, and much esteemed by the whole tribe, for her modesty, as well as beauty. She was beautifully

---

dressed in skins, ornamented profusely with brass buttons and beads. Her hair was plaited, her ears supported a great profusion of curious beads -- and over her other dress she wore a handsomely garnished buffalo robe.

So highly was the Black Rock esteemed (as I have before mentioned), and his beautiful daughter admired and respected by the Traders, that Mr. MCKENZIE employed me to make him copies of their two portraits, which he has hung up in Mr. Laidlaw's trading-house, as valued ornaments and keepsakes.

The second of these women was very richly dressed, the upper part of her garment being almost literally covered with brass buttons; and her hair, which was inimitably beautiful and soft, and glossy as silk; fell over her shoulders in great profusion, and in beautiful waves, produced by the condition in which it is generally kept in braids, giving to it, when combed out, a waving form, adding much to its native appearance, which is invariably straight and graceless.

This woman is at present the wife of a white man by the name of Chardon, a Frenchman, who has been many years in the employment of the American Fur Company, in the character of a Trader and Interpreter; and who by his bold and daring nature, has not only carried dread and consternation amongst the Indian tribes wherever he has gone; but has commanded much respect, and rendered essential service to the Company in the prosecution of their dangerous and critical dealings with the Indian tribes. I have said something of this extraordinary man heretofore, and shall take future occasion to say more of him. For the present, suffice it to say, that although from his continual intercourse with the different tribes for twenty-five or thirty years, where he had always been put forward in the front of danger--sent as a sacrifice, or forlorn hope; still his cut and hacked limbs have withstood all the blows that have been aimed at them; and his unfaltering courage leads him to "beard the lion in his den", whilst his liberal heart, as it always has, deals out to his friends (and even to strangers, if friends are not by) all the dear earnings which are continually bought with severest toil, and at the hazard of his life.

I acknowledge myself a debtor to this good hearted fellow for much kindness and attention to me whilst in the Indian country, and also for a superb dress and robe, which had been manufactured and worn by his wife, and which he insisted on adding to my Indian GALLERY since her death, where it will long remain to be examined.

LETTER No. 28.

MOUTH OF TETON RIVER, UPPER MISSOURI.

WHILST Painting the portraits of the chiefs and braves of the Sioux, as described in my last epistle, my painting-room was the continual rendezvous of the worthies of the tribe; and I, the “lion of the day”, and my art, the summum and ne plus ultra of mysteries, which engaged the whole conversation of chiefs and sachems, as well as of women and children. I mentioned that I have been obliged to paint them according to rank, as they looked upon the operation as a very great honour, which I, as “a great chief and medicine-man”, was conferring on all who sat to me. Fortunately it was for me, however, that the honour was not a sufficient inducement for all to overcome their fears, which often stood in the way of their consenting to be painted; for if all had been willing to undergo the operation, I should have progressed but a very little way in the “rank and file” of their worthies; and should have had to leave many discontented, and (as they would think) neglected. About one in five or eight was willing to be painted, and the rest thought they would be much more sure of “sleeping quiet in their graves” after they were dead, if their pictures were not made. By this lucky difficulty I got great relief, and easily got through with those who were willing, and at the same time decided by the chiefs to be worthy, of so signal an honour.

After I had done with the chiefs and braves, and proposed to paint a few of the women, I at once got myself into a serious perplexity, being heartily laughed at by the whole tribe, both by men and by women, for my exceeding and (to them) unaccountable condescension in seriously proposing to paint a woman; conferring on her the same honour that I had done the chiefs and braves. Those whom I had honoured, were laughed at by hundreds of the jealous, who had been decided unworthy the distinction, and were now amusing themselves with the very enviable honour which the great white medicine-man had conferred, especially on term, and was now to confer equally upon the squaws!

The first reply that I received from those whom I had painted, was, that if I was to paint women and children, the sooner I destroyed their pictures, the better; for I had represented to them that I wanted their pictures to exhibit to white chiefs, to shew who were the most distinguished and worthy of the Sioux; and their women had never taken scalps, nor did anything better than make fires and dress skins. I was quite awkward in this dilemma, in explaining to them that I wanted the portraits of the women to hang tinder those of their husbands, merely to shew how their women looked, and how they dressed, without saying any more of them. After some considerable delay of my operations, and much deliberation on the subject, through the village, I succeeded in getting a number of women’s portraits, of which the two above introduced are a couple.

The vanity of these men, after they had agreed to be painted was beyond all description, and far surpassing that which is oftentimes immodest enough in civilized society, where the sitter generally leaves the picture when it is done to speak for, and to take care of, itself; while an Indian often lays down, from morning till night, in front of his portrait, admiring his own beautiful face, and

---

faithfully guarding it from day to day, to save it from accident or harm.

This watching or guarding their portraits, I have observed during all of my travels amongst them as a very curious thing; and in many instances, where my colours were not dry, and subjected to so many accidents, from the crowds who were gathering about them, I have found this Peculiar guardianship of essential service to me -- relieving my mind oftentimes from a great deal of anxiety.

I was for a long time at a loss for the true cause of this singular a peculiarity, but at last learned that it was owing to their superstitious notion, that there may be life to a certain extent in the picture; and that if harm or violence be done to it, it may in some mysterious way, affect their health or do them other injury.

After I had been several weeks busily at work with my brush in this village, and pretty well used to the modes of life in these regions -- and also familiarly acquainted with all the officers and clerks of the Establishment, it was announced one day, that the steamer which we had left, was coming in the river below, where all eyes were anxiously turned, and all ears were listening; when, at length, we discovered the puffing of her steam; and, at last, heard the thundering of her cannon, which were firing from her deck.

The excitement and dismay caused amongst 6000 of these wild people, when the steamer came up in front of their village, was amusing in the extreme. The steamer was moored at the shore, however; and when Mr. Chouteau and Major Sanford, their old friend and agent, walked ashore, it seemed to restore their confidence and courage; and the whole village gathered in front of the boat, without showing much further amazement, or even curiosity about it.

The steamer rested a week or two at this Place before she started on her voyage for the head-waters of the Missouri; during which time, there was much hilarity and mirth indulged in amongst the Indians, as well as with the hands employed in the service of the Fur Company. The appearance of a steamer in this wild country was deemed a wonderful occurrence, and the time of her presence here, looked upon, and used as a holiday. Some sharp encounters amongst the trappers, who come in here from the mountains, loaded with Packs of furs, with sinews hardened by long exposure, and seemingly impatient for a bight, which is soon given them by some bullying fist-cuff-fellow, who steps forward and settles the matter in a ring, which is made and strictly preserved for fair play, until hard raps, and bloody noses, and blind eyes "settle the hash", and satisfy his trapper ship to lay in bed a week or two, and then graduate a sober and a civil man.

Amongst the Indians we have had numerous sights and amusements to entertain and some to shock us. Shows of dances-ball-plays-horse racing -- foot racing, and wrestling in abundance. Feasting -- fasting, and prayers we have also had; and penance and tortures, and almost every thing short of self-immolation.

Some few days after the steamer had arrived, it was announced that a grand feast was to be given to the great white chiefs, who were visitors amongst them; and preparations were made accordingly for it. The two chiefs, Ha-wan-je-tah and Te-han-dee, of whom I have before spoken, brought their two tents together, forming the two into a semi-circle, enclosing a space sufficiently large to accommodate 150 men; and sat down with that number of the principal chiefs and warriors of the Sioux nation; with Mr. Chouteau, Major Sanford, the Indian agent, Mr. MCKENZIE, and myself, whom they had invited in due time, and placed on elevated seats in the center of the crescent; while the rest of the company all sat upon the ground, and mostly cross-legged, prepara-

tory to the feast being dealt out.

In the center of the semi-circle was erected a flag-staff, on which was waving a white flag, and to which also was tied the calumet, both expressive of their friendly feelings towards us. Near the foot of the flag-staff were placed in a row on the ground, six or eight kettles, with iron covers on them, shutting them tight, in which were prepared the viands for our voluptuous feast. Near the kettles, and on the ground also, bottom side upwards, were a number of wooden bowls, in which the meat was to be served out. And in front, two or three men, wile were there placed as waiters, to light the pipes for smoking, and also to deal out the food.

In these positions things stood, and all sat, with thousands climbing and crowding around, for a peep at the grand pageant; when at length, Ha-wan-je-tah (The One Horn), head chief of the nation, rose in front of the Indian agent, in a very handsome costume, and addressed him thus: "My father, I am glad to see you here to-day -- my heart is always glad to see my father when he comes -- our Great Father, who sends him here is very rich, and we are poor. Our friend Mr. McKinzie, who is here, we are also glad to see; we know him well, and we shall be sorry when he is gone our friend who is on your right-hand we all know is very rich; and we have heard that he owns the great medicine-canoe; he is a good man, and a friend to the red men. Our friend the White Medicine, who sits with you, we did not know -- he came amongst us a stranger, and he has made me very well -- all the women know it, and think it very good; he has done many curious things, and we have all been pleased with him -- he has made us much amusement -- and we know he is great medicine.

"My father, I hope you will have pity on us, we are very poor-we offer you to-day, not the best that we have got; for we have a plenty of good buffalo hump and marrow -- but we give you our hearts in this feast -- we have killed our faithful dogs to feed you -- and the Great Spirit will seal our friendship. I have no more to say."

After these words he took off his beautiful war-eagle head-dress -- his shirt and leggings -- his necklace of grizzly bears claws and his moccasins; and tying them together, laid them gracefully down at the feet of the agent as a present; and laying a handsome pipe on top of them, he walked around into an adjoining lodge, where he got a buffalo robe to cover his shoulders, and returned to the feast, taking his seat which he had before occupied.

Major Sanford then rose and made a short speech in reply, thanking him for the valuable present which he had made him, and for the very polite and impressive manner in which it had been done; and sent to the steamer for a quantity of tobacco and other presents, which were given to him in return. After this, and after several others of the chiefs had addressed him in a similar manner; and, like the first, disrobed themselves, and thrown their beautiful costumes at his feet, one of the three men in front deliberately lit a handsome pipe, and brought it to Ha-wan-je-tah to smoke. He took it, and after presenting the stem to the North-to the South -- to the East, and the West -- and then to the Sun that was over his head, and pronounced the words "How--how--how!" drew a whiff or two of smoke through it, and holding the bowl of it in one hand, and its stem in the other, he then held it to each of our mouths, as we successively smoked it; after which it was passed around through the whole group, who ail smoked through it, or as far as its contents lasted, when another of the three waiters was ready with a second, and at length a third one, in the same way, which lasted through the hands of the whole number of guests. This smoking was conducted with the strictest adherence to exact and established form, and the feast the whole way,

to the most positive silence. After the pipe is charged, and is being lit, until the time that the chief has drawn the smoke through it, it is considered an evil omen for any one to speak; and if any one break silence in that time, even in a whisper, the pipe is instantly dropped by the chief, and their superstition is such, that they would not dare to use it on this occasion; but another one is called for and used in its stead. If there is no accident of the kind during the smoking, the waiters then proceed to distribute the meat, which is soon devoured in the feast.

In this case the lids were raised from the kettles, which were all filled with dogs' meat alone. It being well-cooked, and made into a sort of a stew, sent forth a very savory and pleasing smell, promising to be an acceptable and palatable food. Each of us civilized guests had a large wooden bowl placed before us, with a huge quantity of dogs' flesh floating in a profusion of soup, or rich gravy, with a large spoon resting in the dish, made of the buffalo's horn. In this most difficult and painful dilemma we sat; all of us knowing the solemnity and good feeling in which it was given, and the absolute necessity of falling to, and devouring a little of it. We all tasted it a few times, and resigned our dishes, which were quite willingly taken, and passed around with others, to every part of the group, who all ate heartily of the delicious viands, which were soon dipped out of the kettles, and entirely devoured; after which each one arose as he felt disposed, and walked off without uttering a word. In this way the feast ended, and all retired silently, and gradually, until the ground was left vacant to the charge of the waiters or officers, who seemed to have charge of it during the whole occasion.

This feast was unquestionably given to us, as the most undoubted evidence they could give us of their friendship; and we, who knew the spirit and feeling in which it was given, could not but treat it respectfully, and receive it as a very high and marked compliment.

Since I witnessed it on this occasion, I have been honoured with numerous entertainments of the kind amongst the other tribes, which I have visited towards the sources of the Missouri, and all conducted in the same solemn and impressive manner; from which I feel authorized to pronounce the cornfeast a truly religious ceremony, wherein the poor Indian sees fit to sacrifice his faithful companion to bear testimony to the sacredness of his vows of friendship, and invite his friend to partake of its flesh, to remind him forcibly of the reality of the sacrifice, and the solemnity of his professions.

The dog, amongst all Indian tribes, is more esteemed and more valued than amongst any part of the civilized world; the Indian who has more time to devote to his company, and whose untutored mind more nearly assimilates to that of his faithful servant, keeps him closer company, and draws him nearer to his heart; they hunt together, and are equal sharers in the chase—their bed is one; and on the rocks, and on their coats of arms they carve his image as the symbol of fidelity. Yet, with all of these he will end his affection with this faithful follower, and with tears in his eyes, offer him as a sacrifice to seal the pledge he has made to man; because a feast of venison, or of buffalo meat, is what is due to every one who enters an Indian's wigwam and of course, conveys but a passive or neutral evidence, that generally goes for nothing.

I have sat at many of these feasts, and never could but appreciate the moral and solemnity of them. I have seen the master take from the bowl the head of his victim, and descant on its former affection and fidelity with tears in his eyes. And I have seen guests at the same time by the aide of me, jesting and sneering at the poor Indian's folly and stupidity; and I have said in my heart, that they never deserved a name so good or so honourable as that of the poor animal whose bones

they were picking.

At the feast which I have been above describing, each of us tasted a little of the meat, and passed the dishes on to the Indians, who soon demolished everything they contained. We all agreed that the meat was well cooked, and seemed to be a well-flavored and palatable food; and no doubt, could have been eaten with a good relish, if we had been hungry, and ignorant of the nature of the food we were eating.

The flesh of these dogs, though apparently relished by the Indians, is, undoubtedly, inferior to the venison and buffalo's meat, of which feasts are constantly made where friends are invited, as they are in civilized society, to a pleasant and convivial party; from which fact alone, it would seem clear, that they have some extraordinary motive, at all events, for feasting on the flesh of that useful and faithful animal; even when, as in the instance I have been describing, their village is well supplied with fresh and dried meat of the buffalo. The dog-feast is given, I believe, by all tribes in North America; and by them all, I think, this faithful animal, as well as the horse, is sacrificed in several different ways, to appease offended Spirits or Deities, whom it is considered necessary that they should conciliate in this way; and when done, is invariably done by giving the best in the herd or the kennel.

LETTER. No. 29.

MOUTH OF TETON RIVER, UPPER MISSOURI.

ANOTHER curious and disgusting scene I witnessed in the after part of the day on which we were honoured with the dog feast. In this I took no part, but was sufficiently near to it, when standing some rods off, and witnessing the cruel operation. I was called upon by one of the clerks in the Establishment to ride up a mile or so, near the banks of the Teton River, in a little plain at the base of the bluffs, where were grouped some fifteen or twenty lodges of the Ting-ta-to-ah band, to see a man (as they said) "looking at the sun"! We found him naked, except his breech-cloth, with splints or skewers run through the flesh on both breasts, leaning back and hanging with the weight of his body to the top of a pole which was fastened to the ground, and to the upper end of which he was fastened by a cord which was tied to the splints. In this position he was leaning back, with nearly the whole weight of his body hanging to the pole, the top of which was bent forward, allowing his body to sink about half-way to the ground. His feet were still upon the ground, supporting a small part of his weight; and he held in his left hand his favorite bow, and in his right, with a desperate grip, his medicine-bag. In this condition, with the blood trickling down over his body, which was covered with white and yellow clay, and amidst a great crowd who were looking on, sympathizing with and encouraging him, he was hanging and "looking at the sun", without paying the least attention to any one about him. In the group that was reclining around him, were several mystery-men beating their drums and shaking their rattles, and singing as loud as they could yell, to encourage him and strengthen his heart to stand and look at the sun, from its rising in the morning 'till its setting at night; at which time, if his heart and his strength have not failed him, he is "cut down", receives the liberal donation of presents (which have been thrown into a pile before him during the day), and also the name and the style of a doctor, or medicine-man, which lasts him, and ensures him respect, through life.

This most extraordinary and cruel custom I never heard of amongst any other tribe, and never saw an instance of it before or after the one I have just named. It is a sort of worship, or penance, of great cruelty; disgusting and painful to behold, with only one palliating circumstance about it, which is, that it is a voluntary torture and of very rare occurrence. The poor and ignorant, misguided and superstitious man who undertakes it, puts his everlasting reputation at stake upon the issue; for when he takes his stand, he expects to face the sun and gradually turn his body in listless silence, till he sees it go down at night; and if he faints and falls, of which there is imminent danger, he loses his reputation as a brave or mystery-man, and suffers a signal disgrace in the estimation of the tribe, like all men who have the presumption to set themselves up for braves or mystery-men, and fail justly to sustain the character.

The Sioux seem to have many modes of worshipping the Great or Good Spirit, and also of conciliating the Evil Spirit: they have numerous fasts and feasts, and many modes of sacrificing, but yet they seem to pay less strict attention to them than the Mandans do, which may perhaps be owing

---

in a great measure to the wandering and predatory modes of life which they pursue, rendering it difficult to adhere so rigidly to the strict form and letter of their customs.

There had been, a few days before I arrived at this place, a great medicine operation held on the prairie, a mile or so back of the Fort, and which, of course, I was not lucky enough to see. The poles were still standing, and the whole transaction was described to me by my friend Mr. Halsey, one of the clerks in the Establishment. From the account given of it, it seems to bear some slight resemblance to that of the Mandan religious ceremony, but no nearer to it than a feeble effort by so ignorant and superstitious a people, to copy a custom which they most probably have had no opportunity to see themselves, but have endeavored to imitate from hearsay. They had an awning of immense size erected on the prairie which is yet standing, made of willow bushes supported by posts, with Poles and willow boughs laid over; under the center of which there was a pole set firmly in the ground, from which many of the young men had suspended their bodies by splints run through the flesh in different parts, the numerous scars of which were yet seen bleeding afresh from day to day, amongst the crowds that were about me.

During my stay amongst the Sioux, as I was considered by them to be great medicine, Received many pipes and other little things from them as presents, given to me in token of respect for me, and as assurances of their friendship; and I, being desirous to collect and bring from their country every variety of their manufactures, of their costumes, their weapons, their pipes, and their mystery-things, purchased a great many others, for which, as I was "medicine" and a "great white chief"! I was necessarily obliged to pay very liberal prices.

Of the various costumes (of this, as well as of other tribes), that I have collected, there will be seen fair and faithful representations in the numerous portraits; and of their war-clubs, pipes, &c. I have set forth in the following illustrations, a few of the most interesting of the very great numbers of those things which I have collected in this and other tribes which I have visited.

The luxury of smoking is known to all the North American Indians, in their primitive state, and that before they have any knowledge of tobacco; which is only introduced amongst them by civilized adventurers, who teach them the use and luxury of whiskey at the same time.

In their native state they are excessive smokers, and many of them (I would almost venture the assertion), would seem to be smoking one-half of their lives. There may be two good reasons for this, the first of which is, that the idle and leisure life that the Indian leads, (who has no trade or business to follow -- no office hours to attend to, or profession to learn), induces him to look for occupation and amusement in so innocent a luxury, which again further tempts him to its excessive use, from its feeble and harmless effects on the system. There are many weeds and leaves, and barks of trees, which are narcotics, and of spontaneous growth in their countries, which the Indians dry and pulverize, and carry in pouches and smoke to great excess -- and which in several of the languages, when thus prepared, is called k'nick K'neck.

As smoking is a luxury so highly valued by the Indians, they have bestowed much pains, and not a little ingenuity, to the construction of their pipes. Of these I have procured a collection of several hundreds, and have given facsimile outlines of a number of the most curious. The bowls of these are generally made of the red steatite, or "pipe-stone" (as it is more familiarly called in this country), and many of them designed and carved with much taste and skill, with figures and groups in alto relievo, standing or reclining upon them.

The red stone of which these pipe bowls are made, is, in my estimation, a great curiosity; inas-

much as I am sore it is a variety of steatite (if it be steatite), differing from that of any known European locality, and also from any locality known in America, other than the one from which all these pipes come; and which are all traceable I have found to one source; and that source as yet unvisited except by the red man who describes it, everywhere, as a place of vast importance to the Indians -- as given to them by the Great Spirit, for their pipes, and strictly forbidden to be used for anything else.

The source from whence all these pipes come, is, undoubtedly, somewhere between this place and the Mississippi River; and as the Indians all speak of it as a great medicine-place, I shall certainly lay my course to it, ere long, and be able to give the world some account of it and its mysteries.

The Indians shape out the bowls of these pipes from the solid stone, which is not quite as hard as marble, with nothing but a knife. The stone which is of a cherry red, admits of a beautiful polish, and the Indian makes the hole in the bowl of the pipe, by drilling into it a hard stick, shaped to the desired size, with a quantity of sharp sand and water kept constantly in the hole, subjecting him therefore to a very great labour and the necessity of much patience.

The shafts or stems of these pipes, are from two to four feet long, sometimes round, but most generally fat; of an inch or two in breadth, and wound half their length or more with braids of porcupines' quills; and often ornamented with the beaks and tufts from the wood-pecker's head, with ermine skins and long red hair, dyed from white horse hair or the white buffalo's tail.

The stems of these pipes will be found to be carved in many ingenious forms, and in all cases they are perforated through the center, quite staggering the wits, of the enlightened world to guess how the holes have been bored through them; until it is simply and briefly explained, that the stems are uniformly made of the stalk of the young ash, which generally grows straight, and has a small pith through the center, which is easily burned out with a hot wire or a piece of hard wood, by a much slower process.

In another drawing of articles, the pipes marked b are ordinary pipes, made and used for the luxury only of smoking; and for this purpose, every Indian designs and constructs his own pipe. The calumet, or Pipe of peace, ornamented with the war-eagle's quills, is a sacred pipe, and never allowed to be used on any other occasion than that of peace-making; when the chief brings it into treaty, and unfolding the many bandages which are carefully kept around it -- has it ready to be mutually smoked by the chiefs, after the terms of the treaty are agreed upon, as the means of solemnizing or signing, by an illiterate people, who cannot draw up an instrument, and sign their names to it, as it is done in the civilized world.

The mode of solemnizing is by passing the sacred stem to each chief, who draws one breath of smoke only through it, thereby passing the most inviolable pledge that they can possibly give, for the keeping of the peace. This sacred pipe is then carefully folded up, and stowed away in the chief's lodge, until a similar occasion calls it out to be used in a similar manner. There is no custom more uniformly in constant use amongst the poor Indians than that of smoking, nor any other more highly valued. His pipe is his constant companion through life -- his messenger of peace; he pledges his friends through its stem and its bowl -- and when its care-drowning fumes cease to flow, it takes a place with him in his solitary grave, with his tomahawk and war-club, companions to his long fancied, "mild and beautiful hunting-grounds."

The weapons of these people, like their pipes, are numerous, and mostly manufactured by themselves. In a former place. I have described a part of these, such as the bows and arrows, lances,

&c., and they have yet many others, specimens of which I have collected from every tribe; and a number of which I have grouped together; consisting of knives, war-clubs, and tomahawks. I have here introduced the most general and established forms that are in use amongst the different tribes, which are all strictly copied from amongst the great variety of these articles to be found in my Collection.

The scalping-knives and tomahawks epee are of civilized manufacture, made expressly for Indian use, and carried into the Indian country by thousands and tens of thousands, and sold at an enormous price. The scabbards of the knives and handles for the tomahawks, the Indians construct themselves, according to their own taste, and oftentimes ornament them very handsomely. In his rude and unapproached condition, the Indian is a stranger to such weapons as these--he works not in the metals; and his untutored mind has not been ingenious enough to design or execute anything so savage or destructive as these civilized refinements on Indian barbarity. In his native simplicity he shapes out his rude hatchet from a piece of stone, as in letter f, heads his arrows and spears with flints; and his knife is a sharpened bone, or the edge of a broken silex. The war-club c is also another civilized refinement, with a blade of steel, of eight or ten inches in length, and set in a club, studded around and ornamented with some hundreds of brass nails.

Their primitive clubs d are curiously carved in wood, and fashioned out with some considerable picturesque form and grace; are admirably fitted to the hand, and calculated to deal a deadly blow with the spike of iron or bone which is imbedded in the ball or bulb at the end.

Two of the tomahawks that I have named, marked e, are what are denominated "pipe-tomahawks," as the heads of them are formed into bowls like a pipe, in which their tobacco is put, and they smoke through the handle. These are the most valued of an Indian's weapons, inasmuch as they are a matter of luxury, and useful for cutting his fire-wood, &c. in time of peace; and deadly weapons in time of war, which they use in the hand, or throw with unerring and deadly aim.

The scalping-knife b in a beautiful scabbard, which is carried under the belt, is the form of knife most generally used in all parts of the Indian country, where knives have been introduced. It is a common and cheap butcher knife with one edge, manufactured at Sheffield, in England, perhaps, for sixpence; and sold to the poor Indian in these wild regions for a horse. If I should live to get home, and should ever cross the Atlantic with my Collection, a curious enigma would be solved for the English people, who may enquire for a scalping-knife, when they find that every one in my Collection (and hear also, that nearly every one that is to be seen in the Indian country, to the Rocky Mountains and the Pacific Ocean) bears on its blade the impress of G.R., which they will doubtless understand.

The huge two-edged knife, with its scabbard of a part of the skin of a grizzly bear's head, letter a, is one belonging to the famous chief of the Mandans, of whom I have before said much. The manufacture of this knife is undoubtedly American; and its shape differs altogether from those which are in general use.

The above weapons, as well as the bow and lance, of which I have before spoken, are all carried and used on horseback with great effect. The Indians in this country of green fields, all ride for their enemies, and also for their game, which is almost invariably killed whilst their horses are at full speed. They are all cruel masters for their horses; and in war or the chase goad them on with a heavy and cruel whip, the handle of which is generally made of a large prong of the elk's horn or of wood, mid the lashes of rawhide are very heavy; being braided, or twisted, or cut into wide

straps. These are invariably attached to the wrist of the right arm by a tough thong, that they can be taken up and used at any moment, and dropped the next, without being lost.

During the time that I was engaged in painting my portraits, I was occasionally inducing the young men to give me their dances, a great variety of which they gave me by being slightly paid; which I was glad to do, in order to enable me to study their character and expression thoroughly, which I am sure I have done; and I shall take pleasure in shewing them to the world when I get back. The dancing is generally done by the young men, and considered undignified for the chiefs or doctors to join in. Yet so great was my medicine, that chiefs and medicine-men turned out and agreed to compliment me with a dance. I looked on with great satisfaction; having been assured by the Interpreters and Traders, that this was the highest honour they had ever known them to pay to any stranger amongst them.

In this dance, which I have called "the dance of the chiefs," for want of a more significant title, was given by fifteen or twenty chiefs and doctors; many of whom were very old and venerable men. All of them came out in their head-dresses of war-eagle quills, with a spear or staff in the left hand, and a rattle in the right. It was given in the midst of the Sioux village, in front of the head chiefs lodge; and beside the medicine-man who beat on the drum, and sang for the dance, there were four young women standing in a row, and chanting a sort of chorus for the dancers; forming one of the very few instances that I ever have met, where the women are allowed to take any part in the dancing, or other game or amusement, with the men.

This dance was a very spirited thing, and pleased me much, as well as all the village, who were assembled around to witness what most of them never before had seen, their aged and venerable chiefs united in giving a dance.

As I have introduced the scalping-knife above, it may be well for me to give some further account in this place of the custom and the mode of taking the scalp; a custom practiced by all the North American Indians, which is done when an enemy is killed in battle, by grasping the left hand into the hair on the crown of the head, and passing the knife around it through the skin, tearing off a piece of the skin with the hair, as large as the palm of the hand, or larger, which is dried, and often curiously ornamented and preserved, and highly valued as a trophy. The scalping is an operation not calculated of itself to take life, as it only removes the skin, without injuring the bone of the head; and necessarily, to be a genuine scalp, must contain and show the crown or center of the head; that part of the skin which lies directly over what the phrenologists call "self-esteem," where the hair divides and radiates from the center; of which they all profess to be strict judges, and able to decide whether an effort has been made to produce two or more scalps from one head. Besides taking the scalp, the victor generally, if he has time to do it without endangering his own scalp, cuts off and brings home the rest of the hair, which his wife will divide into a great many small locks, and with them fringe off the seams of his shirt and his leggings, as will have been seen in many of the illustrations; which also are worn as trophies and ornaments to the dress, and then are familiarly called "scalp-locks." Of these there are many dresses in my Collection, which exhibit a continuous row from the top of each shoulder, down the arms to the wrists, and down the seams of the leggings, from the hips to the feet, rendering them a very costly article to buy from the Indian, while is not sure that his success in his military exploits will ever enable him to replace them. The scalp, then, is a patch of the skin taken from the head of an enemy killed in battle, and preserved and highly appreciated as the record of a death produced by the hand of the individual

---

who possesses it; and may oftentimes during his life, be of great service to a man living in a community where there is no historian to enrol the names of the fellows to record the heroic deeds of the brave, who have gained their laurels in mortal combat with their enemies; where it is as lawful and as glorious to slay an enemy in battle, as it is in Christian communities; and where the poor Indian is bound to keep the record himself, or be liable to lose it and the honour, for no one in the tribe will keep it for him. As the scalp is taken then as the evidence of a death, it will easily be seen, that the Indian has no business or inclination to take it from the head of the living; which I venture to say is never done in North America, unless it be, as it sometimes has happened, where a man falls in the heat of battle, stunned with the blow of a weapon or a gunshot, and the Indians, rushing over his body, snatches off his scalp, supposing him dead, who afterwards rises from the field of battle, and easily recovers from this superficial wound of the knife, wearing a bald spot on his head during the remainder of his life, of which we have frequent occurrences on our Western frontiers. The scalp must be from the head of an enemy also, or it subjects its Possessor to disgrace and infamy who carries it. There may be many instances where an Indian is justified in the estimation of his tribe in taking the life of one of his own people; and their laws are such, as oftentimes make it his imperative duty; and yet no circumstances, however aggravating, will justify him or release him from the disgrace of taking the scalp.

There is no custom practiced by the Indians, for which; they are more universally condemned, than that of taking the scalp; and, at the same time, I think there is some excuse for them, inasmuch as it is a general custom of the country, and founded, like many other apparently absurd and ridiculous customs of these people, in one of the necessities of Indian life, which necessities we are free from in the civilized world, and which customs, of course, we need not and do not practice. From an ancient custom, "time out of mind," the warriors of these tribes have been in the habit of going to war, expecting to take the scalps of their enemies whom they may slay in battle, and all eyes of the tribe are upon them, making it their duty to do it; so from custom it is every man's right, and his duty also, to continue and keep up a regulation of his society, which it is not in his power as an individual, to abolish or correct, if he saw fit to do it.

One of the principal denunciations against the custom of taking the scalp, is on account of its alleged cruelty, which it certainly has not; as the cruelty would be in the Killing, and not in the act of cutting the skin from a man's head after he is dead. To say the most of it, it is a disgusting custom, and I wish I could be quite sure that the civilized and Christian world (who kill hundreds, to where the poor Indians kill one), do not often treat their enemies dead, in equally as indecent and disgusting a manner, as the Indian does by taking the scalp.

If the reader thinks that I am taking too much pains to defend the Indians for this, and others of their seemingly abominable customs, he will bear it in mind, that I have lived with these people, until I have learned the necessities of Indian life in which these customs are founded; and also, that I have met with so many acts of kindness and hospitality at the hands of the poor Indian, that I feel bound, when I can do it, to render what excuse I can for a people, who are dying with broken hearts, and never can speak in the civilized world in their own defense.

And even yet, reader, if your education, and your reading of Indian cruelties and Indian barbarities -- of scalps, and scalping-knives, and scalping, should have ossified a corner of your heart against these unfortunate people, and would shut out their advocate, I will annoy you no longer on this subject, but withdraw, and leave you to cherish the very beautiful, humane and parental

moral that was carried out by the United States and British Governments during the last, and the revolutionary wars, when they mutually employed thousands of their "Red children," to aid and to bleed, in fighting their battles, and paid them, according to contract, so many pounds, shillings and pence or so many dollars and cents for every "scalp" of a "red" or a blue coat" they could bring in!

In a drawing, there will be seen the principal modes in which the scalps are prepared, and several of the uses to which they are put. The most usual way of preparing and dressing the scalp is that of stretching it on a little hoop at the end of a stick two or three feet long, for the purpose of "dancing it," as they term it; which will be described in the scalp-dance, in a few moments. There are many again, which are small, and not "dressed;" sometimes not larger than a crown piece, and hung to different parts of the dress. In public shows and parades, they are often suspended from the bridle bits or halter when they are paraded and carried as trophies. Sometimes they are cut out, as it were into a string, the hair forming a beautiful fringe to line the handle of a war-club. Sometimes they are hung at the end of a club, and at other times, by the order of the chief, are hung out, over the wigwams, suspended from a pole, which is called the "scalp-pole". This is often done by the chief of a village, in a pleasant day, by his erecting over his wig-warn a pole with all the scalps that he had taken, arranged upon it; at the sight of which all the chiefs and warriors of the tribe, who had taken scalps, "follow suit"; enabling every member of the community to stroll about the village on that day and "count scalps", learning thereby the standing of every warrior, which is decided in a great degree by the number of scalps they have taken in battles with their enemies. In yet another sketch shows the usual manner of taking the scalp, and (letter h), exhibits the head of a man who had been scalped and recovered from the wound.

So much for scalps and scalping, of which I shall yet say more, unless I should unluckily lose one before I get out of the country.

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

by George Catlin

(First published in London in 1844)

LETTER--No. 30.

MOUTH OF TETON RIVER, UPPER MISSOURI.

In the last letter I gave an account of many of the weapons and other manufactures of these wild folks; and as this has been a day of packing and casing a great many of these things, which I have obtained of the Indians, to add to my *Musee Indienne*, I will name a feat more, which I have just been handling over; some description of which may be necessary for the reader in endeavoring: to appreciate some of their strange customs and amusements, which I am soon to unfold. - In a drawing, will be seen the quiver made of the fawn's skin, and the Sioux shield made of the skin of the buffalo's neck, hardened with the glue extracted from the hoofs and joints of the same animal. The process of "smoking tire shield" is a very curious, as well as an important one, in their estimation. For this purpose a young man about to construct him a shield; digs a hole of two feet in depth, in the ground, and as large in diameter as he designs to make his shield. In this he builds a fire, and over it, a few inches higher than the ground, he stretches the raw hide horizontally over the fire, with little pegs driven through holes made near the edges of the skin. This skin is at first, twice as large as the size of the required shield; but having got his particular and best friends (who are invited on the occasion,) into a ring, to dance and sing around it, and solicit the Great Spirit to instil into it the power to protect him harmless against his enemies, he spreads over it the glue, which is rubbed and dried in, as the skin is heated; and a second busily drives other and other pegs, inside of those in the ground, as they are gradually giving way and being pulled up by the contraction of the skin. By this curious process, which is most dexterously done, the skin is kept tight whilst it contracts to one-half of its size, taking up the glue and increasing in thickness until it is rendered as thick and hard as required (and his friends have pleaded long enough to make it snow, and almost ball proof), when the dance ceases, and the fire is put out. When it is cooled and cut into the shape that he desires, it is often painted with his medicine or totem upon it, the figure of an eagle, an owl, a buffalo or other animal, as the case may be, which he trusts will guard and protect him from harm. It is then fringed with eagles' quills, or other ornaments he may have chosen, and slung with a broad leather strap that crosses his breast. These shields are carried by all the warriors in these regions, for their protection in battles, which are almost variably fought from their horses' backs.

Of pipes, and the custom of smoking, I have already spoken; and I then said, that the Indians use several substitutes for tobacco, which they call *K'nick K'neck*. For the carrying of this delicious weed or bark, and preserving its flavour, the women construct very curious pouches of otter, or beaver, or other skins (letters c, c, c.), which are ingeniously ornamented with porcupine quills and beads, and generally carried hanging across the left arm, containing a quantity of the precious narcotic, with flint and steel, and spunk, for lighting the pipe.

The musical instruments used amongst these people are few, and exceedingly rude and imperfect, consisting chiefly of rattles, drums, whistles, and lutes, all of which are used in the different tribes.

---

I made sketches today of the rattles (or She-she-quois) most generally used, made of rawhide, which becomes very hard when dry, and charged with Pebbles or something of the kind, which produce a shrill noise to mark the time in their dances and songs. Their drums (letters e, e,) are made in a very rude manner, oftentimes with a mere piece of rawhide stretched over a hoop, very much in the shape of a tambourine ; and at other times are made in the form of a keg, with a head of rawhide at each end; on these they beat with a drum-stick, which oftentimes itself is a rattle, the bulb or head of it being made of rawhide and filled with pebbles. In other instances the stick has, at its end, a little hoop wound and covered with buckskin, to soften the sound; with which they beat on the drum with great violence, as the chief and heel-inspiring sound for all their dances, and also as an accompaniment for their numerous and never-ending songs of amusement, of thanksgiving, and medicine or metal. The mystery whistle, (letter f,) is another instrument of their invention, and very ingeniously made, the sound being produced on a principle entirely different from that of any wind instrument known in civilized inventions; and the notes produced on it, by the sleight or trick of an Indian boy, in so simple and successful a manner, as to baffle entirely all civilized ingenuity, even when it is seen to be played. An Indian boy would stand and blow his notes on this repeatedly, for hundreds of white men who might be lookers-on, not one of whom could make the least noise on it, even by practicing with it for hours. When I first saw this curious exhibition, I was charmed with the peculiar sweetness of its harmonic sounds, and completely perplexed, (as hundreds of white men have no doubt been before me, to the great amusement and satisfaction of the women and children,) as to the mode in which the sound was produced, even though it was repeatedly played immediately before my eyes, and handed to me for my vain and amusing endeavors. The sounds of this little simple toy are liquid and sweet beyond description; and, though here only given in harmonics, I am inclined to think, might, by some ingenious musician or musical instrument-maker, be modulated and converted into something very pleasing.

The War-whistle is a well known and valued little instrument, of six or nine inches in length, invariably made of the bone of the deer or turkey's leg, and generally ornamented. with porcupine quills of different colors which are wound around it. A chief or leader carries this to battle with him, suspended generally from his neck, and worn under his dress. This little instrument has but two notes, which are produced by blowing in the ends of it. The note produced in one end, being much more shrill than the other, gives the signal for battle, whilst the other sounds a retreat; a thing that is distinctly heard and understood by every man, even in the heat and noise of battle, where all are barking and yelling as loud as possible, and of course unable to hear the commands of their leader.

There is yet another wind instrument which I have added to my Collection, and from its appearance would seem to have been borrowed, in part, from the civilized world. This is what is often on the frontier called a "deer-skin flute," a Winnebago courting flute, "tsal-eet-quash-to"; it is perforated with holes for the fingers, sometimes for six, at others for four, and in some instances for three only, having only so many notes with their octaves. These notes are very irregularly graduated, showing clearly that they have very little-taste or ear for melody. These instruments are blow in the end, and the sound produced much on the principle of a whistle. In the vicinity of the Upper Mississippi, I often and familiarly heard this instrument, called the Winnebago courting flute; and was credibly informed by traders and others in those regions, that the young men of

that tribe meet with signal success, oftentimes, in wooing their sweethearts with its simple notes, which they blow for hours together, and from day to day, from the bank of some stream -- some favorite rock or log on which they are seated, near to the wigwam which contains the object of their tender passion; until her soul is touched, and she responds by some welcome signal, that she is ready to repay the young Orpheus for his pains, with the gift of her hand and her heart. How true these representations may have been made, I cannot say, but there certainly must have been some ground for the present cognomen by which it is known in that country.

From these rude and exceedingly defective instruments, it will at once be seen, that music has made but little progress with these people; and the same fact will be still more clearly proved, to those who have an opportunity to hear their vocal exhibitions, which are daily and almost hourly serenading the ears of the traveller through their country.

Dancing is one of the principal and most frequent amusements of all the tribes of Indians in America; and, in all of these, both vocal and instrumental music are introduced. These dances consist in about four different steps, which constitute all the different varieties: but the figures and forms of these scenes are very numerous, and produced by the most violent jumps and contortions, accompanied with the song and beats of the drum, which are given in exact time with their motions. It has been said by some travellers, that the Indian has neither harmony or melody in his music, but I am unwilling to subscribe to such an assertion; although I grant, that for the most part of their vocal exercises, there is a total absence of what the musical world would call melody; their songs being made up chiefly of a sort of violent chant of harsh and jarring gutturals, of yelps and barks, and screams, which are given out in perfect time, not only with "method (but with harmony) in their madness." There are times too, as every traveller of the Indian country will attest, if he will recall them to his recollection, when the Indian lays down by his tire-side with his drum in his hand, which he lightly and almost imperceptibly touches over, as he accompanies it with his stifled voice of dulcet sounds that might come from the most tender and delicate female. These quiet and tender songs are very different from those which are sung at their dances, in full chorus and violent gesticulation; and many of them seem to be quite rich in plaintive expression and melody, though barren of change and variety.

Dancing, I have before said, is one of the principal and most valued amusements of the Indians, and much more frequently practiced by them than by any civilized society; inasmuch as it enters into their forms of worship, and is often their mode of appealing to the Great Spirit -- of paying their usual devotions to their medicine -- and of honouring and entertaining strangers of distinction in their country.

Instead of the "giddy maze" of the quadrille or the country dance, enlivened by the cheering smiles and graces of silken beauty, the Indian performs his rounds with jumps, and starts, and yells, much to the satisfaction of his own exclusive self, and infinite amusement of the gentler sex, who are always lookers on, but seldom allowed so great a pleasure, or so signal an honour, as that of joining with their lords in this or any other entertainment. Whilst staying with these people on my way up the river, I was repeatedly honoured with the dance, and I as often hired them to give them, or went to overlook where they were performing them at their own pleasure, in pursuance of their peculiar customs, or for their own amusement, that I might study and correctly herald them to future ages. I saw so many of their different varieties of dances amongst the Sioux, that I should almost be disposed to denominate them the "dancing Indians". It would actually seem

as if they had dances for every thing. And in so large a village, there was scarcely an hour in any day or night, but what the beat of the drum could somewhere be heard. These dances are almost as various and different in their character as they are numerous -- some of them so exceedingly grotesque and laughable, as to keep the bystanders in an irresistible roar of laughter -- others are calculated to excite his pity, and forcibly appeal to his sympathies, whilst others disgust, and yet others terrify and alarm him with their frightful threats and contortions.

All the world have heard of the "bear-dance", though I doubt whether more than a very small proportion have ever seen it.

The Sioux, like all the others of these western tribes, are fond of bear's meat, and must have good stores of the "bear's-grease" laid in, to oil their long and glossy locks, as well as the surface of their bodies. And they all like the fine pleasure of a bear hunt, and also a participation in the bear dance, which is given several days in succession, previous to their starting out, and in which they all join in a song to the Bear Spirit; which they think holds somewhere an invisible existence, and must be consulted and conciliated before they can enter upon their excursion with any prospect of success. For this grotesque and amusing scene, one of the chief medicine-men, placed over his body the entire skin of a bear, with a war-eagle's quill on his head, taking the lead in the dance, and looking through the skin which formed a masque that hung over his face. Many others in the dance wore masques on their faces, made of the skin from; the bear's head; and all, with the motions of their hands, closely imitated the movements of that animal; some representing its motion in running, and others the peculiar attitude and hanging of the paws, when it is sitting up on its hind feet, and looking out for the approach of an enemy. This grotesque and amusing masquerade oftentimes is continued at intervals, for several days previous to the starting of a party on the bear hunt, who would scarcely count upon a tolerable prospect of success, without a strict adherence to this most important and indispensable form.

Dancing is done here too, as it is oftentimes done in the enlightened world, to get favours -- to buy the world's goods; and in both countries danced with about equal merit, except that the Indian has surpassed us in honesty by christening it in his own country, the "beggar's dance". This spirited dance was given, not by a set of beggars though, literally speaking, but by the first and most independent young men in the tribe beautifully dressed, (i.e. not dressed at all, except with their breech clouts or kelts, made of eagles' and ravens' quills,) with their lances, and pipes, and rattles in their hands, and a medicine-man beating the drum, and joining in the song at the highest key of his voice. In this dance every one sings as loud as he can halloo; uniting his voice with the others, in an appeal to the Great Spirit, to open the hearts of the bystanders to give to the poor, and not to themselves; assuring them that the Great Spirit will be kind to those who are kind to the helpless and poor.

Of scalps, and of the modes and objects of scalping, I have before spoken; and I therein stated, "that most of the scalps were stretched on little hoops for the purpose of being used in the scalp-dance, of which I shall say more at a future time."

The Scalp dance is a celebration of a victory; and amongst this tribe, as I learned whilst residing with them, danced in the night, by the light of their torches, and just before retiring to bed. When a war party returns from a war excursion, bringing home with them the scalps of their enemies, they generally "dance them" for fifteen nights succession ranting forth the meet extravagant boasts of their wonderful prowess in war, whilst they brandish their war weapons in their

hands. A number of young women are selected to aid (though they do not actually join in the lance), by stepping into the centre of the ring, and holding up the scalps that have been recently taken, whilst the warriors dance (or rather jump), around in a circle, brandishing their weapons, and barking and yelping in the most frightful manner, all jumping on both feet at a time, with a simultaneous stamp, and blow, and thrust of their weapons; with which it would seem as if they were actually cutting and carving each other to pieces. During these frantic leaps, and yelps, and thrusts, every man distorts his face to the utmost of his muscles, darting about his glaring eye-balls and snapping his teeth, as if he were in the heat (and actually breathing through his inflated nostrils the very hissing death) of battle. No description that can be written, could ever convey more than a feeble outline of the frightful effects of these scenes enacted in the dead and darkness of night, under the glaring light of their blazing flambeaux; nor could all the years allotted to mortal man, in the least obliterate or deface the vivid impress that one scene of this kind would leave upon his memory.

The precise object for which the scalp is taken, is one which is definitely understood, and has already been explained; but the motive (or motives), for which this strict ceremony is so scrupulously held by all the American tribes, over the scalp of an enemy, is a subject, as yet not satisfactorily settled in my mind. There is no doubt, but one great object in these exhibitions is public exultation; yet there are several conclusive evidences, that there are other and essential motives for thus formally and strictly displaying the scalp. Amongst some of the tribes, it is the custom to bury the scalps after they have gone through this series of public exhibitions; which may in a measure have been held for the purpose of giving them notoriety, and of awarding public credit to the persons who obtained them, and now, from a custom of the tribe, are obliged to part with them. The great respect which seems to be paid to them whilst they use them, as well as the pitying and mournful song which they howl to the manes of their unfortunate victims; as well as the precise care and solemnity with which they afterwards bury the scalps, sufficiently convince me that they have a superstitious dread of the spirits of their slain enemies, and many conciliatory offices to perform, to ensure their own peace; one of which is the ceremony above described.

LETTER -- No. 31.

MOUTH OF TETON RIVER, UPPER MISSOURI.

In former Letters I have given: some account of the Bisons, or (as they are more denominated in this country) buffaloes, which inhabit these regions in numerous herds; and of which I must say yet a little more familiar.

These noble animals of the ox species, and which have been so well described in our books on natural History, are a subject of curious interest and great importance in this vast wilderness; rendered peculiarly so at this time, like the history of the poor savage; and from the same consideration, ; that they are rapidly wasting away at the approach of civilized man -- and like him and his character, in a very few years, to live only in books or on canvass.

The word buffalo is undoubtedly most incorrectly applied to these animals, and I can scarcely tell why they have been so called; for they bear just about as much resemblance to the Eastern buffalo, as they do to a zebra or to a common ox. How nearly they may approach to the bison of Europe, which I never have had an opportunity to see, and which, I am inclined to think, is now nearly extinct, I am unable to say ; yet if I were to judge from the numerous engravings I have seen of those animals, and descriptions I have read of them, I should be inclined to think, there was yet a wide difference between the bison of the American prairies, and those in the North of Europe and Asia. The American bison, or (as I shall here after call it) buffalo, is the largest of the ruminating animals that is now living in America; and seems to have been spread over the plains of this vast country, by the Great Spirit, for the use and subsistence of the red men, who live almost exclusively on their flesh, and clothe themselves with their skins. The reader, by referring back to in the beginning of this Work, will see faithful traces of the male and female of this huge animal, in their proud and free state of nature, grazing on the plains of the country to which they appropriately belong. Their colour is a dark brown, but changing very much as the season varies from warm to cold; their hair or fur, from its great length in the winter and spring, and exposure to the weather, turning quite light, and almost to a jet black, when the winter coat is shed off, and a new growth is shooting out.

The buffalo bull often grows to the enormous weight of 2000 pounds, and shakes a long and shaggy black mane, that falls in great profusion and confusion, over his head and shoulders; and oftentimes falling down quite to the ground. The horns are short, but very large, and have but one turn, i.e. they are a simple arch, without the least approach to a spiral form, like those of the common ox, or of the goat species.

The female is much smaller than the male, and always distinguishable by the peculiar shape of the horns, which are much smaller and more crooked, turning their points more in towards the centre of the forehead.

One of the most remarkable characteristics of the buffalo, is the peculiar formation and expression of the eye, the ball of which is very large and white, and the iris jet black. The lids of the eye

---

seem always to be strained quite open, and the ball rolling forward and down; so that a considerable part of the iris is hidden behind the lower lid, while the pure white of the eyeball glares out over it in an arch, in the shape of a moon at the end of its first quarter.

These animals are, truly speaking, gregarious, but not migratory -- they graze in immense and almost incredible numbers at times, and roam about and over vast tracts of country, from East to West, and from West to East, as often as from North to South; which has often been supposed they naturally and habitually did to accommodate themselves to the temperature of the climate in the different latitudes. The limits within which they are found in America, are from the 30th to the 55th degrees of North latitude; and their extent from East to West, which is from the border of our extreme Western frontier limits, to the Western verge of the Rocky Mountains, is defined by quite different causes, than those which the degrees of temperature have prescribed to them on the North and the South. Within these 25 degrees of latitude, the buffaloes seem to flourish, and get their living without the necessity of evading the rigor of the climate, for which Nature seems most wisely to have prepared them by the greater or less profusion of Fur, with which she has clothed them.

It is very evident that, as high North as Lake Winnipeg, seven or eight hundred miles North of this, the buffalo subsists itself through the severest winters; getting its food chiefly by browsing amongst the timber, and by pawing through the snow, for a bite at the grass, which in those regions is frozen up very suddenly in the beginning of the winter, with all its juices in it, and consequently furnishes very nutritious and efficient food; and often, if not generally, supporting the animal in better flesh during these difficult seasons of their lives, than they are found to be in, in the 30th degree of latitude, upon the borders of Mexico, where the severity of winter is not known, but during a long and tedious autumn, the herbage, under the influence of a burning sun, is gradually dried away to a mere husk, and its nutriment gone, leaving these poor creatures, even in the dead of winter, to bask in the warmth of a genial sun, without the benefit of a green or juicy thing to bite at.

The place from which I am now writing, may be said to be the very heart or nucleus of the buffalo country, about equal distant between the two extremes; and of course, the most congenial temperature for them to flourish in. The finest animals that graze on the prairies are to be found in this latitude; and I am sure I never could send from a better source, some further account of the death and destruction that is dealt among these noble animals, and hurrying on their final extinction.

The Sioux are a bold and desperate set of horsemen, and great hunters; and in the heart of their country is one of the most extensive assortments of goods, of whiskey, and other saleable commodities, as well as a party of the most indefatigable men, who are constantly calling for every robe that can be stripped from these animals' backs.

These are the causes which lead so directly to their rapid destruction; and which open to the view of the traveller so freshly, so vividly, and so familiarly, the scenes of archery -- of lancing, and of death-dealing, that belong peculiarly to this wild and shorn country.

The almost countless herds of these animals that are sometimes met with on these prairies, have been often spoken of by other writers, and may yet be seen by any traveller who will take the pains to visit these regions. The "running season," which is in August and September, is the time when they congregate into such masses in some places, as literally to blacken the prairies for miles

together. It is no uncommon thing at this season, at these gatherings, to see several thousands in a mass, eddying and wheeling about under a cloud of dust, which is raised by the bulls as they are pawing in the dirt, or engaged in desperate combats, as they constantly are, plunging and butting at each other in the most furious manner. In these scenes, the males are continually following the females, and the whole mass are in constant motion; and all bellowing (or "roaring") in deep and hollow sounds; which, mingled altogether, appear, at the distance of a mile or two, like the sound of distant thunder.

During the season whilst they are congregated together in these dense and confused masses, the remainder of the country around for many miles, becomes entirely vacated; and the traveller may spend many a toilsome day, and many a hungry night, without being cheered by the sight of one; where, if he retraces his steps a few weeks after, he will find them dispersed, and grazing quietly in little families and flocks, and equally stocking the whole country. Of these quiet little herds, a fair representation will be seen, Where some are grazing, others at play, or lying down, and others indulging in their "wallows". A bull in his wallow" is a frequent saying in this country; and has a very significant meaning with those who have ever seen a buffalo bull performing ablution, or rather eodeavouring to cool his heated sides, by tumbling about in a mud puddle.

In the heat of summer, these huge animals, which, no doubt, suffer very much with the great profusion of their long and shaggy heir or fur, often graze on the low grounds in the prairies, where there is little stagnant water lying amongst the grass, and the around underneath being saturated with it, is soft, into which the enormous bull, lowered down upon one knee, will plunge his horns, and at last his head, driving up the earth, and soon making an excavation in the ground, into which the water filters from amongst the grass, forming for him in a few moments, a cool and comfortable bath, into which he plunges like a hog in his mire.

In this delectable laver, he throws himself flat upon his side, and forcing himself violently around, with his horns and his huge hump on his shoulders presented to the sides, he ploughs up the ground by his rotary motion, sinking himself deeper and deeper in the ground, continually enlarging his pool, in which he at length becomes nearly immersed; and the water and mud about him mixed into a complete mortar, which changes his colour, and drips in streams from every part of him as he rises up upon his feet, a hideous monster of mud and ugliness, too frightful and too eccentric to be described!

It is generally the leader of the herd that takes upon him to make this excavation; and if not (but another one opens the ground), the leader (who is conqueror) marches forward, and driving the other from it plunges himself into it; and having cooled his sides, and changed his colour to a walking mass of mud and mortar; he stands in the pool until inclination induces him to step out, and give place to the next in command, who stands ready; and another, and another, who advance forward in their turns, to enjoy the luxury of the wallow; until the whole band (sometimes an hundred or more) will pass through it in turn; each one throwing his body around in a similar manner; and each one adding a little to the dimensions of the pool, while he carries away in his hair an equal share of the clay, which dries to a grey or whitish colour, and gradually falls off. By this operation, which is done, perhaps, in the space of half an hour, a circular excavation of fifteen or twenty feet in diameter, and two feet in depth, is completed, and left for the water to run into, which soon fills it to the level of the ground.

To these sinks, the waters lying on the surface of the prairies, are continually draining, and in

them lodging their vegetable deposits; which, after a lapse of years, fill them up to the surface with a rich soil, which throws up all unusual growth of grass and herbage; forming conspicuous circles which arrest the eye of the traveller, and are calculated to excite his surprise for ages to come. Many travellers who have penetrated not quite far enough into the Western country to see the habits of these animals, and the manner in which these mysterious circles are made; but who have seen the prairies strewed with their bleached bones, and have beheld these strange circles, often occur in groups, and of different sizes--have come home with beautiful and ingenious theories (which must needs be made), for the origin of these, singular and unaccountable appearances, which, for want of a rational theory, have generally been attributed to fairy feet, and gained the appellation of "fairly circles."

Many travellers, again, have supposed that these rings were produced by the dances of the Indians, which are oftentimes (and in fact most generally) performed in a circle; yet a moment's consideration disproves such a probability, inasmuch as the Indians always select the ground for their dancing near the sites of their villages, and that always on a dry and hard foundation; when these "fairy circles" are uniformly found to be on low and wet ground.

As my visit to these parts of the "Great Far West" has brought me into the heart of the buffalo country, where I have had abundant opportunities of seeing this noble animal in all its phases -- its habits of life, and every mode of its death; I shall take the liberty of being yet a little more particular, and of rendering some further accounts of scenes which I have witnessed in following out my sporting propensities in these singular regions.

The chief hunting amusement of the Indians in these parts consists in the chase of the buffalo, which is almost invariably done on horseback, with bow and lance. In this exercise, which is highly prized by them, as one of their most valued amusements, as well as for the principal mode of procuring meat for their subsistence, they become exceedingly expert; and are able to slay these huge animals with apparent ease.

The Indians in these parts are all mounted on small, but serviceable horses, which are caught by them on the prairies, where they are often running wild in numerous bands. The Indian, then, mounted on his little wild horse, which has been through some years of training, dashes off at full speed amongst the herds of buffaloes, elks, or even antelopes, and deals his deadly arrows to their hearts from his horse's back. The horse is the fleetest animal of the prairie, and easily brings his rider alongside of his game, which falls a certain prey to his deadly shafts, at the distance of a few paces.

In the chase of the buffalo, or other animal, the Indian generally "strips" himself and his horse, by throwing off his shield and quiver, and every part of his dress, which might be an encumbrance to him in running; grasping his bow in his left hand, with five or six arrows drawn from his quiver, and ready for instant use. In his right hand (or attached to the wrist) is a heavy whip, which he uses without mercy, and forces his horse alongside of his game at the swiftest speed.

These horses are so trained, that the Indian has little use for the rein, which hangs on the neck, whilst the horse approaches the animal on the right side, giving his rider the chance to throw his arrow to the left; which he does at the instant when the horse is passing -- bringing him opposite to the heart, which receives the deadly weapon "to the feather." When pursuing a large herd, the Indian generally rides close in the rear, until he selects the animal he wishes to kill, which he separates from the throng as soon as he can, by dashing his horse between it and the herd, and forcing

it off by itself; where he can approach it without the danger of being trampled to death, to which he is often liable by too closely escorting the multitude.

In another drawing, I have fairly represented the mode of approaching, at the instant the arrow is to be thrown; and the striking disparity between the size of a huge bull of 2000 pounds weight, and the Indian horse, which, it will be borne in mind, is but a pony.

No bridle whatever is used in this country by the Indians, as they have no knowledge of a bit. A short halter, however, which answers in place of a bridle, is in general use; of which they usually form a noose around the under jaw of the horse, by which they get great power over the animal; and which they use generally to stop rather than guide the horse. This halter is called by the French Traders in the country, l'arret, the stop, and has great power in arresting the speed of a horse; though it is extremely dangerous to use too freely as a guide, interfering too much with the freedom of his limbs, for the certainty of his feet and security of his rider.

When the Indian then has directed the course of his steed to the animal which he has selected, the training of the horse is such, that it knows the object of its rider's selection, and exerts every muscle to give it close company; while the halter lies loose and untouched upon its neck, and the rider leans quite forward, and off from the side of his horse, with his bow drawn, and ready for the deadly shot, which is given at the instant he is opposite to the animal's body. The horse being instinctively afraid of the animal (though he generally brings his rider within the reach of the end of his bow), keeps his eye strained upon the furious enemy he is so closely encountering; and the moment he has approached to the nearest distance required, and has passed the animal, whether the shot is given or not, he gradually sheers off, to prevent coming on to the horns of the infuriated beast, which often are instantly turned, and presented for the fatal reception of its too familiar attendant. These frightful collisions often take place, notwithstanding the sagacity of the horse, and the caution of its rider; for in these extraordinary (and inexpressible) exhilarations of chase, which seem to drown the prudence alike, of instinct and reason, both horse and rider often seem rushing on to destruction, as if it were: mere pastime and amusement.

I have always counted myself a prudent man, yet I have often waked (as it were) out of the delirium of the chase (into which I had fallen, as into an agitated sleep, and through which I had passed as through a delightful dream), where to have died would have been but to have remained, riding on, without a struggle or a pang.

In some of these, too, I have arisen from the prairie, covered with dirt and blood, having severed company with gun and horse, the one lying some twenty or thirty feet from me with a broken stalk, and the other coolly browsing on the grass at half a mile distance, without man, and without other beast remaining in sight.

For the novice in these scenes there is much danger of his limbs and his life, and he finds it a hard and a desperate struggle that brings him in at the death of these huge monsters, except where it has been produced by hands that have acquired more sleight and tact than his own.

With the Indian, who has made this the every day sport and amusement of his life, there is less difficulty and less danger; he rides without ("losing his breath," and his unagitated hand deals certainty in its deadly blows.

In another painting, I have represented a party of Indians in chase of a herd, some of whom are pursuing with lance and others with bows and arrows. The group in the foreground shews the attitude at the instant after the arrow has been thrown and driven to the heart; the Indian at full

speed, and the lasso dragging behind his horse's heels. The lasso is a long thong of rawhide, of ten or fifteen yards in length, made of several braids or twists, and used chiefly to catch the wild horse, which is done by throwing over their necks a noose which is made at the end of the lasso, with which they are "choked down." In running the buffaloes, or in time of war, the lasso drags on the ground at the horse's feet, and sometimes several rods behind, so that if a man is dismounted, which is often the case, by the tripping or stumbling of the horse, he has the power of grasping to the lasso, and by stubbornly holding on to it, of stopping and securing his horse, on whose back he is instantly replaced, and continuing on in the chase.

In the dead of the winters, which are very long and severely cold in this country, where horses cannot be brought into the chase with any avail, the Indian runs upon the surface of the snow by the aid of his snow shoes, which buoy him up, while the great weight of the buffaloes, sinks them down to the middle of their sides, and completely stopping their progress, ensures them certain and easy victims to the bow or lance of their pursuers. The snow in these regions often lies during the winter, to the depth of three and four feet, being blown away from the tops and sides of the hills in many places, which are left bare for the buffaloes to graze upon, whilst it is drifted in the hollows and ravines to a very great depth, and rendered almost entirely impassable to these huge animals, which, when closely pursued by their enemies, endeavor to plunge through it, but are soon wedged in and almost unable to move, where they fall an easy prey to the Indian, who runs up lightly upon his snow shoes and drives his lance to their hearts. The skins are then stripped off, to be sold to the Fur Traders, and the carcasses left to be devoured by the wolves. This is the season in which the greatest number of these animals are destroyed for their robes they are most easily killed at this time, and their hair or fur being longer and more abundant, gives greater value to the robe.

The Indians generally kill and dry meat enough in the fall, when it is fat and juicy, to last them through the winter; so that they have little other object for this unlimited slaughter, amid the drifts of snow, than that of procuring their robes for traffic with their Traders. The snow shoes are made in a great many forms, of two and three feet in length, and one foot or more in width, of a hoop or hoops bent around for the frame, with a netting or web woven across with strings of rawhide, on which the feet rest, and to which they are fastened with straps somewhat like a skate. With these the Indian will glide over the snow with astonishing quickness, without sinking down, or scarcely leaving his track where he has gone.

The poor buffaloes have their enemy man, besetting and besieging them at all times of the year, and in all the modes that man in his superior wisdom has been able to devise for their destruction. They struggle in vain to evade his deadly shafts, when he dashes amongst them over the plains on his wild horse--they plunge into the snow-drifts where they yield themselves an easy prey to their destroyers, and they also stand unwittingly and behold him, unsuspected under the skin of a white wolf, insinuating himself and his fatal weapons into close company, when they are peaceably grazing on the level prairies, and shot down before they are aware of their danger. There are several varieties of the wolf species in this country, the most formidable and most numerous of which are white, often sneaking about in gangs or families of fifty or sixty in numbers, appearing in distance, on the green prairies like nothing but a flock of sheep. Many of these animals grow to a very great size, being I should think, quite a match for the largest Newfoundland dog. At present, whilst the buffaloes are so abundant, and these ferocious animals are glutted

---

with the buffalo's flesh, they are harmless, and everywhere sneak away from man's presence; which I scarcely think will be the case after the buffaloes are all gone, and they are left, as they must be, with scarcely anything to eat. They always are seen following about in the vicinity of herds of buffaloes and stand ready to pick the bones of those that the hunters leave on the ground, or to overtake and devour those that are wounded, which fall an easy prey to them. While the herd of buffaloes are together, they seem to have little dread of the wolf, and allow them to come in close company with them. The Indian then has taken advantage of this fact, and often places himself under the skin of this animal, and crawls for half a mile or more on his hands and knees, until he approaches within a few rods of the unsuspecting group, and easily shoots down the fattest of the throng.

The buffalo is a very timid animal, and shuns the vicinity of man with the keenest sagacity; yet, when overtaken, and harassed or wounded, turns upon its assailants with the utmost fury, who have only to seek safety in flight. In their desperate resistance the finest horses are often destroyed; but the Indian, with his superior sagacity and dexterity, generally finds some effective mode of escape.

During the season of the year whilst the calves are young, the male seems to stroll about by the side of the dam, as if for the purpose of protecting the young, at which time it is exceedingly hazardous to attack them, as they are sure to turn upon their pursuers, who have often to fly to each others assistance. The buffalo calf, during the first six months is red, and has so much the appearance of a red calf in cultivated fields, that it could easily be mingled and mistaken amongst them. In the fall, when it changes its hair it takes a brown coat for the winter, which it always retains. In pursuing a large herd of buffaloes at the season when their calves are but a few weeks old, I have often been exceedingly amused with the curious manœuvres of these shy little things. Amidst the thundering confusion of a throng of several hundreds or several thousands of these animals, there will be many of the calves that lose sight of their dams; and being left behind by the throng, and the swift Passing hunters, they endeavor to secrete themselves, when they are exceedingly put to it on a level prairie, where nought can be seen but the short grass of six or eight inches in height, save an occasional bunch of wild sage, a few inches higher, to which the poor affrighted things will run, and dropping on their knees, will push their noses under it, and into the grass, where they will stand for hours, with their eyes shut, imagining themselves securely hid, whilst they are standing up quit straight upon their hind feet and can easily be seen at several miles distance. It is a familiar amusement for us accustomed to these scenes, to retreat back over the ground where we have just escorted the herd, and approach these little trembling things, which stubbornly maintain their positions, with their noses pushed under the grass, and their eyes strained upon us, as we dismount from our horses and are passing around them. From this fixed position they are sure not to move, until hands are laid upon them, and then for the shins of a novice, we can extend our sympathy; or if he can preserve the skin on his bones from the furious buttings of its head, we know how to congratulate him on his signal success and good luck. In these desperate struggles, for a moment, the little thing is conquered, and makes no further resistance. And I have often, in concurrence with a known custom of the country, held my hands over the eyes of the calf, and breathed a few strong breaths into its nostrils; after which I have, with my hunting companions, rode several miles into our encampment, with the little prisoner busily following the heels of my horse the whole way, as closely and as affectionately as its instinct would

attach it to the company of its dam!

This is one of the most extraordinary things that I have met with in the habits of this wild country, and although I had often heard of it, and felt unable exactly to believe it, I am now willing to bear testimony to the fact, from the numerous instances which I have witnessed since I came into the country. During the time that I resided at this post, in the spring of the year, on my way up the river, I assisted (in numerous hunts of the buffalo, with the Fur Company's men), in bringing in, in the above manner, several of these little prisoners, which sometimes followed for five or six miles close to our horses' heels, and even into the Fur Company's Fort, and into the stable where our horses were led. In this way, before (left for the headwaters of the Missouri, I think we had collected about a dozen, which Mr. Laidlaw was successfully raising with the aid of a good milch cow, and which were to be committed to the care of Mr. Chouteau to be transported by the return of the steamer, to his extensive plantation in the vicinity of St. Louis. •

It is truly a melancholy contemplation for the traveller in this country, to anticipate the period which is not far distant, when the last of these noble animals, at the hands of white and red men, will fall victims to their cruel and improvident rapacity; leaving these beautiful green fields, a vast and idle waste, unstocked and unpeopled for ages to come, until the bones of the one and the traditions of the other will have vanished, and left scarce an intelligible trace behind.

That the reader should not think me visionary in these contemplations, or romancing in making such assertions, I will hand him the following item of the extravagancies which are practiced in these regions, and rapidly leading to the results which I have just named.

When I first arrived at this place, on my way up the river, which was in the month of May, in 1832, and had taken up my lodgings in the Fur Company's Fort, Mr. Laidlaw, of whom I have before spoken, and also his chief clerk, Mr. Halsey, and many of their men, as well as the chiefs of the Sioux, told me, that only a few days before I arrived, (when an immense herd of buffaloes had showed themselves on the opposite side of the river, almost blackening the plains for a great distance,) a party of five or six hundred Sioux Indians on horseback, forded the river about mid-day, and spending a few hours amongst them, recrossed the river at sun-down and came into the Fort with fourteen hundred fresh buffalo tongues, which were thrown down in a mass, and for which they required but a few gallons of whiskey, which was soon demolished, indulging them in a little, and harmless carouse.

This profligate waste of the lives of these noble and useful animals, when, from all that I could learn not a skin or a pound of the meat (except the tongues), was brought in, fully supports me in the seemingly extravagant predictions that I have made as to their extinction, which I am certain is near at hand. In the above extravagant instance, at a season when their skins were without fur and not worth taking off, and their camp was so well stocked with fresh and dried meat, that they had no occasion for using the flesh, there is a fair exhibition of the improvident character of the savage, and also of his recklessness in catering for his appetite, so long as the present inducements are held out to him in his country, for its gratification.

In this singular country, where the poor Indians have no laws or regulations of society, making it a vice or an impropriety to drink to excess, they think it no harm to indulge in the delicious beverage, as long as they are able to buy whiskey to drink. They look to white men as wiser than themselves, and able to set them examples -- they see none of these in their country but sellers of whiskey, who are constantly tendering it to them, and most of them setting the example by

using it themselves; and they easily acquire a taste, that to be catered for, where whiskey is sold at sixteen dollars per gallon, soon impoverishes them, and must soon strip the skin from the last buffalo's back that lives in their country, to "be dressed by their squaws" and vended to the Traders for a pint of diluted alcohol.

From the above remarks it will be seen, that not- only the red men, but red men and white, have aimed destruction at the race of these animals ; and with them, beasts have turned hunters of buffaloes in this country, slaying them, however, in less numbers, and for far more laudable purpose than that of selling their skins. The white wolves, of which I have spoken in a former epistle, follow the herds of buffaloes as I have said, from one season to another, glutting themselves on the carcasses of those that fall by the deadly shafts of their enemies, or linger with disease or old age to be dispatched by these sneaking cormorants, who are ready at all times kindly to relieve them from the pangs of a lingering death.

Whilst the herd is together, the wolves never attack them, as they instantly gather for combined resistance, which they effectually make. But when the herds are travelling; it often happens that an aged or wounded one, lingers at a distance behind, and when fairly out of sight of the herd, is set upon by these voracious hunters, which often gather to the number of fifty or more, and are sure at last to torture him to death, and use him up at a meal. The buffalo, however, is a huge and furious animal, and when his retreat is cut off, makes desperate and deadly resistance, contending to the last moment for the right of life -- and oftentimes deals death by wholesale, to his canine assailants, which he is tossing into the air or stamping to death under his feet.

During my travels in these regions, I have several times come across such a gang of these animals surrounding an old or a wounded bull, where it would seem, from appearances, that they had been for several days in attendance, and at intervals desperately engaged in the effort to take his life. But a short time since, as one of my hunting companions and myself were returning to our encampment with our horses loaded with meat, we discovered at a distance, a huge bull, encircled with a gang of white wolves; we rode up as near as we could without driving them away, and being within pistol shot, we had a remarkably good view, where I sat for a few moments and made a sketch in my note-book; after which, we rode up and gave the signal for them to disperse, which they instantly did, withdrawing themselves to the distance of fifty or sixty rods, when we found, to our great surprise, that the animal had made desperate resistance, until his eyes were entirely eaten out of his head -- the grizzle of his nose was mostly gone-his tongue was half eaten off, and the skin and flesh of iris legs torn almost literally into strings. In this tattered and torn condition, the poor old veteran stood bracing up in the midst of his devourers, who had ceased hostilities for a few minutes, to enjoy a sort of parley, recovering strength and preparing to resume the attack in a few moments again. In this group, some were reclining, to gain breath, whilst others were sneaking about and licking their chaps in anxiety for a renewal of the attack; and others, less lucky, had been crushed to death by the feet or the horns of the bull. I rode nearer to the pitiable object as he stood bleeding and trembling before me, and said to him, "Now is your time, old fellow, and you had better be off." Though blind and nearly destroyed, there seemed evidently to be a recognition of a friend in me, as he straightened up, and, trembling with excitement, dashed off at full speed upon the prairie, in a straight line. We turned our horses and resumed our march, and when we had advanced a mile or more, we looked back, and on our left, where we saw again the ill-fated animal surrounded by his tormentors, to whose insatiable voracity he unquestionably soon fell a

victim.

Thus much I wrote of the buffaloes, and of the accidents that befall them, as well as of the fate that awaits them; and before I closed my book, I strolled out one day to the shade of a plum-tree, where I laid in the grass on a favorite bluff, and wrote thus:--

“ It is generally supposed, and familiarly said, that a man ‘foils’ into a reverie; but I seated myself in the shade a few minutes since, resolved to force myself into one; and for this purpose I laid open a small pocket-map of North America, and excluding my thoughts from every other object in the world, I soon succeeded in producing the desired illusion. This little chart, over which I bent, was seen in all its parts, as nothing but the green and vivid reality. I was lifted up upon an imaginary pair of wings, which easily raised and held me floating in the open air, from whence I could behold beneath me the Pacific and the Atlantic Oceans--the great cities of the East, and the mighty rivers. I could see the blue chain of the great lakes at the North--the Rocky Mountains, and beneath them and near their base, the vast, and almost boundless plains of grass, which were speckled with the bands of grazing buffaloes!

“The world turned gently around, and I examined its surface; continent alter continent passed under my eye, and yet amidst them all, I saw not the vast and vivid green, that is spread like a carpet over the Western wilds all my own country. I saw not elsewhere in the world, the myriad herds of buffaloes -- my eyes scanned in vain, for they were not. And when I turned again to the wilds of my native land, I beheld them all in motion! Far the distance of several hundreds of miles from North to South, they were wheeling about in vast columns and herds -- some were scattered, and ran with furious wildness -- some lay dead, and others were pawing the earth for a hiding-place -- some were sinking down and dying, gushing out their life’s blood in deep-drawn sighs -- and others were contending in furious battle for the life they possessed, and the ground that they stood upon. They had long since assembled from the thickets, and secret haunts of the deep forest, into the midst of the treeless and bushless plains, as the Place for their safety. I could see in an hundred places, amid the wheeling bands, and on their skirts and flanks, the leaping wild horse darting among them. I saw not the arrows, nor heard the twang of the sinewy bows that sent them; but I saw their victims fall I -- on other steeds that rushed along their sides, I saw the glistening lances, which seemed to lay across them ; their blades were blazing in the sun, till dipped in blood, and then I lost them ! In other parts (and there were many), the vivid dash of fire-arms was seen--their victims fell too, and over their dead bodies hung suspended in air, little clouds of whitened smoke, from under which the flying horsemen had darted forward to mingle again with, and deal death to, the trampling throng.

“So strange were men mixed (both red and white) with the countless herds that wheeled and eddyed about, that all below seemed one vast extended field of battle--whole armies, in some places, seemed to blacken the earth’s surface; -- in other parts, regiments, battalions, wings, platoons, rank and file, and “Indian-file” -- all were in motion; and death and destruction seemed to be the watch-word amongst them. In their turmoil, they sent up great clouds of dust, and with them came the mingled din of groans and trampling hoofs, that seemed like the rumbling of a dreadful cataract, or the roaring of distant thunder. Alternate pity and admiration harrowed up in my bosom anti my brain, many a hidden thought; and amongst them a few of the beautiful notes that were once sung, and exactly in point: (*Quadrupedante pufrena sonitn quatit ungula campum.*) Even such was the din amidst the quadrupeds of these vast plans. And from the craggy cliffs of

the Rocky Mountains also were seen descending into the valley, the myriad Tartars, who had not horses to ride, but before their well drawn bows the fattest of the herds were falling. Hundreds and thousands were strewed upon the plains--they were flayed, and their reddened carcasses left; and about them bands of wolves, and dogs, and buzzards were seen devouring them. Contiguous, and in sight, were the distant and feeble smokes of wigwams and villages, where the skins were dragged, and dressed for white man's luxury! where they were all sold for whiskey and the poor Indians laid drunk, and were crying. I cast my eyes into the towns and cities of the East, and there I beheld buffalo robes hanging at almost every door for traffic; and I saw also the curling smokes of a thousand Stills -- and I said, 'Oh insatiable man, is thy avarice such! wouldst thou tear the skin from the back of the last animal of this noble race, and rob thy fellow-man of his meat, and for it give him poison!'

Many are the rudenesses and wilds in Nature's works, which are destined to Fall before the deadly axe and desolating hands of cultivating man; and so amongst her ranks of living, of beast and human, we often find noble stamps, or beautiful colours, to which our admiration clings; and even in the overwhelming march of civilized improvements and refinements do we love to cherish their existence, and lend our efforts to preserve them in their primitive rudeness. Such of Nature's works are always worthy of our preservation and protection; and the further we become separated (and the face of the country) from that pristine wildness and beauty, the more pleasure does the mind of enlightened man feel in recurring to those scenes, when he can have them preserved for his eyes and his mind to dwell upon.

Of such "rudenesses and wilds," Nature has no where presented more beautiful and lovely scenes, than those of the vast prairies of the West; and of man and beast, no nobler specimens than those who inhabit them -- the Indian and the buffalo -- joint and original tenants of the soil, and fugitives together from the approach of civilized man; they have fled to the great plains of the West, and there, under an equal doom, they have taken up their last abode, where their race will expire, and their bones will bleach together.

It may be that power is right, and voracity a virtue; and that these people, and these noble animals, are righteously doomed to an issue that will not be averted. It can be easily proved -- we have a civilized science that can easily do it, or anything else that may be required to cover the iniquities of civilized man in catering for his unholy appetites. It can be proved that the weak and ignorant have no rights--that there can be no virtue in darkness--that God's gifts have no meaning or merit until they are appropriated by civilized man -- by him brought into the light, and converted to his use and luxury. We have a mode of reasoning (I forget what it is called) by which all this can be proved, and even more. The word and the system are entirely of civilized origin; and latitude is admirably given to them in proportion to the increase of civilized wants, which often require a judge to overrule the laws of nature. I say that we can prove such things; but an Indian cannot. It is a mode of reasoning unknown to him in his nature's simplicity but admirably adapted to subserve the interests of the enlightened world; who are always their own judges, when dealing with the savage: and who, in the present refined age, have many appetites that can only be law, indulged by proving God's laws defective.

It is not enough in this polished and extravagant age, that we get from the Indian his lands, and the very clothes from his back, but the food from their mouths must be stopped, to add a new and useless article to the fashionable world's luxuries. The ranks must be thinned, and the race

exterminated, of this noble animal, and the Indians of the great plains left without the means of supporting life, that white men may figure a few years longer, enveloped in buffalo robes--that they may spread them, for their pleasure and elegance, over the backs of their sleighs, and trail them ostentatiously amidst the busy throng, as things of beauty and elegance that had been made for them!

Reader! listen to the following calculations; and forget them not. The buffaloes (the quadrupeds from whose backs your beautiful robes were taken, and whose myriads were once spread over the whole country, from the Rocky Mountains to the Atlantic Ocean) have recently fled before the appalling appearance of civilized man, and taken up their abode and pasturage amid the almost boundless prairies of the West. An instinctive dread of their deadly foes, who made an easy prey of them whilst grazing in the forest, has led them to seek the midst of the vast and treeless plains of grass, as the spot where they would be least exposed to the assaults of their enemies; and it is exclusively in those desolate fields of silence (yet of beauty) that they are to be found -- and over these vast steppes, or prairies, have they fled, like the Indian, towards the "setting sun"; until their bands have been crowded together, and their limits confined to a narrow strip of country on this side of the Rocky Mountains.

This strip of country, which extends from the province of Mexico to lake Winnepeg on the North, is almost one entire plain of grass. which is, and ever must be, useless to cultivating man. It is here, and here chiefly, that the buffaloes dwell; and with, and hovering about them, live and flourish the tribes of Indians, whom God made for the enjoyment of that fair land and its luxuries. It is a melancholy contemplation for one who has travelled as I have, through these realms, and seen this noble animal in all its pride and glory, to contemplate it so rapidly wasting from the world, drawing the irresistible conclusion too, which one must do, that its species is soon to be extinguished, and with it the peace and happiness (if not the actual existence) of the tribes of Indians who are joint tenants with them, in the occupancy of these vast and idle plains.

And what a splendid contemplation too, when one (who has travelled these realms, and can duly appreciate them) imagines them as they might in future be seen, (by some great protecting policy of government) preserved in their pristine beauty and wildness, in a magnificent park, where the world could see for ages to come, the native Indian in his classic attire, galloping his wild horse, with sinewy bow, and shield and lance, amid the fleeting herds of elks and buffaloes. That a beautiful and thrilling specimen for America to preserve and hold up to the view of her refined citizens and the world, in future ages! A nation's Park, containing man and beast, in all the wild and freshness of their nature's beauty!

I would ask no other monument to my memory, nor any other enrolment of my name amongst the famous dead, than the reputation of having been the founder of such an institution.

Such scenes might easily have been preserved, and still could be cherished on the great plains of the West, without delirium to the country or its borders; for the tracts of country on which the buffaloes have assembled, are uniformly sterile, and of no available use to cultivating man.

It is on these plains, which are stocked with buffaloes, that the finest specimens of the Indian race are to be seen. It is here, that the savage is decorated in the richest costume. It is here, and here only, that his wants are all satisfied, and even the luxuries of life are afforded him in abundance.

And here also is he the proud and honourable man (before he has had teachers or laws), above the imported wants, which beget meanness and vice; stimulated by ideas of honour and virtue, in

which the God of Nature has certainly not curtailed him.

There are, by a fair calculation, more than 300,000 Indians, who are now subsisted on the flesh of the buffaloes, and by those animals supplied with ail the loxuries of life which they desire, as they know of none others. The great variety of uses to which they convert the body and other parts of that animal, are almost incredible to the person who has not actually dwelt amongst these people, and closely studied their modes and customs. Every part of their flesh is converted into food, in one shape or another, and on it they entirely subsist. The robes of the animals are worn by the Indians instead of blankets -- their skins when tanned, are used as coverings for their lodges, and for their beds; undressed, they are used for constructing canoes -- for saddles, for bridles -- for harnesses, laces, and thongs. The horns are shaped into ladles and spoons -- the brains are used for dressing the skins--their bones are used for saddle trees -- for war clubs, and scrapers for graining-- the robes -- and others are broken up for the marrow-fat which is contained in them. Their sinews are used for struts and backs to their bows -- for thread to string their beads and sew their dresses. The feet of the animals are boiled, with their hoofs, for the glue they contain, for fastening their arrow points, and many other uses. The hair from the head and shoulders, which is long, is twisted and braided into halters, and the tail is used for a fly brush. In this way do these people convert and use the various parts of this useful animal, and with all these luxuries of life about them, and their numerous games, they are happy (God bless them) in the ignorance of the disastrous fate that awaits them.

Yet this interesting community, with its sports, its wildnesses, its languages, and all its manners and customs, could be perpetuated, and also the buffaloes, whose numbers would increase and supply them with food for ages and centuries to come, if a system of non-intercourse could be established and preserved. But such is not to be the case -- the buffalo's doom is sealed, and with their extinction must assuredly sink into real despair and starvation, the inhabitants of these vast plains, which afford for the Indians, no other possible means of subsistence; and they must at last fall a prey to wolves and buzzards, who will have no other bones to pick.

It seems hard and cruel, (does it not?) that we civilized people with all the luxuries and comforts of the world about us, should be drawing from the backs of these useful animals the skins for our luxury, leaving their carcasses to be devoured by the wolves -- that we should draw from that country, some 150 or 200,000 of their robes annually the greater part of which are taken from animals that are killed expressly for the robe, at a season when the meat is not cured and preserved, and for each of which skins the Indian has received but a pint of whiskey!

Such is the fact, and that number or near it, are annually destroyed, in addition to the number that is necessarily killed for the subsistence of 300,000 Indians, who live entirely upon them. It may be said, perhaps, that the Fur Trade of these great western realms, which is now limited chiefly to the purchase of buffalo robes, is of great and national importance, and should and must be encouraged. To such a suggestion I would reply, by merely enquiring, (independently of the poor Indians' disasters,) how much more advantageously would such a capital be employed, both for the weal of the country and for the owners, if it were invested in machines for the manufacture of woollen robes, of equal and superior value and beauty; thereby encouraging the growers of wool, and the industrious manufacturer, rather than cultivating a taste for the use of buffalo skins; which is just to be acquired, and then, from necessity, to be dispensed with, when a few years shall have destroyed the last of the animals producing them.

It may be answered, perhaps, that the necessaries of life are given in exchange for these robes; but what, I would ask, are the necessities in Indian life, where they have buffaloes in abundance to live on? The Indian's necessities are entirely artificial -- are all created; and when the buffaloes shall have disappeared in his country, which will be within eight or ten years, I would ask, who is to supply him with the necessaries of life then? and I would ask, further, (and leave the question to be answered ten years hence), when the skin shall have been stripped from the back of the last animal, who is to resist the ravages of 300,000 starving savages; and in their trains, 1,500,000 wolves, whom direst necessity will have driven from their desolate and gameless plains, to seek for the means of subsistence along our exposed Frontier? God has everywhere supplied man in a state of Nature, with the necessaries of life, and before we destroy the game of his country, or teach him new desires, he has no wants that are not satisfied.

Amongst the tribes who have been impoverished and repeatedly removed, the necessaries of life are extended with a better grace from the hands of civilized man; 90,000 of such have already been removed, and they draw from Government some 5 or 600,000 dollars annually in cash; which money passes immediately into the hands of white men, and for it the necessaries of life may be abundantly furnished. But who, I would ask, are to furnish the Indians who have been instructed in this unnatural mode -- living upon such necessaries, and even luxuries of life, extended to them by the hands of white men, when those annuities are at an end, and the skin is stripped from the last of the animals which God gave them for their subsistence?

Reader, I will stop here, lest you might forget to answer these important queries -- these are questions which I know will puzzle the world -- and, perhaps it is not right that I should ask them. \* \*

\* \* \* \*

Thus much I wrote and painted at this place, whilst on my way up the river: after which I embarked on the steamer for the Yellow Stone, and the sources of the Missouri, through which interesting regions I have made a successful Tour; and have returned, as will have been seen by the foregoing narrations, in my canoe, to this place, from whence I am to descend the river still further in a few days. If I ever get time, I may give further Notes on this place, and of people and their doings, which I met with here; but at present, I throw my note-book, and canvass, and brushes into my canoe, which will be launched to-morrow morning, and on its way towards St. Louis, with myself at the steering-oar, as usual: and with Ba'tiste and Bogard to paddle, of whom, I beg the readers' pardon for having said nothing of late, though they have been my constant companions. Our way is now over the foaming and muddy waters of the Missouri, and amid snags and drift logs (for there is a sweeping freshet on her waters), and many a day will pass before other Letters will come from me; and possibly, the reader may have to look to my biographer for the rest. Adieu.

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

by George Catlin

(First published in London in 1844)

---

LETTER No. 32

FORT LEAVENWORTH, LOWER MISSOURI.

The readers, I presume, will have felt some anxiety for me and the fate of my little craft, after the close of my last Letter; and I have the very great satisfaction of announcing to them that we escaped snags and sawers, and every other danger, and arrived here safe from the Upper Missouri, where my last letters were dated. We, (that is, Ba'tiste, Bogard and I,) are comfortably quartered for awhile, in the barracks of this hospitable Cantonment, which is now the extreme Western military post on the frontier, and under the command of Colonel Davenport, a gentleman of great urbanity of manners, with a Roman head and a Grecian heart, restrained and tempered by the charms of an American lady, who has elegantly pioneered the graces of civilized refinements into these uncivilized regions.

This Cantonment, which is beautifully situated on the west bank of the Missouri River, and six hundred miles above its mouth, was constructed some years since by General Leavenworth, from whom it has taken its name. Its location is very beautiful, and so is the country around it. It is the con-centration point of a number of hostile tribes in the vicinity, and has its influence in restraining their warlike propensities.

There is generally a regiment of men stationed here, for the purpose of holding the Indians in check, and of preserving the peace amongst the hostile tribes. I shall visit several tribes in this vicinity, and most assuredly give you some further account of them, as fast as I get it.

Since the date of my last epistles, I succeeded in descending the river to this place, in my little canoe, with my two men at the oars, and myself at the helm, steering its course the whole way amongst snags and sand-bars.

Before I give further account of this downward voyage, however, I must recur back for a few moments, to the Teton River, from whence I started, and from whence my last epistles were written, to record a few more incidents which I then overlooked in my note-book. Whilst painting my portraits amongst the Sioux, as I have described, I got the portrait of a noble Shienne chief, by the name of Nee-hee-o-ee-woo-tis, the wolf on the hill. The chief of a party of that tribe, on a friendly visit to the Sioux, and the portrait also of a woman, Tis-see-woo-na-tis (she who bathes her knees. The Shiennes are a small tribe of about 3000 in numbers, living neighbors to the Sioux, on the west of them, and between the Black Hills and the Rocky Mountains. There is no finer race of men than these in North America, and none superior in stature, excepting the Osages; scarcely a man in the tribe, full grown, who is less than six feet in height. The Shiennes are undoubtedly the richest in horses of any tribe on the Continent, living in a country as they do, where the greatest herds of wild horses are grazing on the prairies, which they catch in great numbers and vend to the Sioux, Mandans and other tribes, as well as to the Fur Traders.

These people are the most desperate set of horsemen, and warriors also, having carried on almost unceasing wars with the Pawnees and Blackfeet, "time out of mind." The chief represented in the

---

picture was clothed in a handsome dress of deer skins, very neatly garnished with broad bands of porcupine quill-work down the sleeves of his shirt and his leggings, and all the way fringed with scalp-locks. His hair was very profuse, and flowing over his shoulders; and in his hand he held a beautiful Sioux pipe, which had just been presented to him by Mr. McKenzie, the Trader. This was one of the finest looking and most dignified men that I have met in the Indian country; and from the account given of him by the Traders a man of honour and strictest integrity. The woman was comely, and beautifully dressed; her dress of the mountain-sheep skins, tastefully ornamented with quills and beads, and her hair plaited in large braids, that hung down on her breast.

After I had painted these and many more, whom I have not time at present to name, I painted the portrait of a celebrated warrior of the Sioux, by the name of Mah-to-chee-ga (the little bear), who was unfortunately slain in a few moments after the picture was done, by one of his own tribe; and which was very near costing me my life for having painted a side view of his face, leaving one-half of it out of the picture, which had been the cause of the affray; and supposed by the whole tribe to have been intentionally left out by me, as "good for nothing." This was the last picture that I painted amongst the Sioux, and the last, undoubtedly, that I ever shall paint in that place. So tremendous and so alarming was the excitement about it, that my brushes were instantly put away, and I embarked the next day on the steamer for the sources of the Missouri, and was glad to get under weigh.

The man who slew this noble warrior was a troublesome fellow of the same tribe, by the name of Shon-ka (the dog). A "hue and cry" has been on his track for several months; and my life having been repeatedly threatened during my absence up the river, I shall defer telling the whole of this most extraordinary affair, until I see that my own scalp is safe, and I am successfully out of the country. A few weeks or months will decide how many are to fall victims to the vengeance of the relatives of this murdered brave; and if I outlive the affair, I shall certainly give some further account of it.

My voyage from the mouth of the Teton River to this place has been the most rugged, yet the most delightful, of my whole Tour. Our canoe was generally landed at night on the point of some projecting barren sand-bar, where we straightened our limbs on our buffalo robes, secure from the annoyance of mosquitos, and out of the walks of Indians and grizzly bears. In addition to the opportunity which this descending Tour has afforded me, of visiting all the tribes of Indians on the river, and leisurely filling my portfolio with the beautiful scenery which its shores present--the sportsman's fever was roused and satisfied; the swan, ducks, geese, and pelicans--the deer, antelope, elk, and buffaloes, were "stretched" by our rifles; and some times -- "pull boys! pull! a war party! For your lives pull! Or we are gone!"

I often landed my skiff, and mounted the green-carpeted bluffs. Whose soft grassy tops, invited me to recline, where I was at once lost in contemplation. Soul melting scenery that was about me! A place where the mind could think volumes; but the tongue must be silent that would speak, and the hand palsied that would write. A place where a Divine would confess that he never had fancied Paradise -- where the painter's palette would lose its beautiful tints -- the blood-stirring notes of eloquence would die in their utterance -- and even the soft tones of sweet music would scarcely preserve a spark to light the soul again that had passed this sweet delirium. I mean the prairie, whose enameled plains that lie beneath me, in distance soften into sweetness, like an essence; whose thousand velvet covered hills, (surely never formed by chance, but grouped in one

of Nature's sportive moods) -- tossing and leaping down with steep or graceful declivities to the river's edge, as if to grace its pictured shores, and make it "a thing to look upon." I mean the prairie at sun-set; when the green hill-tops are turned into gold -- and their long shadows of melancholy are thrown over the valleys -- when all the breathing of day are hushed, and nought but the soft notes of the retiring dove can be heard ; or the still softer and more plaintive notes of the wolf, who sneaks through these scenes of enchantment, and mournfully how--l---s, as if lonesome, and lost in the too beautiful quiet and stillness about him. I mean this prairie; where Heaven sheds its purest light, and lends its richest tints -- this round-topped bluff, here the foot treads soft, and light -- whose steep sides, and lofty head, rear me to the skies, overlooking yonder pictured vale of beauty -- this solitary cedar-post, which tells a tale of grief -- grief that was keenly felt, and tenderly, but long since softened in the march of time and lost. Oh, sad and tearstarting contemplation I: sole tenant of this stately mound, how solitary thy habitation! here Heaven wrested from thee thy ambition, and made thee sleeping monarch of this land of silence.

Stranger! oh, how the mystic web of sympathy links my soul to thee and thy afflictions! I knew thee not, but it was enough; thy tale was told, and I a solitary wanderer through thy land, have stopped to drop familiar tears upon thy grave. Pardon this gush from a stranger's eyes, for they are all that thou canst have in this strange land, where friends and dear relations are not allowed to pluck a flower, and drop a tear to freshen recollections of endearments past.

Stranger! Adieu. With streaming eyes I leave thee again, and thy fairy land, to peaceful solitude. My pencil has faithfully traced thy beautiful habitation; and long shall live in the world, and familiar, the name of "Floyd's Grave".

Readers, pardon this digression. I have seated myself down, not on a prairie, but at my table, by a warm and cheering fire, with my journal before me to cull from it a few pages, for your entertainment; and if there are spots of loveliness and beauty, over which I have passed, and whose images are occasionally beckoning me into digressions, you must forgive me.

Such is the spot I have just named, and some others, on to which I am instantly transferred when I cast my eyes back upon the enameled and beautiful shores of the Upper Missouri; and I am constrained to step aside and give ear to their breathing, when their soft images, and cherished associations, so earnestly prompt me. "Floyd's Grave" is a name given to one of the most lovely and imposing mounds or bluffs on the Missouri River, about twelve hundred miles above St. Louis, from the melancholy fate of Sergeant Floyd, who was of Lewis and Clark's expedition, in 1806; who died on the way, and whose body was taken to this beautiful hill, and buried in its top, where now stands a cedar post, bearing the initials of his name.

I landed my canoe in front of this grass-covered mound, and all hands being fatigued, we encamped a couple of days at its base. I several times ascended it and sat upon his grave, overgrown with grass and the most delicate wild flowers, where I sat and contemplated the solitude and stillness of this tenanted mound; and beheld from its top, the windings infinite of the Missouri, and its thousand hills and domes of green, vanishing into blue in distance, when nought but the soft-breathing winds were heard, to break the stillness and quietude of the scene. Where not the chirping of bird or sound of cricket, nor soaring eagle's scream, were interposed between God and man; nor aught to check man's whole surrender of his soul to his Creator. I could not hunt upon this ground, but I roamed from hill-top to hill-top, and culled wild flowers, and looked into the valley below me, both up the river and down, and contemplated the thousand hills and dales

that are now carpeted with green, streaked as they will be, with the plough, and yellow with the harvest sheaf; spotted with lowing kine-with houses and fences, and groups of hamlets and villas -- and these lovely hill-tops ringing with the giddy din and maze, or secret earnest whispers of lovesick swains -- of pristine simplicity and virtue -- wholesome and well earned contentment and abundance -- and again, of wealth and refinements -- of idleness and luxury -- of vice and its deformities -- of fire and sword, and the vengeance of offended Heaven, wreaked in retributive destruction and peace, and quiet, and loveliness, and silence, dwelling again, over and through these scenes, and blending them into futurity!

Many such scenes there are, and thousands, on the Missouri shores. My canoe has been stopped, and I have clambered up their grassy and flower decked sides; and sighed all alone, as I have carefully traced and fastened them in colours on my canvass.

This voyage in my little canoe, amid the thousand islands and grass covered bluffs that stud the shores of this mighty river, afforded me infinite pleasure, mingled with Pains and privations which I never shall wish to forget. Gliding along from day to day, and tiring our eyes on the varying landscapes that were continually opening to our view, my merry voyageurs were continually chanting their cheerful boat songs, and I' every now and then," taking up their unerring rifles to bring down the stately elks or antelopes, which were often gazing at us from the shores of the river.

But a few miles from "Floyd's Bluff" we landed our canoe, and spent a day in the vicinity of the "Black Bird's Grave". This is a celebrated point on the Missouri, and a sort of telegraphic place, which all the travellers in these realms, both white and red, are in the habit of visiting: the one to pay respect to the bones of one of their distinguished leaders; and the others, to indulge their eyes on the lovely landscape that spreads out to an almost illimitable extent in every direction about it. This elevated bluff, which may be distinguished for several leagues in distance, has received the name of the "Black Bird's Grave", from the fact, that a famous chief of the O-ma-haws, by the name of the Black Bird, was buried on its top, at his own peculiar request; over whose grave a cedar post was erected by his tribe some thirty years ago, which is still standing. The O-ma-haw village was about sixty miles above this place; and this very noted chief, who had been on a visit to Washington City, in company with the Indian agent, died of the small-pox, near this spot, on his return home. And, whilst dying, enjoined on his warriors who were about him, this singular request, which was literally complied with. He requested them to take his body down the river to this his favourite haunt, and on the pinnacle of this towering bluff; to bury him on the back of his favourite war-horse, which was to be buried alive, under him, from whence he could see, as he said, "the Frenchmen passing up and down the river in their boats." He owned, amongst many horses, a noble white steed that was led to the top of the grass-covered hill; and, with great pomp and ceremony, in presence of the whole nation, and several of the Fur Traders and the Indian agent, he was placed astride of his horse's back, with his bow in his hand, and his shield and quiver slung-with his pipe and his medicine-bag -- with his supply of dried meat, and his tobacco-pouch replenished to last him through his journey to the "beautiful hunting grounds of the shades of his fathers" -- with his flint and steel, and his tinder, to light his pipes by the way. The scalps that he had taken from his enemies' heads, could be trophies for nobody else, and were hung to the bridle of his horse -- he was in full dress and fully equipped; and on his head waved, to the last moment, his beautiful head-dress of the war-eagle's plumes. In this plight, and the last

---

funeral honours having been performed by the medicine-men, every warrior of his band painted the palm and fingers of his right hand with vermilion; which was stamped, and perfectly impressed on the milk-white sides of his devoted horse.

This all done, turfs were brought and placed around the feet and legs of the horse, and gradually laid up to its sides; and at last, over the back and head of the unsuspecting animal, and last of all, over the head and even the eagle plumes of its valiant rider, where altogether have smouldered and remained undisturbed to the present day.

This mound which is covered with a green turf, and spotted with wild flowers, with its cedar post in its centre, can easily be seen at the distance of fifteen miles, by the voyageur, and forms for him a familiar and useful land-mark.

Whilst visiting this mound in company with Major Sanford, on our way up the river, I discovered in a hole made in the mound, by a "ground hog" or other animal, the skull of the horse; and by a little pains, also came at the skull of the chief, which I carried to the river side, and secreted till my return in my canoe, when I took it in, and brought with me to this place, where I now have it, with others which I have collected on my route.

There have been some very surprising tales told of this man, which will lender him famous in history, whether they be truth or matters of fiction. Of the many, one of the most current is, that he gained his celebrity and authority by the most diabolical series of murders in his own tribe; by administering arsenic (with which he had been supplied by the Fur Traders) to such of his enemies as he wished to pet rid of -- and even to others in his tribe whom he was willing to sacrifice, merely to establish his superhuman powers, and the most servile dread of the tribe, from the certainty with which his victims fell around him, precisely at the times he saw fit to predict their death! It has been said that he administered this potent drug, and to them unknown medicine, to many of his friends as well as to foes; and by such an inhuman and unparalleled depravity, succeeded in exercising the most despotic and absolute authority in his tribe, until the time of his death!

This story may be true, and it may not. I cannot contradict it; and I am sure the world will forgive me, if I say, I cannot believe it. If it be true, two things are also true; the one, not much to the credit of the Indian character; and the other, to the everlasting infamy of the Fur Traders. If it be true, it furnishes an instance of Indian depravity that I never have elsewhere heard of in my travels; and carries the most conclusive proof of the incredible enormity of white men's dealings in this country; who, for some sinister purpose must have introduced the Poisonous drug into die country, and taught the poor chief how to use it; whilst they were silent accessories to the murders he was committing. This story is said to have been told by the Fur Traders; and although I have not always the highest confidence in their justice to the Indian, yet, I cannot for the honour of my own species believe them to be so depraved and so wicked, nor so weak, as to reveal such iniquities of this chief, if they were true, which must directly implicate themselves as accessories to his most wilful and unprovoked murders.

Such he has been heralded, however, to future ages, as a murderer -- like hundreds and thousands of others, as "horse thieves" -- as "drunkards" -- as "rogues of the first order", &c. &c. -- by the historian who catches but a glaring story, (and perhaps fabrication) of their lives, and has no time nor disposition to enquire into and record their long and brilliant list of virtues, which must be lost in the shade of infamy, for want of an historian.

I have learned much of this noble chieftain, and at a proper time shall recount the modes of his

civil and military life -- how he exposed his life, and shed his blood in rescuing the victims to horrid torture, and abolished that savage custom in his tribe -- how he led on and headed his brave warriors, against the Sacs and Foxes; and saved the butchery of his women and children -- how he received the Indian agent, and entertained him in his hospitable wigwam, in his village -- and how he conducted and acquitted himself on his embassy to the civilized world.

So much I will take pains to say, of a man whom I never saw, because other historians have taken equal pains just to mention his name, and a solitary (and doubtful) act of his life, as they have said of hundreds of others, for the purpose of consigning him to infamy.

How much more kind would it have been for the historian, who never saw him, to have enumerated with this, other characteristic actions of his life (for the verdict of the world); or to have allowed, in charity, his bones and his name to have slept in silence, instead of calling them up from the grave, to thrust a dagger through them, and throw them back again.

Book-making now-a-days, is done for money-making; and he who takes the Indian for his theme, and cannot go and see him, finds a poverty in his matter that naturally begets error, by grasping at every little tale that is brought or fabricated by their enemies. Such books are standards, because they are made for white man's reading only; and herald the character of a people who never can disprove them. They answer the purpose for which they are written; and the poor Indian who has no redress, stands stigmatized and branded, as a murderous wretch and beast.

If the system of book-making and newspaper printing were in operation in the Indian country awhile, to herald the iniquities and horrible barbarities of white men in these Western regions, which now are sure to be overlooked; I venture to say, that chapters would soon be printed, which would sicken the reader to his heart, and set up the Indian, a fair and tolerable man.

There is no more beautiful prairie country in the world, than that which is to be seen in this vicinity. In looking back from this bluff, towards the West, there is, to an almost boundless extent, one of the most beautiful scenes imaginable. The surface of the country is gracefully and slightly undulating, like the swells of the retiring ocean after-a heavy storm. And everywhere covered with a beautiful green turf, and with occasional patches and clusters of trees. The soil in this region is also rich, and capable of making one of the most beautiful and productive countries in the world. Ba'tiste and Bogard used their rifles to some effect during the day that we loitered here, and gathered great quantities of delicious grapes. From this lovely spot we embarked the next morning, and glided through constantly changing scenes of beauty, until we landed our canoe at the base of a beautiful series of grass-covered bluffs, which, like thousands and thousands of others on the banks of this river, are designated by no name, that I know of; and I therefore introduce them as fair specimens of the grassy bluffs of the Missouri.

My canoe was landed at noon, at the base of these picturesque hills--and there rested till the next morning. As soon as we were ashore, I scrambled to their summits, and beheld; I took my easel, and canvass and brushes, to the top of the bluff, and painted the two views from the same spot; the one looking up, and the other down the river. The reader, by imagining these hills to be five or six hundred feet high, and every foot of them, as far as they can be discovered in distance, covered with a vivid green turf, whilst the sun is gilding one side, and throwing a cool shadow on the other, will be enabled to form something like an adequate idea of the shores of the Missouri. From this enchanting spot there was nothing to arrest the eye from ranging over its waters for the distance of twenty or thirty miles, where it quietly glides between its barriers, formed of thousands

of green and gracefully sloping hills, with its rich and alluvial meadows, and woodlands -- and its hundred islands, covered with stately cotton-wood.

In these two views, the reader has a fair account of the general character of the Upper Missouri, which I have already described, he will at once see the process by which this wonderful formation has been produced. In that plate will be seen the manner in which the rains are wearing down the clay-bluffs, cutting gullies or sluices behind them, and leaving them at last to stand out in relief, these rounded and graceful forms, until in time they get seeded over, and nourish a growth of green grass on their sides, which forms a turf, and protects their surface, preserving them for centuries, in the forms that are here seen. The tops of the highest of these bluffs rise nearly up to the summit level of the prairies, which is found as soon as one travels a mile or so from the river, amongst these picturesque groups, and comes out at their top; from whence the country goes off to the East and the West, with an almost perfectly level surface.

These two views were taken about thirty miles above the village of the Puncas, and five miles above "the Tower", the name given by the travellers through the country, to a high and remarkable clay bluff, rising to the height of some hundreds of feet from the water, and having in distance, the castellated appearance of a fortification.

My canoe was not unmoored from the shores of this lovely spot for two days, except for the purpose of crossing the river; which I several times did, to ascend and examine the hills on the opposite side. I had Ba'tiste and Bogard with me on the tops of these green carpeted bluffs, and tried in vain to make them see the beauty of scenes that were about us. They dropped asleep, and I strolled and contemplated alone; clambering "up one hill" and sliding or running "down another," with no other living being in sight, save now and then a bristling wolf, which, from my approach, was reluctantly retreating from his shady lair -- or sneaking behind me and smelling on my track.

Whilst strolling about on the western bank of the river at this place, I found the ancient site of an Indian village, which, from the character of the marks, I am sure was once the residence of the Mandans. I said in a former Letter, when speaking of the Mandans, that within the recollection of some of their oldest men, they lived some sixty or eighty miles down the river from the place of their present residence; and that they then lived in nine villages. On my way down, I became fully convinced of the fact; having landed my canoe, and examined the ground where the foundation of every wigwam can yet be distinctly seen. At that time, they must have been much more numerous than at present, from the many marks they have left, as well as from their own representations.

The Mandans have a peculiar way of building their wigwams, by digging down a couple of feet in the earth; and there fixing the ends of the poles which form the walls of their houses. There are other marks, such as their caches-and also their mode of depositing their dead on scaffolds -- and of preserving the skulls in circles on the prairies; which peculiar customs I have before described, and most of which are distinctly to be recognized in each of these places, as well as in several similar remains which I have met with on the banks of the river, between here and the Mandans: which fully convince me, that they have formerly occupied the lower parts of the Missouri, and have gradually made their way quite through the heart of the great Sioux country; and having been well fortified in all their locations, as in their present one, by a regular stockade and ditch; they have been able successfully to resist the continual assaults of the Sioux, that numerous tribe, who have been, and still are, endeavoring to effect their entire destruction. I have examined, at

---

least fifteen or twenty of their ancient locations on the banks of this river, and can easily discover the regular differences in the ages of these antiquities; and around them all I have found numerous bits of their broken pottery, corresponding with that which they are now manufacturing in great abundance; and which is certainly made by no other tribe in these regions. These evidences, and others which I shall not take the time to mention in this place, go a great way in my mind towards strengthening the possibility of their having moved from the Ohio river, and of their being a remnant of the followers of Madoc. I have much further to trace them yet, however, and shall certainly have more to say on so interesting a subject in future.

Almost every mile I have advanced on the banks of this river, I have met evidences and marks of Indians in some form or other; and they have generally been those of the Sioux, who occupy and own the greater part of this immense region of country. In the latter part of my voyage, however, and of which I have been speaking in the former part of this Letter, I met the ancient sites of the O-ma-ha and Ot-to towns, which are easily detected when they are met. The usual mode of the Omahas, of depositing their dead in the crotches and on the branches of trees, enveloped in skins, and never without a wooden dish hanging by the head of the corpse; probably for the purpose of enabling it to dip up water to quench its thirst on the long and tedious journey, which they generally expect to enter on after death. These corpses are so frequent along the banks of the river, that in some places a dozen or more of them may be seen at one view.

The customs of the Sioux, which are found in endless numbers on the river; and in fact, through every part of this country. The wigwams of these people are only moveable tents, and leave but a temporary mark to be discovered. Their burials, however, are peculiar and lasting remains, which can be long detected. They often deposit their dead on trees, and on scaffolds; but more generally bury in the tops of bluffs, or near their villages; when they often split out staves and drive in the ground around the grave, to protect it from the trespass of dogs or wild animals.

The character of Mandan remains, that are met with in numerous places on the river. Their mode of resting their dead upon scaffolds is not so peculiar to them as positively to distinguish them from Sioux, who sometimes bury in the same way; but the excavations for their earth-covered wigwams, which I have said are two feet deep in the ground, with the ends of the decayed timbers remaining in them, are peculiar and conclusive evidence of their being of Mandan construction; and the custom of leaving the skulls bleached upon the ground in circles, instead of burying them as the other tribes do, forms also a strong evidence of the fact that they are Mandan remains.

In most of these sites of their ancient towns, however, I have been unable to find about their burial places, these characteristic deposits of the skulls; from which I conclude, that whenever they deliberately moved to a different region, they buried the skulls out of respect to the dead. I found, just back of one of these sites of their ancient towns, however, and at least 500 miles below where they now live, the same arrangement of skulls. They had laid so long, however, exposed to the weather, that they were reduced almost to a powder, except the teeth, which mostly seemed polished and sound as ever. It seems that no human hands had dared to meddle with the dead; and that even their enemies had respected them; for every one, and there were at least two hundred in one circle, had mouldered to chalk, in its exact relative position, as they had been placed in a circle. In this case, I am of opinion that the village was besieged by the Sioux, and entirely destroyed; or that the Mandans were driven off without the power to stop and bury the bones of their dead. Belie Vue, on the West bank of the River, about nine miles above the mouth of the Platte, and is

the agency of Major Dougherty, one of the oldest and most effective agents on our frontiers. This spot is, as I said, lovely in itself; but doubly so to the eye of the weather-beaten voyageur from the sources of the Missouri, who steers his canoe in, to the shore, as I did, and soon finds himself a welcome guest at the comfortable board of the Major, with a table again to eat from--and that (not "groaning", but) standing under the comfortable weight of meat and vegetable luxuries, products of the labour of cultivating man. It was a pleasure to see again, in this great wilderness, a civilized habitation; and still more pleasant to find it surrounded with corn-fields, and potatoes, with numerous fruit-trees, bending under the weight of their fruit -- with pigs and poultry, and kine; and what was best of all, to see the kind and benevolent face, that never looked anything but welcome to the half-starved guests, who throw themselves upon him from the North, from the South, the East, or the West.

At this place I was in the country of the Pawnees, a numerous tribe, whose villages are on the Platte river, and of whom I shall say more an on. Major Dougherty has been for many years the agent for this hostile tribe; and by his familiar knowledge of the Indian character, and his strict honesty and integrity, he has been able to effect a friendly intercourse with them, and also to attract the applause and highest confidence of the world, as well as of the authorities who sent him there.

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

by George Catlin

(First published in London in 1844)

---

LETTER -- No. 33.

FORT LEAVENWORTH, LOWER MISSOURI.

I MENTIONED in a former epistle, that this is the extreme outpost on the Western Frontier, and built, like several others, in the heart of the Indian country. There is no finer tract of lands in North America, or, perhaps, in the world, than that vast space of prairie country, which lies in the vicinity of this post, embracing it on all sides. This garrison, like many others on the frontiers, is avowedly placed here for the purpose of protecting our frontier inhabitants from the incursions of Indians; and also for the purpose of preserving the peace amongst the different hostile tribes, who seem continually to wage, and glory in, their deadly wars. How far these feeble garrisons, which are generally but half manned, have been, or will be, able to intimidate and control the warlike ardour of these restless and revengeful spirits; or how far they will be able in desperate necessity, to protect the lives and property of the honest pioneer, is yet to be tested,

They have doubtless been designed with the best views, to effect the most humane objects, though I very much doubt the benefits that are anticipated to flow from them, unless a more efficient number of men are stationed in them than I have generally found; enough to promise protection to the Indian, and them to ensure it; instead of promising, and leaving them to seek it in their own way at last, and when they are least prepared to do it.

When I speak of this post as being on the Lower Missouri, I do not wish to convey the idea that I am down near the sea-coast, at the mouth of the river, or near it; I only mean that I am on the lower part of the Missouri, yet 600 miles above its junction with the Mississippi, and near 2000 from the Gulf of Mexico, into which the Mississippi discharges its waters.

In this delightful Cantonment there are generally stationed six or seven companies of infantry, and ten or fifteen officers; several of whom have their wives and daughters with them, forming a very pleasant little community, who are almost continually together in social enjoyment of the peculiar amusements and pleasures of this wild country. Of these pastimes they have many, such as riding on horseback or in carriages over the beautiful green fields of the prairies, picking strawberries and wild plums -- deer chasing -- grouse shooting -- horse-racing, and other amusements of the garrison, in which they are almost constantly engaged; enjoying life to a very high degree. In these delightful amusements, and with these pleasing companions, I have been for a while participating with great satisfaction; I have joined several times in the deer-hunts, and more frequently in grouse shooting, which constitutes the principal amusement of this place.

This delicious bird, which is found in great abundance in nearly all the North American prairies, and most generally called the Prairie Hen, is, from what I can learn, very much like the English grouse, or heath hen, both in size, in colour, and in habits. They make their appearance in these parts in the months of August and September, from the higher latitudes, where they go in the early part of the summer, to raise their broods. This is the season for the best sport amongst them; and the whole garrison, in fact are almost subsisted on them at this time, owing to the facility with

---

which they are killed.

I was lucky enough the other day, with one of the officers of the garrison, to gain the enviable distinction of having brought in together seventy- five of these fine birds, which we killed in one afternoon; and although I am quite ashamed to confess the manner in which we killed the greater part of them, I am not so professed a sportsman as to induce me to conceal the fact. We had a fine pointer, and had legitimately followed the sportsman's style for a part of the afternoon; but seeing the prairies on fire several miles ahead of us, and the wind driving the fire gradually towards us, we found these poor birds driven before its long line, which seemed to extend From horizon to horizon, and they were flying in swarms or flocks that would at times almost fill the air. They generally flew half a mile or so, and lit down again in the grass, where they would sit until the fire was close upon them, and then they would rise again. We observed by watching their motions, that they lit in great numbers in every solitary tree; and we placed our selves near each of these trees in turn, and shot them down as they settled in them; sometimes killing five or six at a shot, by getting a range upon them.

In this way we retreated for miles before the flames, in the midst of the flocks, and keeping company with them where they were carried along in advance of the fire, in accumulating numbers; many of which had been driven along for many miles. We murdered the poor birds in this way, until we had as many as we could well carry, and laid our course back to the Fort, where we got much credit for our great shooting; and where we were mutually pledged to keep the secret.

The prairies burning form some of the most beautiful scenes that are to be witnessed in this country, and also some of the most sublime. Every acre of these vast prairies (being covered for hundreds and hundreds of miles, with a crop of grass, which dies and dries in the fall) burns over during the fall or early in the spring, leaving the ground of a black and doleful colour.

There are many modes by which the fire is communicated to them, both by white men and by Indians -- par accident; and yet many more where it is voluntarily done for the purpose of getting a fresh crop of grass, for the grazing or their horses, and also for easier travelling during the next summer, when there will be no old grass to lie upon the prairies, entangling the feet of man and horse, as they are passing over them.

Over the elevated lands and prairie bluffs, where the grass is thin and short, the fire slowly creeps with a feeble flame, which one can easily step over; where the wild animals often rest in their lairs until the flames almost burn their noses, when they will reluctantly rise, and leap over it, and trot off amongst the cinders, where the fire has past and left the ground as black as jet. These scenes at night become indescribably beautiful, when their flames are seen at many miles distance, creeping over the sides and tops of the bluffs, appearing to be sparkling and brilliant chains of liquid fire (the hills being lost to the view), hanging suspended in graceful festoons from the skies.

But there is yet another character of burning prairies, that requires another Letter, and a different pen to describe -- the war, or hell of fires! Where the grass is seven or eight feet high, as is often the case for many miles together, on the Missouri bottoms; and the flames are driven forward by the hurricanes, which often sweep over the vast prairies of this denuded country. There are many of these meadows on the Missouri, the Platte, and the Arkansas, of many miles in breadth, which are perfectly level, with a waving grass, so high, that we are obliged to stand erect in our stirrups, in order to look over its waving tops, as we are riding through it. The fire in these, before such a wind, travels at an immense and frightful rate, and often destroys, on their fleetest horses, parties

of Indians, who are so unlucky as to be overtaken by it; not that it travels as fast as a horse at full speed, but that the high grass is filled with wild pea-vines and other impediments, which render it necessary for the rider to guide his horse in the zig-zag paths of the deers and buffaloes, retarding his progress, until he is overtaken by the dense column of smoke that is swept before the fire -- alarming the horse, which stops and stands terrified and immutable, till the burning grass which is wafted in the wind, falls about him, kindling up in a moment a thousand new fires, which are instantly wrapped in the swelling flood of smoke that is moving on like a black thunder-cloud, rolling on the earth, with its lightning's glare, and its thunder rumbling as it goes.

\* \* \* \* When Ba'tiste, and Bogard, and I, and Patrick Raymond (who like Bogard had been a free trapper in the Rocky Mountains), and Pah-me-o-ne-qua (The Red Thunder), our guide back from a neighboring village, were jogging along on the summit of an elevated bluff, overlooking an immense valley of high grass, through which we were about to lay our course.---

"Well, then, you say you have seen the prairies on fire?" Yes. "You have seen the fire on the mountains, and beheld it feebly creeping over the grassy hills of the North, where the toad and the timid snail were pacing from its approach -- all this you have seen, and who has not? But who has seen the vivid lightnings, and heard the roaring thunder of the rolling conflagration which sweeps over the deep-clad prairies of the West? Who has dashed, on his wild horse, through an ocean of grass, with the raging tempest at his back, rolling over the land its swelling waves of liquid fire?" What! "Aye, even so. Ask the red savage of the wilds what is awful and sublime -- Ask him where the Great Spirit has mixed up all the elements of death, and if he does not blow them over the land in a storm of fire? Ask him what foe he has met, that regarded not his frightening yells, or his sinewy bow? Ask these lords of the land, who vauntingly challenge the thunder and lightning of Heaven--whether there is not one foe that travels over their land, too swift for their feet, and too mighty for their strength--at whose approach their stout hearts sicken, and their strong-armed courage withers to nothing? Ask him again (if he is sullen, and his eyes set in their sockets) --' Hush!--sh!--sh!--sh!--sh!--(he will tell you, with a soul too proud to confess -- his head sunk on his breast, and his hand over his mouth)--that's medicine!"

I said to my comrades, as we were about to descend from the towering bluffs into the prairie -- "We will take that buffalo trail, where the travelling herds have slashed down the high grass, and making for that blue point, rising, as you can just discern, above this ocean of grass; a good day's work will bring us over this vast meadow before sunset." We entered the trail, and slowly progressed on our way, being obliged to follow the winding paths of the buffaloes, for the grass was higher than the backs of our horses. Soon after we entered, my Indian guide dismounted slowly from his horse, and lying prostrate on the ground, with his face in the dirt, he cried, and was talking to the Spirits of the brave -- "For," said he, "over this beautiful plain dwells the Spirit of fire! He rides in yonder cloud -- his face blackens with rage at the sound of the trampling hoofs -- the fire-bow is in his hand -- he draws it across the path of the Indian, and quicker than lightning, a thousand flames rise to destroy him; such is the talk of my fathers, and the ground is whitened with their bones. It was here", said he, "that the brave son of Wah-chee-ton, and the strong-armed warriors of his band, just twelve moons since, licked the fire from the blazing wand of that great magician. Their pointed spears were drawn upon the backs of the treacherous Sioux, whose swift-dying horses led them, in vain, to the midst of this valley of death. A circular cloud sprang up from the prairie around them! it was raised, and their doom was fixed by the Spirit of fire! It was

on this vast plain of pre-grass that waves over our heads, that the swift foot of Mah-to-ga was laid. It is here, also, that the fleet-bounding wild horse mingles his bones with the red man; and the eagle's wing is melted as he darts over its surface. Friends! It is the season of fire; and I fear, from the smell of the wind, that the Spirit is awake!"

Pah-me-o-ne-qua said no more, but mounted his wild horse, and waving his hand, his red shoulders were seen rapidly vanishing as he glided through the thick mazes of waving grass. We were on his trail, and busily traced him until the midday-sun had brought us to the ground, with our refreshments spread before us. He partook of them not, but stood like a statue, while his black eyes, in sullen silence, swept the horizon round; and their, with a deep-drawn sigh, he gracefully sunk to the earth, and laid with his face to the ground. Our buffalo tongues and pemican, and marrow-fat, were spread before us; and we were in the full enjoyment of these dainties of the Western world, when, quicker than the frightened elk, our Indian friend sprang upon his feet! His eyes skimmed again slowly over the prairies' surface, and he laid himself as before on the ground. "Bed Thunder seems sullen to-day." Said Bogard -- "He startles at every rush of the wind, and scowls at the whole world that is about him."

"There's a rare chap for you -- a fellow who would shake his fist at Heaven, when he is at home; and here, in a grass-patch, must make his pre-medicine for a circumstance that he could easily leave at a shake of his horse's heels."

"Not sae sure o' that, my hooney, though we'll not be making too lightly of the matter, nor either be frightened at the mon's strange octions. But, Bogard, I'll tell ye in aord (and thot's enough), there's something more than odds in all this 'medicine.' If this mon's a fool, he was born out of his own country, that's all -- and if the divil iver gits him, he must take him cowl, for he is too swift and too wide-awake to be taken alive -- you understond that, I suppose? But, to come to the plain matter -- supposin that the Fire Spirit (and I go for somewhat of witchcraft), I say supposin that this Fire Spirit should jist impty his pipe on tother side of this prairie, and strike up a bit of a blaze in this high grass, and send it packing across this direction, before sich a death of a wind as this is! By the bull barley, I'll bet you'd be after' making medicine,' and taking a bit of it, too, to get rid of the racket."

"Yes, but you see, Patrick----"

"Neever mind thot (not wishin to distarb you); and suppose the blowin wind was coming fast ahead, jist blowin about our ears a warld of smoke and chokin us to dith, and we were dancin about a Varginny reel among these little paths, where the divil would we be by the time we got to that bluff, for it's now fool of a distance? Givin you time to spake, I would say a word more (askin your pardon), I know by the expression of your face, mon, you neever have seen the world on fire yet, and therefore you know nothin at all of a hurry burly of this kind -- did ye? -- Did ye iver see (and I jist want to know), did ye iver see the fire in high grass, runnin with a strong wind, about five mile and the half, and thin hear it strike into a slash of dry cane brake!! I would jist ax you that? By thunder you niver have -- for your eyes would jist stick out of your head at the thought of it! Did ye iver look way into the backside of Mr. Maelzel's Moscow, and see the flashin flames a runnin up; and then hear the poppin of the militia: fire jist afterwards? Then you have jist a touch of it! ye're jist beginnin--ye may talk about fires -- but this is sich a baste of a fire! Ask Jack Sanford, he's a chop that can tall you all about it. Not wishin to distarb you, I would say a word more--and that is this -- If I were advisin, I would say that we are gettin too far into this imbustible

meadow; for the grass is dry, and the wind is too strong to make a light matter of, at this season of the year; an now I'll jist tell ye how McKenzie and I were sarved in this very plane about two Years ago; and he's a worldly chop, and niver aslape, my word for that ----- hollo, what's that!"

Red Thunder was on his feet! -- his long arm was stretched over the grass, and his blazing eye-balls starting from their sockets! "White man (said he), see ye that small cloud lifting itself from the prairie? He rises! The hoofs of our horses have waked him! The Fire Spirit is awake -- this wind is from his nostrils, and his face is this way!" No more -- but his swift horse darted under him, and he gracefully slid over the waving grass as it was bent by the wind. Our viands were left, and we were swift on his trail. The extraordinary leaps of his wild horse, occasionally raised his red shoulders to view, and he sank again in the waving billows of grass. The tremulous wind was hurrying by us fast, and on it was borne the agitated wing of the soaring eagle. His neck was stretched for the towering bluff, and the thrilling screams of his voice told the secret that was behind him. Our horses were swift, and we struggled hard, yet hope was feeble, for the bluff was yet blue, and nature nearly exhausted! The sunshine was dying, and a cool shadow advancing over the plain. Not daring to look back, we strained every nerve. The roar of a distant cataract seemed gradually advancing on us -- the winds increased, the howling tempest was maddening behind us -- and the swift-winged beetle and heath hens, instinctively drew their straight lines over our heads. The fleet-bounding antelope Passed us also; and the still swifter long-legged hare, who leaves but a shadow as he dies! There was no time for thought -- but I recollect the heavens were overcast -- the distant thunder was heard -- the lightning's glare was reddening the scene -- and the smell that came on the winds struck terror to my soul! The piercing yell of my savage guide at this moment came back upon the winds -- his robe was seen waving in the air, and his foaming horse leaping up the towering bluff.

Our breath and our sinews, in this last struggle for life, were just enough to bring us to its summit. We had risen from a sea of fire! "Great God I (I exclaimed) how sublime to gaze into that valley, where the elements of nature are so strangely convulsed!" Ask not the poet or painter how it looked, for they can tell you not; but ask the naked savage, and watch the electric twinge of his manly nerves and muscles, as he pronounces the lengthened "hush----sh-----" his hand on his mouth, and his glaring eye-balls looking you to the very soul!

I beheld beneath me an immense cloud of black smoke, which extended from one extremity of this vast plain to the other, and seemed majestically to roll over its surface in a bed of liquid fire; and above this mighty desolation, as it rolled along, the whitened smoke, pale with terror, was streaming and rising up in magnificent cliffs to heaven!

I stood secure, but tremblingly, and heard the maddening wind, which hurled this monster o'er the land -- I heard the roaring thunder, and saw its thousand lightnings dash; and then I saw behind, the black and smoking desolation of this storm of fire!

LETTER--No. 35.

ST. LOUIS, MISSOURI.

My little bark has been soaked in the water agin, and Ba'tiste and Bogard have paddled, and I have steered and dodged our little craft amongst the snags and sawyers, until at last we landed the humble little thing amongst the huge steamers and floating palaces at the wharf of this bustling and growing city.

And first of all, I must relate the fate of my little boat, which had borne us safe over two thousand miles of the Missouri's turbid and boiling current, with no fault, excepting two or three instances, when the waves became too saucy, she, like the best of boats of her size, went to the bottom, and left us soused, to paddle our way to the shore, and drag out our things and dry them in the sun. When we landed at the wharf, my luggage was all taken out, and removed to my hotel; and when I returned a few hours afterwards, to look for my little boat, to which I had contracted a peculiar attachment (although I had left it in special charge of a person at work on the wharf); some mystery or medicine operation had relieved me from any further anxiety or trouble about it -- it had gone and never returned, although it had safely passed the countries of mysteries, and had often laid weeks and months at the villages of red men, with no laws to guard it; and where it had also often been taken out of the water by mystery-men, and carried up the bank, and turned against my wigwam; and by them again safely carried to the river's edge. and put afloat upon the water, when I was ready to take a seat in it.

St. Louis, which is 1400 miles west of New York, is a flourishing town, of 15,000 inhabitants, and destined to be the great emporium of the West--the greatest inland town in America. Its location is on the Western bank of the Mississippi river, twenty miles below the mouth of the Missouri, and 1400 above the entrance of the Mississippi into the Gulf of Mexico.

This is the great depot of all the Fur Trading Companies to the Upper Missouri and Rocky Mountains, and their starting-place; and also for the Santa Fe, and other Trading Companies, who reach the Mexican borders overland, to trade for silver bullion, from the extensive mines of that rich country.

I have also made it my starting-point, and place of deposit, to which I send from different quarters, my packages of paintings and Indian articles, minerals, fossils, &c., as I collect them in various regions, here to be stored till my return; and where on my last return, if I ever make it, I shall hustle them altogether, and remove them to the East.

To this place I had transmitted by steamer and other conveyance, about twenty boxes and packages at different times, as my note-book shewed; and I have, on looking them up and enumerating them, been lucky enough to recover and recognize about fifteen of the twenty, which is a pretty fair proportion for this wild and desperate country, and the very conscientious hands they often are doomed to pass through.

Ba'tiste and Bogard (poor fellows) I found, after remaining here a few days, had been about as

---

unceremoniously snatched off, as my little canoe; and Bogard, in particular, as he had made show of a few hundred dollars, which he had saved of his hard earnings in the Rocky Mountains.

He came down with a liberal heart, which he had learned in an Indian life of ten years, with a strong taste, which he had acquired, for whiskey, in a country where it, was sold for twenty dollars per gallon; and with an independent feeling, which illy harmonized with rules and regulations of a country of laws; and the consequence soon was, that by the "Hawk and Buzzard system", and Rocky Mountain liberality, and Rocky Mountain prodigality, the poor fellow was soon "jugged up;" where he could deliberately dream of beavers, and the free and cooling breezes of the mountain air, without the pleasure of setting his trap for the one, or even indulging the hope of ever again having the pleasure of breathing the other.

I had imbibed rather less of these delightful passions in the Indian country, and consequently indulged less in them when I came back; and of course, was rather more fortunate than poor Bogard, whose feelings I soothed as far as it laid in my power, and prepared to "lay my course" to the South, with colours and canvass in readiness for another campaign.

In my sojourn in St. Louis, amongst many other kind and congenial friends whom I met, I have had daily interviews with the venerable Governor Clark, whose whitened locks are still shaken in roars of laughter, and good jests among the numerous citizens, who all love him, and continually rally around him in his hospitable mansion.

Governor Clark, with Captain Lewis, were the first explorers across the Rocky Mountains, and down the Colombia to the Pacific Ocean thirty-two years ago; whose tour has been published in a very interesting work, which has long been before the world. My works and my design have been warmly approved and applauded by this excellent patriarch of the Western World; and kindly recommended by him in such ways as have been of great service to me. Governor Clark is now Superintendent of Indian Affairs for all the Western and North Western regions; and surely, their interests could never have been intrusted to better or abler hands.

So long have I been recruiting, and enjoying the society of friends in this town, that the navigation of the river has suddenly closed, being entirely frozen over; and the earth's surface covered with eighteen inches of drifting snow, which has driven me to the only means, and I start in a day or two, with a tough little pony and a packhorse, to trudge through the snow drifts from this to New Madrid, and perhaps further; a distance of three or four hundred miles to the South ••• where I must venture to meet a warmer climate -- the river open, and steamers running, to waft me to the Gulf of Mexico. Of the fate or success that waits me, or of the incidents of that travel, as they have not transpired, I can as yet say nothing; and I close my book for further time and future entries.

LETTER--No. 37.

FORT GIBSON, ARKANSAS TERRITORY .

Since the date of my last Letter at Pensacola, in Florida, I travelled to New Orleans, and from thence up the Mississippi several hundred miles, to the mouth of the Arkansas; and up the Arkansas, 700 miles to this place. We wended our way up, between the pictured shores of this beautiful river, on the steamer "Arkansas," until within 200 miles of this post; when we got aground, and the water falling fast, left the steamer nearly on dry ground. Hunting and fishing, and whist, and sleeping, and eating, were our principal amusements to deceive away the time, whilst we were waiting for the water to rise. Lieutenant Seaton, of the army, was one of my companions in misery, whilst we lay two weeks or more without prospect of further progress -- the poor fellow on his way to his post to join his regiment, had left his trunk, unfortunately, with all his clothes in it; and by hunting and fishing in shirts that I loaned him, or from other causes, we became yoked in amusements, in catering for our table-in getting fish and wild fowl; and, after that, as the "last kick" for amusement and pastime, with another good companion by the name of Chadwick, we clambered up and over the rugged mountains' sides, from day to day, turning stones to catch centipedes and tarantulas, of which poisonous reptiles we caged a number; and on the boat amused ourselves by betting on their battles, which were immediately fought, and life almost instantly taken, when they came together.

In this, and fifty other ways, we whiled away the heavy time : but yet, at last we reached our destined goal, and here we are at present fixed. Fort Gibson is the extreme south-western outpost on the United States frontier; beautifully situated on the banks of the river, in the midst of an extensive and lovely prairie ; and is at Present occupied by the with regiment of United States infantry, heretofore under the command of General Arbuckle, one of the oldest officers on the frontier, and the original builder of the post.

Being soon to leave this little civilized world for a campaign in the Indian country, I take this opportunity to bequeath a few words before the moment of departure. Having sometime since obtained permission from the Secretary of War to accompany the regiment of the United States dragoons in their summer campaign, I reported myself at this Place two months ago, where I have been waiting ever since for their organization. -- After the many difficulties which they have had to encounter, they have at length all assembled--the grassy plains are resounding with the trampling hoofs of the prancing warhorse -- and already the hills are echoing back the notes of the spirit-stirring trumpets, which are sounding for the onset. The natives are again "to be astonished", and I shall probably again be a witness to the scene. But whether the approach of eight hundred mounted dragoons amongst the Camanchees and Pawnees, will afford me a better subject for a picture of a gaping and astounded multitude, than did the first approach of our steamboat amongst the Mandans, &c., is a question yet to be solved. I. am strongly inclined to think that the scene will not be less wild and spirited, and I ardently wish it; for I have become so much

---

Indian of late, that my pencil has lost all appetite for subjects that savour of tameness. I should delight in seeing these red knights of the lance astonished, for it is then that they shew their brightest hues -- and I care not how badly we frighten them, provided we hurt them not, nor frighten them out of sketching distance. You will agree with me, that I am going farther to get-sitters, than any of my fellow-artists ever did; but I take an indescribable pleasure in roaming through Nature's trackless wilds, and selecting my models, where I am free and unshackled by the killing restraints of society; where a painter must modestly sit and breathe away in agony the edge and soul of his inspiration, waiting for the sluggish calls of the civil. Though the toil, the privations, and expense of travelling to these remote parts of the world to get subjects for my pencil, place almost insurmountable, and sometimes painful obstacles before me, yet I am encouraged by the continual conviction that I am practicing in the true School of the Arts; and that, though I should get as poor as Lazarus, I should deem myself rich in models and studies for the future occupation of my life. Of this much I am certain -- that amongst these sons of the forest, where are continually repeated the feats and gambols equal to the Grecian Games, I have learned more of the essential parts of my art in the three last years, than I could have learned in New York in a life-time.

The landscape scenes of these wild and beautiful regions, are, of themselves, a rich reward for the traveller who can place them in his portfolio: and being myself the only one accompanying the dragoons `for scientific purposes, there will be an additional pleasure to be derived from those pursuits. The regiment of eight hundred men, with whom I am to travel, will be an effective force, and a perfect protection against any attacks that will ever be made by Indians. It is composed principally of young men of respectable families, who would act, on all occasions, from feelings of pride and honour, in addition to those of the common soldier.

The day before yesterday the regiment of dragoons and the 7th regiment of infantry, stationed here, were reviewed by General Leavenworth, who has lately arrived at this post, superseding Colonel Arbuckle in the command.

Both regiments were drawn up in battle array, in fatigue dress, and passing through a number of the manoeuvres of battle, of charge and repulse, &c., presenting a novel and thrilling scene in the prairie, to the thousands of Indians and others who had assembled to witness the display. The proud and manly deportment of these young men remind one forcibly of a regiment of Independent Volunteers, and the horses have a most beautiful appearance from the arrangement of colours. - Each company of horses has been selected of one colour entire. There is: a company of bays, a company of blacks, -one of whites, one of sorrels, one of greys, one of cream colour, &c. &c., which render the companies distinct, and the effect exceedingly pleasing. This regiment goes out under the command of Colonel Dodge, and from his well tested qualifications, and, from the beautiful equipment of the command, there can be little doubt but that they will do credit to themselves and an honour to their country I so far as honours can be gained and laurels can be plucked from their wild stems in a savage country. The object of this summer's campaign seems to be to cultivate an acquaintance with the Pawnees and Camanches. These are two extensive tribes of roaming Indians. who, from their extreme ignorance of us, have not yet recognized the United States in treaty; and have struck frequent blows on -- our frontiers and plundered our traders who are traversing their country. For this I cannot so much blame them, for the Spaniards are gradually advancing upon them on one side, and the Americans on the other, and fast destroying the furs and game of their country, which God gave them as their only wealth and means of subsistence.

---

This movement of the dragoons seems to be one of the most humane in its views, and I heartily hope that it may prove so in the event, as well for our own sates as for that of the Indian. I can see no reason why we should march upon them with an invading army carrying with it the spirit of chastisement. The object of Government undoubtedly is to effect a friendly meeting with them, that they may see and respect us, and to establish something like a system of mutual rights with them. To penetrate their country with the other view, that of chastising them, even with five times the number that are now going, would be entirely futile, and perhaps disastrous in the extreme. It is a pretty thing (and perhaps an easy one, in the estimation of the world) for an army of mounted men to be gaily prancing over the boundless green fields of the West, and it is so for a little distance -- but it would be well that the world should be apprised of some of the actual difficulties that oppose themselves to the success of such a campaign, that they may not censure too severely, in case this command should fail to accomplish the objects for which they were organized.

In the first place, from the great difficulty of organizing and equipping, these troops are starting too late in the season for their summer's campaign, by two months. The journey which they have to perform is a very long one, and although the first part of it will be picturesque and pleasing, the after part of it will be tiresome and fatiguing in the extreme. As they advance to the West, the grass (and consequently the game) will be gradually diminishing, and water in many parts of the county not to be found.

As the troops will be obliged to subsist themselves a great part of the way, it will be extremely difficult to do it under such circumstances, and at the same time hold themselves in readiness, with half-famished horses and men nearly exhausted, to contend with a numerous enemy who are at home, on the ground on which they were born, with horses fresh and ready for action. It is not probable, however, that the Indians will venture to take advantage of such circumstances; but I am inclined to think, that the expedition will be more likely to fail from another source : it is my opinion that the appearance of so large a military force in their country, will alarm the Indians to that degree, that they will fly with their families to their hiding-places amongst those barren deserts, which they themselves can reach only by great fatigue and extreme privation, and to which our half-exhausted troops cannot possibly follow them. From these haunts their warriors would advance and annoy the regiment as much as they could, by striking at their hunting parties and cutting off their supplies. To attempt to pursue them, if they cannot be called to a council, would be as useless as to follow the wind; for our troops in such a case, are in a country where they are obliged to subsist themselves, and the Indians being on fresh horses, with a supply of provisions, would easily drive all the buffaloes ahead of them; and endeavor, as far as possible, to decoy our troops into the barren parts of the country, where they could not find the means of subsistence. The plan designed to be pursued, and the only one that can succeed, is to send runners to the different bands, explaining the friendly intentions of our Government, and to invite them to a meeting. For this purpose several Camanchee and Pawnee prisoners have been purchased from the Osages, who may be of great service in bringing about a friendly interview.

I ardently hope that this Plan may succeed, for I am anticipating great fatigue and privation in the endeavor to see these wild tribes together; that I may be enabled to lay before the world a just estimate of their manners and customs.

I hope that my suggestions may not be truly prophetic; but I am constrained to say, that I doubt very much whether we shall see anything more of them than their tails, and the sites of their de-

served villages.

Several companies have already started from this place; and the remaining ones will be on their march in a day or two. General Leavenworth will accompany them 200 miles, to the mouth of False Washita, and I shall be attached to his staff. Incidents which may occur, I shall record.

Adieu.

LETTER-No. 38.

FORT GIBSON, ARKANSAS.

NEARLY two months have elapsed since I arrived at this post, on my way up the river from the Mississippi, to join the regiment of dragoons on their campaign into the country of the Camanchees and Pawnee Picts; during which time, I have been industriously at work with my brush and my pen, recording the looks and the deeds of the Osages, who inhabit the country on the North and the West of this.

The Osage, or (as they call themselves) Wa-saw-see, are a tribe of about 5200 in numbers, inhabiting and hunting over the head-waters of the Arkansas, and Neosho or Grand Rivers. Their present residence is about 700 miles West of the Mississippi river; in three villages, constituted of wigwams, built of barks and flags or reeds. One of these villages is within forty miles of this Fort; another within sixty, and the third about eighty miles. Their chief place of trade is with the sutlers at this post; and there are constantly more or less of them encamped about the garrison.

The Osages may justly be said to be the tallest race of men in North America, either of red or white skins; there being very few indeed of the men, at their full growth, who are less than six feet in stature, and very many of them six and a half, and others seven feet. They are at the same time well-proportioned in their limbs, and good looking; being rather narrow in the shoulders, and, like most all very tall people, a little inclined to stoop; not throwing the chest out, and the head and shoulders back, quite as much as the Crows and Mandans, and other tribes amongst which I have been familiar. Their movement is graceful and quick; and in war and the chase, I think they are equal to any of the tribes about them.

This tribe, though living, as they long have, near the borders of the civilized community, have studiously rejected everything of civilized customs: and are uniformly dressed in skins of their own dressing -- strictly maintaining their primitive looks and manners, without the slightest appearance of innovations, excepting in the blankets, which have been recently admitted to their use instead of the buffalo robes, which are now getting scarce amongst them.

The Osages are One Of the tribes who shave the head, as I have before described when speaking of the Pawnees and Konzas, and they decorate and paint it with great care, and some considerable taste. There is a peculiarity in the heads of these people which is very striking to the eye of a traveller; and which I find is produced by artificial means in infancy. Their children, like those of all the other tribes, are carried on a board, and slung upon the mother's back. The infants are lashed to the boards, with their backs upon them, apparently in a very uncomfortable condition; and with the Osages, the head of the child bound down so tight to the board, as to force in the occipital bone, and create an unnatural deficiency on the back part, and consequently more than a natural elevation of the top of the head. This custom, they told me they practiced, because "it pressed out a bold and manly appearance in front." This I think, from observation, to be rather imaginary than real; as I cannot see that they exhibit any extraordinary development in the front; though

---

they evidently shew a striking deficiency on the back part, and also an unnatural elevation on the top of the head, which is, no doubt, produced by this custom. The difference between this mode and the one practiced by the Flat-head Indians beyond the Rocky Mountains, consists in this, that the Flat-heads press the head between two boards; the one pressing the frontal bone down, whilst the other is pressing the occipital up, producing the most frightful deformity; whilst the Osages merely press the occipital in, and that, but to a moderate degree, occasioning but a slight, and in many cases, almost immaterial, departure from the symmetry of nature.

These people, like all those tribes who shave the head, cut and slit their ears very much, and suspend from them great quantities of wampum and tinsel ornaments. Their necks are generally ornamented also with a profusion of wampum and beads; and as they live in a warm climate where there is not so much necessity for warm clothing, as amongst the more Northern tribes, of whom I have been heretofore speaking; their shoulders, arms, and chests are generally naked, and painted in a great variety of picturesque ways, with silver bands on the wrists, and oftentimes a profusion of rings on the fingers.

The head-chief of the Osages at this time, is a young man by the name of Clermont, the son of a very distinguished chief of that name, who recently died; leaving his son his successor, with the consent of the tribe. I painted the portrait of this chief at full length, in a beautiful dress, his leg-gings fringed with scalp-locks, and in his hand his favorite and valued war-club.

By his side I have painted also at full length, his wife and child. She was richly dressed in costly cloths of civilized manufacture, which is almost a solitary instance amongst the Osages, who so studiously reject every luxury and every custom of civilized people; and amongst those, the use of whiskey, which is on all sides tendered to them -- but almost uniformity rejected! This is an unusual and unaccountable thing, unless the influence which the missionaries and teachers have exercised over them, has induced them to abandon the pernicious and destructive habit of drinking to excess. From what I can learn, the Osages were once fond of whiskey; and, like all other tribes who have had the opportunity, were in the habit of using it to excess. Several very good and exemplary men have been for years past exerting their greatest efforts, with those of their families, amongst these people; having established schools and agricultural experiments amongst them. And I am fully of the opinion, that this decided anomaly in the Indian country, has resulted from the devoted exertions of these pious and good men.

Amongst the chiefs of the Osages, and probably the next in authority and respect in the tribe, is Tehong-tas-sab-bee, (the black dog), whom I painted also at full length, with his pipe in one hand, and his tomahawk in the other; his head shaved, and ornamented with a beautiful crest of deers' hair, and his body wrapped in a huge mackinaw blanket.

This dignitary, who is blind in the left eye, is one of the most conspicuous characters in all this country, rendered so by his huge size (standing in height and in girth, above all of his tribe), as well as by his extraordinary life. The Black Dog is familiarly known to all the officers of the army, as well as to Traders and all other white men, who have traversed these regions, and I believe, admired and respected by most of them.

His height, I think, is seven feet; and his limbs full and rather fat, making his bulk formidable, and weighing, perhaps, some 250 or 300 pounds. This man is chief of one of the three bands of the Osages, divided as they are into three families; occupying, as I before said, three villages, "Black Dog's Village", and "White denominated", Clermont's Village, "White Hair's Village". The White

Hair is another distinguished leader of the Osages; and some have awarded to him the title of Head Chief; but in the jealous feelings of rivalry which have long agitated this tribe, and some times, even endangered its peace, I believe it has been generally agreed that his claims are third in the tribe; though he justly claims the title of a chief, and a very gallant and excellent man. The portrait of this man, I regret to say, I did not get.

Amongst the many brave and distinguished warriors of the tribe, one of the most noted and respected is Tal-lee, Painted at full length, with his lance in his hand--his shield on his arm, and his bow and quiver slung upon his back.

In this portrait, there is a fair specimen of the Osage figure and dress, as well as of the facial outline, and shape and character of the head, and mode of dressing and ornamenting it with the helmet-crest, and the eagle's

If I had the time at present, I would unfold to the reader some of the pleasing and extraordinary incidents of this gallant fellow's military life; and also the anecdotes that have grown out of the familiar life I have led with this handsome and high-minded gentleman of the mild woods and prairies. Of the Black Dog I should say more also; and most assuredly will not fail to do justice to these extraordinary men, when I have leisure to write off all my notes, and turn biographer. At present, I shake hands with these two noblemen, and bid them good-bye; promising them, that if I never get time to say more of their virtues -- I shall say nothing again them.

In three paintings I have represented three braves, Ko-ha-tunk-a (The Big Crow); Nah-com-e-shee (the man of the bed), and Mun-ne-puskee (he who is not afraid). These portraits set forth fairly the modes of dress and ornaments of the young men of the tribe, from the tops of their heads to the soles of their feet. The only dress they wear in warm weather is the breech-cloth, leggings, and moccasins of dressed skins, and garters worn immediately below the knee, ornamented profusely with heads and wampum.

These three distinguished and ambitious young men, were of the best families in the Osage nation; and as they explained to me, having formed a peculiar attachment to each other -- they desired me to paint them all on one canvass, in which wish I indulged them.

Besides the above personages, I also painted the portraits of Wa-hobeck-ee (---), a brave, and said to be the handsomest man in the Osage nation; Moi-een-e-shee (The Constant Walker); Wa-mash-ee-sheek (He Who Takes Away); Wa-chesh-uk (war); Mink-chesk (-----); Wash-im-pe-shee (The Mad Man), a distinguished warrior; Shin-ga-wos-sa (The Handsome Bird); Cah-he-ga-shin-ga (The Little Chief), and Teha-to-ga (The Mad Buffalo); all of which will hang in my INDIAN MUSEUM for the inspection of the curious. The last mentioned of these was tried and convicted of the murder of two white men during Adams's administration, and was afterwards pardoned, and still lives, though in disgrace in his tribe, as one whose life had been forfeited, "but (as they say) not worth taking."

The Osages have been formerly, and until quite recently, a powerful and warlike tribe: carrying their arms fearlessly through all of these realms; and ready to cope with foes of any kind that they were liable to meet. At present, the case is quite different; they have been repeatedly moved and jostled along, from the head waters of the White river, and even from the shores of the Mississippi, to where they now are; and reduced by every war and every move. The small-pox has taken its share of them at two or three different times; and the Konzas, as they are now called, having been a part of the Osages, and receded from them, impaired their strength; and have at last helped to

lessen the number of their warriors: so that their decline has been very rapid, bringing them to the mere handful that now exists of them; though still Preserving their valor as warriors, which they are continually showing off as bravely and as professionally as they can, with the Pawnees and the Camanchees, with whom they are waging incessant war; although they are the principal sufferers in those scenes which they fearlessly persist in, as if they were actually bent on their self-destruction very great efforts have been, and are being made amongst these people to civilize and Christianize them; and still I believe with but little success. Agriculture they have caught but little of; and of religion and civilization still less. One good result has, however, been produced by these faithful labourers, which is the conversion of these People to temperance; which I consider the first important step rewards the Other results, and which of itself is an achievement that redounds much to the credit and humanity of those, whose lives have been devoted to its accomplishment.

Here I must leave the Osages for the present, but not the reader,,whose company I still hope to have awhile longer, to bear how I get along amongst in a few days, in the wild and untried scenes, that I am to start upon company with the first regiment of dragoons, in the first grand civilized foray, into the country of the wild and warlike Camanchees.

LETTER--No. 39.

MOUTH OF FALSE WASHITA, RED RIVER.

UNDER the protection of the United States dragoons, I arrived at this place three days since, on my way again in search of the "Far West". How far I may this time follow the flying phantom, is uncertain. I am already again in the land of the buffaloes and the fleet-bounding antelopes; and I anticipate, with many other beating hearts, rare sport and amusement amongst the wild herds ere long.

We shall start from hence in a few days, and other epistles I may occasionally drop you from terra incognita, for such is the great expanse of country which we expect to range over; and names we are to give, and country to explore, as far as we proceed. We are, at this place, on the banks of the Red River, having Texas under our eye on the opposite bank. Our encampment is on the point of land between the Red and False Washita rivers, at their junction; and the country about us is a panorama too beautiful to be painted with a pen: it is, like most of the country in these regions, composed of prairie and timber, alternating in the most delightful shapes and proportions that the eye of a connoisseur could desire. The verdure is everywhere of the deepest green, and the plains about us are literally speckled with buffalo. We are distant from Fort Gibson about 200 miles, which distance we accomplished in ten days.

A great part of the way, the country is prairie, gracefully undulating-well watered, and continually beautified by copses and patches of timber. On our way my attention was rivetted to the tops of some of the prairie bluffs, whose summits I approached with inexpressible delight. I rode to the top of one of these noble mounds, in company with my friends Lieut. Wheelock and Joseph Chadwick, where we agreed that our horses instinctively looked and admired. They thought not of the rich herbage that was under their feet, but, with deep-drawn sighs, their necks were loftily curved, and their eyes widely stretched over the landscape that was beneath us. From this elevated spot, the horizon was bounded all around us by mountain streaks of blue, softening into azure as they vanished, and the pictured vales that intermediate lay, were deepening into green as the eye was beneath us, and winding through the waving peculiar effect, the "bold dragoons", marching in beautiful order forming a train of a mile in length. Baggage waggons and Indians (engage's) helped to lengthen the procession. From the point where we stood, the line was seen in miniature; and the undulating hills over which it was bending its way, gave it the appearance of a huge black snake gracefully gliding over a rich carpet of green.

This picturesque country of 200 miles, over which we have passed, belongs to the Creeks and Choctaws, and affords one of the richest and most desirable countries in the world for agricultural pursuits.

Scarcely a day has passed, in which we have not crossed oak ridges, of several miles in breadth, with a sandy soil and scattering timber; where the ground was almost literally covered with vines, producing the greatest profusion of delicious grapes, of five-eighths of an inch in diameter, and

---

hanging in such endless clusters, as justly to entitle this singular and solitary wilderness to the style of a vineyard (and ready for the vintage), for many miles together.

The next hour we would be trailing through broad and verdant valleys of green prairies, into which we had descended; and oftentimes find our progress completely arrested by hundreds of acres of small plum-trees, of four or six feet in height; so closely woven and interlocked together, as entirely to dispute our progress, and sending us several miles around; when every bush that was in sight was so loaded with the weight of its delicious wild fruit, that they were in many instances literally without leaves on their branches, and bent quite to the ground. Amongst these, and in patches, were intervening beds of wild roses, wild currants, and gooseberries. And underneath and about them, and occasionally interlocked with them, huge masses of the prickly pears, and beautiful and tempting wild flowers that sweetened the atmosphere above; whilst an occasional huge yellow rattlesnake, or a copper-head, could be seen gliding over, or basking across their vari-coloured tendrils and leaves.

On the eighth day of our march we met, for the first time, a herd of buffaloes; and being in advance of the command, in company with General Leavenworth, Colonel Dodge, and several other officers; we all had an opportunity of testing the mettle of our horses and our own tact at the wild and spirited death. The inspiration of chase took at once, and alike, with the old and the young; a beautiful plain lay before us, and we all gave spur for the onset. General Leavenworth and Colonel Dodge, with their pistols, gallantly and handsomely labored a fat cow, and were in together at the death. I was not quite so fortunate in my selection, for the one which I saw fit to gallant over the plain alone, of the same sex, younger and coy, led me a hard chase, and for a long time, disputed my near approach; when, at length, the full speed of my horse forced us to close company, and she desperately assaulted his shoulders with her horns. My gun was aimed, but missing its fire, the muzzle entangled in her mane, and was instantly broke in two in my hands, and fell over my shoulder. My pistols were then brought to bear upon her; and though severely wounded, she succeeded in reaching the thicket, and left me without "a deed of chivalry to boast." -- Since that day, the Indian hunters in our charge have supplied us abundantly with buffalo meat; and report says, that the country ahead of us will afford us continual sport, and an abundant supply.

We are halting here for a few days to recruit horses and men, after which the line of march will be resumed; and if the Pawnees are as near to us as we have strong reason to believe, from their recent trails and fires, it is probable that within a few days we shall "thrash" them or "get thrashed"; unless through their sagacity and fear, they elude our search by flying before us to their hiding-places.

The prevailing policy amongst the officers seems to be, that of flogging them first, and then establishing a treaty of peace. If this plan were morally right, I do not think it practicable; for, as enemies, I do not believe they will stand to meet us; but, as friends, I think we may bring them to a talk, if the proper means are adopted. We are here encamped on the ground on which Judge Martin and servant were butchered, and his son kidnaped by the Pawnees or Camanchees, but a few weeks since; and the moment they discover us in a large body, they will presume that we are relentlessly seeking for revenge, and they will probably be very shy of our approach. We are over the Washita -- the "Rubicon is passed". We are invaders of a sacred soil. We are carrying war in our front, -- and "we shall soon see, what we shall see."

The cruel fate of Judge Martin and family has been published in the papers; and it belongs to the

regiment of dragoons to demand the surrender of the murderers, and get for the information of the world, some authentic account of the mode in which this horrid outrage was committed.

Judge Martin was a very respectable and independent man, living on the lower part of the Red River, and in the habit of taking his children and a couple of black men-servants with him, and a tent to live in, every summer, into these wild regions; where he pitched it upon the prairie, and spent several months in killing buffaloes and other wild game, for his own private amusement. The news came to Fort Gibson but a few weeks before we started, that he had been set upon by a party of Indians and destroyed. A detachment of troops was speedily sent to the spot, where they found his body horridly mangled, and also of one of his negroes; and it is supposed that his son, a fine boy of nine years of age, has been taken home to their villages by them. Where they still retain him, and where it is our hope to recover him.

Great praise is due to General Leavenworth for his early and unremitted efforts to facilitate the movements of the regiment of dragoons, by opening roads from Gibson and Towson to this place. We found encamped two companies of infantry from Fort Towson, who will follow in the rear of the dragoons as far as necessary, transporting with wagons, stores and supplies, and ready, at the same time, to co-operate with the dragoons in case of necessity. General Leavenworth will advance with us from this post, below far he may proceed is uncertain. We know not exactly the route which we shall take, for circumstances alone must decide that point. We shall probably reach Cantonment Leavenworth in the fall; and one thing is certain (in the opinion of one who has already seen something of Indian life and country), we shall meet with many severe privations and reach that place a jaded set of fellows, and as ragged as Jack Falstaff's famous band.

You are no doubt inquiring, who are these Pawnees, Camanchees, and Arapahoes, and why not tell us all about, them? Their history, numbers and limits are still in obscurity; nothing definite is yet known of them, but I hope I shall soon be able, to give the world a clue to them.

IF my life and health are preserved, I anticipate many a pleasing scene for my pencil, as well as incidents worth; of reciting to the world, which I shall occasionally do, as opportunity may occur.

---

LETTER -- No. 40.

MOUTH OF FALSE WASHITA.

Since I wrote my last Letter from this place, I have been detained here with the rest of the cavalcade from the extraordinary sickness which afflicting the regiment, and actually threatening to arrest its progress.

It was, as I wrote the other day, the expectation of the commanding officer that we should have been by this time recruited and recovered from sickness, and ready to start again on our march; but since I wrote nearly one half of the command, and included amongst them, several officers, with General Leavenworth, have been thrown upon their backs, with the prevailing epidemic, a slow and distressing bilious fever. The horses of the regiment are also sick, about an equal proportion, and seemingly suffering with the same disease. They are daily dying, and men are calling sick, and General Leavenworth has ordered Col. Dodge to select all the men, and all the horses that are able to proceed, and be off to-morrow at nine o'clock upon the march towards the Camanchees, in hopes thereby to preserve the health of the men, and make the most rapid advance toward the extreme point of destination.

General Leavenworth has reserved Col. Kearney to take command of the remaining troops and the little encampment; and promises Colonel Dodge that he will himself be well enough in a few days to proceed with a party on his trail and overtake him at the Cross Timbers.

I should here remark, that when we started from Fort Gibson, the regiment of dragoons, instead of the eight hundred which it was supposed it would contain, had only organized to the amount of 400 men, which was the number that started from that place; and being at this time- half disabled, furnishes but 200 effective men to penetrate the wild and untried regions of the hostile Camanchees. All has been bustle and confusion this day, packing up and preparing for the start to-morrow morning. My canvass and painting apparatus are prepared and ready for the pack-horse, which carries the goods and chattels of my esteemed companion Joseph Chadwick and myself, and we shall be the two only guests of the procession, and consequently the only two who will be at liberty to gallop about where we please, despite military rules and regulations, chasing the wild herds, or seeking our own amusements in any such modes as we choose. Mr. Chadwick: is a young man from St. Louis, with whom I have been long acquainted, and for whom I have the highest esteem. He has so far stood by me as a faithful friend, and I rely implicitly on his society during this campaign for much good company and amusement. Though I have an order from the Secretary at War to the commanding officer, to protect and supply me, I shall ask but for their Protection ; as I have, with my friend Joe, laid in our own supplies for the campaign, not putting the Government to any expense on my account, in pursuit of my own private objects.

I am writing this under General Leavenworth's tent, where he has personally invited me to take up my quarters during our encampment here, and he promises to send it by his express, which starts to-morrow with a mail from this to Fort Towson on the frontier, some hundreds of miles below

this. At the time I am writing, the General lies pallid and emaciated before me, on his couch, with a dragoon fanning him, whilst he breathes forty or fifty breaths a minute, and writhes under a burning fever, although he is yet unwilling even to admit that he is sick.

In my last Letter I gave a brief account of a buffalo chase, where General Leavenworth and Col. Dodge took parts, and met with pleasing success. The next day, while on the march, and a mile or in advance of the regiment, and two days before we reached this place, General Leavenworth, Col. Dodge, Lieut. Wheelock and myself were jogging along, and all in turn complaining of the lameness of our bones, from the chase on the former day, when the General, who had long ago had his surfeit of pleasure of this kind on the Upper Missouri, remonstrated against further indulgence, in the following manner: "Well, Colonel, this running for buffaloes is bad business for us -- we are getting too old, and should leave such amusements to the young men; I have had enough of this fun in my life, and I am determined not to hazard my limbs or weary my horse any more with it -- it is the height of folly for us, but will do well enough for boys." Col. Dodge assented at once to his resolves, and approved them; whilst I, who had tried it in every form! and I had thought, (to my heart's content), on the Upper Missouri, joined my assent to the folly of our destroying our horses, which had a long journey to perform, and agreed that I would join no more in the buffalo chase, however near and inviting they might come to me.

In the midst of this conversation, and these mutual declarations (or rather just at the end of them), as we were jogging along in "Indian file", and General Leavenworth taking the lead, and just rising to the top of a little hill over which it seems he had had an instant peep, he dropped himself suddenly upon the side of his horse and wheeled back! and rapidly informed us with an agitated whisper, and an exceeding game contraction of the eye, that a snug little band of buffaloes were quietly grazing just over the knell in a beautiful meadow for running, and that if I would take to the left! and Lieut. Wheelock to the right! and let him and the Colonel dash right into the midst of them; we could play the devil with them!! One half of this at least was said after he had got upon his feet and taken off his portmanteau and valise, in which we had all followed suit, and were mounting for the start! And I am almost sure nothing else was said, and if it had been I should not have heard it, for I was too far off! and too rapidly dashed over the waving grass! and too eagerly gazing and plying the whip, to hear or to see, anything but the trampling hoofs! and the blackened throng I and the darting steeds! and the flashing of guns! until I had crossed the beautiful lawn! and the limb of a tree, as my horse was darting into the timber, had crossed my horse's back, and had scraped me into the grass, from which I soon raised my head! and all was silent! and all out of sight! Save the dragoon regiment, which I could see in distance creeping along on the top of a high hill. I found my legs under me in a few moments, and put them in their accustomed positions, none of which would for some time, answer the usual purpose; but I at last got them to work, and brought ("Charley") out of the bushes, where he had "brought up" in the top of a fallen tree, without damage.

No buffalo was harmed in this furious assault, nor horse nor rider. Col. Dodge and Lieut. Wheelock had joined the regiment, and General Leavenworth joined me, with too much game expression yet in his eye to allow him more time than to say, "I'll have that calf before I quit!" And away he sailed, "up hill and down dale," in pursuit of a fine calf that had been hidden on the ground during the chase, and was now making its way over the prairies in pursuit of the herd. I rode to the top of a little hill to witness the success of the General's second effort, and after he had come

close upon the little affrighted animal, it dodged about in such a manner as evidently to baffle his skill, and perplex his horse, which at last fell in a hole, and both were instantly out of my sight. I ran my horse with all possible speed to the spot, and found him on his hands and knees, endeavouring to get up. I dismounted and raised him on to his feet, when I asked him if he was hurt, to which he replied "No, but I might have been," when he instantly fainted, and I laid him on the grass. I had left my canteen with my portmanteau, and had nothing to administer to him, nor was there water near us. I took my lancet from my pocket and was tying his arm to open a vein, when he recovered, and objected to the operation, assuring me that he was not in the least injured. I caught his horse and soon got him mounted again, when we rode on together, and after two or three hours were enabled to join the regiment.

From that hour to the present, I think I have seen a decided change in the General's face; he has looked pale and feeble, and been continually troubled with a violent cough. I have rode by the side of him from day to day, and he several times told me that he was fearful he was badly hurt. He looks very feeble now, and I very much fear the result of the fever that has set in upon him. We take up the line of march at bugle-call in the morning, and it may be a long time before I can send a Letter again, as there are no post-offices nor mail carriers in the country where we are now going. It will take a great deal to stop me from writing, however, and as I am now to enter upon one of the most interesting parts of the Indian country, inasmuch as it is one of the wildest and most hostile, I shall surely scribble an occasional Letter, if I have to carry them in my own pocket, and bring them in with me on my return.

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

by George Catlin

(First published in London in 1844)

---

LETTER--No. 41.

GREAT CAMANCHEE VILLAGE.

WE are again at rest, and I am with subjects rude and almost infinite around me, for my pen and my brush. The little band of dragoons are encamped by a fine spring of cool water, within half a mile of the principal town of the Camanches, and in the midst of a bustling and wild scene, I assure you; and before I proceed to give an account of things and scenes that are about me, I must return for a few moments to the place where I left the Reader, at the encampment at False Washita, and rapidly travel with him over the country that lies between that place and the Camanchee Village, where I am now writing.

On the morning after my last Letter was written, the sound and efficient part of the regiment was in motion at nine o'clock. And with them, my friend "Joe" and I, with our provisions laid in, and all snugly arranged on our packhorse, which we alternately led or drove between us.

Our course was about due West, on the divide between the Washita and Red Rivers, with our faces looking towards the Rocky Mountains. The country over which we passed from day to day, was inimitably beautiful; being the whole way one continuous prairie of green fields, with occasional clusters of timber and shrubbery, just enough for the uses of cultivating-man, and for the pleasure of his eyes to dwell upon. The regiment was rather more than half on the move, consisting of 250 men, instead of 200 as I predicted in my Letter from that place. All seemed gay and buoyant at the fresh start, which all trusted was to liberate us from the fatal miasma which we conceived was hovering about the mouth of the False Washita. We advanced on happily, and met with no trouble until the second night of our encampment, in the midst of which we were thrown into (as printers would say,) in an instant of the most appalling alarm and confusion. We were encamped on a beautiful prairie, where we were every hour apprehensive of the lurking enemy. And in the dead of night, when all seemed to be sound asleep and quiet, the instant sound and flash of a gun within a few paces of us! and then the most horrid and frightful groans that instantly followed it, brought us all upon our hands and knees in an instant, and our affrighted horses (which were breaking their lassos,) in full speed and fury over our heads, with the frightful and mingled din of snorting, and cries of "Indians! Indians! Pawnees!" &c., which rang from every part of our little encampment! In a few moments the excitement was chiefly over, and silence restored; when we could hear the trampling hoofs of the horses, which were making off in all directions, (not unlike a drove of swine that once ran into the sea, when they were possessed of devils); and leaving hut now and then an individual quadruped hanging at its stake within our little camp. The mode of our encampment was, uniformly in four lines, forming a square of fifteen or twenty rods in diameter. Upon these lines our saddles and packs were all laid, at the distance of five feet from each other; and each man, after grazing his horse, had it fastened with a rope or lasso, to a stake driven in the ground at a little distance from his feet; thus enclosing the horses all within the square, for the convenience of securing them in case of attack or alarm. In this way we laid encamped, when

---

we were awakened by the alarm that I have just mentioned; and our horses affrighted, dashed out of the camp, and over the heads of their masters in the desperate "Stampedo".

After an instant preparation for battle, and a little recovery from the fright, which was soon effected by waiting a few moments in vain, for the enemy to come on;-a general explanation took place, which brought all to our legs again, and convinced us that there was no decided obstacle, as yet, to our reaching the Camanchee towns; and after that, "sweet home", and the arms of our wives and dear little children, provided we could ever overtake and recover our horses, which had swept off in fifty directions, and with impetus enough to ensure us employment for a day or two to come. At the proper moment for it to be made, there was a general enquiry for the cause of this Teal misfortune, when it was ascertained to have originated in the following manner. A "raw recruit", who was standing as one of the sentinels on that night, saw, as he says "he supposed", an Indian creeping out of a bunch of bushes a few paces in front of him, upon whom he leveled his rifle; and as the poor creature did not "advance and give the countersign" at his call, nor any answer at all, he "let off!" And popped a bullet through the heart of a poor dragoon horse, which had strayed away on the night before, and had faithfully followed our trail all the day, and was now, with a beastly misgiving, coming up, and slowly poking through a little thicket of bushes into camp, to join its comrades, in servitude again! The sudden shock of a gun, and the most appalling groans of this poor dying animal, in the dead of night, and so close upon the heels of sweet sleep, created a long vibration of nerves, and a day of great perplexity and toil which followed, as we had to retrace our steps twenty miles or more, in pursuit of affrighted horses; of which some fifteen or twenty took up wild and free life upon the prairies, to which they were abandoned, as they could not be found. After a detention of two days in consequence of this disaster, we took up the line of march again, and pursued our course with vigour and success, over a continuation of green fields, enamelled with wild flowers, and pleasingly relieved with patches and groves of timber.

On the fourth day of our march, we discovered many fresh signs of buffaloes; and at last, immense herds of them grazing on the distant hills. Indian trails were daily growing fresh, and their smokes were seen in various directions ahead of us. And on the same day at noon, we discovered a large party at several miles distance, sitting on their horses and looking at us. From the glistering of the blades of their lances, which were blazing as they turned them in the sun, it was at first thought that they were Mexican cavalry, who might have been apprized of our approach into their country, and had advanced to contest the point with us. On drawing a little nearer, however, and scanning them closer with our spy-glasses, they were soon ascertained to be a war-party of Camanchees, on the look out for their enemies.

The regiment was called to a halt, and the requisite preparations made and orders issued, we advanced in a direct line towards them until we had approached to within two or three miles of them, when they suddenly disappeared over the hill, and soon after shewed themselves on another mound farther off and in a different direction. The course of the regiment was then changed, and another advance towards them was commenced, and as before, they disappeared and shewed themselves in another direction. After several such efforts which proved ineffectual, Col. Dodge ordered the command to halt, while he rode forward with a few of his staff, and an ensign carrying a white flag. I joined this advance, and the Indians stood their ground until we had come within half a mile of them, and could distinctly observe all their numbers and movements. We then came to a halt, and the white flag was sent a little in advance, and waved as a signal for them

to approach; at which one of their party galloped out in advance of the war-party, on a milk white horse, carrying a piece of white buffalo akin on the point of his long lance in reply to our flag. This moment was the commencement of one of the most thrilling and beautiful scenes I ever witnessed. All eyes, both from his own party and ours, were fixed upon the manoeuvres of this gallant little fellow, and he well knew it.

The distance between the two parties was perhaps half a mile, and that a beautiful and gently sloping prairie; over which he was for the space of a quarter of an hour, reining and spurring his maddened horse, and gradually approaching us by tacking to the right and the left, like a vessel beating against the wind. He at length came prancing and leaping along till he met the flag of the regiment, when he leaned his spear for a moment against it, looking the bearer full in the face, when he wheeled his horse, and dashed up to Col. Dodge, with his extended hand, which was instantly grasped and shaken. We all had him by the hand in a moment, and the rest of the party seeing him received in this friendly manner, instead of being sacrificed, as they undoubtedly expected, started under "full whip" in a direct line towards us, and in a moment gathered, like a black cloud, around us! The regiment then moved up in regular order, and a general shake of the hand ensued, which was accomplished by each warrior riding along the ranks, and shaking the hand of every one as he passed. This necessary form took up considerable time, and during the whole operation, my eyes were fixed upon the gallant and wonderful appearance of the little fellow who bore us the white flag on the point of his lance. He rode a fine and spirited wild horse, which was as white as the drifted snow, with an exuberant mane, and its long and bushy tail sweeping the ground. In his hand he tightly drew the reins upon a heavy Spanish bit, and at every jump, plunged into the animal's sides, till they were in a gore of blood, a huge pair of spurs, plundered, no doubt, from the Spaniards in their border wars, which are continually waged on the Mexican frontiers. The eyes of this noble little steed seemed to be squeezed out of its head; and its fright, and its agitation had brought out upon its skin a perspiration that was fretted into a white foam and lather. The warrior's quiver was slung on the warrior's back, and his bow grasped in his left hand, ready for instant use, if called for. His shield was on his arm, and across his thigh, in a beautiful cover of buckskin, his gun was slung--and in his right hand his lance of fourteen feet in length.

Thus armed and equipped was this dashing cavalier; and nearly in the same manner, all the rest of the party; and very many of them leading an extra horse, which we soon learned was the favourite war-horse; and from which circumstances altogether, we soon understood that they were a war-party in search of their enemy.

After a shake of the hand, we dismounted, and the pipe was lit, and passed around. And then a "talk" was held, in which we were aided by a Spaniard we luckily had with us, who could converse with one of the Camanches, who spoke some Spanish.

Colonel Dodge explained to them the friendly motives with which we were penetrating their country--that we were sent by the President to reach their villages -- to see the chiefs of the Camanches and Pawnee Picts -- to shake hands with them, and to smoke the pipe of peace, and to establish an acquaintance, and consequently a system of trade that would be beneficial to both. They listened attentively, and perfectly appreciated; and taking Colonel Dodge at his word, relying with confidence in what he told them; they informed us that their great town was within a few days' march, and pointing in the direction -- offered to abandon their war-excursion, and turn

about and escort us to it, which they did in perfect good faith. We were on the march in the afternoon of that day, and from day to day they busily led us on, over hill and dale, encamping by the side of us at night, and resuming the march in the morning.

During this march, over one of the most lovely and picturesque countries in the world, we had enough continually to amuse and excite us. The whole country seemed at times to be alive with buffaloes, and bands of wild horses.

We had with us about thirty Osage and Cherokee, Seneca and Delaware Indians, employed as guides and hunters for the regiment; and with the war-party of ninety or a hundred Camanches, we formed a most picturesque appearance while passing over the green fields, and consequently, sad havoc amongst the herds of buffaloes, which we were almost hourly passing. We were now out of the influence and reach of bread stuffs, and subsisted ourselves on buffaloes' meat altogether; and the Indians of the different tribes, emulous to shew their skill in the chase, and prove the mettle of their horses, took infinite pleasure in dashing into every herd, that we approached; by which means, the regiment was abundantly supplied from day to day with fresh meat.

In one of those spirited scenes when the regiment were on the march, and the Indians with their bows and arrows were closely plying a band of these affrighted animals, they made a bolt through the line of the dragoons, and a complete breach, through which the whole herd passed, upsetting horses and riders in the most amusing manner, and receiving such shots as came from those guns and pistols that were aimed, and not fired off into the empty air.

The buffaloes are very blind animals, and owing, probably in a great measure, to the profuse locks that hang over their eyes; they run chiefly by the nose, and follow in the tracks of each other, seemingly heedless of what is about them; and of course, easily disposed to rush in a mass, and the whole tribe or gang to pass in the tracks of those that have first led the way.

The tract of country over which we passed, between the False Washita and this place, is stocked, not only with buffaloes, but with numerous bands of wild horses, many of which we saw every day. There is no other animal on the prairies so wild and so sagacious as the horse; and none other so difficult to come up with. So remarkably keen is their eye, that they will generally run "at the sight", when they are a mile distant; being, no doubt, able to distinguish the character of the enemy that is approaching when at that distance; and when in motion, will seldom stop short of three or four miles. I made many attempts to approach them by stealth, when they were grazing and playing their gambols, without ever having been more than once able to succeed. In this instance, I left my horse, and with my friend Chadwick, skulked through a ravine for a couple of miles; until we were at length brought within gun-shot of a fine herd of them, when I used my pencil for some time, while we were under cover of a little hedge of bushes which effectually screened us from their view. In the herd we saw all the colours, nearly, that can be seen in a kennel of English hounds. Some were milk white, some jet black -- others were sorrel, and bay, and cream colour -- many were of an iron grey; and others were pied, containing a variety of colours on the same animal. Their manes were very profuse, and hanging in the wildest confusion over their necks and faces -- and their long tails swept the ground.

After we had satisfied our curiosity in looking at these proud and playful animals, we agreed that we would try the experiment of "creasing" one, as it is termed in this country; which is done by shooting them through the gristle on the top of the neck, which stuns them so that they fall, and are secured with the hobbies on the feet; after which they rise again without fatal injury. This is

a practice often resorted to by expert hunters, with good rifles, who are not able to take them in any other way. My friend Joe and I were armed on this occasion, each with a light fowling-piece, which have not quite the preciseness in throwing a bullet that a rifle has; and having both leveled our pieces at the withers of a noble, fine-looking iron prey, we pulled trigger, and the poor creature fell, and the rest of the herd were out of sight in a moment. We advanced speedily to him, and had the most inexpressible mortification of finding, that we never had thought of hobbles or halters, to secure him -- and in a few moments more, had the still greater mortification, and even anguish, to find that one of our shots had broken the poor creature's neck, and that he was quite dead.

The laments of poor Chadwick for the wicked folly of destroying this noble animal, were such as I never shall forget; and so guilty did we feel that we agreed that when we joined the regiment, we should boast of all the rest of our hunting feats, but never make mention of this.

The usual mode of taking the wild horses, is, by throwing the laso, whilst pursuing them at full speed, and dropping a noose over their necks, by which their speed is soon checked, and they are "choked down." The laso is a thong of rawhide, some ten or fifteen yards in length, twisted or braided, with a noose fixed at the end of it; which, when the coil of the laso is thrown out, drops with great certainty over the neck of the animal, which is soon conquered.

The Indian, when he starts for a wild horse, mounts one of the fleetest he can get, and coiling his laso on his arm, starts off under the "full whip", till he can enter the band, when he soon gets it over the neck of one of the number; when he instantly dismounts, leaving his own horse, and runs as fast as he can, letting the laso pass out gradually and carefully through his hands, until the horse falls for want of breath, and lies helpless on the ground; at which time the Indian advances slowly towards the horse's head, keeping his laso tight upon its neck, until he fastens a pair of hobbles on the animal's two forefeet, and also loosens the laso (giving the horse chance to breathe), and gives it a noose around the under jaw, by which he gets great power over the affrighted animal, which is rearing and plunging when it gets breath; and by which, as he advances, hand over hand, towards the horse's nose, he is able to hold it down and prevent it from throwing itself over on its back, at the hazard of its limbs. By this means he gradually advances, until he is able to place his hand on the animal's nose, and over its eyes; and at length to breathe in its nostrils, when it soon becomes docile and conquered; so that he has little else to do than to remove the hobbles from its feet, and lead or ride it into camp.

This "breaking down" or taming, however, is not without the most desperate trial on the part of the horse, which rears and plunges in every possible way to effect its escape, until its power is exhausted, and it becomes covered with foam; and at last yields to the power of man, and becomes his willing slave for the rest of its life. By this very rigid treatment, the poor animal seems to be so completely conquered, that it makes no further struggle for its freedom; but submits quietly ever after, and is led or rode away with very little difficulty. Great care is taken, however, in this and in subsequent treatment, not to subdue the spirit of the animal, which is carefully preserved and kept up, although they use them with great severity; being, generally speaking, cruel masters.

The wild horse of these regions is a small, but very powerful animal; with an exceedingly prominent eye, sharp nose, high nostril, small feet and delicate leg; and undoubtedly, have sprung from a stock introduced by the Spaniards, at the time of the invasion of Mexico; which having strayed off upon the prairies, have run wild, and stocked the plains from this to Lake Winnipeg, two or

three thousand miles to the North.

This useful animal has been of great service to the Indians living on these vast plains, enabling them to take their game more easily, to carry their burthens, &c.; and no doubt, render them better and handier service than if they were of a larger and heavier breed. Vast numbers of them are also killed for food by the Indians. They subsist themselves both in winter and summer by biting at the grass, which they can always get in sufficient quantities for their food.

Whilst on our march we met with many droves of these beautiful animals, and several times had the opportunity of seeing the Indians pursue them, and take them with the laso. The first successful instance of the kind was effected by one of our guides and hunters, by the name of Beatte, a Frenchman, whose parents had lived nearly their whole lives in the Osage village; and who, himself had been reared from infancy amongst them; and in a continual life. Of Indian modes and amusements, had acquired all the skill and tact of his Indian teachers, and probably a little more; for he is reputed, without exception, the best hunter in these Western regions.

This instance took Place one day whilst the regiment was at its usual halt of an hour, in the middle of the day.

When the bugle sounded for a halt, and all were dismounted, Beatte and several others of the hunters asked permission of Col. Dodge to pursue a drove of horses which were then in sight, at a distance of a mile or more from us. The permission was given, and they started off, and by following a ravine, approached near to the unsuspecting animals, when they broke upon them and pursued them for several miles in full view of the regiment. Several of us had good glasses, with which we could plainly see every movement and every manoeuvre. After a race of two or three miles, Beatte was seen with his wild horse down, and the band and the other hunters rapidly leaving him.

Seeing him in this condition, I galloped off to him as rapidly as possible, and had the satisfaction of seeing the whole operation of "breaking down", and bringing in the wild animal; and in another drawing, I have given a fair representation of the mode by which it was done. When he had conquered the horse in this way, his brother, who was one of the unsuccessful ones in the chase, came, riding back, and leading up the horse, of Beatte which he had left behind, and after staying with us a few minutes, assisted Beatte in leading his conquered wild horse towards the regiment, where it was satisfactorily examined and commented upon, as it was trembling and covered with white foam, until the bugle sounded the signal for marching, when all mounted; and with the rest, Beatte, astride of his wild horse, which had a buffalo skin girted on its back, and a halter, with a cruel noose around the under jaw. In this manner the command resumed its march, and Beatte astride of his wild horse, on which he rode quietly and without difficulty, until night; the whole thing, the capture, and breaking, all having been accomplished within the space of one hour, our usual and daily halt at midday.

Several others of these animals were caught in a similar manner during our march, by others of our hunters, affording us satisfactory instances of this most extraordinary and almost unaccountable feat.

The horses that were caught were by no means very valuable specimens, being rather of an ordinary quality; and I saw to my perfect satisfaction, that the finest of these droves can never be obtained in this way, as they take the lead at once, when they are pursued, and in a few moments will be seen half a mile or more ahead of the bulk of the drove, which they are leading off. There is

not a doubt but there are many very fine and valuable horses amongst these herds; but it is impossible for the Indian or other hunter to take them, unless it be done by "creasing" them, as I have before described; which is often done, but always destroys the spirit and character of the animal. After many hard and tedious days of travel, we were at last told by our Camanchee guides that we were near their village; and having led us to the top of a gently rising elevation on the prairie, they pointed to their village at several miles distance, in the midst of one of the most enchanting valleys that human eyes ever looked upon. The general course of the valley is from N. W. to S. E., of several miles in width, with a magnificent range of mountains rising in distance beyond; it being, without doubt, a huge "spur" of the Rocky Mountains, composed entirely of a reddish granite or gneis, corresponding with the other links of this stupendous chain. In the midst of this lovely valley, we could just discern amongst the scattering shrubbery that lined the banks of the water-courses, the tops of the Camanchee wigwams, and the smoke curling above them. The valley, for a mile distant about the village, seemed speckled with horses and mules that were grazing in it. The chiefs of the war-party requested the regiment to halt, until they could ride in, and inform their people who were coming. We then dismounted for an hour or so; when we could see them busily running and catching their horses; and at length, several hundreds of their braves and warriors came out at full speed to welcome us, and forming in a line in front of us, as we were again mounted, presented a formidable and pleasing appearance. As they wheeled their horses, they very rapidly formed in a line, and "dressed" like well-disciplined cavalry. The regiment was drawn up in three columns, with a line formed in front, by Colonel Dodge and his staff, in which rank my friend Chadwick and I were also paraded; when we had a fine view of the whole manoeuvre, which was picturesque and thrilling in the extreme.

In the centre of our advance was stationed a white flag, and the Indians answered to it with one which they sent forward and planted by the side of it.

The two lines were thus drawn up, face to face, within twenty or thirty yards of each other, as inveterate foes that never had met; and, to the everlasting credit of the Camanchees, whom the world had always looked upon as murderous and hostile, they had all come out in this manner, with their heads uncovered, and without a weapon of any kind, to meet a war-party bristling with arms, and trespassing to the middle of their country. They had every reason to look upon us as their natural enemy, as they have been in the habit of estimating all pale faces; and yet, instead of arms or defenses, or even of frowns, they galloped out and looked us in our faces, without an expression of fear or dismay, and evidently with expressions of joy and impatient pleasure, to shake us by the hand, on the bare assertion of Colonel Dodge, which had been made to the chiefs, that "we came to see them on a friendly visit."

After we had sat and gazed at each other in this way for some half an hour or so, the head chief of the band came galloping up to Colonel Dodge, and having shaken him by the hand, he passed on to the other officers in turn, and then rode alongside of the different columns, shaking hands with every dragoon in the regiment; he was followed in this by his principal chiefs and braves, which altogether took up nearly an hour longer, when the Indians retreated slowly towards their village, escorting us to the banks of a fine clear stream, and a good spring of fresh water, half a mile from their village, which they designated as a suitable place for our encampment, and we were soon bivouacked at the place from which I am now scribbling.

No sooner were we encamped here (or, in other words, as soon as our things were thrown upon

the ground,) Major Mason, Lieutenant Wheelock, Captain Brown, Captain Duncan, my friend Chadwick and myself, galloped off to the village, and through it in the greatest impatience to the prairies, where there were at least three thousand horses and mules grazing; all of us eager and impatient to see and to appropriate the splendid Arabian horses, which we had so often heard were owned by the Camanchee warriors. We galloped around busily, and glanced our eyes rapidly over them; and all soon returned to the camp, quite "crest fallen" and satisfied, that, although there were some tolerable nags amongst this medley group of all colours and all shapes, the beautiful Arabian we had so often heard of at the East, as belonging to the Camanchees, must either be a great ways further South than this, or else it must be a horse of the imagination.

The Camanchee horses are generally small, all of them being of the wild breed, and a very tough and serviceable animal; and from what I can learn here of the chiefs, there are yet, farther South, and nearer the Mexican borders, some of the noblest animals in use of the chiefs, yet I do not know that we have any more reason to rely upon this information, than that which had made our horse-jockeys that we have with us, to run almost crazy for the possession of those we were to find at this place. Amongst the immense herds we found grazing here, one-third perhaps are mules, which are much more valuable than the horses.

Of the horses, the officers and men have purchased a number of the best, by giving a very inferior blanket and butcher's knife, costing in all about four dollars! These horses in our cities at the East, independent of the name, putting them upon their merits alone, would be worth from eighty to one hundred dollars each, and not more.

A vast many of such could be bought on such terms, and are hourly brought into camp for sale. If we had goods to trade for them, and means of getting them home, a great profit could be made, which can easily be learned from the following transaction that took place yesterday. A fine looking Indian was hanging about my tent very closely for several days, and continually scanning an old and half-worn cotton umbrella, which I carried over me to keep off the sun, as I was suffering with fever and ague, and at last proposed to purchase it of me, with a very neat limbed and pretty pied horse which he was riding. He proposed at first, that I should give him a knife and the umbrella, but as I was not disposed for the trade (the umbrella being so useful an article to me, that I did not know how to Part with it, not knowing whether there was another in the regiment); he came a second time, and offered me the horse for the umbrella alone, which offer I still rejected; and he went back to the village, and soon returned with another hone of a much better duality, supposing that I had not valued the former one equal to the umbrella.

With this he endeavoured to push the trade, and after I had with great difficulty made him understand that I was sick, and could not part with it, he turned and rode back towards the village, and in a short time returned again with one of the largest and finest mules I ever saw, proposing that, which I also rejected; when he disappeared again.

In a few moments my friend Captain Duncan, in whose hospitable tent I was quartered, came in, and the circumstance being related to him, started up some warm jockey feelings, which he was thoroughly possessed of, when he instantly sprang upon his feet, and exclaimed, "d-----mn the fellow! Where is he gone? Here, Gosset! Get my old umbrella out of the pack, I rolled it up with my wiper and the flying-pan-get it as quick as lightning!" With it in his hand, the worthy Captain soon overtook the young man, and escorted him into the village, and returned in a short time-not with the mule, but with the second horse that had been offered to me.

Though they appeared to be near the river, I found it half a day's journey to travel to and from them; they being several miles from the river. On ascending them I found them to be two or three hundred feet high, and rising on their sides at an angle of 45 degrees; and on their tops, in some places, for half a mile in length, perfectly level, with a green turf, and corresponding exactly with the tabular hills spoken of above the Mandans. I therein said, that I should visit these hills on my way down the river; and I am fully convinced, from close examination, that they are a part of the same original superstratum, which therein described, though seven or eight hundred miles separated from them. They agree exactly in character, and also in the materials of which they are composed; and I believe, that some unaccountable gorge where waters has swept away the intervening earth, leaving these solitary and isolated, though incontrovertible evidences, that the summit level of all this great valley has at one time been where the level surface of these hills now is, two or three hundred feet above what is now generally denominated the summit level.

The mouth of the Platte, is a beautiful scene, and no doubt will be the site of a large and flourishing town, soon after Indian titles shall have been extinguished to the lands in these regions, which will be done within a very few years. The Platte is a long and powerful stream, pouring in from the Rocky Mountains and joining with the Missouri at this place.

In this voyage, as in all others that I have performed, I kept my journal, but I have not room, it will be seen, to insert more than an occasional extract from it for my present purpose. In this voyage, Ba'tiste and Bogard were my constant companions; and we ah had our rides, and used them often. We often went ashore amongst the herds of buffaloes, and were obliged to do so for our daily food. We lived the whole way on buffaloes' flesh and venison -- we had no bread; but laid in a good stock of coffee and sugar. These, however, from an unforeseen accident availed us but little; as on the second or third day of our voyage, after we had taken our coffee on the shore, and Ba'tiste and Bogard had gone in pursuit of a herd of buffaloes, I took it in my head to have an extra very fine dish of coffee to myself, as the fire was fine. For this purpose, I added more coffee-grounds to the pot, and placed it on the fire, which I sat watching, when I saw a fine buffalo cow wending her way leisurely over the hills, but a little distance from me, for whom I started at once, with my ride trailed in my hand; and after creeping, and running, and heading, and all that, for half an hour, without getting a shot at her; I came back to the encampment, where I found my two men with meat enough, but in the most uncontrollable rage, for my coffee had all boiled out, and the coffee-pot was melted to Pieces!

This was truly a deplorable accident, and one that could in no effectual way be remedied. We afterwards botched up a mess or two of it in our frying-pan, but to little purpose, and then abandoned it to Bogard alone, who thank fully received the dry coffee-grounds and sugar, at his meals, which he soon entirely demolished.

We met immense numbers of buffaloes in the early part of our voyage and used to land our canoe almost every hour in the day; and oftentimes all together approach the unsuspecting herds, through some deep and hidden ravine within a few rods of them, and at the word, "pull trigger" each of us bring down our victim.

In one instance, near the mouth of White River, we met the most immense herd crossing the Missouri River -- and from an imprudence got our boat into imminent danger amongst them, from which we were highly delighted to make our escape. It was in the midst of the "running season", and we had heard the "roaring" (as it is called) of the herd, when we were several miles

from them. When we came in sight, we were actually terrified at the immense numbers that were streaming down the green hills on one side of the river, and galloping up and over the bluffs on the other. The river was filled, and in parts blackened, with their heads and horns, as they were swimming about, following up their objects, and making desperate battle whilst they were swimming.

I deemed it imprudent for our canoe to be dodging amongst them, and ran it ashore for a few hours, where we laid, waiting for the opportunity of seeing the river clear; but we waited in vain. Their numbers, however, got somewhat diminished at last, and we pushed off, and successfully made our way amongst them. From the immense numbers that had passed the river at that place, they had torn down the prairie bank of fifteen feet in height, so as to form a sort of road or landing-place, where they all in succession clambered up. Many in their turmoil had been wafted below this landing, and unable to regain it against the swiftness of the current, had fastened themselves along in crowds, hugging close to the high bank under which they were standing. As we were drifting by these, and supposing ourselves out of danger, I drew up my rifle and shot one of them in the head, which tumbled into the water, and brought with him a hundred others, which plunged in, and in a moment were swimming about our canoe, and placing it in great danger. No attack was made upon us, and in the confusion the poor beasts knew not, perhaps, the enemy that was amongst them; but we were liable to be sunk by them, as they were furiously looking and climbing on to each other. I rose in my canoe, and by my gestures and hallooing, kept them from coming in contact with us, until we were out of their reach.

This was one of the instances that I formerly spoke of, where thousands and tens of thousands of these animals congregate in the running season, and move about from East and West, or wherever accident or circumstances may lead them. In this grand crusade, no one can know the numbers that may have made the ford within a few days; nor in their blinded fury in such scenes, would feeble man be much respected.

During the remainder of that day we paddled onward, and passed many of their carcasses floating on the current, or lodged on the heads of islands and sand-bars. And, in the vicinity of, and not far below the grand turmoil, we passed several that were mired in the quicksand near the shores; some were standing fast and half immersed; whilst others were nearly out of sight, and gasping for the last breath; others were standing with all legs fast, and one half of their bodies above the water, and their heads sunk under it, where they had evidently remained several days; and flocks of ravens and crows were covering their backs, and picking the flesh from their dead bodies. So much of the Upper Missouri and its modes, at present; though I have much more in store for some future occasion.

Fort Leavenworth, which is on the Lower Missouri, being below the mouth of the Platte, is the nucleus of another neighborhood of Indians, amongst whom I am to commence my labours, and of whom I shall soon be enabled to give some account. So, for the present, Adieu.

LETTER--No. 42.

GREAT CAMANCHEE VILLAGE.

The Village of the Camanches by the side of which we are encamped, is composed of six or eight hundred skin-covered lodges, made of poles and buffalo skins, in the manner precisely as those of the Sioux and other Missouri tribes, of which I have heretofore given some account. This village with its thousands of wild inmates, with horses and dogs, and wild sports and domestic occupations, presents a most curious scene; and the manners and looks of the people, a rich subject for the brush and the pen.

In the view I have made of it, but a small Portion of the village is shewn; which is as well as to shew the whole of it, inasmuch as the wigwams, as well as the customs, are the same in every part of it. In the foreground is seen the wigwam of the chief; and in various parts, crotches and poles, on which the women are? Drying meat, and "graining" buffalo robes. These people, living in a country where buffaloes are abundant, make their wigwams more easily of their skins, than of anything else; and with them find greater facilities of moving about, as circumstances often require; when they drag them upon the poles attached to their horses, and erect them again with little trouble in their new residence.

We white men, strolling about amongst their wigwams, are looked upon with as much curiosity as if we had come from the moon; and evidently create a sort of chill in the blood of children and dogs, when we make our appearance. I was pleased to-day with the simplicity of a group which came out in front of the chiefs lodge to scrutinize my faithful friend Chadwick and I, as we were strolling about the avenues and labyrinths of their village; upon which I took out my book and sketched as quick as lightning, whilst "Joe" riveted their attention by some ingenious trick or other, over my shoulders, which I did not see, having no time to turn my head. These were the juvenile parts of the chiefs family, and all who at this moment were at home; the venerable old man, and his three or four wives, making a visit, like hundreds of others, to the encampment.

In speaking just above, of the mode of moving their wigwams, and changing their encampments, I should have said a little more, and should also have given to the reader, a sketch of one of these extraordinary scenes, which I have had the good luck to witness; where several thousands were on the march, and furnishing one of those laughable scenes which daily happen, where so many dogs, and so many squaws, are travelling in such a confused mass; with so many conflicting interests, and so many local and individual rights to be pertinaciously claimed and protected.

Each horse drags his load, and each dog, (i. e. each dog that will do it and there are many that will not), also dragging his wallet on a couple of poles; and each squaw with her load, and all together (notwithstanding their burthens) cherishing their pugnacious feelings, which often bring them into general conflict, commencing usually amongst the dogs, and sure to result in fisticuffs of the women; whilst the men, riding leisurely on the right or the left, take infinite pleasure in overlooking these desperate conflicts, at which they are sure to have a laugh, and in which, as sure never to

---

lend a hand.

The Camanchees, like the Northern tribes, have many games, and in Pleasant weather seem to be continually practicing more or less of them, on the prairies, back of, and contiguous to, their village.

In their ball-plays, and some other games, they are far behind the Sioux and others of the Northern tribes; but, in racing horses and riding, they are not equalled by any other Indians on the Continent. Racing horses, it would seem, is a constant and almost incessant exercise, and their principal mode of gambling; and perhaps, a more finished set of jockeys are not to be found. The exercise of these people, in a country where horses are so abundant, and the country so fine for riding, is chiefly done on horseback; and it "stands to reason", that such a people, who have been practicing from their childhood, should become exceedingly expert in this wholesome and beautiful exercise. Amongst their feats of riding, there is one that has astonished me more than anything of the kind I have ever seen, or expect to see, in my life -- a stratagem of war, learned and practiced by every young man in the tribe; by which he is able to drop his body upon the side of his horse at the instant he is passing, effectually screened from his enemies' weapons as he lays in a horizontal position behind the body of his horse, with his heel hanging over the horses' back; by which he has the power of throwing himself up again, and changing to the other side of the horse if necessary. In this wonderful condition, he will hang whilst his horse is at fullest speed, carrying with him his bow and his shield, and also his long lance of fourteen feet in length, all or either of which he will wield upon his enemy as he passes; rising and throwing his arrows over the horse's back, or with equal ease and equal success under the horse's neck. This astonishing feat which the young men have bees repeatedly playing off to our surprise as well as amusement, whilst they have been galloping about in front of our tents, completely puzzled the whole of us; and appeared to be the result of magic, rather than of skill acquired by practice. I had several times great curiosity to approach them, to ascertain by what means their bodies could be suspended in this manner, where nothing could be seen but the heel hanging over the horse's back. In these endeavors I was continually frustrated, until one day I coaxed a young fellow up within a little distance of me, by offering him a few plugs of tobacco, and he in a moment solved the difficulty, so far as to render it apparently more feasible than before; yet leaving it one of the most extraordinary results of practice and persevering endeavors. I found on examination, that a shorthair halter was passed around under the neck of the horse, and both ends tightly braided into the mane, on the withers, leaving a loop to hang under the neck, and against the breast, which, being caught up in the hand, makes a sling into which the elbow falls, taking the weight of the body on the middle of the upper arm. Into this loop the rider drops suddenly and fearlessly, leaving his heel to hang over the back of the horse, to steady him, and also to restore him when he wishes to regain his upright position on the horse's back.

Besides this wonderful art, these people have several other feats of horsemanship, which they are continually showing off; which are pleasing and extraordinary, and of which they seem very proud. A people who spend so very great a part of their lives, actually on their horses backs, must needs become exceedingly expert in every thing that pertains to riding-to war, or to the chase; and I am ready, without hesitation, to pronounce the Camanchees the most extraordinary horsemen that I have seen yet in all my travels, and I doubt very much whether any people in the world can surpass them.

The Camanchees are in stature, rather low, and in person, often approaching to corpulency. In their movements, they are heavy and ungraceful; and on their feet, one of the most unattractive and slovenly-looking races of Indians that I have ever seen; but the moment they mount their horses, they seem at once metamorphosed, and surprise the spectator with the ease and elegance of their movements. A Camanchee on his feet is out of his element, and comparatively almost as awkward as a monkey on the ground, without a limb or a branch to cling to; but the moment he lays his hand upon his hone, his face, even becomes handsome, and he gracefully flies away like a different being.

Our encampment is surrounded by continual swarms of old and young--of middle aged -- of male and female -- of dogs, and every moving thing that constitutes their community; and our tents are lined with the chiefs and other worthies of the tribe. So it will be seen there is no difficulty of getting subjects enough for my brush, as well as for my pen, whilst residing in this place.

The head chief of this village, who is represented to us here, as the head of the nation, is a mild and pleasant looking gentleman, without anything striking or peculiar in his looks; dressed in a very humble manner, with very few ornaments upon him, and his hair carelessly falling about his face, and over his shoulders. The name of this chief is Ee-shahko-nee (The Bow and Quiver). The only ornaments to be seen about him were a couple of beautiful shells worn in his ears, and a boar's tusk attached to his neck, and worn on his breast.

For several days after we arrived at this place, there was a huge mass of flesh, Ta-wah-que-nah (The Mountain of Rocks), who was put forward as head chief of the tribe; and all honours were being paid to him by the regiment of dragoons, until the above-mentioned chief arrived from the country, where it seems he was leading a war-party; and had been sent for, no doubt, on the occasion. When he arrived, this huge monster, who is the largest and fattest Indian I ever saw, stepped quite into the background, giving way to this admitted chief, who seemed to have the confidence and respect of the whole tribe.

This enormous man, whose flesh would undoubtedly weigh three hundred pounds or more, took the most wonderful strides in the exercise of his temporary authority; which, in all probability, he was lawfully exercising in the absence of his superior, as second chief of the tribe.

A perfect personation of Jack Falstaff, in size and in figure, with an African face, and a beard on his chin of two or three inches in length. His name, he tells me, he got from having conducted a large party of Camanchees through a secret and subterraneous passage, entirely through the mountain of granite rocks, which lies back of their village; thereby saving their lives from their more powerful enemy, who had "cornered them up" in such a way, that there was no other possible mode for their escape. The mountain under which he conducted them, is called Ta-wah-que-nah (The Mountain of Rocks), and from this he has received his name, which would certainly have been far more appropriate if it had been a mountain of flesh.

Corpulency is a thing exceedingly rare to be found in any of the tribes, amongst the men, owing, probably, to the exposed and active sort of lives they lead; and that in the absence of all the spices of life, many of which have their effect in producing this disgusting, as well as unhandy and awkward extravagance in civilized society.

Ish-a-ro-yeh (He Who Carries A Wolf); and Is-sa-wah-tam-ah (The Wolf Tied With Hair); are also chiefs of some standing in the tribe, and evidently men of great influence, as they were put forward by the head chiefs, for their likenesses to be painted in turn, after their own. The first of

the two seemed to be the leader of the war-party which we met, and of which I have spoken; and in escorting us to their village, this man took the lead and piloted us the whole way, in consequence of which Colonel Dodge presented him a very fine gun.

His-oo-san-ches (The Spaniard), a gallant little fellow, is represented to us as one of the leading warriors of the tribe; and no doubt is one of the most extraordinary men at present living in these regions.

He is half Spanish, and being a half-breed, for whom they generally have the most contemptuous feelings, he has been all his life thrown into the front of battle and danger; at which posts he has signalized himself, and commanded the highest admiration and respect of the tribe, for his daring and adventurous career. This is the man of whom I have before spoken, who dashed out so boldly from the war-party, and came to us with the white rag raised on the point of his lance, and of whom I have made a sketch in. I have here represented him as he stood for me, with his shield on his arm, with his quiver slung, and his lance of fourteen feet in length in his right hand. This extraordinary little man, whose figure was light, seemed to be all bone and muscle, and exhibited immense power, by the curve of the bones in his legs and his arms. We had many exhibitions of his extraordinary strength, as well as agility; and of his gentlemanly politeness and friendship, we had as frequent evidences. As an instance of this, I will recite an occurrence which took place but a few days since, when we were moving our encampment to a more desirable ground on another side of their village. We had a deep and powerful stream to ford, when we had several men who were sick, and obliged to be carried on litters. My friend "Joe" and I came up in the rear of the regiment, where the litters of the sick were passing, and we found this little fellow up to his chin in the muddy water, wading and carrying one end of each litter on his head, as they were in turn, passed over. After they had all passed, this gallant little fellow beckoned to me to dismount, and take a seat on his shoulders, which I declined; preferring to stick to my horse's back, which I did, as he took it by the bridle and conducted it through the shallowest ford. When I was across, I took from my belt a handsome knife and presented it to him, which seemed to please him very much. Besides the above-named chiefs and warriors, I painted the portrait of Kots-o-ko-ro-ko (The Hair of The Bull's Neck); and Hah-nee (The Beaver); the first, a chief, and the second, a warrior of terrible aspect, and also of considerable distinction. These and many other paintings, as well as manufactures from this tribe, may be always seen in my Museum, if I have the good luck to get them safe home from this wild and remote region.

From what I have already seen of the Camanchees, I am fully convinced that they are a numerous and very powerful tribe, and quite equal in numbers and prowess, to the accounts generally given of them.

It is entirely impossible at present to make a correct estimate of their numbers; but taking their own account of villages they point to in such numbers, South of the banks of the Red River, as well as those that lie farther West, and undoubtedly North of its banks, they must be a very numerous tribe; and I think I am able to say, from estimates that these chiefs have made me, that they number some 30 or 40,000 -- being able to shew some 6 or 7000 warriors, well-mounted and well-armed. This estimate I offer not as conclusive, for so little is as yet known of these people, that no estimate can be implicitly relied upon other than that, which, in general terms, pronounces them to be a very numerous and warlike tribe.

We shall learn much more of them before we get out of their country; and I trust that it will yet be

in my power to give something like a fair census of them before we have done with them. They speak much of their allies and friends, the Pawnee Picts, living to the West some three or four days' march, whom we are going to visit in a few days, and afterwards return to this village, and then "bend our course" homeward, or, in other words, back to Fort Gibson. Besides the Pawnee Picts, there are the Kiowas and Wicos; small tribes that live in the same vicinity, and also in the same alliance, whom we shall probably see on our march. Every preparation is now making to be off in a few days -- and I shall omit further remarks on the Camanchees, until we return, when I shall probably have much more to relate of them and their customs. So many of the men and officers are getting sick, that the little command will be very much crippled, from the necessity we shall be under, of leaving about thirty sick, and about an equal number of well to take care of and protect them: for which purpose, we are constructing a fort, with a sort of breastwork of timbers and bushes, which will be ready in a day or two; and the sound part of the command prepared to start with several Camanchee leaders, who have agreed to pilot the way.

LETTER -- No. 43.

GREAT CAMANCHEE VILLAGE.

The above Letter it will be seen, was written some time ago, and when all hands (save those who were too sick) were on the start for the Pawnee arrived; and as the dragoons have made their visit there and returned in a village. Amongst those exceptions was I, before the hour of starting had most jaded condition, and I have again got well enough to write, I will render some account of the excursion, which is from the pen and the pencil of my friend Joe, who went with them and took my sketch and note-books in his pocket.

“We were four days travelling over a beautiful country, most of the way prairie, and generally along near the base of a stupendous range of mountains of reddish granite, in many places piled up to an immense height without tree or shrubbery on them; looking as if they had actually dropped from the clouds in such a confused mass, and all lay where they had fallen.

Such we found the mountains enclosing the Pawnee village, on the bank of Red River, about ninety miles from the Camanchee town. The dragoon regiment was drawn up within half a mile or so of this village, and encamped in a square, where we remained three days. We found here a very numerous village, containing some five or six hundred wigwams, all made of long prairie grass, thatched over poles which are fastened in the ground and bent in at the top; giving to them, in distance, the appearance of straw beehives, as in, which is an accurate view of it, shewing the Red River in front, and the “mountains of rocks” behind it.

“To our very great surprise, we have found these people cultivating quite extensive fields of corn (maize), pumpkins, melons, beans and squashes; so, with these aids, and an abundant supply of buffalo meat, they may be said to be living very well.

“The next day after our arrival here, Colonel Dodge opened a council with the chiefs, in the chief’s lodge, where he had the most of his officers around him. He first explained to them the friendly views with which he came to see them; and of the wish of our Government to establish a lasting peace with them, which they seemed at once to appreciate and highly to estimate.

“The head chief of the tribe is a very old man, and he several times replied to Colonel Dodge in a very eloquent manner; assuring him of the friendly feelings of his chiefs and warriors towards the pale faces, in the direction from whence we came.

“After Colonel Dodge had explained in general terms, the objects of our visit, he told them that he should expect from them some account of the foul murder of Judge Martin and his family on the False Washita, which had been perpetrated but a few weeks before, and which the Camanchees had told us was done by the Pawnee Picts. The Colonel told them, also, that he learned from the Camanchees, that they had the little boy, the son of the murdered gentleman, in their possession; and that he should expect them to deliver him up, as an indispensable condition of the friendly arrangement that was now making. They positively denied the fact, and all knowledge of it; firmly

assuring us that they knew nothing of the murder, or of the boy. The demand was repeatedly made, and as often denied; until at length a negro-man was discovered, who was living with the Pawnees, who spoke good English; and coming into the council-house, gave information that such a boy had recently been brought into their village, and was now a prisoner amongst them. This excited great surprise and indignation in the council, and Colonel Dodge then informed the chiefs that the council would rest here; and certainly nothing further of a peaceable nature would transpire until the boy was brought in. In this alarming dilemma, all remained in gloomy silence for awhile; when Colonel Dodge further informed the chiefs, that as an evidence of his friendly intentions towards them, he had, on starting, purchased at a very great price, from their enemies the Osages, two Pawnee (and one Kiowa) girls; which had been held by them for some years as prisoners, and which he had brought the whole way home, and had here ready to be delivered to their friends and relations; but whom he certainly would never show, until the little boy was produced. He also made another demand, which was for the restoration of an United States ranger, by the name of Abbe, who had been captured by them during the summer before. They acknowledged the seizure of this man, and all solemnly declared that he had been taken by a party of the Camanches, over whom they had no control, and carried beyond the Red River into the Mexican provinces, where he was put to death. They held a long consultation about the boy, and seeing their plans defeated by the evidence of the negro; and also being convinced of the friendly disposition of the Colonel, by bringing home their prisoners from the Osages, they sent out and had the boy brought in, from the middle of a corn-field, where he had been secreted. He is a smart and very intelligent boy of nine years of age, and when he came in, he was entirely naked, as they keep their own boys of that age. There was a great excitement in the council when the little fellow was brought in; and as he Passed amongst them, he looked around and exclaimed with some surprise, "What! Are there white men here?" To which Colonel Dodge replied, and asked his name; and he promptly answered. "My name is Matthew Wright Martin."

He was then received into Colonel Dodge's arms; and an order was immediately given for the Pawnee and Kiowa girls to be brought forward; they were in a few minutes brought into the council-house, when they were at once recognized by their friends and relatives, who embraced them with the most extravagant expressions of joy and satisfaction. The heart of the venerable old chief was melted at this evidence of white man's friendship, and he rose upon his feet, and taking Colonel Dodge in his arms, and placing his left cheek against the left cheek of the Colonel, held him for some minutes without saying a word, whilst tears were flowing from his eyes. He then embraced each officer in turn, in the same silent and affectionate manner -- which form took half an hour or more, before it was completed.

"From this moment the council, which before had been a very grave and uncertain one, took a pleasing and friendly turn. And this excellent old man ordered the women to supply the dragoons with something to eat, as they were hungry.

(The little encampment, which heretofore was in a woeful condition, having eaten up their last rations twelve hours before, were now gladdened by the approach of a number of women, who brought their "back loads" of dried buffalo meat and green corn, and threw it down amongst there. This seemed almost like a providential deliverance, for the country between here and the Camanches, was entirely destitute of game, and our last Provisions were consumed.

"The council thus Proceeded successfully and pleasantly for several days, whilst the warriors of

the Kiowas and Wicos, two adjoining and friendly tribes living further to the West, were arriving; and also a great many from other bands of the Camanchees, who had heard of our arrival; until two thousand or more of these wild and fearless-looking fellows were assembled, and all, from their horses' backs, with weapons in hand, were looking into our pitiful little encampment, of two hundred men, all in a state of dependence and almost literal starvation; and at the same time nearly one half the number too sick to have made a successful resistance if we were to have been attacked."

The command returned to this village after an absence of fifteen days, in a fatigued and destitute condition, with scarcely anything to eat, or chance of getting anything here; in consequence of which, Colonel Dodge almost instantly ordered preparations to be made for a move to the head of the Canadian river, a distance of an hundred or more miles, where the Indians represented to us there would be found immense herds of buffaloes; a place where we could get enough to eat, and by lying by awhile, could restore the sick, who are now occupying a great number of litters. Some days have elapsed, however, and we are not quite ready for the start yet. And during that time, continual parties of the Pawnee Picts and Kioways have come up; and also Camanchees, from other-villages, to get a look at us, and many of them are volunteering to go in with us to the frontier.

The world who know me, will see that I can scarcely be idle under such circumstances as these, where so many subjects for my brush and my pen are gathering about me.

The Pawnee Picts, Kioways, and Wicos are the subjects that I am most closely scanning at this moment, and I have materials enough around me.

The Pawnee Picts are undoubtedly a numerous and powerful tribe, occupying, with the Kioways and Wicos, the whole country on the head waters of the Red River, and quite into and through the southern part of the Rocky Mountains. The old chief told me by signs, enumerating with his hands and fingers, that they had altogether three thousand warriors; which if true, estimating according to the usual rule, one warrior to four, would make the whole number about twelve thousand; and, allowing a fair per-centage for boasting or bragging, of which they are generally a little guilty in such cases, there would be at a fair calculation from eight to ten thousand. These then, in an established alliance with the great tribe of Camanchees, hunting and feasting together, and ready to join in common defence of their country become a very formidable enemy when attacked on their own ground.

The name of the Pawnee Picts, we find to be in their own language, Tow-ee-ahge, the meaning of which I have not yet learned. I have ascertained also, that these people are in no way related to the Pawnees of the Platte, who reside a thousand miles or more North of them, and know them only as enemies. There is no family or tribal resemblance; nor any in their language or customs. The Pawnees of the Platte shave the head, and the Pawnee Picts abominate the custom; allowing their hair to grow like the Camanchees and other tribes.

The old chief of the Pawnee Picts, of whom I have before spoken, and whose name is We-ta-ra-sha-ro, is undoubtedly a very excellent and kind-hearted old man, of ninety or more years of age, and has consented to accompany us, with a large party of his people, to Fort Gibson; where Colonel Dodge has promised to return him liberal presents from the Government, for the friendship he has evinced on the present occasion.

The second chief of this tribe, Sky-se-ro-ka, we found to be a remarkably clever man, and much

approved and valued in his tribe.

The Pawnee Picts, as well as the Camanchees, are generally a very clumsy and ordinary looking set of men, when on their feet; but being fine horsemen, are equally improved in appearance as soon as they mount upon their horses' backs.

Amongst the women of this tribe, there were many that were exceedingly pretty in feature and in form; and also in expression, though their skins are very dark. The dress of the men in this tribe, as amongst the Camanchees, consists generally in leggings of dressed skins, and moccasins; with a flap or breech clout, made also of dressed skins or furs, and often very beautifully ornamented with shells, &c. Above the waist they seldom wear any drapery, owing to the warmth of the climate, which will rarely justify it; and their heads are generally uncovered with a head-dress, like the Northern tribes who live in a colder climate, and actually require them for comfort.

The women of the Camanchees and Pawnee Picts, are always decently and comfortably clad, being covered generally with a gown or slip, that reaches from the thin quite down to the ankles, made of deer or elk skins; often garnished very prettily, and ornamented with long fringes of elk's teeth, which are fastened on them in rows, and more highly valued than any other ornament they can put upon them.

I have given the portraits of two Pawnee girls, Kah-kee-tsee (The Thighs), and She-de-a (Wild Sage), the two Pawnee women who had been held as prisoners by the Osages, and purchased by the Indian Commissioner, the Reverend Mr. Schemmerhom, and brought home to their own people, and delivered up in the Pawnee town, in the manner that I have just described.

The Kioways are a much finer looking race of men, than either the Camanchees or Pawnees -- are tall and erect, with an easy and graceful gait -- with long hair, cultivated oftentimes so as to reach nearly to the ground.

They have generally the fine and Roman outline of head, that is so frequently found at the North, and decidedly distinct from that of the Camanchees and Pawnee Picts. These men speak a language distinct from both of the others; and in fact, the Camanchees and Pawnee Picts -- and Kioways, and Wicos, are all so distinctly different in their languages, as to appear in that respect as total strangers to each other.

The head chief of the Kioways, whose name is The-toot-sah we found to be a very gentlemanly and high minded man, who treated the dragoons and officers with great kindness while in his country. His long hair, which was put up in several large clubs, and ornamented with a great many silver broaches, extended quite down to his knees. This distinguished and, as well as several others of his tribe, have agreed to join us on the march to Fort Gibson; so I shall have much of their company yet, and probably much more to say of them at a future period. Bon-son-gee (the new fire) is another chief of this tribe, and called a very good man; the principal ornaments which he carried on his person were a boar's tusk and his war-whistle, which were hanging on his breast. Quay-ham-kay (The Stone Shell), is another fair specimen of the warriors of this tribe; and, if I mistake not, somewhat allied to the mysteries and arcana of the healing art, from the close company he keeps with my friend Dr. Findley, who is surgeon to the regiment, and by whom I have been employed to make a copy of my portrait of this distinguished personage.

Wun-pan-to-mee (The White Weasel), a girl; and Tunk-aht-oh-ye (The Thunderer), a boy; who are brother and sister, are two Kioways who were purchased from the Osages, to be taken to their tribe by the dragoons. The girl was taken the whole distance with us, on horseback, to the Pawnee

village, and there delivered to her friends, as I have before mentioned; and the fine little boy was killed at the Fur Trader's house on the banks of the Verdigris, near Fort Gibson, the day after I painted his portrait, and only a few days before he was to have started with us on the march. He was a beautiful boy of nine or ten years of age, and was killed by a ram, which struck him in the abdomen, and knocking him against a fence, killed him instantly.

Kots-a-to-ah (The Smoked Shield), is another of the extraordinary men of this tribe, near seven feet in stature, and distinguished, not only as one of the greatest warriors, but the swiftest on foot, in the nation. This man, it is said, runs down a buffalo on foot, and slays it with his knife or his lance, as he runs by its side!

I made a portrait of Ush-ee-kitz (He Who Fights With A Feather), head chief of the Wi-co tribe, a very polite and polished Indian, in his manners, and remarkable for his mode of embracing the officers and others in council.

In the different talks and councils that we have had with these people, this man has been a conspicuous speaker; and always, at the end of his speeches, has been in the habit of stepping forward and embracing friends and foes, all that were about him, taking each one in turn, closely and affectionately in his arms, with his left cheek against theirs, and thus holding them tightly for several minutes.

All the above chiefs and braves, and many others, forming a very picturesque cavalcade, will move off with us in a day or two, on our way back to Fort Gibson, where it is to be hoped we may arrive more happy than we are in our present jaded and sickly condition.

LETTER--No. 44.

CAMP CANADIAN, TEXAS.

Six days of severe travelling have brought us from the Camanchee village to the North bank of the Canadian, where we are snugly encamped on a beautiful plain, and in the midst of countless numbers of buffaloes; and halting a few days to recruit our horses and men, and dry meat to last us the remainder of our journey.

The plains around this, for many miles, seem actually speckled in distance, and in every direction, with herds of grazing buffaloes; and for several days, the officers and men have been indulged in a general licence to gratify their sporting propensities; and a scene of bustle and cruel slaughter it has been, to be sure ! From morning till night, the camp has been daily almost deserted; the men have dispersed in little squads in all directions, and are dealing death to these poor creatures to a most cruel and wanton extent, merely for the pleasure of destroying, generally without stopping to cut out the meat. During yesterday and this day, several hundreds have undoubtedly been killed, and not so much as the flesh of half a dozen used. Such immense swarms of them are spread over this tract of country ; and so divided and terrified have they become, finding their enemies in all directions where they run, that the poor beasts seem completely bewildered -- running here and there, and as often as otherwise, come singly advancing to the horsemen, as if to join them for their company, and are easily shot down. In the turmoil and confusion, when their assailants have, been pushing them forward, they have galloped through our encampment, jumping over our fires, upsetting pots and kettles, driving horses from their fastenings, and throwing the whole encampment into the greatest instant consternation and alarm. The hunting fever will be satiated in a few days amongst the young men, who are well enough to take parts in the chase; and the bilious fever, it is to be hoped, will be abated in a short time, amongst those who are invalid, and meat enough will be dried to last us to Fort Gibson, when we shall be on the march again, and wending our way towards that garrison.

Many are now sick and unable to ride, and are carried on litters between two horses. Nearly every tent belonging to the officers has been converted to hospitals for the sick; and sighs and groaning are heard in all directions. From the Camanchee village to this place, the country has been entirely prairie; and most of the way high and dry ground, without water, for which we sometimes suffered very much. From day to day we have dragged a long exposed to the hot and burning rays of the sun, without a cloud to relieve its intensity, or a bush to shade us, or anything to cast a shadow, except the bodies of our horses. The grass for a great part of the way, was very much dried up, scarcely affording a bite for our horses; and sometimes for the distance of many miles, the only water we could find, was in stagnant pools, lying on the highest ground, in which the buffaloes have been lying and wallowing like hogs in a mud-puddle. We frequently came to these dirty layers, from which we drove the herds of wallowing buffaloes, and into which our poor and almost dying horses, irresistibly ran and plunged their noses, sucking up the dirty and poisonous

---

draught, until, in some instances, they fell dead in their tracks--the men also (and oftentimes amongst the number, the writer of these lines) sprang from their horses, and laded up and drank to almost fatal excess, the disgusting and tepid draught, and with it filled their canteens, which were slung to their sides, and from which they were sucking the bilious contents during the day. In our march we found many deep ravines, in the bottoms of which there were the marks of wild and powerful streams; but in this season of drought they were all dried up, except an occasional one, where we found them dashing along in the coolest and dearest manner, and on trial, to our great agony, so salt that even our horses could not drink from them; so we had occasionally the tantalizing pleasure of hearing the roar of, and looking into, the dearest and most sparkling streams; and after that the dire necessity of drinking from stagnant pools which lay from month to month exposed to the rays of the sun, till their waters become so poisonous and heavy, from the loss of their vital principle, that they are neither diminished by absorption, or taken into the atmosphere by evaporation.

This poisonous and indigestible water, with the intense rays of the sun in the hottest part of the summer, is the cause of the unexampled sickness of the horses and men. Both appear to be suffering and dying with the same disease, a slow and distressing bilious fever, which seems to terminate in a most frightful and fatal affection of the liver.

In these several cruel days' march, I have suffered severely, having had all the time (and having yet) a distracting fever on me. My real friend, Joe, has constantly rode by my side, dismounting and filling my canteen for me, and picking up minerals or fossils, which my jaundiced eyes were able to discover as we were passing over them; or doing other kind offers for me, when I was too weak to mount my horse without aid. During this march over these dry and parched plains, we picked up many curious things of the fossil and mineral kind, and besides them a number of the horned frogs. In our portmanteaux we had a number of tin boxes in which we had carried Seidlitz powders, in which we caged a number of them safely, in hopes to carry them home alive. Several remarkable specimens my friend Joe has secured of these, with the horns of half and three-fourths of an inch in length, and very sharp at the points.

These curious subjects have 80 often fallen under my eye while on the Upper Missouri, that with me, they have lost their novelty in a great degree; but they have amused and astonished my friend Chadwick so much, that he declares he will take every one he can pick up, and make a sensation with them when ne gets home. In this way Joe's fancy for horned frogs has grown into a sort of frog-mania, and his eyes are strained all day, and gazing amongst the grass and pebbles as he rides along, for his precious little prizes, which he occasionally picks up and consigns to his pockets. On one of these hard day's march, and just at night, whilst we were looking out for water, and a suitable place to encamp, Joe and I galloped off a mile or two to the right of the regiment, to a Point of timber, to look for water, where we found a small and sunken stagnant pool; and as our horses plunged their feet into it to drink, we saw to our great surprise, a number of frogs hopping across its surface, as our horses started them from the shore! Several of them stopped in the middle of the pool, sitting quite "high and dry" on the surface of the water; and when we approached them nearer, or jostled them, they made a leap into the air, and coming down head foremost went under the water and secreted themselves at the bottom. Here was a subject for Joe, in his own line! frogs with horns, and frogs with webbed feet, that could hop about, and sit upon, the surface of the water! We rode around the pool and drove a number of them into it, and fearing that it

would be useless to try to get one of them that evening; we rode back to the encampment, exulting very much in the curious discovery we had made for the naturalists; and by relating to some of the officers what we had seen, got excessively laughed at for our wonderful discovery! Nevertheless, Joe and I could not disbelieve what we had seen so distinctly "with our own eyes"; and we took to ourselves, or in other words, I acquiesced in Joe's taking to himself, as it was so peculiarly in his line) the most unequivocal satisfaction in the curious and undoubted discovery of this new variety; and we made our arrangements to ride back to the spot before "bugle call" in the morning; and by a thorough effort, to obtain a specimen or two of the web-footed frogs for Joe's pocket, to be by him introduced to the consideration of the knowing ones in the East. Well, our horses were saddled at an early hour, and Joe and I were soon on the spot -- and he with a handkerchief at the end of a little pole, with which he had made a sort of scoop-net, soon dipped one up as it was hopping along on the surface of the water, and making unsuccessful efforts to dive through its surface. On examining its feet, we found, to our very great surprise.

I laughed a great deal at poor Joe's most cruel expense, and we amused ourselves a few minutes about this filthy and curious pool, and rode back to the encampment. We found by taking the water up in the hollow of the hand, and dipping the finger in it, and drawing it over the side, thus conducting a little of it out; it was so slimy that the whole would run over the side of the hand in a moment!

We were joked and teased a great deal about our web-footed frogs; and after this, poor Joe has had repeatedly to take out and exhibit his little pets in his pockets, to convince our travelling companions that frogs sometimes actually have horns.

Since writing the above, an express has arrived from the encampment, which we left at the mouth of False Washita, with the melancholy tidings of the death of General Leavenworth, Lieutenant McClure, and ten or fifteen of the men left at that place! This has cast a gloom over our little encampment here, and seems to be received as a fatal foreboding by those who are sick with the same disease; and many of them, poor fellows, with scarce a hope left now for their recovery. It seems that the General had moved on our trail a few days after we left the Washita, to the "Cross Timbers", a distance of fifty or sixty miles, where his disease at last terminated his existence; and I am inclined to think, as I before mentioned, in consequence of the injury he sustained in a fall from his horse when running a buffalo calf. My reason for believing this, is, that I rode and ate with him every day after the hour of his fall; and from that moment I was quite sure that I saw a different expression in his face, from that which he naturally more; and when riding by the side of him two or three days after his fall, I observed to him, "General, you have a very bad cough" -- "Yes," he replied, "I have killed myself in running that devilish calf; and it was a very lucky thing, Catlin, that you painted the portrait of me before we started, for it is all that my dear wife will ever see of me."

We shall be on the move again in a few days; and I plainly see that I shall be upon a litter, unless my horrid fever leaves me, which is daily taking away my strength, and almost, at times, my senses. Adieu!

LETTER -- No. 45.

FORT GIBSON, ARKANSAS.

The last Letter was written from my tent, and out upon the wild prairies, when I was shaken and terrified by a burning fever, with home and my dear wife and little one, two thousand miles ahead of me, whom I was despairing of ever embracing again. I am now scarcely better off, except that I am in comfortable quarters, with kind attendance, and friends about me. I am yet sick and very feeble, having been for several weeks upon my back since I was brought in from the prairies. I am slowly recovering, and for the first time since I wrote from the Canadian, able to use my pen or my brush.

We drew off from that slaughtering ground a few days after my last Letter was written, with a great number sick, carried upon litters -- with horses giving out and dying by the way, which much impeded our progress over the long and tedious route that laid between us and Fort Gibson. Fifteen days, however, of constant toil and fatigue brought us here, but in a most crippled condition. Many of the sick were left by the way with attendants to take care of them, others were buried from their litters on which they breathed their last while travelling, and many others were brought in, to this place, merely to die and get the privilege of a decent burial.

Since the very day of our start into that country, the men have been constantly falling sick, and on their return, of those who are alive, there are not well ones enough to take care of the sick. Many are yet left out upon the prairies, and of those that have been brought in, and quartered in the hospital, with the soldiers of the infantry regiment stationed here, four or five are buried daily; and as an equal number from the 9th regiment are falling by the same disease, I have the mournful sound of "Roslin Castle" with muffled drums, passing six or eight times a-day under my window, to the burying-ground; which is but a little distance in front of my room, where I can lay in my bed and see every poor fellow lowered down into his silent and peaceful habitation. During the day before yesterday, no less than eight solemn processions visited that insatiable ground, and amongst them was carried the corpse of my intimate and much-loved friend Lieutenant West, who was aid-de-camp to General Leavenworth, on this disastrous campaign, and who has left in this place, a worthy and distracted widow, with her little ones to mourn for his untimely end. On the same day was buried also the Prussian Botanist, a most excellent and scientific gentleman, who had obtained an order from the Secretary at War to accompany the expedition for scientific purposes. He had at St. Louis, purchased a very comfortable Dearborn waggon, and a snug span of little horses to convey himself and his servant with his collection of plants, over the prairies. In this he travelled in company with the regiment from St. Louis to Fort Gibson, some five or six hundred miles, and from that to the False Washita, and the Cross Timbers and back again. In this Tour he had made an immense, and no doubt, very valuable collection of plants, and at this Place had been for some weeks indefatigably engaged in changing and drying them, and at last, fell a victim to the disease of the country, which seemed to have made an easy conquest of him, from

---

the very feeble and enervated state he was evidently in, that of pulmonary consumption. This fine, gentlemanly and urbane, excellent man, to whom I became very much attached, was lodged in a room adjoining to mine, where he died, as he had lived, peaceably and smiling, and that when nobody knew that his life was in immediate danger. The surgeon who was attending me, (Dr. Wright,) was sitting on my bed-side in his morning call at my room, when a negro boy, who alone had been left in the room with him, came into my apartment and said Mr. Beyrich was dying -- we instantly stepped into his room and found him, not in the agonies of death, but quietly breathing his last, without a word or a struggle, as he had laid himself upon his bed with his clothes and his boots on. In this way perished this worthy man, who had no one here of kindred friends to drop tears for him; and on the day previous to his misfortune, died also, and much in the same way, his devoted and faithful servant, a young man, a native of Germany. Their bodies were buried by the side of each other, and a general feeling of deep grief was manifested by the officers and citizens of the post, in the respect that was paid to their remains in the appropriate and decent committal of them to the grave.

After leaving the head waters of the Canadian, my illness continually increased, and losing strength every day, I soon got so reduced that I was necessarily lifted on to and off from, my horse; and at last, so that I could not ride at all. I was then put into a baggage-waggon which was going sack empty, except with several soldiers sick, and in this condition rode eight days, most of the time in a delirious state, lying on the hard planks of the waggon, and made still harder by the jarring and jolting, until the skin from my elbows and knees was literally worn through, and I almost "worn out", when we at length reached this post, and I was taken to a bed, in comfortable quarters, where I have had the skillful attendance of my friend and old schoolmate Dr. Wright, under whose hands, thank God, I have been restored, and all; now daily recovering my flesh and usual strength.

The experiment has thus been made, of sending an army of men from the North, into this Southern and warm climate, in the hottest months of the year, of July and August; and from this sad experiment I am sure a secret will be learned that will be of value on future occasions.

Of the 450 fine fellows who started from this place four months since, about one-third have already died, and I believe many more there are whose fates are sealed, and will yet fall victims to the deadly diseases contracted in that fatal country. About this post it seems to be almost equally unhealthy, and generally so during this season, all over this region, which is probably owing to an unusual drought which has been visited on the country, and unknown heretofore to the oldest inhabitants.

Since we carne in from the prairies, and the sickness has a little abated, we have had a bustling time with the Indians at this place. Colonel Dodge sent runners to the chiefs of all the contiguous tribes of Indians, with an invitation to meet the Pawnees, &c. in council, at this place. Seven or eight tribes flocked to us, in great numbers on the first day of the month, when the council commenced; it continued for several days, and gave these semi-civilized sons of the forest a fair opportunity of shaking the hands of their wild and untamed red brethren of the West -- of embracing them in their arms, with expressions of friendship, and of smoking the calumet together, as the solemn pledge of lasting peace and friendship.

Colonel Dodge, Major Armstrong (the Indian agent), and General Stokes (the Indian commissioner), presided at this council, and I cannot name a scene more interesting and entertaining

than it was; where, for several days in succession, free vent was given to the feelings of men civilized, half-civilized, and wild; where the three stages of man were fearlessly asserting their rights, their happiness, and friendship For each other. The vain orations of the half polished (and half-breed) Cherokees and Choctaws, with all their finery and art, found their match in the brief and jarring gutturals of the wild and naked man.

After the council had adjourned, and the fumes of the peace-making calumet had vanished away, and Colonel Dodge had made them additional presents, they soon made preparations for their departure, and on the next day started, with an escort of dragoons, for their own country. This movement is much to be regretted; for it would have been exceedingly gratifying to the people of the East to have seen so wild a group, and it would have been of great service to them to have visited Washington -- a journey, though, which they could not be prevailed upon to make.

We brought with us to this place, three of the principal chiefs of the Pawnees, fifteen Kioways, one Camanchee, and one Wico chief. The group was undoubtedly one of the most interesting that ever visited our frontier; and, I have taken the utmost pains in painting the portraits of all of them, as well as seven of the Camanchee chiefs, who came part of the way with us, and turned back. These portraits, together with other paintings which I have made, descriptive of their manners and customs -- views of their villages-landscapes of the country, &c., will soon be laid before the amateurs of the East, and, I trust, will be found to be very interesting.

Although the achievement has been a handsome one, of bringing these unknown people to an acquaintance, and a general peace; and at first sight would appear to be of great benefit to them -- yet I have my strong doubts, whether it will better their condition, unless with the exercised aid of the strong arm of Government, they can be protected in the rights which by nature, they are entitled to.

There is already in this place a company of eighty men fitted out, who are to start tomorrow, to overtake these Indians a few miles from this place, and accompany them home, with a large stock of goods, with traps for catching beavers, &c., calculating to build a trading-house amongst them, where they will amass, at once, an immense fortune, being the first traders and trappers that have ever been in that part of the country.

I have travelled too much among Indian tribes, and seen too much, not to know the evil consequences of such a system. Goods are sold at such exorbitant prices, that the Indian gets a mere shadow for his peltries, &c. The Indians see no white people but traders and sellers of whiskey; and of course, judge us all by them--they consequently hold us, and always mill, in contempt; as inferior to themselves, as they have reason to do -- and they neither fear nor respect us. When, on the contrary, if the Government would promptly prohibit such establishments, and invite these Indians to our frontier posts, they would bring in their furs, their robes, horses, mules, &c., to this place, where there is a good market for them all -- where they would get the full value of their property -- where there were several stores of goods --where there is an honourable competition, and where they would get four or five times as much for their articles of trade, as they would get from a trader in the village, out of the reach of competition, and out of sight of the civilized world. At the same time, as they would be continually coming where they would see good and polished society, they would be gradually adopting our modes of living--introducing to their country our vegetables, our domestic animals, poultry, &c., and at length, our arts and manufactures; they would see and estimate our military strength, and advantages, and would be led to fear and re-

spect us. In short, it would undoubtedly be the quickest and surest way to a general acquaintance -- to friendship and peace, and at last to civilization. If there is a law in existence for such protection of the Indian tribes, which may have been waived in the case of those nations with which we have long traded, it is a great pity that it should not be rigidly enforced in this new and important acquaintance, which we have just made with thirty or forty thousand strangers to the civilized world; yet (as we have learned from their unaffected hospitality when in their villages), with hearts of human mould, susceptible of all the noble feelings belonging to civilized man.

This acquaintance has cost the United States a vast sum of money, as well as the lives of several valuable and esteemed officers, and more than 100 of the dragoons; and for the honour of the American name, I think we ought, in forming an acquaintance with these numerous tribes, to adopt and enforce some different system from that which has been generally practiced on and beyond our frontiers heretofore.

What the regiment of dragoons has suffered from sickness since they started on their summer's campaign is unexampled in this country, and almost incredible. When we started from this place, ten or fifteen were sent back the first day, too sick to proceed; and so afterwards our numbers were daily diminished, and at the distance of 200 miles from this place we could muster, out of the whole regiment, but 250 men who were able to proceed, with which little band, and that again reduced some sixty or seventy by sickness, we pushed on, and accomplished-all that was done. The beautiful and pictured scenes which we passed over had an alluring charm on their surface, but (as it would seem) a lurking poison within, that spread a gloom about our encampment whenever we pitched it.

We sometimes rode day after day, without a tree to shade us from the burning rays of a tropical sun, or a breath of wind to regale us or cheer our hearts -- and with mouths continually parched with thirst, we dipped our drink from stagnant pools that were heated by the sun, and kept in fermentation by the wallowing herds of buffaloes that resort to them. In this way we dragged on, sometimes passing picturesque and broken country, with fine springs and streams, affording us the luxury of a refreshing shade and a cool draught of water.

Thus was dragged through and completed this most disastrous campaign; and to Colonel Dodge and Colonel Kearny, who so indefatigably led and encouraged their men through it, too much praise cannot be awarded.

During my illness while I have been at this post, my friend Joe has been almost constantly by my bedside; evincing (as he did when we were creeping over the vast prairies) the most sincere and intense anxiety for my recovery; whilst he has administered, like a brother, every aid and every comfort that lay in his power to bring. Such tried friendship as this, I shall ever recollect; and it will long hence and often, lead my mind back to retrace, at least, the first part of our campaign, which was full pleasant; and many of its incidents have formed pleasing impressions on my memory, which I would preserve to the end of my life.

When we started, we were fresh and ardent for the incidents that were before us -- our little pack-horse carried our bedding and culinary articles; amongst which we had a coffee-pot and a frying-pan -- coffee in good store, and sugar -- and wherever we spread our bear-skin, and kindled our fire in the grass, we were sure to take by ourselves, a delightful repast, and a refreshing sleep. During the march, as we were subject to no military subordination, we galloped about wherever we were disposed, popping away at whatever we chose to spend ammunition upon -- and running

our noses into every wild nook and crevice, as we saw fit. In this way we travelled happily, until our coffee was gone, and our bread; and even then we were happy upon meat alone, until at last each one in his turn, like every other moving thing about us, both man and beast, were vomiting and fainting, under the poisonous influence of some latent enemy, that was floating in the air, and threatening our destruction. Then came the "tug of war", and instead of catering for our amusements, every one seemed desperately studying the means that were to support him on his feet, and bring him safe home again to the bosoms of his friends. In our start, our feelings were buoyant and light, and we had the luxuries of life--the green prairies, spotted with wild flowers, and the clear blue sky, were an earthly paradise to us, until fatigue and disease, and at last despair, made them tiresome and painful to our jaundiced eyes.

On our way, and while we were in good heart, my friend Joe and I had picked up many minerals and fossils of an interesting nature, which we put in our portmanteaux and carried for weeks, with much pains, and some pain also, until the time when our ardour cooled and our spirits lagged, and then we discharged and threw them away; and sometimes we came across specimens again, still more wonderful, which we put in their place, and lugged along till we were tired of them, and their weight, and we discharged them as before; so that from our eager desire to procure, we lugged many pounds weight of stones, shells, &c. nearly the whole way, and were glad that their mother Earth should receive them again at our hands, which was done long before we got back. One of the most curious places we met in all our route, was a mountain ridge of fossil shells, from which a great number of the above-mentioned specimens were taken. During our second day's march from the mouth of the False Washita, we were astonished to find ourselves travelling over a bed of clam and oyster shells, which were all in a complete state of petrification. This ridge, which seemed to run from N. E. to S.W. was several hundred feet high, and varying from a quarter to half a mile in breadth, seemed to be composed of nothing but a concretion of shells, which, on the surface, exposed to the weather for the depth of eight or ten inches, were entirely separated from the cementing material which had held them together, and were lying on the surface, sometimes for acres together, without a particle of soil or grass upon them; with the colour, shapes and appearance exactly, of the natural shells, lying loosely together, into which our horses' feet were sinking at every step, above their fetterlocks. These I consider the most extraordinary petrifications I ever beheld. In any way they could be seen, individually or in the mass together, they seemed to be nothing but the pure shells themselves, both in colour and in shape. In many instances we picked them up entire, never having been opened; and taking our knives out, and splitting them open as we would an oyster, the fish was seen petrified in perfect form, and by dipping it into water, it shewed all the colours and freshness of an oyster just opened and laid on a plate to be eaten. Joe and I had carefully tied up many of these, with which we felt quite sure we could deceive our oyster-eating friends when we got back to the East; yet, like many other things we collected, they shared the fate that I have mentioned, without our bringing home one of them, though we brought many of them several hundreds of miles, and at last threw them away. This remarkable ridge is in some parts covered with grass, but generally with mere scattering bunches, for miles together, partially covering this compact mass of shells, forming (in my opinion) one of the greatest geological curiosities now to be seen in this country, as it lies evidently some thousands of feet above the level of the ocean, and seven or eight hundred miles from the nearest point on the sea-coast.

In another section of the country, lying between Fort Gibson and the Washita, we passed over a ridge for several miles, running parallel to this, where much of the way there was no earth or grass under foot, but our horses were travelling on a solid rock, which had on its surface a reddish or oxidized appearance; and on getting from my horse and striking it with my hatchet, I found, it to contain sixty or eighty per cent of solid iron, which produced a ringing noise, and a rebounding of the hatchet, as if it were struck upon an anvil.

In other parts, and farther West, between the Camanchee village and the Canadian, we passed over a similar surface for many miles denuded, with the exception of here and there little bunches of grass and wild sage, a level and exposed surface of solid gypsum, of a dark grey colour; and through it, occasionally, as far as the eye could discover, to the East and the West, streaks of three and five inches wide of snowy gypsum, which was literally as white as the drifted snow.

Of saltpetre and salt, there are also endless supplies; so it will be seen that the mineral resources of this wilderness country are inexhaustible and rich, and that the idle savage who never converts them to his use, must soon yield them to the occupation of enlightened and cultivating man.

In the vicinity of this post there are an immense number of Indians, most of whom have been removed to their present locations by the Government, from their Eastern original positions, within a few years past; and previous to my starting with the dragoons, I had two months at my leisure in this section of the country, which I used in travelling about with my canvass and note-book, and visiting all of them in their villages. I have made many paintings amongst them, and have a curious note-book to open at a future day, for which the reader may be prepared. The tribes whom I thus visited, and of whom my note-book will yet speak, are the Cherokees, Choctaws, Creeks, Seminoles, Chickasaws, Quapaws, Senecas, Delawares, and several others, whose customs are interesting, and whose history, from their proximity to, and dealings with the civilized community, is one of great interest, and some importance, to the enlightened world, Adieu.

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

---

LETTER--No. 46.

ALTON, ILLINOIS.

A few days after the date of the above Letter, I took leave of Fort Gibson, and made a transit across the prairies to this place, a distance of 550 miles, which I have performed entirely alone, and had the satisfaction of joining my wife, whom I have found in good health, in a family of my esteemed friends, with whom she has been residing during my last year of absence.

While at Fort Gibson, on my return from the Camanchees, I was quartered for a month or two in a room with my fellow-companion in misery, Captain Wharton, of the dragoons, who had come in-from the prairies in a condition very similar to mine, and laid in a bed in the opposite corner of the room; where we laid for several weeks, like two grim ghosts, rolling our glaring and staring eyeballs upon each other, when we were totally unable to hold converse, other than that which was exchanged through the expressive language of our hollow, and bilious, sunken eyes.

The Captain had been sent with a company of dragoons to escort the Santa Fee Traders through the country of the Camanchees and Pawnees, and had returned from a rapid and bold foray into the country, with many of his men sick, and himself attacked with the epidemic of the country.

The Captain is a gentleman of high and noble bearing, of one of the most respected families in Philadelphia, with a fine and chivalrous feeling; but with scarce physical stamina sufficient to bear him up under the rough vicissitudes of his wild and arduous sort of life in this country.

As soon as our respective surgeons had clarified our flesh and our bones with calomel, had brought our pulses to beat calmly, our tongues to ply gently, and our stomachs to digest moderately; we began to feel pleasure exquisitely in our convalescence, and draw amusement from mutual relations of scenes and adventures we had witnessed on our several marches. The Captain convalescing faster than I did, soon got so as to eat (but not to digest) enormous meals, which visited back upon him the renewed horrors of his disease; and I, who had got ahead of him in strength, but not in prudence, was thrown back in my turn, by similar indulgence; and so we were mutually and repeatedly, until he at length got so as to feel strength enough to ride, and resolution enough to swear that he would take leave of that deadly spot, and seek restoration and health in a cooler and more congenial latitude. So he had his horse brought up one morning, whilst he was so weak that he could scarcely mount upon its back, and with his servant, a small negro boy, packed on another, he steered off upon the prairies towards Fort Leavenworth, 500 miles to the North, where his company had long since marched.

I remained a week or two longer, envying the Captain the good luck to escape from that dangerous ground; and after I had gained strength sufficient to warrant it, I made preparations to take informal leave, and wend my way also over the prairies to the Missouri, a distance of 500 miles, and most of the way a solitary wilderness. For this purpose I had my horse "Charley" brought up from his pasture, where he had been in good keeping during my illness, and got so fat as to form almost an objectionable contrast to his master, with whom he was to embark on a long and

tedious journey again, over the vast and almost boundless prairies.

I had, like the Captain, grown into such a dread of that place, from the scenes of death that were and had been visited upon it, that I resolved to be off as soon as I had strength to get on to my horse, and balance myself upon his back. For this purpose I packed up my canvass and brushes, and other luggage, and sent them down the river to the Mississippi, to be forwarded by steamer, to meet me at St. Louis. So, one fine morning, Charley was brought up and saddled, and a bear-skin and a buffalo robe being spread upon his saddle, and a coffee-pot and tin cup tied to it also -- with a few pounds of hard biscuit in my portmanteau -- with my fowling piece in my hand, and my pistols in my belt -- with my sketch-book slung on my back, and a small pocket compass in my pocket; I took leave of Fort Gibson, even against the advice of my surgeon and all the officers of the garrison, who gathered around me to bid me farewell. No argument could contend with the fixed resolve in my own mind, that if I could get out upon the prairies, and moving continually to the Northward, I should daily gain strength, and save myself, possibly, from the jaws of that voracious burial-ground that laid in front of my room; where I had for months laid and imagined myself going with other poor fellows, whose mournful dirges were played under my window from day to day. No one can imagine what was the dread I felt for that place; nor the pleasure, which was extatic, when Charley was trembling under me, and I turned him around on the top of a prairie bluff at a mile distance, to take the last look upon it, and thank God, as I did audibly, that I was not to be buried within its enclosure. I said to myself, that "to die on the prairie, and be devoured by wolves; or to fall in combat and be scalped by an Indian, would be far more acceptable than the lingering death that would consign me to the jaws of that insatiable grave", for which, in the fever and weakness of my mind, I had contracted so destructive a terror.

So, alone, without other living being with me than my affectionate horse Charley, I turned my face to the North, and commenced on my long journey, with confidence full and strong, that I should gain strength daily; and no one can ever know the pleasure of that moment, which placed me alone, upon the boundless sea of waving grass, over which my proud horse was prancing, and I with my life in my own hands, commenced to steer my course to the banks of the Missouri. For the convalescent, rising and escaping from the gloom and horrors of a sick bed, astride of his strong and trembling horse, carrying him fast and safely over green fields spotted and tinted with waving wild flowers; and through the fresh and cool breezes that are rushing about him, as he daily shortens the distance that lies between him and his wife and little ones, there is an exquisite pleasure yet to be learned, by those who never have felt it.

Day by day I thus pranced and galloped along, the whole way through waving grass and green fields, occasionally dismounting and lying in the grass an hour or so, until the grim shaking and chattering of an ague chill had passed off; and through the nights, slept on my bear-skin spread upon the grass, with my saddle for my pillow, and my buffalo robe drawn over me for my covering. My horse Charley was picketed near me at the end of his lasso, which gave him room for his grazing; and thus we snored and nodded away the nights, and never were denied the doleful serenades of the gangs of sneaking wolves that were nightly perambulating our little encampment, and stationed at a safe distance from us at sun-rise in the morning -- gazing at us, and impatient to pick up the crumbs and bones that were left, when we moved away from our feeble fire that had faintly flickered through the night, and in the absence of timber, had been made of dried buffalo dung.

This "Charley" was a noble animal of the Camanchee wild breed, of a clay bank colour; and from our long and tried acquaintance, we had become very much attached to each other, and acquired a wonderful facility both of mutual accommodation, and of construing each other's views and intentions. In fact, we had been so long tried together, that there would have seemed to the spectator almost an unity of interest; and at all events, an unity of feelings on the subject of attachment, as well as on that of mutual dependence and protection.

I purchased this very showy and well-known animal of Colonel Burbank, of the ninth regiment, and rode it the whole distance to the Camanchee villages and back again; and at the time when most of the horses of the regiment were drooping and giving out by the way -- Charley flourished and came in good flesh and good spirits.

On this journey, while he and I were twenty-five days alone, we had much time, and the best of circumstances, under which to learn what we had as yet overlooked in each other's characters, as well as to draw great pleasure and real benefit from what we already had learned of each other, in our former travels.

I generally halted on the bank of some little stream, at half an hour's sun, where feed was good for Charley, and where I could get wood to kindle my fire, and water for my coffee. The first thing was to undress "Charley" and drive down his picket, to which he was fastened, to graze over a circle that he could inscribe at the end of his lasso. In this wise he busily fed himself until nightfall; and after my coffee was made and drank, I uniformly moped him up, with his picket by my head, so that I could lay my hand upon his lasso in an instant, in case of any alarm that was liable to drive him from me. On one of these evenings when he was grazing as usual, he slipped the lasso over his head, and deliberately took his supper at his pleasure, wherever he chose to prefer it, as he was strolling around. When night approached, I took the lasso in hand and endeavored to catch him, but I soon saw that he was determined to enjoy a little freedom; and he continually evaded me until dark, when I abandoned the pursuit, making up my mind that I should inevitably lose him, and be obliged to perform the rest of my journey on foot. He had led me a chase of half a mile or more, when I left him busily grazing, and returned to my little solitary bivouac, and laid myself on my bear skin, and went to sleep.

In the middle of the night I waked, whilst I was lying on my back, and on half opening my eyes, I was instantly shocked to the soul, by the huge figure (as I thought) of an Indian, standing over me, and in the very instant of taking my scalp! The chill of horror that paralyzed me for the first moment, held me still till I saw there was no need of my moving -- that my faithful horse "Charley" had "played shy" till he had "filled his belly," and had then moved up, from feelings of pure affection, or from instinctive fear, or possibly, from a due share of both, and taken his position with his forefeet at the edge of my bed, with his head hanging directly over me, while he was standing fast asleep!

My nerves, which had been most violently shocked, were soon quieted, and I fell asleep, and so continued until sunrise in the morning, when I waked, and beheld my faithful servant at some considerable distance, busily at work picking up his breakfast amongst the cane-brake, along the bank of the creek. I went as busily to work, preparing my own, which was eaten, and after it, I had another half-hour of fruitless endeavors to catch Charley, whilst he seemed mindful of success on the evening before, and continually tantalized me by turning around and around, and keeping out of my reach. I recollected the conclusive evidence of his attachment and dependence, which

he had voluntarily given in the night, and I thought I would try them in another way. So I packed up my things and slung the saddle on my back, trailing my gun in my hand, and started on my route. After I had advanced a quarter of a mile, I looked back, and saw him standing with his head and tail very high, looking alternately at me and at the spot where I had been encamped, and left a little fire burning. In this condition he stood and surveyed the prairies around for a while, as I continued on. He, at length, walked with a hurried step to the spot, and seeing everything gone, began to neigh very violently, and at last started off at fullest speed, and overtook me, passing within a few paces of me, and wheeling about at a few rods distance in front of me, trembling like an aspen leaf.

I called him by his familiar name, and walked up to him with the bridle in my hand, which I put over his head, as he held it down for me, and the saddle on his back, as he actually stooped to receive it. I was soon arranged, and on his back, when he started off upon his course as if he was well contented and pleased, like his rider, with the manoeuvre which had brought us together again, and afforded us mutual relief from our awkward positions. Though this alarming freak of "Charley's" passed off and terminated so satisfactorily; yet I thought such rather dangerous ones to play, and I took good care after that night, to keep him under my strict authority; resolving to avoid further tricks and experiments till we got to the land of cultivated fields and steady habits. On the night of this memorable day, Charley and I stopped in one of the most lovely little valleys I ever saw, and even far more beautiful than could have been imagined by mortal man. An enchanting little lawn of five or six acres, on the banks of a cool and rippling stream, that was alive with fish; and every now and then, a fine brood of young ducks, just old enough for delicious food, and too unsophisticated to avoid an easy and simple death. This little lawn was surrounded by bunches and copses of the most luxuriant and picturesque foliage, consisting of the lofty bois d'arcs and elms, spreading out their huge branches, as if offering protection to the rounded groups of cherry and plum-trees that supported festoons of grapevines, with their purple clusters that hung in the most tempting manner over the green carpet that was everywhere decked out with wild flowers, of all tints and of various sizes, from the modest wild sun-flowers, with their thousand tall and drooping heads, to the lilies that stood, and the violets that crept beneath them. By the side of this cool stream, Charley was fastened, and near him my bear-skin was spread in the grass, and by it my little fire, to which I soon brought a fine string of perch from the brook; from which, and a broiled duck, and a delicious cup of coffee, I made my dinner and supper, which were usually united in one meal, at half an hour's sun. After this I strolled about this sweet little paradise, which I found was chosen, not only by myself, but by the wild deer, which were repeatedly rising from their quiet lairs, and bounding out, and over the graceful swells of the prairies which hemmed in, and framed this little Picture of sweetest tints and most masterly touches. The Indians also, I found, had loved it once, and left it; for here and there were their solitary and deserted graves, which told, though briefly, of former chants and sports; and perhaps, of wars and deaths, that have once rung and echoed through this little silent vale.

On my return to my encampment, I laid down upon my back, and looked awhile into the blue heavens that were over me, with their pure and milk white clouds that were passing -- with the sun just setting in the West, and the silver moon rising in the East, and renewed the impressions of my own insignificance, as I contemplated the incomprehensible mechanism of that wonderful clock, whose time is infallible, and whose motion is eternity! I trembled, at last, at the dangerous

expanse of my thoughts, and turned them again, and my eyes, upon the little and more comprehensible things that were about me. One of the first was a newspaper, which I had brought from the Garrison, the National Intelligencer, of Washington, which I had read for years, but never with quite the zest and relish that I now conversed over its familiar columns, in this clean and sweet valley of dead silence!

And while reading, I thought of (and laughed), what I had almost forgotten, the sensation I produced amongst the Minatarees while on the Upper Missouri, a few years since, by taking from amongst my painting apparatus an old number of the New York Commercial Advertiser, edited by my kind and tried friend Colonel Stone. The Minatarees thought that I was mad, when they saw me for hours together, with my eyes fixed upon its pages. They had different and various conjectures about it; the most current of which was, that I was looking at it to cure my sore eyes, and they called it the "medicine cloth for sore eyes!" I at length put an end to this and several equally ignorant conjectures, by reading passages in it, which were interpreted to them, and the objects of the paper fully explained; after which, it was looked upon as much greater mystery than before; and several liberal offers were made me for it, which I was obliged to refuse, having already received a beautifully garnished robe for it, from the hands of a young son of Esculapius, who told me that if he could employ a good interpreter to explain everything in it, he could travel about amongst the Minatarees and Mandans, and Sioux, and exhibit it after I was gone; getting rich with presents, and adding greatly to the list of his medicines, as it would make him a great Medicine-Man. I left with the poor fellow his painted robe, and the newspaper; and just before I departed, I saw him unfolding it to show to some of his friends, when he took from around it, some eight or ten folds of birch bark and deer skins; all of which were carefully enclosed in a sack made of the skin of a pole cat, and undoubtedly destined to become, and to be called, his mystery or medicine-bag.

The distance from Fort Gibson to the Missouri, where I struck the river, is about five hundred miles, and most of the way a beautiful prairie, in a wild and uncultivated state without roads and without bridges, over a great part of which I steered my course with my Docket-compass, fording and swimming the streams in the best manner I could; shooting prairie hens, and occasionally catching fish, which I cooked for my meals, and slept upon the ground at night. On my way I visited "Riqua's Village" of Osages, and lodged during the night in the hospitable cabin of my old friend Beatte, of whom I have often spoken heretofore, as one of the guides and hunters for the dragoons on their campaign in the Camanchee country. This was the most extraordinary hunter, I think, that I ever have met in all my travels. To "hunt", was a phrase almost foreign to him, however, for when he went out with his rifle, it was "for meat", or "for cattle"; and he never came in without it. He never told how many animals he had seen -- how many he had wounded, &c. -- but his horse was always loaded with meat, which was thrown down in camp without comment or words spoken. Riqua was an early pioneer of Christianity in this country, who has devoted many years of his life, with his interesting family, in endeavouring to civilize and Christianize these people, by the force of pious and industrious examples, which he has successfully set them; and, I think, in the most judicious way, by establishing a little village, at some miles distance from the villages of the Osages; where he has invited a considerable number of families who have taken their residence by the side of him; where they are following his virtuous examples in their dealings and modes of life, and in agricultural pursuits which he is teaching them, and showing them that they

may raise the comforts and luxuries of life out of the ground, instead of seeking for them in the precarious manner in which they naturally look for them, in the uncertainty of the chase.

It was a source of much regret to me, that I did not see this pious man, as he was on a Tour to the East, when I was in his little village.

Beatte lived in this village with his aged parents, to whom he introduced me; and with whom, altogether, I spent a very pleasant evening in conversation. They are both French, and have spent the greater part of their lives with the Osages, and seem to be familiar with their whole history. This Beatte was the hunter and guide for a party of rangers (the summer before our campaign), with whom Washington Irving made his excursion to the borders of the Pawnee country; and of whose extraordinary character and powers. Mr. Irving has drawn a very just and glowing account, excepting one error which I think he has inadvertently fallen into, that of calling him a "half-breed." Beatte had complained of this to me often while out on the prairies; and when I entered his hospitable cabin, he said he was glad to see me, and almost instantly continued, "Now you shall see, Monsieur Catline, I am not 'half breed', here I shall introduce you to my father and my mother, who you see are two very nice and good old French people."

From this cabin where I fared well and slept soundly, I started in the morning, after taking with them a good cup of coffee, and went smoothly on over the prairies on my course.

About the middle of my journey, I struck a road leading into a small civilized settlement, called the "Kickapoo prairie", to which I "bent my course"; and riding up to a log cabin which was kept as a sort of an hotel or tavern, I met at the door, the black boy belonging to my friend Captain Wharton, who I have said took his leave of Fort Gibson a few weeks before me; I asked the boy where his master was, to which he replied, "My good masse, Massa Wharton, in dese house, jist dead of de libber compliment!"

I dismounted and went in, and to my deepest sorrow and anguish, I found him, as the boy said, nearly dead, without power to raise his head or his voice -- his eyes were rolled upon me, and as he recognized me he took me by the hand, which he firmly gripped, whilst both shed tears in profusion. By placing my ear to his lips, his whispers could he heard, and he was able in an imperfect manner to make his views and his wishes known. His disease seemed to be a repeated attack of his former malady, and a severe affection of the liver, which was to be (as his physician said) the proximate cause of his death. I conversed with his physician who seemed to be a young and inexperienced man, who told me that he certainly could not live more than ten days. I staid two days with him, and having no means with me of rendering him pecuniary or other aid amongst strangers, I left him in kind hands, and started on my course again. My health improved daily, from the time of my setting out at Fort Gibson; and I was now moving along cheerfully, and in hopes soon to reach the end of my toilsome journey. I had yet vast prairies to Pass over, and occasional latent difficulties, which were not apparent on their smooth and deceiving surfaces. Deep sunken streams, like, ditches, occasionally presented themselves suddenly to my view, when I was within a few steps of plunging into them from their perpendicular sides, which were overhung with long wild. grass, and almost obscured from the sight. The bearings of my compass told me that I must cross them, and the only alternative was to plunge into them, and get out as well as I could. They were often muddy, and I could not tell whether they were three or ten feet deep, until my horse was in them; and sometimes he went down head foremost, and I with him, to scramble out on the opposite shore in the best condition we could. In one of these canals, which I had

followed for several miles in the vain hope of finding a shoal, or an accustomed ford, I plunged, with Charley, where it was about six or eight yards wide (and God knows how deep, for we did not go to the bottom), and swam him to the opposite bank, on to which I clung; and which, being perpendicular and of clay, and three or four feet higher than the water, was as insurmountable difficulty to Charley; and I led the, poor fellow at least a mile, as I walked on the top of the bank, with the bridle in my hand, holding his head above the water as he was swimming; and I at times almost inextricably entangled in the long grass that was often higher than my head, and hanging over the brink, filled and woven together, with ivy and wild pea-vines. I at length (and just before I was ready to drop the rein of faithful Charley, in hopeless despair), came to an old buffalo ford, where the banks were graded down, and the poor exhausted animal, at last got out, and was ready and willing to take me and my luggage (after I had dried them in the sun) on the journey again. The Osage river which is a powerful stream, I struck at a place which seemed to stagger my courage very much. There had been heavy rains but a few days before, and this furious stream was rolling along its wild and turbid waters, with a freshet upon it, that spread its waters, in many places over its banks, as was the case at the place where I encountered it. There seemed to be but little choice in places with this stream, which, with its banks full, was sixty or eighty yards in width, with a current that was sweeping along at a rapid rate. I stripped everything from Charley, and tied him with his lasso, until I travelled the shores up and down for some distance, and collected drift wood enough for a small raft, which I constructed, to carry my clothes and saddle, and other things, safe over. This being completed, and my clothes taken off, and they with other things, laid upon the raft, I took Charley to the bank and drove him in and across, where he soon reached the opposite shore, and went to feeding on the bank. Next was to come the "great white medicine"; and with him, saddle, bridle, saddle-bags, sketch-book, gun and pistols, coffee and coffee-pot, powder, and his clothes, all of which were placed upon the raft, and the raft pushed into the stream, and the "medicine man" swimming behind it, and pushing it along before him, until it reached the opposite Bore, at least half a mile below! From this, his things were carried to the top of the bank, and in a little time, Charley was caught and dressed, and straddled, and on the way again.

These are a few of the incidents of that journey of 500 miles, which I performed entirely alone, and which at last brought me out at Boonville on the Western bank of the Missouri. While I was crossing the river at that place, I met General Arbuckle, with two surgeons, who were to start the next day from Boonville for Fort Gibson, travelling over the route that I had just passed. I instantly informed them of the condition of poor Wharton, and the two surgeons were started off that afternoon at fullest speed, with orders to reach him in the shortest time possible, and do everything to save his life. I assisted in purchasing for him, several little things that he had named to me, such as jellies-acids-apples, &c. &c.; and saw them start; and (God knows), I shall impatiently hope to hear of their timely assistance, and of his recovery.

From Boonville, which is a very pretty little town, building up with the finest style of brick houses, I crossed the river to New Franklin, where I laid by several days, on account of stormy weather; and from thence proceeded with success to the end of my journey, where I now am, under the roof of kind and hospitable friends, with my dear wife, who has patiently waited one year to receive me back, a wreck, as I now am; and who is to start in a few days with me to the coast of Florida, 1400 miles South of: this, to spend the winter in patching up my health, and fitting me for

future campaigns.

On this Tour (from which I shall return in the spring, if my health will admit of it), I shall visit the Seminoles in Florida,--the Euchees--the Creeks in Alabama and Georgia, and the Choctaws and Cherokees, who are yet remaining on their lands, on the East side of the Mississippi.

We take steamer for New Orleans to-morrow, so, till after another campaign, Adieu.

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

by George Catlin

(First published in London in 1844)

---

LETTER--No. 49

ST. LOUIS.

IN one of my last Letters from Fort Gibson, written some months since, I promised to open my note-book on a future occasion, to give some further account of tribes and remnants of tribes located in that vicinity amongst whom I had been spending some time with my pen and my pencil; and having since that time extended my rambles over much of that ground again, and also through the regions of the East and South East, from whence the most of those tribes have emigrated; I consider this a proper time to say something more of them, and their customs and condition, before I go farther.

The most of these, as I have said, are tribes or parts of tribes which the Government has recently, by means of Treaty stipulations, removed to that wild and distant country, on to lands which have been given to them in exchange for their valuable possessions within the States, tell or twelve hundred miles to the East.

Of a number of such reduced and removed tribes, who have been located West of the Missouri, and North of St. Louis, I have already spoken in a former Letter, and shall yet make brief mention of another, which has been conducted to the same region--and then direct the attention of the reader to those which are settled in the neighborhood of Fort Gibson, who are the Cherokees-Creeks-Choctaws-Chickasaws-Se and Euchees.

The people above alluded to are the  
SHA-WA-NO'S.

The history of this once powerful tribe is so closely and necessarily connected with that of the United States, and the revolutionary war, that it is generally pretty well understood. This tribe formerly inhabited great parts of the states of Pennsylvania, New Jersey, (and for the last sixty years,) a part of the states of Ohio and Indiana, to which they had removed; and now, a considerable portion of them, a tract of country several hundred miles West of the Mississippi, which has been conveyed to them by Government in exchange for their lands in Ohio, from which it is expected the remainder of the tribe will soon move. It has been said that this tribe came formerly from Florida, but I do not believe it. The mere fact, that there is found in East Florida a river by the name of Su wa-nee, which bears some resemblance to Sha-wa-no, seems, as far as I can learn, to be the principal evidence that has been adduced for the fact. They have evidently been known, and that within the scope of our authenticated history, on the Atlantic coast--on the Delaware and Chesapeake bays. And after that, have fought their way against every sort of trespass and abuse--against the bayonet and disease, through the states of Pennsylvania, Delaware and Ohio, Indiana, Illinois and Missouri, to their present location near the Kon-zas River, at least 1500 miles from their native country.

This tribe and the Delawares, of whom I have spoken, were neighbours on the Atlantic coast, and alternately allies and enemies, have retrograded and retreated together--have fought their enemies

---

united, and fought each other, until their remnants that have outlived their nation's calamities, have now settled as neighbours together in the Western wilds; where, it is probable, the sweeping hand of death will soon relieve them from further necessity of warring or moving; and the Government, from the necessity or policy of proposing to them a yet more distant home. In their long and disastrous pilgrimage, both of these tribes laid claim to, and alternately occupied the beautiful and renowned valley of Wy-o-ming; and after strewing the Susquehana's lovely banks with their bones, and their tumuli, they both yielded at last to the dire necessity, which follows all civilized intercourse with natives, and fled to the Alleghany, and at last to the banks of the Ohio; where necessity soon came again, and again, and again, until the great "Guardian" of all "red children" placed them where they now are.

There are of this tribe remaining about 1200; some few of whom are agriculturists, and industrious and temperate, and religious people; but the greater proportion of them are miserably poor and dependent, having scarcely the ambition to labour or to hunt, and a passion for whiskey-drinking, that sinks them into the most abject poverty, as they will give the last thing they possess for a drink of it. There is not a tribe on the Continent whose history is more interesting than that of the Shawanos, nor any one that has produced more extraordinary men.

The great Tecumseh, whose name and history I can but barely allude to at this time, was the chief of this tribe, and perhaps the most extraordinary Indian of his age.

The present chief of the tribe Lay-law-she-kaw (he who goes up the river), is a very aged, but extraordinary man, with a fine and intelligent head, and his ears slit and stretched down to his shoulders, a custom highly valued in this tribe; which is done by severing the rim of the ear with a knife, and stretching it down by wearing heavy weights attached to it at times, to elongate it as much as possible, making a large orifice, through which, on parades, &c. they often pass a bunch of arrows or quills, and wear them as ornaments.

In this instance (which was not an unusual one), the rims of the ears were so extended down, that they touched the shoulders, making a ring through which the whole hand could easily be passed. The daughter of this old chief, Ka-te-qua (the female eagle), was an agreeable looking girl, of fifteen years of age, and much thought of by the tribe. Pah-te-coo-saw (the straight man), a warrior of this tribe, has distinguished himself by his exploits; and when he sat for his picture, had painted his face in a very curious manner with black and red paint.

Ten-sgua-ta-way (the open door), called the "Shawnee Prophet", is perhaps one of the most remarkable men, who has flourished on these frontiers for some time past. This man is brother of the famous Tecumseh, and quite equal in his medicines or mysteries, to what his brother was in arms; he was blind in his left eye, and in his right hand he was holding his "medicine fire", and his "sacred string of beans" in the other. With these mysteries he made his way through most of the North Western tribes, enlisting warriors wherever he went, to assist Tecumseh in effecting his great scheme, of forming a confederacy of all the Indians on the frontier, to drive back the whites and defend the Indians' rights; which he told them could never in any other way be protected. His plan was certainly a correct one, if not a very great one; and his brother, the Prophet, exercised his astonishing influence in raising men for him to fight his battles, and carry out his plans. For this purpose, he started upon an embassy to the various tribes on the Upper Missouri, nearly all of which he visited with astonishing success; exhibiting his mystery fire, and using his sacred string of beans, which every young man who was willing to go to war, was to touch; thereby taking the

---

solemn oath to start when called upon, and not to turn back.

In this most surprising manner, this ingenious man entered the villages of most of his inveterate enemies, and of others who never had heard of the name of his tribe; and manoeuvred in so successful a way, as to make his medicines a safe passport for him to all of their villages; and also the means of enlisting in the different tribes, some eight or ten thousand warriors, who had solemnly sworn to return with him on his way back; and to assist in the wars that Tecumseh was to wage against the whites on the frontier. I found, on my visit to the Sioux -- to the Puncas, to the Riccarees and the Mandans, that he had been there, and even to the Blackfeet; and everywhere told them of the potency of his mysteries, and assured them, that if they allowed the fire to go out ill their wigwams, it would prove fatal to them in every case. He carried with him into every wigwam that he visited, the image of a dead person of the size of life; which was made ingeniously of some light material. and always kept concealed under bandages of thin white muslin cloths and not to be opened; of this he made great mystery, and got his recruits to swear by touching a sacred string of white beans, which he had attached to its neck or some other way secreted about it. In this way, by his extraordinary cunning, he had carried terror into the country as far as he went; and had actually enlisted some eight or ten thousand men, who were sworn to follow him home; and in a few days would have been on their way with him, had not a couple of his political enemies in his own tribe, followed on his track, even to those remote tribes, and defeated his plans, by pronouncing him an impostor; and all of his forms and plans an imposition upon them, which they would be fools to listen to. In this manner. this great recruiting officer was defeated in his plans, for raising an army of men to fight his brother's battles; and to save his life, he discharged his medicines as suddenly as possible, and secretly travelled his way home, over those vast regions, to his own tribe, where the death of Tecumseh, and the opposition of enemies, killed all his splendid prospects, and doomed him to live the rest of his days in silence, and a sort of disgrace; like all men in Indian communities who pretend to great medicine, in any way, and fail; as they all think such failure an evidence of the displeasure of the Great Spirit, who always judges right. This, no doubt, has been a very shrewd and influential man, but circumstances have destroyed him, as they have many other great men before him; and he now lives respected, but silent and melancholy in his tribe. I conversed with him a great deal about his brother Tecumseh, of whom he spoke frankly, and seemingly with great pleasure; but of himself and his own great schemes, he would say nothing. He told me that Tecumseh's plans were to embody all the Indian tribes in a grand confederacy, from the province of Mexico, to the Great Lakes, to unite their forces in an army that would be able to meet and drive back the white people, who were continually advancing on the Indian tribes, and forcing them from their lands towards the Rocky Mountains -- that Tecumseh was a great general, and that nothing but his premature death defeated his grand plan. The Shawanos, like most of the other remnants of tribes, in whose countries the game has been destroyed, and by the use of whiskey, have been reduced to poverty and absolute want, have become, to a certain degree, agriculturists; raising corn and beans, potatoes, hogs, horses, &c; so as to be enabled, if they could possess anywhere on earth, a country which they could have a certainty of holding in perpetuity, as their own, to plant and raise their own crops, and necessaries of life from the ground.

The Government have effected with these people, as with most of the other dispersed tribes, an arrangement by which they are to remove West of the Mississippi, to lands assigned them; on

which they are solemnly promised a home for ever; the uncertain definition of which important word, time and circumstances alone will determine.

Besides the personages whom I have above-mentioned, I painted the portraits of several others of note in the tribe; and amongst them Lay-loo-ahpe-ni-shee-liaw (the grass-bush and blossom), whom I introduce in this place, rather from the very handy and poetical name, than from any great personal distinction known to have been acquired by him.

THE CHER-O-KEES.

Living in the vicinity of, and about Fort Gibson, on the Arkansas, and 700 miles west of the Mississippi river, are a third part or more of the once very numerous and powerful tribe who inhabited and still inhabit, a considerable part of the state of Georgia, and under a Treaty made with the United States Government, have been removed to those regions, where they are settled on a fine tract of country; and having advanced somewhat in the arts and agriculture before they started, are now found to be mostly living well, cultivating their fields of corn and other crops, which they raise with great success.

Under a serious difficulty existing between these people (whom their former solemn Treaties with the United States Government, were acknowledged a free and independent nation, with powers to make and enforce their own laws), and the state of Georgia, which could not admit such a Government within her sovereignty, it was thought most expedient by the Government of the United States, to propose to them, for the fourth or fifth time, to enter into Treaty stipulations again to move; and by so doing to settle the difficult question with the state of Georgia, and at the same time, to place them in peaceable possession of a large tract of fine country, where they would for ever be free from the continual trespasses and abuses which it was supposed they would be subjected to, if they were to remain in the state of Georgia, under the present difficulties and the high excited feelings which were then existing in the minds of many people along their borders.

John Ross, a civilized and highly educated and accomplished gentleman, who is the head-chief of the tribe, and several of his leading subordinate chiefs, have sternly and steadily rejected the proposition of such a Treaty; and are yet, with a great majority of the nation remaining on their own ground in the state of Georgia, although some six or 7000 of the tribe have several years since removed to the Arkansas, under the guidance and control of an aged and dignified chief by the name of Jol-lee.

This man, like most of the chiefs, as well as a very great proportion of the Cherokee population, has a mixture of white and red blood in his veins, of which, in this instance, the first seems decidedly to predominate. Another chief, and second to this, amongst this portion of the Cherokees, by the name of The-ke-neh-kee (the black coat), I have also painted and placed in my Collection, as well as a very interesting specimen of the Cherokee women.

I have travelled pretty generally through the several different locations of this interesting tribe, both in the Western and Eastern divisions, and have found them, as well as the Choctaws and Creeks, their neighbours, very far advanced in the arts; affording to the world the most satisfactory evidences that are to be found in America, of the fact, that the Indian was not made to shun and evade good example, and necessarily to live and die a brute, as many speculating men would needs record them and treat them, until they are robbed and trampled into the dust; that no living evidences might give the lie to their theories, or draw the cloak from their cruel and horrible iniquities.

As I have repeatedly said to my readers, in the course of my former epistles, that the greater part of my time would be devoted to the condition and customs of the tribes that might be found in their primitive state, they will feel disposed to Pardon me for barely introducing the Cherokees, and several others of these very interesting tribes, and leaving them and their customs and histories (which are of themselves enough for volumes), to the reader, who is, perhaps, nearly as familiar as I am myself, with the Full and fair accounts of these people, who have had their historians and biographers.

The history of the Cherokees and other numerous remnants of tribes, who are the exhabitants of the finest and most valued portions of the United States, is a subject of great interest and importance, and has already been woven into the most valued histories of the country, as well as forming material parts of the archives of the Government, which is my excuse for barely introducing the reader to them, and beckoning him off again to the native and untrodden wilds, to teach him something new and unrecorded. Yet I leave the subject, as I left the people (to whom I became attached, for their kindness and friendship), with a heavy heart, wishing them success and the blessing of the Great Spirit, who alone can avert the door, that would almost seem to be fixed for their unfortunate race.

The Cherokees amount in all to about 22,000, 16,000 of whom are yet living in Georgia, under the Government of their chief, John Ross, whose name I have before mentioned; with this excellent man, who has been for many years devotedly opposed to the Treaty stipulations for moving from their country, I have been familiarly acquainted; and, notwithstanding the bitter invective and animadversions that have been by his political enemies heaped upon him, I feel authorized, and bound, to testify to the unassuming and gentlemanly urbanity of his manners, as well as to the rigid temperance of his habits, and the purity of his language, in which I never knew him to transgress for a moment, in public or private interviews.

At this time, the most strenuous endeavours are making on the part of the Government and the state of Georgia, for the completion of an arrangement for the removal of the whole of this tribe, as well as of the Choctaws and Seminoles; and I have not a doubt of their final success, which seems, from all former experience, to attend every project of the kind made by the Government to their red children.\*

It is not for me to decide, nor in this place to reason, as to the justice or injustice of the treatment of these people at the hands of the Government or individuals; or of the wisdom of the policy which is to Place them in a new, though vast and fertile country, 1000 miles from the land of their birth, in the doubtful dilemma whether to break the natural turf with their rusting ploughshares, or string their bows, and dash over the boundless prairies, beckoned on by the alluring dictates of their nature, seeking laurels amongst the ranks of their new enemies, and subsistence amongst the herds of buffaloes.

Besides the Cherokees in Georgia, and those that I have spoken of in the neighbourhood of Fort Gibson, there is another band or family of the same tribe, of several hundreds, living on the banks of the Canadian river, an hundred or more miles South West of Fort Gibson, under the Government of a distinguished chief by the name of Tuch-ee (familiarly called by the white people, "Dutch"). This is one of the most extraordinary men that lives on the frontiers at the present day, both for his remarkable history, and for his fine and manly figure, and character of face.

This man was in the employment of the Government as a guide and hunter for the regiment of

dragoons, on their expedition to the Camanchees, where T had him for a constant companion for several months, and opportunities in abundance, for studying his true character, and of witnessing his wonderful exploits in the different varieties of the chase. The history of this man's life has been very curious and surprising; and I sincerely hope that some one, with more leisure and more talent than myself, will take it up, and do it justice. I promise that the life of this man furnishes the best materials for a popular tale, that are now to be procured on the Western frontier.

He is familiarly known, and much of his life, to all the officers who have been stationed at Fort Gibson, or at any of the posts in that region of country.

Some twenty years or more since, becoming fatigued and incensed with civilized encroachments, that were continually making on the borders of the Cherokee country in Georgia, where he then resided, and probably, foreseeing the disastrous results they were to lead to, he beat up for volunteers to emigrate to the West, where he had designed to go, and colonize in a wild country beyond the reach and contamination of civilized innovations; and succeeded in getting several hundred men, women, and children, whom he led over the banks of the Mississippi, and settled upon the head waters of White River, where they lived until the appearance of white faces, which began to peep through the forests at them, when they made another move of 600 miles to the banks of the Canadian, where they now reside; and where, by the system of desperate warfare, which he has carried on against the Osages and the Camanchees, he has successfully cleared away from a large tract of fine country, all the enemies that could contend for it, and now holds it, with his little band of myrmidons, as their own undisputed soil, where they are living comfortably by raising from the soil fine crops of corn and potatoes, and other necessaries of life; whilst they indulge whenever they please, in the pleasures of the chase amongst the herds of buffaloes, or in the natural propensity for ornamenting their dresses and their war-clubs with the scalp-locks of their enemies.

THE CREEKS (or MUS-KO-GEES).

Of 20,000 in numbers, have, until quite recently, occupied an immense tract of country in the states of Mississippi and Alabama; but by a similar arrangement (and for a similar purpose) with the Government, have exchanged their possessions there for a country, adjoining to the Cherokees, on the South side of the Arkansas, to which they have already all removed, and on which, like the Cherokees, they are laying out fine farms, and building good houses, in which they live; in many instances, surrounded by immense fields of corn and wheat. There is scarcely a finer country on earth than that now owned by the Creeks; and in North America, certainly no Indian tribe more advanced in the arts and agriculture than they are. It is no uncommon thing to see a Creek with twenty or thirty slaves at work on his plantation, having brought them from a slave-holding country, from which, in their long journey, and exposure to white man's ingenuity, I venture to say, that most of them got rid of one-half of them, whilst on their long and disastrous crusade. The Creeks, as well as the Cherokees and Choctaws, have good schools and churches established amongst them, conducted by excellent and pious men, from whose example they are drawing great and lasting benefits.

I have given the portraits of two distinguished men, and I believe, both chiefs. The first by the name of Stee-cha-co-me-co (the great king), familiarly called "Ben Perryman" and the other, Holte-mal-te-tez-te-nehk-ee (---), Failed "Sam Perryman". These two men are brothers, and are fair specimens of the tribe, who are mostly clad in calicoes, and other cloths of civilized manufacture;

---

tasselled and hinged off by themselves in the most fantastic way, and sometimes with much true and picturesque taste. They use a vast many beads, and other trinkets, to hang upon their necks, and ornament their moccasins and beautiful belts.

#### THE CHOCTAWS.

Of fifteen thousand, are another tribe, removed from the Northern parts of Alabama, and Mississippi, within the few years past, and now occupying a large and rich tract of country, South of the Arkansas and the Canadian rivers; adjoining to the country of the Creeks and the Cherokees, equally civilized, and living much in the same manner.

In this tribe I painted the portrait of their famous and excellent chief, Mo-sho-la-tub-bee (he who puts out and kills), who has since died of the small-pox. In the same plate will also be seen, the portrait of a distinguished and very gentlemanly man, who has been well-educated, and who gave me much curious and valuable information, of the history and traditions of his tribe. The name of this man, is Ha-tchoo-tuck-nee (the snapping turtle), familiarly called by the whites "Peter Pinchlin".

These people seem, even in their troubles, to be happy ; and have, like all the other remnants of tribes, preserved with great tenacity their different games, which it would seem they are everlastingly practicing for want of other occupations or amusements in life. Whilst I was staying at the Choctaw agency in the midst of their nation, it seemed to be a sort of season of amusements, a kind of holiday r when the whole tribe almost, were assembled around the establishment, and from day to day we were entertained with some games or feats that were exceedingly amusing: horse-racing, dancing, wrestling, foot-racing, and ball-playing, were amongst the most exciting; and of all the catalogue, the most beautiful, was decidedly that of ball-playing. This wonderful game, which is the favorite-one amongst all the tribes, and with these Southern tribes played exactly the same, can never be appreciated by those who are not happy enough to see it.

It is no uncommon occurrence for six or eight hundred or a thousand of these young men, to engage in a game of ball, with five or six times that number of spectators, of men, women and children, surrounding the ground, and looking on. And I pronounce such a scene, with its hundreds of Nature's most beautiful models, denuded, and painted of various colours, running and leaping into the air, in all the most extravagant and varied forms, in the desperate struggles for the ball, a school for the painter or sculptor, equal to any of those which ever inspired the hand of the artist in the Olympian games or the Roman forum.

I have made it an uniform rule, whilst in the Indian country, to attend every ball-play I could hear of, if I could do it by riding a distance of twenty or thirty miles; and my usual custom has been on such occasions, to straddle the: back of my horse, and look on to the best advantage. In this way I have sat, and oftentimes reclined, and almost dropped from my horse's back, with irresistible laughter at the succession of droll tricks, and kicks and scuffles which ensue, in the almost superhuman straggles for the ball. These plays generally commence at nine o'clock, or near ii, in the morning; and I have more than once balanced myself on my pony, from that time till near sundown, without more than one minute of intermission at a time, before the game has been decided. It is impossible for pen and ink alone, or brushes, or even with their combined efforts, to give more than a caricature of such a scene; but such as I have been able to do, I have put upon the canvass, and in the slight outlines which I have here taken from those paintings, (for the colouring to which the reader must look to my pen), I will convey as correct an account as I can, and

leave the reader to imagine the rest; or look to other books for what I may have omitted.

While at the Choctaw agency it was announced, that there was to be a great play on a certain day, within a few miles, on which occasion I attended, and made the three sketches which are hereto annexed ; and also the following entry in my note-book, which I literally copy out.

On Monday afternoon at three, o'clock, I rode out with Lieutenants S. and M., to a very pretty prairie, about six miles distant, to the ball-play-ground of the Choctaws, where we found several thousand Indians encamped. There were two points of timber about half a mile apart, in which the two parties for the play, with their respective families and friends, were encamped; and lying between them, the prairie on which the game was to be played. My companions and myself, although we had been apprised, that to see the whole of a ball-play, we must remain on the ground all the night previous, had brought nothing to sleep upon, resolving to keep our eyes open, and see what transpired through the night. During the afternoon, we loitered about amongst the different tents and shantees of the two encampments, and afterwards, at sundown, witnessed the ceremony of measuring out the ground, and erecting the "byes" of goals which were to guide the play. Each party had their goal made with two upright posts, about 25 feet high and six feet apart, set firm in the ground, with a pole across at the top. These goals were about forty or fifty rods apart; and at a Point just half way between, was another small stake, driven down, where the ball was to be thrown up at the firing of a gun, to be struggled for by the players. All this preparation was made by some old men, who were, it seems, selected to be the judges of the play, who drew a line from one bye to the other to which directly came from the woods, on both sides, a great concourse of women and old men, boys and girls, and dogs and horses, where bets were to be made on the play. The betting was all done across this line, and seemed to be chiefly left to the women, who seemed to have martialled out a little of everything that their houses and their fields possessed. Goods and chattels -- knives -- dresses -- blankets -- pots and kettles -- dogs and horses, and guns; and all were placed in the possession of stake-holders, who sat by them, and watched them on the ground all night, preparatory to the play.

The sticks with which this tribe play, are bent into an oblong hoop at the end, with a sort of slight web of small thongs tied across, to prevent the ball from passing through. The players hold one of these in each hand, and by leaping into the air, they catch the ball between the two nettings and throw it, without being allowed to strike it, or catch it in their hands.

The mode in which these sticks are constructed and used, will be seen in the portrait of Tullock-chish-Ro (He Who Drinks The Juice Of The Stone), the most distinguished ball-player of the Choctaw nation, represented in his ball-play dress, with his hall-sticks in his hands. In every ball play of these people, it is a rule of the play, that no man shall wear moccasins on his feet, or any other dress than his breech-cloth around his waist, with a beautiful bead belt, and a "tail", made of white horsehair or quills, and a "mane" on the neck, of horsehair dyed of various colours.

This game had been arranged and "made up", three or four months before the parties met to play it, and in the following manner. The two champions who led the two parties, and had the alternate choosing of the players through the whole tribe, sent runners, with the ball-sticks most fantastically ornamented with ribbons and red paint, to be touched by each one of the chosen players; who thereby agreed to be on the spot at the appointed time and ready for the play. The ground having been all prepared and preliminaries of the game all settled, and the bettings all made, and goods all "staked", night came on without the appearance of any players on the ground.

---

But soon after dark, a procession of lighted flambeaux was seen coming from each encampment, to the ground where the players assembled around their respective byes; and at the beat of the drums and chants of the women, each party of players commenced the "ball-play dance". Each party danced for a quarter of an hour around their respective byes, in their ball-play dress; rattling their ball-sticks together in the most a violent manner, and all singing as loud as they could raise their voices; whilst the women of each party, who had their goods at stake, formed into two rows on the line between the two parties of players, and danced also, in an uniform step, and all their voices joined in chants to the Great Spirit; in which they were soliciting his favour in deciding the game to their advantage; and also encouraging the players to exert every power they possessed, in the struggle that was to ensue. In the mean time, four old medicine-man, who were to have the starting of the ball, and who were to be judges of the play, were seated at the point where the ball was to be started; and busily smoking to the Great Spirit for their success in judging rightly, and impartially, between the parties in so important an affair.

This dance was one of the most picturesque scenes imaginable, and was repeated at intervals of every half hour during the night, and exactly in the same manner; so that the players were certainly awake all the night, and arranged in their appropriate dress, prepared for the play which was to commence at nine o'clock the next morning. In the morning, at the hour, the two parties and all their friends, were drawn out and over the ground; when at length the game commenced, by the judges throwing up the ball at the firing of a gun; when an instant struggle ensued between the players, who were some six or seven hundred in numbers, and were mutually endeavouring to catch the ball in their sticks, and throw it home and between their respective stakes; which, whenever successfully done, counts one for game. In this game every player was dressed alike, that is, divested of all dress except the girdle and the tail, which I have before described; and in these desperate struggler for the ball, when it is up, where hundreds are running together and leaping, actually over each other's heads, and darting between their adversaries' legs, tripping and throwing, and foiling each one in every possible manner, and every voice raised to the highest key, in shrill yelps and barks. There are rapid successions of feats, and of incidents, that astonish and amuse far beyond the conception of any one who has not had the singular good luck to witness them. In these struggles, every mode I used that can be devised, to oppose the progress of the foremost, who is like: to get the ball; and these obstructions often meet desperate individual resistance, which terminates in a violent scuffle, and sometimes in fisticuffs; when their stricks are dropped, and the parties are unmolested, whilst they are set tling it between themselves; unless it be by a general stampede, to whici they are subject who are down, if the ball happens to pass in their direction. Every weapon, by a rule of all ball-plays, is laid by in their respective en campments, and no man allowed to go for one; so that the sudden broil that take place on the ground, are presumed to be as suddenly settled with out any probability of much personal injury; and no one is allowed to inter fere in any way with the contentious individuals.

There are times, when the ball gets to the ground, and such a confused mass rushing together around it, and knocking their sticks te gether, without the possibility of any one getting or seeing it, for the dust that they raise, that the spectator loses his strength, and everything else but his senses; when the condensed mass of ball-sticks, and shins, and bloody noses, is carried around the different parts of the ground, for a quarter (an hour at a time), without any one of the mass being able to see the ball and which they are often thus scuffling for, several minutes after it has

bee thrown off, and, layed over another part of the ground.

For each time that the ball was passed between the stakes of either part: one was counted for their game, and a halt of about one minute; when was again started by the judges of the play, and a similar struggle ensued and so on until the successful party arrived to 100, which was the limit (the game), and accomplished at an hour's sun, when they took the stakes and then, by a previous agreement, produced a number of jugs of whiskey: which gave all a wholesome drink, and sent them all off merry and in good humour, but not drunk.

After this exciting day, the concourse was assembled in the vicinity I the agency house, where we had a great variety of dauces and other amusements; the most of which I have described on former occasion One, however, was new to me, and I must say a few words of it: this with the Eagle Dance, a very pretty scene, which is got up by their your men, in honour of that bird, for which they seem to have a religior regard. This picturesque dance was given by twelve or sixteen men, whet ludiPn were chiefly naked and painted white, with white clay, and each one holding in his hand the tailof the eagle, while his head was also decorated with an eagle's quill. Spears were stuck in the ground, around which the dance was performed by four men at a time, who had simultaneously, at the beat of the drum, jumped up from the ground where they had all sat in rows of four, one row immediately behind the other, and ready to take the place of the first four when they left the ground fatigued, which they did by hopping or jumping around behind the rest, and taking their seats, ready to come up again in their turn, after each of the other sets had been through the same forms.

In this dance, thesteps or rather jumps, were different from anything I had ever witnessed before, as the dancers were squat down, with their bodies almost to the ground, in a severe and most difficult posture, as will have been seen in the drawing.

I have already, in a former Letter, while speaking of the ancient custom of Aattening the head, given a curious tradition of this interesting tribe, accounting for their having come from the West, and I here insert another or two, which I had, as well as the former one, from the lips of Peter Pinchlin, a very intelligent and influential man in the tribe.

The Deluge. "Our people have always had a tradition of the Deluge, which happened in this way: "There was total darkness for a great time over the whole of the earth; the Choctaw doctors or mystery-men looked out for daylight for a long time, until at last they despaired of ever seeing it, and the whole nation were very unhappy. At last a light was discovered in the horth, and there was great rejoicing, until it was found to be great mountains of water rolling on, which destroyed them all, except a few families who had expected it and built a great raft, on which they were saved."

Future State. "Our people all believe that the spirit lives in a future state -- that it has a great distance to travel after death towards the West -- that it has to cross a dreadful deep and rapid stream, which is hemmed in on both sides by high and rugged hills -- over this stream, from hill to hill, there lies a long and slippery pine-log, with the bark peeled off, over which the dead have to pass to the delightful hunting-grounds. On the other side of the stream there are six persons of the good hunting-grounds, with rocks in their hands, which they throw at them allwhen they are on the middle of the log. The good walk on safely, to the good hunting-grounds, where there is one continual day -- where the trees are always green -- where the sky has no clouds -- where there are continual fine and cooling breezes -- where there is one continual scene of feasting,

dancing and rejoicing -- where there is no pain or trouble, and people never grow old, but for ever live young and enjoy the youthful pleasures.

“The wicked see the stones coming, and try to dodge, by which they fall from the log, and go down thousands of feet to the water, which is dashing over the rocks, and is stinking with dead fish, and animals, where they are carried around and brought continually hack to the same place in whirlpools -- where the trees are all dead, and the waters are full of toads and lizards, and snakes -- where the dead are always hungry, and have nothing to eat -- are always sick, and never die -- where the sun never shines, and where the wicked are continually climbing up by thousands on the sides of a high rock from which they can overlook the beautiful country of the good hunting-grounds, the place of the happy, hut never can reach it.”

Origin of the Craw-fish band. “Our people have amongst them a band which is called, the Craw-fish band. They formerly, but at a very remote period, lived under ground, and used to come up out of the mud -- they were a species of craw-fish; and they went on their hands and feet, and lived in a large cave deep under ground, where there was no light for several miles. They spoke no language at all, nor could they understand any. The entrance to their cave was through the mud -- and they used to run down through that, and into their cave; and thus, the Choctaws were for a long time unable to molest them. The Choctaws used to lay and wait for them to come out into the sun, where they would try to talk to them, and cultivate an acquaintance.

“One day, a parcel of them were run upon so suddenly by the Choctaws, that they had no time to go through the mud into their cave, but were driven into it by another entrance, which they had through the rocks. The Choctaws then tried a long time to smoke them out, and at last succeeded-they treated them kindly-taught them the Choctaw language-taught them to walk on two legs -- made them cut off their toe nails, and pluck the hair from their bodies, after which they adopted them into their nation--and the remainder of them are living under ground to this day.”

LETTERS AND NOTES ON THE  
MANNERS, CUSTOMS, AND CONDITIONS OF  
NORTH AMERICAN INDIANS

by George Catlin

(First published in London in 1844)

---

LETTER-NO. 55.

RED PIPE STONE Quarry, COTEAU DES PRAIRIES.

Well, to proceed with the Story of the Dog, which I promised; (after which I shall record the tale of Wi-jun-jon, (the pigeon's egg head), which was also told by me during the last night, before we retired to rest.

"I think I said that my little canoe had brought-us down the Missouri, about eight hundred miles below the mouth of Yellow Stone, when we landed at Laidlaw's Trading-house, which is twelve hundred miles above civilization and the city of St. Louis. If I did not say it: it is no matter, for it was even so; and 'Ba'tiste and Bogard who had paddled, and I who had steered,' threw our little bark out upon the bank, and taking our paddles in our bands, and our 'plunder' upon our backs, crossed the plain to the American Fur Company's Fort, in charge of Mr, Laidlaw, who gave us a hearty welcome; and placed us in an instant at his table, which happened at that moment to be stationed in the middle of the floor, distributing to its surrounding guests the simple blessings which belong to that fair and silent land of buffalo tongues and beavers' tails! A bottle of good Madeira wine sprung (a l' instant) upon the corner of the table, before us, and swore, point blank, to the welcome that was expressed in every feature of our host. After the usual salutations, the news, and a glass of wine, Mr. Laidlaw began thus:

"Well, my friend, you have got along well, so far; and I am glad to see you. You have seen a great many fine Indians since you left here, and have, no doubt, procured many interesting and valuable portraits; but there has been a deal of trouble about the ' pictures,' in this neighborhood, since you went away. Of course, you have heard nothing of it at the Yellow Stone ; but amongst us, I assure you, there has not a day passed since you left, without some fuss or excitement about the portraits. The 'Dog' is not yet dead, though he has been shot at several times, and had his left arm broken. The 'Little Bear's' friends have overtaken the brother of the Dog, that fine fellow whom you painted, and killed him! They are now sensible that they have sacrificed one of the best men in the nation, for one of the greatest rascals; and they are more desperately bent on revenge than ever. They have made frequent enquiries for you, knowing that you had gone up the river; alleging that you had been the cause of these deaths, and that if the Dog could not be found, they should look to you for a settlement of that unfortunate affair!

"That unlucky business, taken altogether, has been the greatest piece of medicine (mystery), and created the greatest excitement amongst the Sioux, of anything that has happened since I came into the country. My dear Sir, you must not continue your voyage down the river, in your unprotected condition. A large party of the Little Bear's' band, are now encamped on the river below, and for you to stop there (which you might be obliged to do), would be to endanger your life."

\* \* \* Reader, sit still, and let me change ends with my story, (which is done in one moment,) and then, from a relation of the circumstances which elicited the friendly advice and caution of Mr. Laidlaw just mentioned, you will be better enabled to understand the nature of the bloody affair

which I am undertaking to relate.

“About four months previous to the moment I am now speaking of, I had passed up the Missouri river by this place, on the steam-boat “Yellowstone”, on which I ascended the Missouri to the mouth of Yellow Stone river. While going up, this boat, having on board the United States Indian agent: Major Sanford -- Messrs. Pierre, Chouteau, McKenzie of the American Fur Company, and myself, as passengers, stopped at this trading-post, and remained several weeks; where were assembled six hundred families of Sioux Indians, their tents being pitched in close order on an extensive prairie on the bank of the river.

“This trading-post, in charge of Mr. Laidlaw, is the concentrating place, and principal trading depot, for this Powerful tribe, who number, when all taken together, something like forty or fifty thousand. On this occasion, five or six thousand had assembled to see the steam-boat and meet the Indian agent, which, and whom they knew were to arrive about this time. During the few weeks that we remained there, I was busily engaged painting my portraits, for here were assembled the principal chiefs and medicine-men of the nation. To these people, the operations of my brush were entirely new and unaccountable, and excited amongst them the greatest curiosity imaginable. Every thing else (even the steam-boat) was abandoned for the pleasure of crowding into my painting-room, and witnessing the result of each fellow’s success, as he came out from under the operation of my brush.

“They had been at first much afraid of the consequences that might flow from so strange and unaccountable an operation; but having been made to understand my views, they began to look upon it as a great honour, and afforded me the opportunities that I desired; exhibiting the utmost degree of vanity for their appearance, both as to features and dress. The consequence was, that my room was filled with the chiefs who sat around, arranged according to the rank or grade which they held in the estimation of their tribe; and in this order it became necessary for me to paint them, to the exclusion of those who never signalized themselves, and were without any distinguishing character in society.

“The first man on the list, was Ha-wan-ghee-ta (one horn), head chief of the nation, of whom I have heretofore spoken; and after him the subordinate chiefs, or chiefs of bands, according to the estimation in which they were held by the chief and the tribe. My models were thus placed before me whether ugly or beautiful, all the same, and I saw at once there was to be trouble somewhere, as I could not paint them all. The medicine-men or high priests, who are esteemed by many the oracles of the nation, and the most important men in it -- becoming jealous, commenced their harangues, outside of the lodge, telling them that they were all fools -- that those who were painted would soon die in consequence; and that these pictures, which had life to a considerable degree in them, would live in the hands of white men after they were dead, and make them sleepless and endless trouble.

“Those whom I had painted, though evidently somewhat alarmed, were unwilling to acknowledge it, and those whom I had not painted, unwilling to be outdone in courage, allowed me the privilege; braving and defying the danger that they were evidently more or less in dread of. Feuds began to arise too, among some of the chiefs of the different bands, who (not unlike some instances amongst the chiefs and warriors of our own country), had looked upon their rival chiefs with unsleeping jealousy, until it had grown into disrespect and enmity. An instance of this kind presented itself at this critical juncture, in this assembly of inflammable spirits, which changed

in a moment, its features, from the free and jocular garrulity of an Indian levee, to the frightful yells and agitated treads and starts of an Indian battle! I had in progress at this time a Portrait of Mah-to-tchee-ga (little bear); of the Onc-pa-pa band, a noble fine fellow, who was sitting before me as I was painting. I was Painting almost a profile view of his face, throwing a part of it into shadow, and had it nearly finished, when an Indian by the name of Shon-Ka (the dog), chief of the Caz-a-zshee-ta band; an ill-natured and surly man -- despised by the chiefs of every other band, entered the wigwam in a sullen mood, and seated himself on the floor in front of my sitter, where he could have a full view of the picture in its operation. After sitting a while with his arms folded, and his lips stuffy arched with contempt; he sneeringly spoke thus:

“Mah-to-tchee-ga is but half a man.”

Dead silence ensued for a moment, and nought was in motion save the eyes of the chiefs, who were seated around the room, and darting their glances about upon each other in listless anxiety to hear the sequel that was to follow! During this interval, the eyes of Mah-to-tchee-ga had not moved -- his lips became slightly curved, and he pleasantly asked, in low and steady accent, ‘Who says that?’ ‘Shon-Ka says it,’ was the reply; ‘and Skon-Ka can prove it.’ At this the eyes of Mah-to-tchee-ga, which had not yet moved, began steadily to turn, and slow, as if upon pivots, and when they were rolled out of their sockets till they had fixed upon the object of their contempt; his dark and jutting brows were shoving down in trembling contention, with the blazing rays that were actually burning with contempt, the object that was before them. ‘Why does Shon-ka say it?’

“Ask We-chash-a-wa-kon (the painter), he can tell you; he knows you are but half a man-he has painted but one half of your face, and knows the other half is good for nothing!”

“Let the painter say it, and I will believe it; but when the Dog says it let him prove it.”

“Shon-ka said it, and Shon-ka can prove it; if Mah-to-tchee-ga be a man, and waste to be honoured by the white men, let him not be ashamed; but let him do as Shon-ka has done, give the white man a horse, and then let him see the whole of your face without being ashamed.”

“When Mah-to-tchee-ga kills a white man and steals his horses, he may be ashamed to look at a white man until he brings him a horse! When Mah-to-tchee-ga waylays and murders an honorable and a brave Sioux, because he is a coward and not brave enough to meet him in fair combat, then he may be ashamed to look at a white man till he has given him a horse! Mah-to-tchee-ga can look at any one; and he is now looking at an old woman and a coward!”

“This repartee, which had lasted for a few minutes, to the amusement and excitement of the chiefs, being ended thus -- The Dog rose suddenly from the ground, and wrapping himself in his robe, left the wigwam, considerably agitated, having the laugh of all the chiefs upon him.”

“The Little Bear had followed him with his piercing eyes until he left the door, and then pleasantly and unmoved, resumed his position, where he sat a few minutes longer, until the portrait was completed. He then rose, and in the most graceful and gentlemanly manner, presented to me a very beautiful shirt of buckskin, richly garnished with quills of the porcupine, hinged with scalp-locks (honorable memorials) from his enemies’ heads, and painted, with all his battles emblazoned on it. He then left my wigwam, and a few steps brought him to the door of his own, where the Dog intercepted him, and asked, What meant Mah-to-tchee-ga by tile last words that he spoke to Shon-ka. “Mah-to-tchee-ga said it, and Shon-ka is not a fool -- that is enough.” At this The Dog walked violently to his own lodge: and the Little Bear retreated into his, both knowing from looks and gestures what was about to be the consequence of their altercation.

“The Little Bear instantly charged his gun, and then (as their custom is) threw himself upon his face, in humble supplication to the Great Spirit for his aid and protection. His wife, in the meantime, seeing him agitated, and fearing some evil consequences, without knowing anything of the preliminaries, secretly withdrew the bullet from his gun, and told him not of it.

“The Dog’s voice, at this moment, was heard, and recognized at the door of Mah-to-tchee-ga’s lodge -- If Mah-to-tchee-ga be a whole man, let him come out and prove it; it is Shon-Ka that calls him!”

“His wife screamed; but it was too late. The gun was in his hand, and he sprang out of the door -- both drew and simultaneously fired! The Dog fled uninjured; but the Little Bear lay weltering in his blood (strange to say) with all that side of his face entirely shot away, which had been left out of the picture: end, according to the prediction of the Dog, “good for nothing”; carrying away one half of the jaws, and the flesh from the nostrils and corner of the mouth, to the ear, including one eye, and leaving the jugular vein entirely exposed. Here was a ‘coup’; and any one accustomed to the thrilling excitement that such scenes produce in an Indian village, call form some idea of the frightful agitation amidst several thousand Indians, who were divided into jealous bands or clans, under ambitious and rival chiefs ! In one minute, a thousand guns and bows were seized! A thousand thrilling yells were raised: and many were the fierce and darting warriors who sallied round the Dog for his protection -- he fled amidst a shower of bullets and arrows; but his braves were about him! The blood of the Onc-pa-pas was roused, and the indignant braves of that gallant band rushed forth from all quarters, and, swift upon their heels, were hot for vengeance! On the plain, and in full view of us, for some time, the whizzing arrows flew, and so did bullets, until the Dog and his brave followers were lost in distance on the prairie! In this rencontre, the Dog had his left arm broken; but succeeded, at length, in making his escape.

“On the next day after this affair took place, the Little Bear died of his wound, and was buried amidst the most pitiful and heart-rending cries of his distracted wife, whose grief was inconsolable at the thought of having been herself the immediate and innocent cause of his death, by depriving him of his supposed protection.

“This marvelous and fatal transaction was soon talked through the village, and the eyes of all this superstitious multitude were fixed upon me as the cause of the calamity--my paintings and brushes were instantly packed, and all hands, both Traders and Travellers, assumed at once a posture of defense.

“I evaded, no doubt, in a great measure, the concentration of their immediate censure upon me, by expressions of great condolence, and by distributing liberal presents to the wife and relations of the deceased; and by uniting also with Mr. Laidlaw and the other gentlemen, in giving him honourable burial, where we placed over his grave a handsome Sioux lodge, and hung a white flag to wave over it.

“On this occasion, many were the tears that were shed for the brave and honourable Mah-to-tchee-ga, and all the warriors of his band swore sleepless vengeance on the Dog, until his life should answer for the loss of their chief and leader.

“On the day that he was buried, I started for the mouth of Yellow Stone, and while I was gone, the spirit of vengeance had pervaded nearly all the Sioux country in search of the Dog, who had evaded pursuit. His brother, however, a noble and honourable fellow, esteemed by all who knew him, fell in their way in an unlucky hour, when their thirst for vengeance was irresistible, and they slew

him. Repentance deep, and grief were the result of so rash an act, when they beheld a brave and worthy man fall for so worthless a character; and as they became exasperated, the spirit of revenge grew more desperate than ever, and they swore they never would lay down their arms or embrace their wives and children until full and complete, should light upon the head that deserved it. This brings us again to the first part of my story, and in this state were things in that part of the country, when I was descending the river, four months afterwards, and landed my canoe as I before stated, at Laidlaw's trading-house.

"The excitement had been kept up all summer amongst these people, and their superstitions bloated to the full brim, from circumstances so well calculated to feed and increase them. Many of them looked to me at once as the author of all these disasters, considering I knew that one half of the man's face was good for nothing, or that I would not have left it out of the picture, and that I must therefore have foreknown the evils that were to flow from the omission; they consequently resolved that I was a dangerous man, and should suffer for my temerity in case the Dog could not be found. Councils had been held, and in all the solemnity of Indian medicine and mystery, I had been doomed to die! At one of these, a young warrior of the One-Papa band, arose and said. "The blood of two chiefs has just sunk into the ground, and an hundred bows are bent which are ready to shed more! On whom shall we bend them? I am a friend to the white men, but here is one whose medicine is too great -- he is a great medicine-man! his medicine is too great! he was the death of Mah-to-tchee-ga! He made only one side of his face! He would not make the other -- the side that he made was alive; the other was dead, and Shonka shot it off! How is this? Who is to die?"

"After him, Tah-zee-kee-da-cha (Torn Belly), of the Yankton band, arose and said -- "Father, this medicine-man has done much harm! You told our chiefs and warriors, that they must be painted -- you said he was a good man, and we believed you -- you thought so, my father, but you see what he has done! -- He looks at our chiefs and our women and then makes them alive!! In this way he has taken our chiefs away, and he can trouble their spirits when they are dead! -- they will be unhappy. If he can make them alive by looking at them, he can do us much harm! -- you tell us that they are not alive -- we see their eyes move! -- their eyes follow us wherever we go, that is enough! I have no more to say!" After him, rose a young man of the Onc-pa-pa band. "Father! You know that I am the brother of Mah-to-tchee-ga! -- you know that I loved him -- both sides of his face were good, and the medicine-man knew it also! Why was half of his face left out? He never was ashamed, but always looked white man in the face! Why was that side of his face shot off? Your friend is not our friend, and has forfeited his life -- we want you to tell us where he is -- we want to see him!"

"Then rose Toh-ki-e-to (a medicine-man) of the Yankton band, and principal orator of the nation.) "My friend, these are young men that speak -- I am not afraid! your white medicine-man painted my picture, and it was good -- I am glad of it -- I am very glad to see that I shall live after vengeance. This brings I am dead! -- I am old and not afraid! -- some of our young men are foolish. I know that this man put many of our buffaloes in his book I for I was with him, and we have had no buffaloes since to eat, it is true -- but I am not afraid!! his medicine is great and I wish him well--we are friends!"

It In this wise was the subject discussed by these superstitious people during my absence, and such were the reasons given by my Friend Mr. Laidlaw, for his friendly advice; wherein he cau-

tioned me against exposing my life in their hands, advising me to take some other route than that which I was pursuing down the river where I would find encamped at the mouth of Cabri river, eighty miles below, several hundred Indians belonging to the Little Bear's band, and I might possibly fall a victim to their unsatiated revenge. I resumed my downward voyage in a few days, however, with my little canoe, which 'Ba'tiste and Bogard paddled and I steered,' and passed their encampment in peace, by taking the opposite shore. The usual friendly invitation however, was given (which is customary on that river), by skipping several rifle bullets across the river, a rod or two ahead of us. To those invitations we paid no attention, and (not suspecting who we were), they allowed us to pursue our course in peace and security. Thus rested the affair of the Dog and its consequences, until I conversed with Major Bean, the agent for these people, who arrived in St. Louis some weeks after I did, bringing later intelligence from them, assuring me that 'the Dog had at length been overtaken and Killed, near the Black-hills, and that the affair might now for ever be considered as settled.'

Thus happened, and thus terminated the affair of "the Doe"; wherein have fallen three distinguished warriors; and wherein might have fallen one "great medicine-man!" and all in consequence of the operations of my brush. The portraits of the three first named will long hang in my Gallery for the world to gaze upon; and the head of the latter (whose hair yet remains on it), may probably be seen (for a time yet) occasionally stalking about in the midst of this Collection of Nature's dignitaries.

The circumstances above detailed, are as correctly given as I could furnish them! and they have doubtless given birth to one of the most wonderful traditions, which will be told and sung amongst the Sioux Indians from age to age; furnishing one of the rarest instances, perhaps, on record, of the extent to which these people may be carried by the force of their superstitions.

STORY OF WI-JUN-JON (The PIGEON'S EGG HEAD);

I recited it as I first told it to poor Ba'tiste, on a former occasion, which was as follows:--

"Well, Ba'tiste, I promised last night, as you were going to sleep, that I would tell you a story this morning -- did I not? "Oui, Monsieur, oui -- de 'Pigeon's Head.'

"No, Ba'tiste, the 'Pigeon's Egg Head.'

"Well den, Monsieur Cataline, de ' Pigeon Egg's Head.

"No, Ba'tiste, you have it wrong yet. The Pigeon's Egg Head.

"Sacre -- well, 'Pee--jonse--ec--head.'

"Right, Ba'tiste. Now you shall hear the 'Story of the pigeon's Egg Head.

"The Indian name of this man (being its literal translation into the Assinneboin language) was Wi-jun-jon.

"Wat! comment! by Gar (pardon); not Wi-jun-jon, le frere de medouce Wee-ne-on-ka, his du chef Assinneboin? But excusez; go on, s'il vous plait.'

"Wi-jun-jon (the Pigeon's Egg Head) was a brave and a warrior of the Assinneboins -- young -- proud -- handsome -- valiant, and graceful. He had fought many a battle, and won many a laurel. The numerous scalps from his enemies' heads adorned his dress, and his claims were fair and just for the highest honours that his country could bestow upon him: for his father was chief of the nation.

"Le meme! de same -- mon frere-mon am I! Bien, I am compose; go on, Monsieur.

---

“Well, this young Assinneboin, the ‘Pigeon’s Egg- Head,’ was selected by Major Sanford, the Indian Agent, to represent his tribe in a delegation which visited Washington city under his charge in the winter of 1832. With this gentleman, the Assinneboin, together with representatives from several others of those North Western tribes, descended the Missouri river, several thousand miles, on their way to Washington.

“While descending the river in a Mackinaw boat, from the mouth of Yellow Stone, Wi-jun-jon and another of his tribe who was with him, at the first approach to the civilized settlements, commenced a register of the white men’s houses (or cabins), by cutting a notch for each on the side of a pipestem, in order to be able to shew when they got home, how many white men’s houses they saw on their journey. At first the cabins were scarce; but continually as they advanced down the river, more and more rapidly increased in numbers; and they soon found their pipe-stem filled with marks, and they determined to put the rest of them on the handle of a war-club, which they soon got marked all over likewise; and at length, while the boat was moored at the shore for the purpose of cooking the dinner of the party, Wi-jun-jon and his companion stepped into the bushes, and cut a long stick, from which they peeled the bark; and when the boat was again underweight, they sat down, and with much labour, copied the notches on to it from the pipe-stem and club; and also kept adding a notch for every house they passed. This stick was soon filled; and in a day or two several others; when, at last, they seemed much at a loss to know what to do with their troublesome records, until they came in sight of St. Louis, which is a town of 15,000 inhabitants; upon which, after consulting a little, they pitched their sticks overboard into the river!

“I was in St. Louis at the time of their arrival, and painted their portraits while they rested in that place. Wi-jun-jon was the first, who reluctantly yielded to the solicitations of the Indian agent and myself, and appeared as sullen as death in my painting-room -- with eyes fixed like those of a statue, upon me, though his pride had plumed and tinted him in all the freshness and brilliancy of an Indian’s toilet. In his nature’s uncovering pride he stood a perfect model; but superstition had hung a lingering curve upon his lip, and pride had stiffened it into contempt. He had been urged into a measure, against which his fears had pleaded; yet he stood unmoved and unflinching amid the struggles of mysteries that were hovering about him, foreboding ills of every kind, and misfortunes that were to happen to him in consequence of this operation.

“He was dressed in his native costume, which was classic and exceedingly beautiful; his leggings and shirt were of the mountain goat skin, richly garnished with quills of the porcupine, and fringed with locks of scalps, taken from his enemies’ heads. Over these floated his long hair in plaits, that fell nearly to the ground; his head was decked with the war-eagle’s plumes -- his robe was of the skin of the young buffalo bull, richly garnished and emblazoned with the battles of his life; his quiver and bow were slung, and his shield, of the skin of the bull’s neck.

“I painted him in this beautiful dress, and so also the others who were with him; and after I had done, Major Sanford went on to Washington with them, where they spent the winter.

“Wi-jun-jon was the foremost on all occasions--the first to enter the levee -- the first to shake the President’s hand, and make his speech to him--the last to extend the hand to them, but the first to catch the smiles and admiration of the gentler sex. He travelled the giddy maze, and beheld amid the buzzing din of civil life, their tricks of art, their handiworks, and their finery; he visited their principal cities--he saw their forts, their ships, their great guns, steamboats, balloons, &c. &c.; and in the spring returned to St. Louis, where I joined him and his companions on their way back to

---

their own country.

“Through the politeness of Mr. Chouteau, of the American Fur Company, I was admitted (the only passenger except Major Sanford and his Indians) to a passage in their steamboat, on her first trip to the Yellow Stone; and when I had embarked, and the boat was about to depart, Wi-jun-jon made his appearance on deck, in a full suit of regimentals! He had in Washington exchanged his beautifully garnished and classic costume, for a full dress ‘en militaire’. It was, perhaps, presented to him by the President. It was broadcloth, of the finest blue, trimmed with lace of gold; on his shoulders were mounted two immense epaulettes; his neck was strangled with a shining black stock, and his feet were pinioned in a pair of waterproof boots, with high heels, which made him ‘step like a yoked hog.

“Ha-ha-hagh (pardon, Monsieur Calaline, for I am almost laugh) -- well, he was a fine gentleman, ha?”

“On his head was a high-crowned beaver hat, with a broad silver lace band, surmounted by a huge red feather, some two feet high; his coat collar stiff with lace, came higher up than his ears, and over it flowed, down towards his haunches -- his long Indian locks, stuck up in rolls and plaits, with red paint.

“Ha-ha-hagh-agh-ah.

“Hold your tongue, Ba’tiste.

“Well, go on--go on.’

“A large silver medal was suspended from his neck by a blue ribbon -- and across his right shoulder passed a wide belt, supporting by his side a broad sword.

“Diable!”

“On his hands he had drawn a pair of white kid gloves, and in them held, a blue umbrella in one, and a large fan in the other. In this fashion was poor Wi-jun-jon metamorphosed, on his return from Washington; and, in this plight was he strutting and whistling Yankee Doodle, about the deck of the steamer that was wending its way up the mighty Missouri, and taking him to his native land again; where he was soon to light his pipe, and cheer the wigwam fire-side, with tales of novelty and wonder.

“Well, Ba’tiste, I travelled with this new-fangled gentleman until he reached his home, two thousand miles above St. Louis, and I could never look upon him for a moment without excessive laughter, at the ridiculous figure he cut -- the strides, the angles, the stiffness of this travelling beau! Oh Ba’tiste, if you could have seen him, you would have split your sides with laughter; he was -- ‘puss in boots’, precisely!

“By gar, he is good compare! Ha-ha, Monsieur: (pardon) I am laugh: I am see him wen he is arrive in Yellow Stone; you know I was dere. I am laugh much wen he is got off de boat, and all de Assinneboins was dere to look. Oh diable! I am laugh almost to die, I am split I -- suppose he was pretty stiff, ha? ‘cob on spindle,’ ha? Oh, by gar, he is coot pour laugh--pour rire?”

“After Wi-jun-jon had got home, and passed the usual salutations among his friends, he commenced the simple narration of scenes he had passed through, and of things he had beheld among the whites; which appeared to them so much like fiction, that it was impossible to believe them, and they set him down as an impostor. ‘He has been, (they said,) among the whites, who are great liars, and all he has learned is to come home and tell lies.’ He sank rapidly into disgrace in his tribe; his high claims to Political eminence all vanished; he was reputed worthless -- the

greatest liar of his nation; the chiefs shunned him and passed him by as one of the tribe who was lost; yet the ears of the gossiping portion of the tribe were open, and the campfire circle and the wigwam fireside, gave silent audience to the whispered narratives of the 'travelled Indian.'

"The next day after he had arrived among his friends, the superfluous part of his coat, (which was a laced frock), was converted into a pair of leggings for his wife; and his hat-band of silver lace furnished her a magnificent pair of garters. The remainder of the coat, curtailed of its original length, was seen buttoned upon the shoulders of his brother, over and above a pair of leggings of buckskin; and Wi-jun-jon was parading about among his gaping friends, with a bow and quiver slung over his shoulders, which, sans coat, exhibited a fine linen shirt with studs and sleeve buttons. His broadsword kept its place, but about noon, his boots gave way to a pair of garnished moccasins; and in such plight he gossiped away the day among his friends, while his heart spoke so freely and so effectually from the bung-hole of a little keg of whiskey, which he had brought the whole way, (as one of the choicest presents made him at Washington), that his tongue became silent.

"One of his little fair enamoras, or 'catch crumbs', such as live in the halo of all great men, fixed her eyes and her affections upon his beautiful silk braces, and the next day, while the keg was yet dealing out its kindnesses, he was seen paying visits to the lodges of his old acquaintance, swaggering about, with his keg under his arm, whistling Yankee Doodle, and Washington's Grand March; his white shirt, or that part of it that had been flapping in the wind, had been shockingly tithed -- his pantaloons of blue, laced with gold, were razed into a pair of comfortable leggings -- his bow and quiver were slung, and his broad-sword which trailed on the ground, had sought the centre of gravity and taken a position between his legs, and dragging behind him, served as a rudder to steer him over the earth's troubled surface.

"Ha-hah-hah -----ah-----o-----oo-- k, eh bien.

"Two days' revel of this kind, had drawn from his keg all its charms; and in the mellowness of his heart, all his finery had vanished, and all of its appendages, except his umbrella, to which his heart's strongest affections still clung, and with it, and under it, in rude dress of buckskin, he was afterwards to be seen, in all sorts of weather, acting the fop and the beau as well as he could, with his limited means. In this plight, and in this dress, with his umbrella always in his hand, (as the only remaining evidence of his quondam greatness), he began in his sober moments, to entertain and instruct his people, by honest and simple narratives of things and scenes he had beheld during his tour to the East; but which (unfortunately for him), were to them too marvellous and improbable to be believed. He told the gaping multitude, that were constantly gathering about him, of the distance he had travelled--of the astonishing number of houses he had seen--of the towns and cities, with all their wealth and splendour -- of travelling on steamboats, in stages, and on railroads. He described our forts, and seventy-four gun ships, which he had visited -- their big guns -- our great bridges--our great council-house at Washington, and its doings--the curious and wonderful machines in the patent office, (which he pronounced the greatest medicine place he had seen); he described the great war parade, which he saw in the city of New York -- the ascent of the balloon from Castle Garden -- the numbers of the white people, the beauty of the white squaws; their red cheeks, and many thousands of other things, all of which were so much beyond their comprehension, that they 'could not be true' and 'he must be the very greatest liar in the whole world.'"

---

“But he was beginning to acquire a reputation of a different kind. He was denominated a medicine-man, and one too of the most extraordinary character; for they deemed him far above the ordinary sort of human beings, whose mind could invent and conjure up for their amusement, such an ingenious fabrication of novelty and wonder. He steadily and unostentatiously persisted, however, in this way of entertaining his friends and his people, though he knew his standing was affected by it. He had an exhaustless theme to descant upon through the remainder of his life; and he seemed satisfied to lecture all his life, for the pleasure which it gave him. “So great was his medicine, however, that they began, chiefs and all, to look upon him as a most extraordinary being, and the customary honours and forms began to be applied to him, and the respect shewn him, that belongs to all men in the Indian country, who are distinguished for their medicine or mysteries. In short, when all became familiar with the astonishing representations that he made, and with the wonderful alacrity with which ‘he created them,’ he was denominated the very greatest of medicine; and not only that, but the ‘lying medicine.’ That he should be the greatest of medicine, and that for lying, merely, rendered him a prodigy in mysteries that commanded not only respect, but at length, (when he was more maturely heard and listened to) admiration, awe, and at last dread and terror; which altogether must needs conspire to rid the world of a monster, whose more than human talents must be cut down, to less than human measurement.”

‘Wat! Monsieur Cataline, dey av not try to kill him?’

“Yes, Ba’tiste, in this way the poor fellow had lived, and been for three years past continually relating the scenes he had beheld, in his tour to the Far East; until his medicine became so alarmingly great, that they were unwilling he should live; they were disposed to kill him for a wizard. One of the young men of the tribe took the duty upon himself, and after much perplexity, hit upon the following plan, to-witt -- he had fully resolved, in conjunction with others who were in the conspiracy, that the medicine of Wi-jun-jon was too great for the ordinary mode, and that he was so great a liar that a rifle bullet would not kill him; while the young man was in this distressing dilemma, which lasted for some weeks, he had a dream one night, which solved all difficulties; and in consequence of which, he loitered about the store in the Fort, at the mouth of the Yellow Stone, until he could procure, by stealth, (according to the injunction of his dream,) the handle of an iron pot, which he supposed to possess the requisite virtue, and taking it into the woods, he there spent a whole day in straightening and filing it, to fit it into the barrel of his gun; after which, he made his appearance again in the Fort, with his gun under his robe, charged with the pot handle, and getting behind poor Wi-jun-jon, whilst he was talking with the Trader, placed the muzzle behind his head and blew out his brains!

“Sacre vengeance! oh, mon Dieu! let me cry -- I shall cry always, for evare Oh he is not true, I hope? no, Monsieur, no!”

“Yes, Ba’tiste, it is a fact: thus ended the days and the greatness, and all the pride and hopes of WI-JUN-JON, the ‘Pigeon’s Egg Head,’ -- a warrior and a brave of the valiant Assiniboins, who travelled eight thousand miles to see the President, and all the great cities of the civilized world; and who, for telling the truth, and nothing but the truth, was, after he got home, disgraced and killed for a wizard.

“Oh, Monsieur Cataline -- I am distress -- I am sick -- I was hope he is not true -- oh I am mortify. Wi-jun-jon was coot Ingin -- he was my bruddare --- eh bien -- eh bien.

“Now, my friend Ba’tiste, I see you are distressed, and I regret exceedingly that it must be so; he

was your friend and relative, and I myself feel sad at the poor fellow's unhappy and luckless fate; for he was a handsome, an honest, and a noble Indian."

"C'est vrais. Monsieur, c'est vrai."

"This man's death, Ba'tiste, has been a loss to himself, to his friends, and to the world; but you and I may profit by it, nevertheless, if we bear it in mind ----

"Oui! yes, Monsr. mais, suppose, 'tis bad wind dat blows nary way, ha?"

"Yes, Ba'tiste, we may profit by his misfortune, if we choose. We may call it 'a caution;' for instance, when I come to write Your book, as you have proposed, the fate of this poor fellow, who was relating no more than what he actually saw, will caution you against the imprudence of telling all that you actually know, and narrating all that you have seen, lest like him you sink into disgrace for telling the truth. You know, Ba'tiste, that there are many things to be seen in the kind of life that you and I have been living for some years past, which it would be more prudent for us to suppress than to tell."

"Oui, Monsieur. Well, suppose, perhaps I am discourage about de book. Ma is, we shall see, ha?"

Thus ended the last night's gossip, and in the cool of this morning, we bid adieu to the quiet and stillness of this wild place, of which I have resolved to give a little further account before we take leave of it.

From the Fall of St. Anthony, my delightful companion (Mr. Wood, whom I have before mentioned) and myself, with our Indian guide, whose name was O-kup-pee, tracing the beautiful shores of the St. Peters river, about eighty miles; crossing it at a place called "Traverse des Sioux", and recrossing it at another point about thirty miles above the mouth of "Terre Bleue", from whence we steered in a direction a little North of West for the "Coteau des Prairies", leaving the St. Peters river, and crossing one of the most beautiful prairie countries in the world, for the distance of one hundred and twenty or thirty miles, which brought us to the base of the Coteau, where we were joined by our kind and esteemed companion Monsieur La Fromboise, as I have before related. This tract of country as well as that along the St. Peters river, is mostly covered with the richest soil, and furnishes an abundance of good water, which flows from a thousand living springs. For many miles we had the Coteau in view in the distance before us, which looked like a blue cloud settling down in the horizon; and we were scarcely sensible of the fact, when we had arrived at its base, from the graceful and almost imperceptible swells with which it commences its elevation above the country around it. Over these swells or terraces, gently rising one above the other, we travelled for the distance of forty or fifty miles, when we at length reached the summit; and from the base of this mound, to its top, a distance of forty or fifty miles, there was not a tree or bush to be seen in any direction, and the ground everywhere was covered with a green turf of grass, about five or six inches high; and we were assured by our Indian guide, that it descended to the West, towards the Missouri, with a similar inclination, and for an equal distance, divested of every thing save the grass that grows, and the animals that walk upon it.

On the very top of this mound or ridge, we found the far-famed quarry or fountain of the Red Pipe, which is truly an anomaly in nature.

The principal and most striking feature of this place, is a perpendicular wall of close-grained, compact quartz, of twenty-five and thirty feet in elevation, running nearly North and South with its face to the West, exhibiting a front of nearly two miles in length, when it disappears at both ends by running under the prairie, which he comes there a little more elevated, and probably cov-

ers it for many miles, both to the North and the South. The depression of the brow of the ridge at this Place has been caused by the wash of a little stream, produced by several springs on the top, a little back from the wall; which has gradually carried away the super-incumbent earth, and having bared the wall for the distance of two miles, is now left to glide for some distance over a perfectly level surface of quartz rock; and then to leap from the top of the wall into a deep basin below, and from thence seek its course to the Missouri, forming the extreme source of a noted and powerful tributary, called the "Big Sioux".

This beautiful wall is horizontal, and stratified in several distinct layers of light grey, and rose or flesh-coloured quartz; and for most of the way, both on the front of the wall, and for acres of its horizontal surface, highly polished or glazed, as if by ignition. At the base of this wall there is a level prairie, of half a mile in width, running parallel to it; in any and all parts of which, the Indians procure the red stone for their pipes, by digging through the soil and several slaty layers of the red stone, to the depth of four or five feet.\*\*\*\*[SEE NOTE] From the very numerous marks of ancient and modern diggings or excavations, it would appear that this place has been for many centuries resorted to for the red stone; and from the great number of graves and remains of ancient fortifications in its vicinity, it would seem, as well as from their actual traditions, that the Indian tribes have long held this place in high superstitious estimation; and also that it has been the resort of different tribes, who have made their regular pilgrimages here to renew their pipes. The red pipe stone, I consider, will take its place amongst minerals, as an interesting subject of itself; and the "Coteau des Prairies" will become hereafter an important theme for geologists; not only from the fact that this is the only known locality of that mineral, but from other phenomena relating to it. The single fact of such a table of quartz, in horizontal strata, resting on this elevated plateau, is of itself (in my opinion) a very interesting subject for investigation; and one which calls upon the scientific world for a correct theory with regard to the time when, and the manner in which, this formation was produced. That it is of a secondary character, and of a sedimentary deposit, seems evident; and that it has withstood the force of the diluvial current, while the great valley of the Missouri, from this very wall of rocks to the Rocky Mountains, has been excavated, and its debris carried to the ocean, there is also not a shadow of doubt; which opinion I confidently advance on the authority of the following remarkable facts:

At the base of the wall, and within a few rods of it, and on the very ground where the Indians dig for the red stone, rests a group of five stupendous boulders of gneiss, leaning against each other; the smallest of which is twelve or fifteen feet, and the largest twenty-five feet in diameter, altogether weighing, unquestionably, several hundred tons. These blocks are composed chiefly of felspar and mica, of an exceedingly coarse grain (the felspar often occurring in crystals of an inch in diameter). The surface of these boulders is in every part covered with a grey moss, which gives them an extremely ancient and venerable appearance, and their sides and angles are rounded by attrition, to the shape and character of most other erratic stones, which are found throughout the country. It is under these blocks that the two holes, or ovens are seen, in which, according to the Indian superstition,

<<<<<NOTE>>>>>

[[[\*\*\*\* From the very many excavations recently and anciently made, I could discover that these layers varied very much, in their thickness in different parts; and that in some places they were overlaid with four or five feet of rock, similar to, and in fact a part of, the lower stratum of the

wall. the two old women, the guardian spirits of the place, reside; of whom I have before spoken.]]]]

<<<<<END OF NOTE>>>>>

That these five immense blocks, of precisely the same character, and differing materially from all other specimens of boulders which I have seen in the great vallies of the Mississippi and Missouri, should have been hurled some hundreds of miles from their native bed, and lodged in so singular a group on this elevated ridge, is truly matter of surprise for the scientific world, as well as for the poor Indian, whose superstitious veneration of them is such, that not a spear of grass is broken or bent by his feet, within three or four rods of them, where he stops, and in humble supplication, by throwing plugs of tobacco to them, solicits permission to dig and carry away the red stone for his pipes. The surface of these boulders are in every part entire and unscratched by anything; wearing the moss everywhere unbroken, except where I applied the hammer, to obtain some small specimens, which I shall bring away with me.

The fact alone, that these blocks differ in character from all other specimens which I have seen in my travels, amongst the thousands of boulders which are strewed over the great valley of the Missouri and Mississippi, from the Yellow Stone almost to the Gulf of Mexico, raises in my mind an unanswerable question, as regards the location of their native bed, and the means by which they have reached their isolated position; like five brothers, leaning against and supporting each other, without the existence of another boulder within many miles of them. There are thousands and tens of thousands of boulders scattered over the prairies, at the base of the COTEAU on either side; and so throughout the valley of the St. Peters and Mississippi, which are also subjects of very great interest and importance to science, inasmuch as they present to the world, a vast variety of characters; and each one, though strayed away from its original position, bears incontestible proof of the character of its native bed. The tract of country lying between the St. Peters river and the Coteau, over which we passed, presents innumerable specimens of this kind; and near the base of the COTEAU they are strewed over the prairie in countless numbers, presenting almost an incredible variety of rich, and beautiful colours; and undoubtedly traceable, (if they can be traced), to separate and distinct beds.

Amongst these beautiful groups, it was sometimes a very easy matter to sit on my horse and count within my sight, some twenty or thirty different varieties, of quartz and granite, in rounded boulders, of every hue and colour, from snow white to intense red, and yellow, and blue, and almost to a jet black; each one well characterized and evidently from a distinct quarry. With the beautiful hues and almost endless characters of these blocks, I became completely surprised and charmed; and I resolved to procure specimens of every variety, which I did with success, by dismounting from my horse, and breaking small bits from them with my hammer; until I had something like an hundred different varieties, containing all the tints and colours of a painter's palette. These, I at length threw away, as I had on several former occasions, other minerals and fossils, which I had collected and lugged along from day to day, and sometimes from week to week.

Whether these varieties of quartz and granite can all be traced to their native beds, or whether they all have origins at this time exposed above the earth's surface, are equally matters of much doubt in my mind. I believe that the geologist may take the different varieties, which he may gather at the base of the Coteau in one hour, and travel the Continent of North America all over without being enabled to put them all in place; coming at last to the unavoidable conclusion,

that numerous chains or beds of primitive rocks have reared their heads on this Continent, the summits of which have been swept away by the force of diluvial currents, and their fragments jostled together and strewed about, like foreigners in a strange? land, over the great vallies of the Mississippi and Missouri, where they will ever remain, and be gazed upon by the traveller, as the only remaining evidence of their native beds, which have again submerged or been covered with diluvial deposits.

There seems not to be, either on the Coteau or in the great vallies on either side, so far as I have travelled, any slaty or other formation exposed above the surface on which grooves or scratches can be seen, to establish the direction of the diluvial currents in those regions; yet I think the fact is pretty clearly established by the general shapes of the vallies, and the courses of the mountain ridges which wall them in on their sides.

The Coteau des Prairies is the dividing ridge between the St. Peters and Missouri rivers; its southern termination or slope is about in the latitude of the Fall of St. Anthony, and it stands equi-distant between the two rivers; its general course bearing two or three degrees West of North for the distance of two or three hundred miles, when it gradually slopes again to the North, throwing out from its base the bend-waters and tributaries of the St. Peters, on the East. The Red River, and other streams, which empty into Hudson's Bay, on the North; La Riviere Jaque and several other tributaries to the Missouri, on the West; and the Red Cedar, the Iowa and the Des Moines, on the South.

This wonderful feature, which is several hundred miles in length, and varying from fifty to a hundred in width, is, perhaps, the noblest mound of its kind in the world; it gradually and gracefully rises on each side, by swell after swell, without tree, or bush or rock (save what are to be seen in the vicinity of the Pipe Stone Quarry), and everywhere covered with green grass, affording the traveller, from its highest elevations, the most unbounded and sublime views of -- nothing at all -- save the blue and boundless ocean of prairies that lie beneath and all around him, vanishing into azure in the distance without a speck or spot to break their softness.

The direction of this ridge, I consider, pretty clearly establishes the course of the diluvial cut-rent in this region, and the erratic stones which are distributed along its base, I attribute to an origin several hundred miles North West from the Coteau. I have not myself traced the Coteau to its highest points, nor to its Northern extremity; but it has been a subject, on which I have closely questioned a number of traders, who have traversed every mile of it with their carts, and from thence to Lake Winnipeg on the North, who uniformly tell me, that there is no range of primitive rocks to be crossed in travelling the whole distance, which is one connected and continuous prairie.

The top and sides of the COTEAU are everywhere strewed over the surface with granitic sand and pebbles, which, together with the fact of the five boulders resting at the Pipe Stone Quarry, shew clearly that every part of the ridge has been subject to the action of these currents, which could not have run counter to it, without having disfigured or deranged its beautiful symmetry.

The glazed or polished surface of the quartz rocks at the Pipe Stone Quarry, I consider a very interesting subject, and one which will excite hereafter a variety of theories, as to the manner in which it has been produced, and the causes which have led to such singular results. The quartz is of a close grain, and exceedingly hard, eliciting the most brilliant spark from steel; and in most places, where exposed to the sun and the air, has a high polish on its surface, entirely beyond any

results which could have been produced by diluvial action, being perfectly glazed as if by ignition. I was not sufficiently particular in my examinations to ascertain whether any parts of the surface of these rocks under the ground, and not exposed to the action of the air, were thus affected, which would afford an important argument in forming a correct theory with regard to it; and it may also be a fact of similar importance, that this polish does not extend over the whole wall or area; but is distributed over it in parts and sections, often disappearing suddenly, and reappearing again, even where the character and exposure of the rock is the same and unbroken. In general, the parts and points most projecting and exposed, bear the highest polish, which would naturally be the case whether it was produced by ignition, or by the action of the air and sun. It would seem almost an impossibility, that the air passing these projections for a series of centuries, could have produced so high a polish on so hard a substance; and it seems equally unaccountable, that this effect could have been produced in the other way, in the total absence of all igneous matter.

I have broken off specimens and brought them home, which certainly bear as high a polish and luster on the surface, as a piece of melted glass; and then as these rocks have undoubtedly been formed where they now lie, it must be admitted, that this strange effect on their surface has been produced either by the action of the air and sun, or by igneous influence; and if by the latter course, there is no other conclusion we can come to, than that these results are volcanic; that this wall has once formed the side of a crater, and that the Pipe Stone, laying in horizontal strata, is formed of the lava which has issued from it. I am strongly inclined to believe, however, that the former supposition is the correct one; and that the Pipe Stone, which differs from all known specimens of lava, is a new variety of steatite, and will be found to be a subject of great interest and one worthy of a careful analysis.

With such notes and such memorandums on this shorn land, whose quiet and silence are only broken by the winds and the thunders of Heaven, I close my note-book, and we this morning saddle our horses; and after wending our way to the "Thunders' Nest" and the "Stone-man Medicine," we shall descend into the valley of the St. Peters, and from that to the regions of civilization; from whence, if I can get there, you will hear of me again. Adieu.

Narrative, by James Clyman

---

Nappa April 17, 1871

“According to promis I will now attempt to give you a short detail of life and incidents of my trip in & through the Rocky Mountains in the years 1824-25, 26, 27, 28 and a portion of 1829

“Haveing been imployed in Public Surveys in the state of Illinois through the winter of 1823 and the early part of 24 I came to St Louis about the first of February to ricieve pay for past services and rimaining there Some days I heard a report that general William H Ashly was engaging men for a Trip to the mouth of the Yellow Stone river I made enquiry as to what was the object but found [pg2] no person who seemed to possess the desired information finding whare Ashleys dwelling was I called on him the same evening Several Gentlemen being present he invited me to call again on a certain evening which I did he then gave a lenthly account of game found in that Region Deer, elk, Bear and Buffalo but to crown all immense Quantities of Beaver whose skins ware verry valuable selling from \$5 to 8\$ per pound at that time in St Louis and the men he wished to engage ware to huters trappers and traders for furs and peltrees my curiosity now being satisfied St Louis being a fine place for Spending money I did not leave immediately not having spent all my funds I loitered about without (without) employment

“Haveing fomed a Slight acquaintance with Mr Ashley we occasionally passed each other on the streets at length one day Meeting him he told me he had been looking for me a few days back and enquiredd as to my employment I informed him that I was entirely unemployed he said he wished then that I would assist him ingeaging men t for his Rocky mountain epedition and he wished me to call at his housse in the evening [pg3] which I accordingly did getting instrutions as to whare I would most probably find men willing to engage which found in grog Shops and other sinks of degredation he rented a house & furnished it with provisions Bread from to Bakers -- pork plenty, which the men had to cook for themselves

“On the 8th of March 1824 all things ready we shoved off from the shore fired a swivel which was answered by a Shout from the shore which we returned with a will and porceed up stream under sail

“A discription of our crew I cannt give but Fallstafs Battallion was genteel in comparison I think we had about (70) seventy all told Two Keel Boats with crews of French some St Louis gumboes as they were called

“We proceeded slowly up the Missouri River under sail wen winds ware favourable and towline when not Towing or what was then calld cordell is a slow and tedious method of assending swift waters It is done by the men walking on the shore and hawling the Boat by a long cord Nothing of importance came under view for some months except loosing men who left us from time to time & engaging a few new men of a much better appearance than those we lost The Missourie is a monotonous crooked stream with large cottonwood forest trees on one side and small young groth on the other with a bare Sand Barr intervening I will state one circumstance only which will show something of the character of Missourie Boats men

Narrative, by James Clyman

---

[pg4]”The winds are occasionally very strong and when head winds prevail we were forced to lay by this circumstance happened once before we left the Settlements the men went out gunning and that night came in with plenty of game Eggs Fowls Turkeys and what not Having a fire on shore they dressed cooked and eat until midnight being care full to burn all the fragments the wind still Blowing in the morning several Neighbours came in hunting for poultry liberty was given to search the boats but they found nothing and left the wind abateing somewhat the cord was got out and pulling around a bend the wind became a fair sailing breeze and were ordered unfurled when out dropped pigs and poultry in abundance

“A man was ordered to Jump in the skiff and pick up the pigs and poultry

“Arriving at Council Bluffs we made several exchanges (8) eight or Ten of our men enlisting and 2 or 3 of the Soldier whose was nearly expired engaging with us The officers being very liberal furnished us with a Quantity of vegetables here we leave the last appearance of civilization and fully Indian country game becoming more plenty we furnished ourselves with meat daily

“But I pass on to the arickaree villages where we met with our defeat on arriving in sight of the villages the barr in front was lined with squaws packing up water thinking to have to stand a siege

[pg5]”For a better understanding it is necessary that I state that the Missouri fur company have established a small trading house some (60) or (80) miles below the arickaree villages the winter previous to our ascent and the arickarees having taken some Sioux squaws prisoners previously one of these Squaws got away from them and made for this trading post and they pursuing come near overtaking her in sight of the post the men in the house ran out and fired on the Pursuing arickarees killing (2) others so that Rees considered war was fully declared between them and the whites But Genl. Ashley thought he could make them understand that his was not responsible for Injuries done by the Missouri fur company But the Rees could not make the distinction they however agreed to receive pay for their loss but the general would make them a present but would not pay the Missouri fur companies damages

“After one days talk they agreed to open trade on the sand bar in front of the village but the only article of Trade they wanted was ammunition For fear of a difficulty, the boats were kept at anchor in the stream, and the skiffs were used for communications Between the boats and the shore. we obtained twenty horses in three days trading, but in doing this we gave them a fine supply of Powder and ball which on fourth day we found out to Sorrow

“In the night of the third day Several of our men without permission went and remained in the village amongst them our Interpreter Mr Rose about midnight he came running into camp & informed us that one of our men was killed in the village and war was declared in earnest We had no Military organization discipline or Subordination Several advised to cross over the river at once but thought best to wait until day light But Genl. Ashley our employer Thought best to wait till morning and go into the village and demand the body of our comrade and his Murderer Ashley

Narrative, by James Clyman

---

being the most interested his advice prevailed We laid on our arms expecting an attack as their was a continual Hubbub in the village

“At length morning appeared every thing still undecided finally one shot was fired into our camp the distance being however to great for certain aim Shortly firing became Quite general we seeing nothing to fire at Here let me give a Short discription of an Indian City or village as it is usually cald Picture to your self (50) or (100) large potatoe holes as they are usuly caled in the west (10) to (15) feet in diameter and 8 to 10 feet high in the center covered on the outside with small willow brush then a (a) layer of coarse grass a coat of earth over all a hole in one side for a door and another in the top to let out the smoke a small fire in the center all Told The continual wars between them and Sioux had caused them to picket in their place You will easely prceive that we had little else to do than to Stand on a bear sand barr and be shot at, at long range Their being seven or Eigh hundred guns in village and we having the day previously furnished them with abundance of Powder and Ball many calls for the boats to come ashore and take us on board but no prayers or threats had the the Boats men being completely Parylized Several men being wounded a skiff was brought ashore all rushed for the Skiff and came near sinking it but it went the boat full of men and water the shot still coming thicker and the aim better we making a brest work of our horses (most) they nerly all being killed the skiffs having taken sevarl loads on Board the boats at length the shot coming thicker and faster one of the skids (was turned) was let go the men clambering on Boad let the skiff float off in their great eaganess to conceal themselves from the rapid fire of the enemy I seeing no hopes of Skiffs or boats comeing ashore left my hiding place behind a dead hors, ran up stream a short distance to get the advantage of the current and coricieving myself to be a tolerable strong swimer stuck the muzzle of my rifle in belt the lock ove my head with all my clothes on but not having made sufficien calculation for the strong current was carried passed the boat within a few feet of the same one Mr Thomas Eddie but the shot coming thick he did not venture from behin the cargo Box and so could not reach me with a setting pole which held in his hands Kowing now or at thinking that I had the river to swim my first aim was to rid myself of all my encumbraces and my Rifle was the greatest in my attempt to draw it over my head it sliped down the lock ketching in my belt comeing to the surface to breathe I found it hindred worse that it did at first making one more effort I turned the lock side ways and it sliped through which gave me some relief but still finding myself to much encumbred I next unbucled my belt and let go my Pistols still continueing to disengage my self I next let go my Ball Pouch and finally one Sleeve of my Hunting shirt which was buckskin and held an immense weight of water when rising to the surface I heard the voice of encoragemnt saying hold on Clyman I will soon relieve you This Reed Gibson who had swam in and caught the skiff the men had let go afloat and was but a few rods from me I was so much exausted that he had to haul me into the skiff wh I lay for a moment to cacth breath when I arose to take the only remaing ore when Gibson caled oh, god I am shot and fell forward in the skiff I encouraged him and Perhaps not fatally give a few pulls more and we will be out of reach he raised and gave sevreral more strokes with the oar using it as a paddle when coplained of feeling faint when he fell forward again and I took his plac in the stern and shoved it across to the East shore whare we landed I hauled the skiff up on the shore and told Gibson to remain in the Skiff and I would go upon the high land whare I could see if any danger beset us thair.

---

Narrative, by James Clyman

---

After getting up on the river bank and looking around I Discovered sevral Indian in the water swimming over of whom ware nearly across the stream I spoke to Gibson telling him of the circumstance he nearly said (said) save yourself Clyman and pay no attention to me as I am a dead man and they can get nothing of me but my Scalp My first Idea was to get in the skiff and meet them in the water and brain them with the oar But on second look I com-concluded there ware to many of them and they ware too near the shore then I looked for some place to hide But there being onley a scant row of brush along the shore I concluded to take to the open Pararie and run for life by this time Gibson had scrambled up the bank and stood by my side and said run Clyman but if you escape write to my friends in Virginia and tell them what has become of me I for the open Prarie and Gibson for the brush to hide At first I started a little distance down the river but fearing that I might be heading in some bend I steered directly for the open Prarie and looking Back I ssaw three Inians mount the bank being intirely divested of garments excepting a belt around the waist containing a Knife and Tomahawk and Bows and arrows in their They made but little halt and started after me One to the right the other to the left while the third took direct after me I took direct for the rising ground I think about three - miles of there being no chanc for dodging the ground being smooth and level but haveing the start of some 20 or 30 rods we had appearantle an even race for about one hour when I began to have the palpitation of the heart and I found my man was gaining on me I had now arived at a moderately roling ground and for the first time turned a hill out of sight I turned to the right and found a hole wased in the earth some 3 feet long 1 1/2 feet wide and Pehaps 2 feet deep with weeds and grass perhaps one foot high surrounding it into this hole I droped and persuer immediatle hove in sight and passed me about fifty yards distant both my right an left hand persuers haveing fallen cosiderably in the rear and particularly the one on my right here fortune favoured me for my direct persuer soon passed over some uneven ground got out of sight when I arose and taking to the right struck into a low ground which covered me and following it soon came into a moderately steep ravine in all this time I gained breath and I did not see my persuers until I gained the top of the ridge over a Quarter of a mile from my friend when I gained this elevation I turned around the three standing near together I made them a low bow with both my hand and thanked god for my present Safety and diliveranc

“But I did not remain long here wishing to put the gratest possible distance between me and the Arrickarees I still continued Southward over a smoothe roling ground But what ware my reflection being at least Three Hundred miles from any assistanc unarmed and uprovided with any sort of means of precureing a subsistance not even a pocket Knife I began to feel after passing So many dangers that my propects ware still verry slim, mounting some high land I saw ahed of me the river and Quite a grove of timber and being verry thirsty I made for the water intending to take a good rest in the timber I took one drink of water and setting down on a drift log a few minuits I chanced to look the and here came the boats floating down the stream the watcing along the shores saw me about as soon as I saw them the boat was laid in and I got aboard

“I spoke of my friend Gibson whe I was informed he was on board I immediately wen to the cabin where he lay but he did not recognize me being in the agonies of Death the shot having passed through his bowels I could not refrain from weeping over him who lost his lifee but saved mine

Narrative, by James Clyman

---

he did not live but an hour or so and we buried him that evening the onley one of (12) that ware killed at the arrickarees Eleven being left on the sand bar and their Scalps taken for the squaws to sing and dance over.

“Before meeting with this defeat I think few men had Stronger Ideas of their bravery and disregard of fear than I had but standing on a bear and open sand barr to be shot at from behind a picketed Indian village was more than I had contacted for and some what cooled my courage before leaving the grave of my friend Gibson that before I had an oppertunity of writing to his friends I forgot his post office and so never have written We fell down a few miles and lay by several day to wait and if any more men had escaped the buthery when on the third or fourth day Jack Larisson came to us naked as when he was born and the skin peeling off of him from the effects of the sun he was wounded a ball passing through the fleshy part of one thigh and ldg- ing in the other the ball was easily exticated and in a few (a few) days he was hobbling around Larrisson had lain between two dead horses untill the boats left and he saw no other chance of escape but to swim the river then divesting himself of all his clothing he took the water the Indians came running and firing at his head but escaped without further injury the wound Before mentioned he had recieved in the early part of the battle if it can be called Battle supposing no more men had survived the slaughte we again dropped down the river

“And landed under the side of an Isle and two men ware sent up to the mouth of the yellowstone and one boat containing the wounded and discouraged was sent down to Council bluffs with orders to continue to St Louis This being the fore part of June here we lay for Six weeks or two months living on scant and frquentle no rations allthrough game was plenty on the main Shore perhaps it was my fault in greate measure for several of us being allowed to go on Shore we ware luckey enough to get Several Elk each one packing meat to his utmost capacity there came on a brisk shower of rain Just before we reached the main shore and a brisk wind arising the men on the (men on the) boat would not bring the skiff and take us on board the bank being bear and no timber neare we ware suffering with wet and cold I went off to the nearest timber made a fire dried and warmed myself laid down and went to sleep in the morning looking around I saw a fine Buck in easy gun shot and I succeeded in Killing him then I was in town plenty of wood plenty of water and plenty of nice fat venison nothing to do but cook and eat here I remained untill next morning then taking a good back load to the landing whare I met several men who had Just landed for the purpose of hunting for me after this I was scarcely ever allowed to go ashore for I might never return

“In proecess of time news came that Col. Livenworth with Seven or eight hundred Sioux Indians ware on the rout to Punnish the Arrickarees and (18) or (20) men came down from the Yellow Stone who had gone up the year prevous these men came in Canoes (came in canoes) and passed the Arrickarees in the night we ware now landed on the main Shore and allowed more liberty than hertofore (at) Col. Levenworth about (150) men the remnant of the (6) Regiment came and Shortly after Major Pilcher with the Sioux Indians (Indians) amounting to 5 or 600 warriors and (18) or 20 engagies of the Missourie furr Company and a grand feast was held and speches made by whites and Indians

---

Narrative, by James Clyman

---

“After 2 days talk a feast and an Indian dance we proceeded up stream Some time toward the last of August we came near the arrickaree villages again a halt was made arms examined amunition distributed and badges given to our friends the Sioux which consisted of a strip of white muslin bound around the head to distinguish friends from foes

“The third day in the afternoon being 2 or three miles from the villages the Sioux made a breake being generally mounted they out went us although we ware put to the double Quick and when we arived the plain was covered with Indians which looked more like a swarm bees than a battle field they going in all possible directions the Rees having mounted and met the Sioux a half mile from their pickets But as soon as we came in sight the Rees retreated into their village the boats came up and landed a short half mile below the village but little efort was mad that afternoon except to surround the Rees and keep them from leaveing the Sioux coming around one side and the whites around the other Quite a number of dead Indians streued over the plain I must here notice the Bravery of one Sioux a Ree ventured out some distance from the pickets and held some tantalizeing conversation with the Sioux, one Siox on a fast horse approached him slowly Still bantering each other to approach nearer at length the Sioux Put whip to his horse taking directly for the Ree and run him right up to the then firing at full speed wheeled to retreat the Rees inside of the pickets firing some 40 or 50 of them covered him completely in smoke but Sioux and his horse came out safe and the Rees horse went in through the gate without a rider the Rees friends came out and carried in the man Several Rees lay dead and one in long shot (shot) of the pickets the old Sioux chief Brought one of his wives up with a war club who struck the corps a number of blow with club he tantalizeing the Rees all the time for their cowardice in comeing out to defend thair dead comrad and allowing his Squaws to strike their braves in gunshot of their village a common habit of the Indians in war is the first man that comes to the body of a dead enemy is to take his Scalp the second will take off his right hand the third his left the fourth his right foot the fifth his Left foot and hang thes trophies around their necks to shew how near they ware to the death of their enemy on the field of Battle and in this case a member of our Sioux shewed Trophies one more circumstance and I am done one large middle aged Sioux blonged to the grizzle Bear medicine came on hand feet to the body of a dead Ree in the attitude of a grzzly Bear snorting and mimican the bear in all his most vicious attitudes and with his teeth tore out mouth fulls of flesh from the breast of the dead body of the Ree

“But I will not tire you with details of the savage habits of Indians to their enimies but I will merely state that it is easy to make a savage of a civilised man but impossible to make a civilised man of a savage in one Generation

“The third day in the afternoon one of the Ree chiefs came out alone offering terms of peace a Schedule was drawn up to be confirmed on the morrow in a half hour after this was undestood our Sioux packed up and ware out of sight also the most of the Missourie companies men

“The night was Quiet but the two previous we had a lively picture of pandimonium the waing of squaws and children the Screams and yelling of men the firing of guns the awful howling

Narrative, by James Clyman

---

of dogs the neighing and braying of hosses and mules with the hooting of owls of which thy a number all intermingled with the stench of dead men and horses made the place the most (most) disagreeable that immaginnation could fix Short of the bottomless pit In the morning however our Quiet night was easily accounted for the Rees having dserted thair village early in the night previous a few men with an Interpeter ware sent forward to hunt them up and bring them back they returned about noon not being able to overtake them one circumstanc I must not omit to mention Captain Riley since General Riley who gave California her constituon was present and in command of company of Company A..6th Regiment and requested pemition to lead a forlorn hope into the villag but was denied that honour he then became allmost furious and swore that he demande the prviledge stating that they had been laying at garison at Council Bluffs for 8 or 10 years doeing nothing but eating pumpkins and now a small chance for promotion occured and it was denied him and might not occur again for the next 10 yeares (again)

“We Remained one night more in our stinking disageeable camp when we loosed cable and dropped down stream 4 men of our mountanier corps was left behind and in an hour after we left a great smoke arose and the acursd village was known to be on fire three Squaw 2 verry old and feebe and one sick and unabe to move ware found to have been left as not worth caring for these ware removed into a lodge which was preserved Col. Levenworth had given special orders that the village be left unmolested & ordered the boats landed and role called to ascertain who if any ware missing the sargent called over the roles rapidly and reported all present then it must be Souix

“We having to hunt for our living we soon fell behind the Col. and his corps dropping down to a place called fort Keawa a trading establishment blonging to Missouriie furr Company

“Here a small company of I think (13) men ware furnished a few horses onley enough to pack their baggage they going back to the mouth of the yellow Stone on their way up they ware actacted in the night by a small party of Rees killing two of thier men and they killing one Ree amongst this party was a Mr Hugh Glass who could not be rstrand and kept under Subordination he went off of the line of march one afternoon and met with a large grissly Bear which he shot at and wounded the bear as is usual attached Glass he attemptd to climb a tree but the bear caught him and hauled to the ground tearing and lacerating his body in feareful rate by this time several men ware in close gun shot but could not shoot for fear of hitting Glass at length the beare appeaed to be satisfied and turned to leave when 2 or 3 men fired the bear turned immediately on glass and give him a second mutilation on turning again several more men shot him when for the third time he pounced on Glass and fell dead over his body this I have from information not being present here I leave Glass for the presen we having bought a few horses and borrowed a few more left about the last of September and proceded westward over a dry roling highland a Elleven in number I must now mention honorable exceptions to the character of the men engaged at St Louis being now thined down to onley nine of those who left in March and first Jededdiah Smith who was our Captain Thomas Fitzpatrick William L. Sublett and Thomas Eddie all of which will figure more or less in the future in evening we camped on White clay Creek a small stream running thick with a white sediment and resembling cream in appearance

---

Narrative, by James Clyman

---

but of a sweetish pugenst taste our guide warned us from using this water too freely as caused excessive costiveness which we soon found out

“We proceeded up this stream one day not in sight since we left the Missouri part of the next day same when our guide informed us to take what water we could as we would not reach water until about noon the next day our means of taking water being very small we trailed on until dark and camped on a ridge where the cactus was so thick that we could scarcely find room to spread our Blankets Starting early about 11 o'clock we arrived at our expected water But behold it was entirely dry not even dam mud to be found but here we found a few Shrubby oaks to protect us from the scorching sun We rested perhaps half an hour 15 miles to the water yet and being all on foot and a pack horse to lead can we if we hold out reach it before dark we urged and hauled our stubborn horses along as fast as possible our guide getting a long way ahead and finely out of sight my pack horse being more tractable than most others I soon got ahead of my companions and we got strung out a mile in (length) the country some what rolling and one steering off to the right or left in search of water we were not only long but wide and it appeared like we might never all collect together again I followed as near as possible the last appearance of our guide but deviating slightly to the right struck on a hole water about an hour before sunset I fired my gun immediately and then ran into the pool arm deep my horse following me

“Coming out I fired my gun again one man and horse made their appearance the horse outran the man plunging into the water first each man as he came fired his gun and Shouted as soon as he could moisten his mouth and throat sufficiently to make a noise about dark we all got collected except two who had given out and were left buried in the sand all but their heads Capt Smith Being the last who was able to walk and he took some water and rode about 2 miles back bringing up the exhausted men which he had buried in the sand and this two days of thirst and Starvation was made to cross a large bend of the white clay River in the morning we found it yet 4 or 5 miles to the river where our guide waiting for us I have been thus particular in describing the means and troubles of traveling in a barren and unknown region here our River is a beautiful clear stream running over a gravelly bottom with some timber along its course having from its bed of mud and ashes for the sediment spoken of is nearer its mouth Continued up the valley of this stream to Sioux encampment of the Bois Brulie tribe where we remained several days trading for Horses and finally obtained 27 or 28 which gave us 2 horses to each man and two or three spare animals so far the country is dry not fit for cultivation (There may) However there may be and probably is better soil and better grazing higher up amongst the hills as it certainly grew better (was) the farther we proceeded up the stream and there was an increase of Shrubbery and soil Likewise here our guide left us to return with the Horses we had borrowed of the Missouri Fur Company.

“We packed up and crossed the White Clay river and proceeded north westerly over a dry rolling Country for several days meeting with a Buffalo now and then which furnished us with provision for at least one meal each day our luck was to fall in with the Ojibwa tribe of Sioux where traded a few more horses and swapped some of our more ordinary

Narrative, by James Clyman

---

“Country nearly the same short grass and plenty of cactus untill we crossed the Chienne River a few miles below where it leaves the Black Hill range of Mountains here some aluvial lands look like they might bear cultivation we did not keep near enough to the hills for a rout to travel on and again fell into a tract of county where no vegetation of any kind existed being worn into knobs and gullies and extremely uneven a loose grayish coloured soil verry soluble in water running thick as it could move of a pale whitish coular and remarkably adhesive there on a misty rain while we were in this pile of ashes and it loded down our horses feet (feet) in great lumps it looked a little remarkable that not a foot of level land could be found the narrow revines going in all manner of directions and the cobble mound of a regular taper from top to bottom all of them of the percise same angle and the tops share the whole of this region is moveing to the Misourie River as fast as rain and thawing of Snow can carry it by enclining a little to the west in a few hours we got on to smoothe ground and soon cleared ourselves of mud at length we arived at the foot of the black Hills which rises in verry slight elevation about the common plain we entered a pleasant undulating pine Region cool and refreshing so different from the hot dusty planes we have been so long passing over and here we found hazlenuts and ripe plumbs a luxury not expected We had one two day travel over undulating Pine with here and there an open glade of rich soill and fine grass but assinding the Ridges unill we arived near the summet our rout became brushy mainly Scruby pine and Juniper the last covered in purple berries comencing our desent the ravines became steep and rugged an rockey the waters flowing westward we suposed we ware on the waters of Powder river one evening late gowing dwn a small stream we came into a Kenyon and pushed ouselves down so far that (that) our horses had no room to turn while looking for a way out it became dark by unpacking and leading our animals down over Slipery rocks three of us got down to a nce open glade where we killed a Buffaloe and fared Sumpiously that night while the rest of the Company remained in the Kenyon without room to lie down we now found it would not do to follow down any stream in these moutains as we ware shure to meet with rocky inaccessible places So with great exertion we again assended to the top of a ridge and ware Quite lucky in gitting a main devide which led us a considerable distance before had to desend again but this portion of the mountain fumished our horses with no food and they began to be verry poor and weak so we left 3 men and five horses behind to recruit while the rest of us proceded on there being some sighn of Beaver in the vicinity and hoping to soon find more where we Might all Stop for a time The Crow Indians being our place of destination a half Breed by the name of Rose who spoke the crow tongue was dispatched ahead to find the Crows and try to induce some of them to come to our assistance we to travel directly west as near as circumstances would permit supposing we ware on the waters of Powder River we ought to be within the bounds of the Crow country continueing five days travel since leaveing our given out horses and likewise Since Rose left us late in the afternoon while passing through a Brushy bottom a large Grssely came down the vally we being in single file men on foot leding pack horses he struck us about the center then turning ran paralel to our line Capt. Smith being in the advanc he ran to the open ground and as he immerged from the thicket he and the bear met face to face Grissly did not hesitate a moment but sprung on the capt taking him by the head first pitcing sprawling on the earth he gave him a grab by the middle fortunately cathing by the ball pouch and Butcher Kife which he broke but breaking several of his ribs and cutting his head badly none of us having any sugical Knowledge what

---

was to be done one Said come take hold and he wuld say why not you so it went around I asked Capt what was best he said one or 2 for water and if you have a needle and thread git it out and sew up my wounds around my head which was bleeding freely I got a pair of scissors and cut off his hair and then began my first Job of dessing wounds upon examination I the bear had taken nearly all his head in his capcious mouth close to his left eye on one side and clos to his right ear on the other and laid the skull bare to near the crown of the head leaving a white streak whare his teeth passed one of his ears was torn from his head out to the outer rim after stitching all the other wounds in the best way I was capabl and according to the captains directions the ear being the last I told him I could do nothing for his Eare 0 you must try to stich up some way or other said he then I put in my needle stiching it through and through and over and over laying the lacerated parts together as nice as I could with my hands water was found in about ame mille when we all moved down and encamped the captain being able to mount his horse and ride to camp whare we pitched a tent the onley one we had and made him as comfortable as circumtances would permit this gave us a lisson on the charcter of the grissly Baare which we did not forget I now a found time to ride around and explore the immediate surroundings of our camp and ascertained that we ware still on the waters of shiann river which heads almost in the eastern part of the Black hill range taking a western course for a long distance into an uneven vally whare a large portion of (of) the waters are sunk or absorbd then turning short to the east it enters the Black hill rang though a narrow Kenyon in appeareantly the highest and most abrupt part of the mountain enclosed in immense cliffs of the most pure and Beautifull black smooth and shining and perhaps five hunded to one thousand feet high how this slate extends I cannot tell We passe through this slate Quarry about 2 miles and one of the men observed here or at some such place Mosses must have obtained the plates or tables on which the declogue was inscirobed some miles farther west I visited place of a different character containing Quite a grove of Petrifid timber standing laying and inclining at various angles one stub in Peticular wa so high that I could barely lay my hand on the top sitting in the saddle the body and main branches scatered on the ground dismouted and picked up several fragments which ware so hard so to bring fire fom steel A mountaneer named Harris being St Louis some yers after undertook to describe some of the strange things seen in the mountains spoke of this petrified grove in a restaurant whare a caterer for one of the dailys was preset and the next morning his exagerated statement came out saying a petrified forest was lately dicovered whare the trees branches leaves and all were perfect and the small birds sitting on them with their mouths open singing at the time of their transformation to stone This is a fine country for game Buffaloe Elk Bare deer antelope &c likewise it produces some Hazel nuts Plumbs white thorn Berries wild currant large and of fine flavour and abundance of nutricious grass and some land that would bear cultivation after remaining here ten days or 2 weeks the capt. Began to ride out a few miles and as winter was rapidly approaching we began to make easy travel west ward and Struck the trail of Shian Indians the next day we came to their village traded and swaped a few horses with them and continued our march across a Ridge mountains not steep & rocky (in general) but smooth and grassy in general with numerous springs and brook of pure water and well stocked with game dsending this ridge we came to the waters of Powder River Running West and north country mountainous and some what rocky

Narrative, by James Clyman

---

“Rose with 15 or 16 Crow Indians came to our camp as soon as we raised a fire in the evening they had been watching for two days passed to assure themselves that no Shians were with us they and the Shians being at war they the Crows brought us several spare Horses which relieved our Broke down animals and gave us a chance to ride but they caused us to travel to fast for our poor horses and so Capt Smith gave them what they could pack sending Rose with them and we followed at our own gait stoping and Traping for beaver occasionly Crossing several steep and high ridges which in any other country would be called mountains Crossed Shell river Quite a stream running into the bighorn as I believe the mountains here do not appear to have any rigular direction but run in all directions are tolerable high but not generall precipitous Before laving this perticular Region I think it the Best Supplied with game of any we passe through in all our Travels and therefore do not wonder that the Indian would not give it up and if it is not too cold there some soil that will bear cultivation we ware there through the month of November the nights war frosty but the days ware generally warm and pleasant on Tongue river we struck the trail of the (of the) Crow Indians Passed over another ridge of mountains we came on to Wind River which is merely another name for the Big horn above the Big horn Mountain the most of this Region is barren and worthless if my recollection is right from the heads of the Shian untill we came on to Wind river we ware Bountiffully supplied with game but here we found none at all two causes may be assigned for this first the country not being well supplied naturely an Second the Crows haveing passed recntly through they had killed and drove off all the game in our reach our meals being few and far between our only hope being to push a head and overtake the Crow village The weather being cold and blustry and I thought the River was well named slight Snows and Strong north winds prevailed continually our horses and urselves became completely exhausted before we reached the main Encampment Still passing up Wind river untill we came immediatly north of Freemont peak on the Wind River Mountain, whare we halted for the winter. The vally is here narrow and uneven but tolerable well set in grass and Buffalo plenty at the time of our arival several grand hunts taking place which being the first I had witnessed I will attempt to give some description the whole grown male population turning out Early in the morning and taking rank along on each side of a narrow vally those on fleetest horses taking a circuit and getting behind a large herd Bufflo drove them pell mell down the vally those Stationed on the sides falling in as they passed they run down the Buffaloe so that old and slow could catch them and even men on foot Killed them with Bow and Arrow the Squaws old men and children following and Buchering and secureing meat and skins as fast as possible the night after this grand hunt not more than half the people came in to camp they remaining out to watch the wolves fom the meat untill they could get it packed in dying now commenced on a grand scale and wood was in demand

“In a few days we moved a short distance to whare wood was more plenty and had another gran hunt after which individuals ware allowed to hunt at their pleasure all though this vally is in heart of the rocky Mountain range Snow did not fall deep and every Clear day it thawed whare the sun struck fairly In the second grand chase I did not go out on horseback as in the first but took it on foot with the foot men the day being too cold for pleasant riding we proceeded to the lower part of the vally whare the stream that passes through the vally enters a narrow Kenyon it being 6 or 7 miles from whare the race commenced and standing on a cliff nealy ove the

---

buffaloe we had rare Sport shooting them on enquiry as to how many were slaughtered that day every one said a thousand or upwards thi I did not dispute thinking it fell near the fact myself and about 20 Indians who stood on the rocks of Kenyon Killed Seventy by my own count It is remarkable the amount of cold these Crows can withstand I have frequently seen them dozens of them runing bufaloe on horseback for hours together all their bodies naked down to the belt around their waists and dismount with but a slight trimble and many of them take a bath every morning even whn the hoar frost was flying thick in the air and it was necessary to cut holes in the ice to get at the water

“They put their children to all kinds of hardships and the femals in particular pack the littl girls and dogs when on march the whole employment of the males being hunting and war and at the time we were there at least one third of the warriors were out in war parties in different directions they being in a state of warfare with all the neighbouring tribes in February we made an effort to cross the mountains north of the wind River nge but found the snow too deep and had to return and take a Southern course east of the wind river range which is here the main Rocky mountains and the main dividing ridge between the Atlantic and Pacific

“In traveling up the Popo Azia a tributary of Wind River we came to an oil springe neare the main Stream whose surface was completely covered over with oil resembling Brittish oil and not far from the same place were stacks Petrolium of considerable bulk Buffaloe being scarce our supply of food was Quite scanty Mr Sublett and my self mounted our horses one morning and put in quest of game we rode on utill near sundown when we came in sight of three male bufalo in a verry open and exposed place our horses being too poor to run we made an effort to aproach them by crawling over the ice and snow but our game saw us and was about to brake when we arose and fired luckeyly we broke ones Shoulder had we had our horses at hand so as to mount and follow we would soon had meat but our horses were narely a mile Distant so Sublett went back for our horses and I loaded my rifle and followed the wounded buffalo there being an uneven riadge about a mile distant in the direction the game went and (and) my hope was to head him there and git another shot I ran with all my speed and fortunately when I oame out of cover was in easy gun shot when all breathless nearly pointing my in the direction of the game to my surprise I gave him a dead Shot bfore I could reload he fell dead in a steep gutter where I could not commence butcering untill Sublett came up to assist me night came on before we got our meat buched we gatherd some dry sage and struck a light by which we got of a small Quantity of meat Shortly after the sun left us the North wind arose and grew stronger and stronger and a cold frosty snow commenced falling before finished our suppers there being no wood and sage being small and scarce and scattering what little fire we had in all directions we spread down our scanty bed and covered ourselves as close as possbele from the wind and snow which found its way through ever crevice

“Although the wind blew and the fine frosty snow crept in and around us this was not the worst for the cold hard frozen earth on which we lay was still more disagreeabi so that sleep was out of the Question by turning every method for rest day light at last apeared when we consulted what we had best do under the circumstances and it was agre that I should arise and gather some

Narrative, by James Clyman

---

sage brush which was small and scarce and would remain under the Buffalo robe and keep his hands warm if possible to strike fire. But all our calculations failed for as soon our hands became exposed to the air they became so numb that we could not hold the flint and steel. We then resorted to our guns with no better success for the wind was so strong and for the want of some fine material to catch the fire in. We or my comrade rapped himself in his robe and laid down after a great struggle I made out to saddle my horse and was about to leave the inhospitable. Not wishing to leave my friend I asked him if he could ride if I saddled his horse but he thought not and was unwilling to try. I then made several unsuccessful efforts to obtain fire. Just as I was about to mount and leave I ran my hand in the ashes to see if any warmth remained. To my joy found a small coal of fire alive not larger than a grain of corn. Throwing it in to hand full of material I had gathered it started a blaze in a minute and in one minute more I had a fine fire. My friend got out and crawled up to my side. Drawing our robe around our backs we tried to warm ourselves but the wind being so strong the smoke and fire came into our faces by the back current. I saddled the other horse packed up the meat while Sublet gathered sagebrush to keep up a fire which was no little job for carried away almost as fast as he put it on. At length we mounted and left. I put my friend ahead and followed urging his horse along. We had about four miles to timber I found I would be liable to freeze on horseback so I got off and walked it being a north inclination the snow was about one foot deep. I saw my friend was too numb to walk so I took the lead for the last half mile and struck a grove of timber where there was an old Indian but one side of which was still standing. I got fire almost immediately then ran back and whopped up my friend's horse. Assisted him to dismount and get to the fire. He seemed to have no life to move as usual he laid down nearly asleep while I went broiling meat on a stick. After awhile I roused him up and gave him his breakfast when he (he) came to and was as active as usual.

“I have been thus particular in describing one night near the summit of the Rocky mountains although a number similar may and often do occur

“We now moved over a low ridge and struck on Sweet Water since ascertained to be a tributary of the Platte river. It was cold and clear the evening that we encamped on Sweet water many of the south sides of the hills were bare of snow. Buffalo scarce and rations limited. Some time in the night the wind arose to a hurricane direct from the north and we had to keep awake and hold on to our blankets and robes to keep them from flying away. In the morning we gathered a large pile of dry pine logs and fixed up our blankets against the wind but the back current brought the smoke and ashes into our faces. In fifteen or twenty minutes after taking down our screen our fire blew entirely away and left the wood but no fire. We then cleared away the snow under the lee of a clump of willows fixed ourselves as comfortable as circumstances would permit. Laid to sleep the wind still blowing all day and night without abatement. The next morning several of us wrapped ourselves in our robes and (and) attempted to take some exercise following down the stream. It became confined in a narrow canyon. Under the points of some rocks we would be partly secure from the cold blast. Toward evening my companion Mr Branch saw a mountain sheep on the rocks almost perpendicular over us and fired at him. Had the good luck to hit him when he came tumbling down to our feet. We soon prepared him and packed him to camp where efforts were made to broil small pieces but soon gave it up the wind still keeping up such

Narrative, by James Clyman

---

a continual blast as to prevent even a starving mountaneer from satisfying his hunger we all took to our blankets again it being the only way to keep from perishing the blast being so strong and cold Late in the night however the lull came on and being awake I arose and found it Quite comfortable I struck up a fire and commenced cooking and eating by broiling thin slices of meat after a short time my comrades began to arise and we talked cooked eat the remainder of the night in the morning we started out in various directions some to look for game and some to look for more comfortable Quarters our present camp being close to the East foot of the Wind River mountain and on a low divide directly south of the Wind river valley having a full sweep for the North Wind Caused us such uncomfotabe time Two parties proceeded one in Quest of game the other for a camping ground I went down the sweet water some four or five miles to where the Kenyon opened out into Quite a valley and found plenty of dry aspin wood in a small grove at the Lower end of the Kenyon and likewise plenty of Mountain Sheep on the cliffs which bounded the stream one of which I had the luck to kill and which I Buied in a snowdrift the next morning we packed up and moved down to the Aspin grove where we remained some two or three weeks Subsisting on Mountain sheep on our way to our new camp we ware overtaken by one of the heaviest falls of snow that I ever witnessed with but verry slight wind the snow came down in one perfect sheet but fortunately it did not las but a short time and we made our camp in good season as I before said we did not leave this camp until the Mountain Sheep began to get scarce and wild and before leaving we here made a cash of Powder Lead and several other articles supposed to be not needed in our Springs hunt and it was here likewise understood that should circumstances at any time seperate us we would meet at this place and at (and) all event we would all met here again or at some navigable point on the stream below at or by the first June according to our recording on leaving sweet water we struck in a South westerly direction this being some of the last days of February I think in 1825 our stock of dried meat being verry scant we soon run out entirely -no game to be found It appears this winter was extremely dry and cold one fourth of the gound on those ridges south of Sweetwater being entirely bare from the effect of strong west winds which carried the snow over to the East and south sides of the ridges about sixth morning out Mr Sublette and myself ware in the advance looking out for game a few antelope had been see the evening previous a slight snow falling we came on the fresh track of a buffalo and supposing he could not be far off we started full speed after him in running about a mile we came in sight of him laying down the animal being thick a hevvy it difficult to hit a vital part when he is laying down we consulted as to the surest way disabling him and came to the concusion that I fire at the rump and if posible breake his coupling while Sublett would fire at his Shouldei and disable him in forward parts so we greed Sublett counting one two three while we both drew aim and both pull trigger at the word fire when both of our rifles went of simutanu and both effected what we desired the animal strugling to rise but could not Sublett beat me in reloading and approached and shot him in the head Just as the company came in sight on a hight of land when they all raised a Shout of Delight at sight many not having tasted food for four days & none of us from two to three now you may suppose we had a happy time in butchering

“Our company coming up we butchered our meat in short order many of the men eating large slices raw we packed up our meat & traveled on until in the afternoon in hopes of finding water but did not, succeed but finding large clumps of sage brush we camped all eaving & part of the

Narrative, by James Clyman

---

night continuing on we found we had crossed the main ridge of the Rocky mountain in the month of January 15 days without water or only such as we got from melting snow our horses eating snow and living fairly when beaver ground was found although we struck Sandy about noon some of the men went immediatly to cutting the ice with thier Tomahauks called out frose to the bottom I walked down they had got down the length of thier arms and was about to give it up I pulled out one of my pistols and fired in to the hole up came the water plentiful for man & horse there being a small growth of willows along the stream we had wood & water plenty but our supply of meat had given out passed down the stream on day in the eavning a buffalo was killed and we were all happy for the present this stream and one other we passd and on the 20th of February we reached Green river where I had the luck to kill two wild geese here Capt Smith with seven men left us he going farther south we left to trap on the branches of the stream as soon as the ice gave way in a few day wild geese became plenty on thawy & Springy places the ice giving way we found beaver plenty and we commenced trapping We found a small family of diggers or Shoshone Indians on our trapping ground whom we feed with the overplus of Beaver the snow disaparing our diggar friends moved off without our knowledge of when or where and when they had gone our horses runing loose on night they all disapared and we were unable to find them or in what direction they had gone we continued trapping on foot with fair success for about six weeks when the 10th of June was drawing close and we had promised all who were alive to meet at our cash on Sweet Water accordingly we cashed traps & furs hung our saddle & horse equipments on trees & set out for Sweet water the same day about noon on turning the point of a ridge we met face to face with five & six indians mounted on some of our horses preparing to take possession of as many horses each on taking hold of a lariat and ordering our friens to dismount but after a short consultation we decided to go with them to thier camp about one mile up a steep mountain where we found six lodges 18 men with a large supply of squaws & children & our old acquaintences that we had fed with the fat of Beaver while the earth was thickly covered with snow we made our camp on rising ground in easy gunshot of thier village all our horses wer given up but one and we concluded this one was hid in the mountain so we caught one of the men tied him fast told them we intended to kill him if our horse was not given back which soon brought him we gave them a few presents and left for our old camp dug up our cashe cut down our saddles and again started for Sweet water this brought us to the 15th of June no sight of Smith or his party remaining here a few days Fitzpatrick & myself mounted & fowling down stream some 15 miles we concluded the stream was unnagable it beeing generally broad & Shallow and all our baggae would have to be packed to some navigable point below where I would be found waiting my comrades who would not be more than three or four days in the rear I moved slowly down stream three days to the mouth where it enters the North Platt Sweetwater is generafly bare of all kind of timber but here near the mouth grew a small thick clump of willoes in this I cut a lodging place and geathered some driftwood for a fire which I was just preparing to strike fire I heard human voices on the stream below carfully watching I saw a number of Indians advance up along the opisite side of the stream being here about 4 rods wide they come up & all stoped on the other side there being a lot of dry wood they soon raised 4 or 5 fires turned loose or tithered all their horses thier being 22 Indians and 30 horses I did not feel myself perfectly safe with so large number a war party in my rear vacinity recoclecting that for 1/2 mile back the country was bare & sandy the moon a few days before

the full I could be trased as easily as if it had been snow so I walked backward across the sandy reagon out to a narrow rocky ridge & following along the same to where the creek broke through it I crossed over to the east side and climbing a high point of rocks I had a fair vew of my disagreeable neighbors at about 40 rods distance some of them lay down and slept while some others kept up the fire about midnight they all arose collected up thier horses too of the horses crossed over the creek two Indians on horse back folowed after when a shout was raised & eight or ten mounted went to assist hunting the fugitives after an hours ride backward & farword they gave up & all started of north I crawled down from my perch & caught a few moments of cool feverish sleep. next day I surveyed the canyon through which the river passes fearfully swift without any perpendicular fall while on one of the high Cliffs I discovered about 20 Ind approach the stream right where I had left a bout halfhour before all on foot they soon mad a small raft of driftwood on which they piled their war equipments & clothes swam the stream and went South I returned to my observatory on Sweetwater I remained in this vacinity eleven days heard nothing of my party began to get lonsome examened my store of amuniton found I had plenty of Powder but only eleven bullets reconitering all the curcumstances in my mind I thought if I spent a week in trying to find my old companions & should not be lucky enough to meet with them I would not have balls enough to take me to civilisation & not knowing whither I was on platt or the Arkansas on the 12th day in the afternoon I left my look out at the mouth of Sweetwater and proceeded down stream knowing that civilation could be reached Eastward the days were quite warm & I had to keep near the water nothing occured for several day worth mentioning at length I found a bull boat lying drifted up on a sand bar and the marks of a large Indian ranch on the main shore I knew by the boat some white men had here for the Indians never made such boats this gave me a fient hope of meeting some white men in this Indian world but continuing down stream several days I saw several persons running Buffalow on the hills on the other side of the river but to far to tell who they were Great herds of Buffalo were drivin across the river right around me I shot one and dried some meat remained here two days in hopes of meeting some human beeing even a friendly Indian would be a relief to my solitude but no person appearing I moved off down stream some two or three days after I came into a grove of large old cottonwoods where a number of village Martins were nesting

“I laied down in the shade and enjoyed their twittering for some hours it reminded me of home & civilisation I saw a number of wild horses on the and I thought I would like to ride there is what hunters call “creasing”; this is done by shooting the animal through the neck close above the main bone this stuns them for a minute or more The next buffalo I killed I made a halter, I was forced to keep near the watter for there were no springs or streams on the plain. A fine black stallion came down to drink and beeing in close gun shot I fired as soon as he had gained the main bank he fell & I ran up & haltered him but he never moved for his neck was broken so I missed my wild ride still continuing my jurny at length I came to a large recent lodge trail crossing the stream I thought it would be plesent to communicate with humans even though it were Indians so I plunged into the stream and crossed over the water was only breast deep any where the villiag was about two miles out in the hills on my approach to them I did not attract thier attention untill within a few rods of thier lodges when a lot of men & boys came running up to me yelling most hidously when one man ran up & snatched my butcher knife and waved it across

Narrative, by James Clyman

---

my breast I thought this a bravado so bared my breast for the fated streike & this perhaps saved my life for he immediatly commensed taking such things as suited him others taking my blankets then all my balls firesteel & flint another untied my powder into a rag when one or two cam rapedly up on horseback then they all left one of the mounted me talking very loud & rapidly then he ordered me to mount behind him which I was glad to do he took me to his lodge and gave me to understand that I must not roam around any for some of them were bad and would kill me I remained in his lodge all night and after the morning meal he had three horses brought he & his son each mounted one and told me to mount the other he rode forward his son in the rear we rode basck over the river & about two miles on the trail where I dismounted and went on a foot again they sitting on their horses watched me untill I had passed over half mile when they returned, my hair had not been cut since I left St Louis I lost my hat at the defeat of the Arickrees and had been bareheaded ever since my hair was quite long my friend had beged for my hair the morning before we left his lodge I had granted his request so he barbered me with a dull butcher knife before leaving me he made me understand he loved me that he had saved my lief and wanted the hair for a memento of me as soon as my friends were fairly out of sight I left the trail fearing some unfriendly Indian the grass was thick and tall which made it hard to brake through so I frequently took ridges which led me from my course the second day in the afternoon I came to a pool of water under an oak tree drank sat down under the shade a short time ate a few grains of parched corn (which my friends had given me) when I heard a growling of some animals near by I advanced a few steps and saw two Badgers fighting I aimed at one but my gun mised fire they started off I geathered some bones (horse brobly) ran after & killed both I struck fire with my gunlock skined & roasted them made a bundle of grass & willow bark. it rained all the later part of the night but I started early in the morning the wet grass beeing more pleasant to travel than the dry it continu showery for several days the mosquitos be uncommonly bad I could not sleep and it got so damp I could not obtain fire and I had to swim several rivers at last I struck a trail that seamed to lead in the right direction which I determind to follow to its extream end on the second day in the afternoon I got so sleepy & nervous that it was with difficulty I kept the trail a number of times I tumbled down asleep but a quick nervous gerk would bring me to my feet again in one of these fits I started up on the trail traveled some 40 rods when I hapened to notise I was going back the way I had come turning right around I went on for some time with my head down when raising my eyes with great surprise I saw the stars & stripe waving over Fort Leavenworth I swoned emmediatly how long I lay unconcious I do not know I was so overpowered with joy The stars & stripes came so unexpected that I was completely overcome being on decending ground I sat contemplating the scene I made several attemps to raise but as often fell back for the want of strength to stand after some minnites I began to breathe easier but certainly no man ever enjoyed the sight of our flag better than I did I walked on down to the fort there beeing no guard on duty I by axident came to the door of Cap Rileys quarters where a waiter brought out the Cap who conducted me to Generl Leavenworth who assigned me a company & gave me a writen introduction to the settelers where I got credit for a change of clothing some shoes & a soldiers cap I remained here receiving rashions as a soldier for ten days when to my surprise Mr Fitzpatrick Mr Stone & Mr Brench arived in a more pitible state if possible than myself. Fitzpatrick went back to the cashe after leaving me they opened the cashe found the powder somewhat damp spread

WHO DISCOVERED THE SOUTH PASS?

The Detroit Advertiser having asserted that Col. Fremont was the discoverer of the South Pass of the Rocky Mountains, a correspondent of the Detroit Free Press denies the truth of statement and the editor of that journal publishes the following letter from Ramsay Crooks, Esq., of New York:—  
New York, June 28, 1856.

My Dear Sir:— Just as I was about closing my letter to you of yesterday's date, I received the Detroit Free Press of the 21st inst., containing a laudation of Col. John C. Fremont taken from the Detroit Advertiser of the previous day and which (if it had been true) is not, in my humble opinion, a very important item in making up the essentials of such a man as should become President of this glorious confederacy.

I, however, presume it is intended to exhibit him as endowed with uncommon intrepidity and daring in exploring so wide a region, surrounded by savages and grizzly bears, thereby proving great firmness of character, so very desirable, but unfortunately so very rare in the head of a great nation.

But even if the Colonel had discovered the 'South Pass' it does not show any more fitness for the exalted station he covets than the numerous beaver hunters and traders who passed and repassed through that noted place full twenty years before Col. Fremont had attained a legal right to vote, and were fully his equals in enterprise, energy, and indomitable perseverance, with this somewhat important difference, that he was backed by the United States treasury, while other explorers had to rely on their own resources.

The perils of the 'South Pass,' therefore, confer on the Colonel no greater claim to distinction than the trapper is entitled to, and his party must be pressed very hard when they had to drag in a circumstance so very unimportant as who discovered the 'South Pass.'

Although the Free Press conclusively proves that the Colonel could not be the discoverer of the 'South Pass,' the details are not accurate and in order that history (if it ever gets there) may be correctly vindicated, I will tell you how it was.

Mr. David Stuart sailed from this port in 1810 for the Columbia River on board the ship 'Tonquin' with a number of Mr. Astor's associates in the 'Pacific Fur Company,' and after the breaking up of the company in 1814, he returned through the Northwest Company's territories to Montreal, far to the north of the 'South Pass,' which he never saw.

In 1811, the overland party of Mr. Astor's expedition, under the command of Mr. Wilson P. Hunt, of Trenton, New Jersey, although numbering sixty well armed men, found the Indians so very troublesome in the country of the Yellowstone River, that the party of seven persons who left Astoria toward the end of June, 1812, considering it dangerous to pass again by the route of 1811, turned toward the southeast as soon as they had crossed the main chain of the Rocky Mountains, and, after several days' journey, came through the celebrated 'South Pass' in the month of November, 1812.

Pursuing from thence an easterly course, they fell upon the River Platte of the Missouri, where they passed the winter and reached St. Louis in April, 1813.

The seven persons forming the party were Robert McClelland of Hagerstown, who, with the celebrated Captain Wells, was captain of spies under General Wayne in his famous Indian campaign, Joseph Miller of Baltimore, for several years an officer of the U. S. army, Robert Stuart, a citizen of Detroit, Benjamin Jones, of Missouri, who acted as huntsman of the party, Francois LeClaire, a

A NARRATIVE OF COLONEL ROBERT CAMPBELL'S EXPERIENCES IN THE  
ROCKY MOUNTAIN FUR TRADE FROM 1825 TO 1835

---

A NARRATIVE OF COLONEL ROBERT CAMPBELL'S EXPERIENCES IN THE ROCKY  
MOUNTAIN FUR TRADE FROM 1825 TO 1835

PREFATORY

The following narrative by the late Col. Robert Campbell, contains a sketch of his life and remarkable experiences while engaged in the Rocky Mountain Fur trade, during a period of ten years - from 1825 to 1835.

It was dictated to me in the year 1870, while I was accompanying him and Hon. Felix R. Brunot, President of the Board of Indian Commissioners as their Secretary, on a mission to Fort Laramie, to treat with Red Cloud. The notes were taken by installments after various intervals on our trip, while the narrator was in the reminiscent mood, and each recital was suspended as soon as he found it tiresome.

Mr. Brunot who was made acquainted with my purpose, expressed his approbation, because no connected account of that portion of Col. Campbell's life, had ever been given to the public.

In fact, this is the only record ever authorized or made of Col. Campbell's experiences.

With a modesty characteristic of him, he avoided notoriety, and although the names of Sublette and Campbell, in the "Adventures of Capt. Bonneville," are given honorable mention in the glowing style of Washington Irving; yet Mr. Campbell, instead of feeling flattered and indisposed to criticism, told me that the account there given on the Blackfeet fight at Pierres Hole, in which he participated was erroneous, and mixed up with incidents that transpired in other encounters.

He said further that he designed to have that account corrected.

I have frequently been solicited by the late Albert Todd and others to write out the notes which I made under the circumstances above related, for the use of the Missouri Historical Society, but partly through a fault of procrastination and partly because of the pressure of other duties, I failed to comply with these requests.

This M.S. is now prepared expressly for and at the instance of Mr. Hugh Campbell and his brothers - the sons of my deceased and venerated friend.

In reading over my notes after the lapse of so many years, I find some breaks or lapses in the narrative, where evidently I had placed a dependence on memory to fill up the omissions.

I now regret they were not fuller, because the strength of my memory was inadequate to tide over the long and unexpected delay in writing out the story.

I have taken pains to transcribe the notes exactly as dictated, without any attempt to color or expand the plain, unpretentious narration.

I cannot close these prefatory observations without adding a few remarks on my own account concerning the subject of this sketch.

The privations perils endured by Col. Campbell in that portion of his life which is treated of here, doubtless laid the foundation of a prosperous business career and his name became widely known throughout the Far West as a merchant banker, having dealings with the Traders throughout the vast region from Santa Fe to the mouth of the Yellowstone.

With these people his credit stood high and unimpeached, as the following incident told me by Gen. Raynolds, of the U.S. Engineer Corps, who conducted an exploring expedition across the Bad Lands on the Upper Missouri, by order of the government in 1857, will illustrate.

Before starting out from Fort Pierre, the General said, he needed money and supplies for the outfit. He applied to the Traders there for means, but they refused credit to the United States,

A NARRATIVE OF COLONEL ROBERT CAMPBELL'S EXPERIENCES IN THE  
ROCKY MOUNTAIN FUR TRADE FROM 1825 TO 1835

---

and would only accept drafts on Robert Campbell of St. Louis, whom they knew and would trust sooner than the Government.

There was something grand in such a distinction as this, no matter what the circumstances. One thing more; on one occasion Col. Campbell stated to us the circumstances which induced him to go to the Mountains in 1825. He came to St. Louis he said, when a young man, seeking employment.

He was an invalid, pale and subject to hemorrhages of the lungs.

He saw old Doctor Farrar, who advised him, saying: "Young man your symptoms are consumptive, and I advise you to go to the Rocky Mountains. I have before sent two or three young men there in your condition, and they came back restored to health and as hearty as bucks."

This latter statement I furnished, I believe, at the time of Col. Campbell's death for the obituary notice in the Missouri Republican.

St. Louis, July 1886

William Fayel.

In 1825 I started from St. Louis, joining Gen. Ashley in an expedition to the Rocky Mountains. Gen. Ashley had just returned from a successful trade in the mountains.

Henry and Ashley in 1822 went up to the mouth of the Yellowstone, where they had a fort.

In 1823, Ashley had a fight with the Arickerees at the old Arickeree village on the Missouri river. He lost twenty men.

He sent news of the fight to Council Bluffs, and Col. Leavenworth went up with troops and destroyed the Arickeree village.

At that time there was the Missouri Fur Company, composed of Pilcher, Fontenelle and other partners. They failed about that time.

Another company, Pratte, Chouteau and Co., of St. Louis was formed. When Ashley was defeated all these men volunteered their assistance. The Sioux joined them, they being at war at the time with the Arickerees. Subsequently Astor joined Pratte, Chouteau & Co., and their concern was merged into the American Fur Company.

As before intimated, an expedition was in the fall of 1825 - fitted out, under the firm of Ashley & Smith, to go out and trade west of the Rocky Mountains.

Jedediah Smith was Ashley's partner. He was a very efficient man.

Smith led the expedition, which I joined and Gen. Ashley remained in St. Louis during the ensuing winter.

We left St. Louis on the first of November. It was wrong to start at that season, because we had the winter to encounter.

The animals - mostly mules - were purchased for the expedition in old Franklin Howard County, then a great point of trade to New Mexico.

The mules were all shipped to St. Louis, and all our party mounted.

Our camp was then at Cote Brillante, a beautiful grassy hill, six miles from the City, west of the Prairie House.

We first took our animals to our camp, then located just west of Seventh Street, and east of the Catholic College, on the present Washington Avenue.

The men were assembled there, but we made our final start from Cote Brillants.

The expedition consisted of sixty men, all provided with pack animals.

A NARRATIVE OF COLONEL ROBERT CAMPBELL'S EXPERIENCES IN THE  
ROCKY MOUNTAIN FUR TRADE FROM 1825 TO 1835

---

We traveled on the South side of the Missouri River. The first Indians we saw were the Kaws, in Jackson County.

That year Jackson County was purchased from the Kaws and Osages.

The Indians came down to St. Louis and made the treaty with Governor Clark, that same year.

The Indians all bought umbrellas and walked in Indian file, bare headed with the umbrellas spread over them, making a ludicrous appearance. The first thing they had done on reaching town was to buy up all the red umbrellas.

They were large, fine looking Indians.

We found little settlements all along our route, but they became more sparse in the upper counties until we got to Jackson County, the Indian title to which had been extinguished, as stated that year.

At the mouth of the Kaw, just above the site of Kansas City, Ely and Curtis were located as traders. We bought beef off them. We crossed the Kaw and on the first day of January reached Fort Riley. We wintered all along the Republican Fork, and suffered very much for want of provisions. One third of our mules died that winter, and we sent back for more mules to St. Louis.

The Republican Pawnees had a mud village on the Republican Fork, on the South side fifty miles north of Grand Island.

Some of our men knew where the Indians had formerly cached their corn and they dug it up.

When the Pawnees returned to their village, they having gone out on the Buffalo hunt, we paid them for so much of the corn as we had taken. The Republican Pawnees, three years after we were there, joined on the Platte with the Grand Pawnees, who were then on the Loupe Fork.

The chief of the Republican Pawnees was Ish-Ka-ta-pa. Mr. Smith and myself staid in his lodge.

We had no interpreters. We lived on the corn taken from the caches, and killed some buffalo bulls on the Smoky Hill Fork while going out.

That was the only meat we had except that we got occasionally a wild turkey.

The Kaw village was then at the junction of the Blue and Kaw rivers.

We followed up the Republican Fork from the Pawnee village to the Platte.

We suffered great privations until joined by General Ashley from St. Louis.

He overtook us at Grand Island on the Platte about the first of April with supplies. He then sent off Smith and Harris to the Trappers in the Mountains, to arrange in advance for a rendezvous, which was about twenty miles north of Salt Lake in Utah, called Cache or Willow Valley. At O'Fallon's Bluff, the expedition was joined by Bill Fallon, after whom the Bluffs were named. His name was Fallon; not O'Fallon. He had wintered there.

His father was a wagon maker in St. Louis. He was a strong, athletic man, as spry as a cat, and a great horseman.

His weight was 200 pounds. He could mount a horse on the run and pick up a sixpence from the ground while on the gallop.

Hiram Scott was also of our party, he having left St. Louis with us.

He wintered with us on the Kaw and Republican but afterward left us at Willow Valley, and in the spring of 1827 while descending the Platte in a canoe, was taken sick and left behind by his associates and was devoured by wolves.

His bones were found the next year by Sublette and Jackson. Scotts Bluff was named after him.

Col. A. G. Boone, also was with the party, starting with us from St. Louis.\*

A NARRATIVE OF COLONEL ROBERT CAMPBELL'S EXPERIENCES IN THE  
ROCKY MOUNTAIN FUR TRADE FROM 1825 TO 1835

---

\*Note - Col. Boone was a grand-son of the famous Daniel Boone. In 1870. Col. Campbell met him at Denver, he having come there from Fort Sill, where he had been Indian Agent.

They recalled reminiscences of their trip to the mountains in 1825. Near the foot of the range where Denver now stands, they made dried meat for the mountain trip.

On returning over the mountains Boone's horse froze to death and he had to carry his gun to Lexington, Mo.

He died three years ago - W.F.

Gen. Ashley brought with him twenty-five men from St. Louis. We continued our march, meeting with few adventures. Everybody walked except Ashley. A good many of the men - about 25 or 30 - had deserted. They were sick of the trip, having suffered like the rest, almost to the verge of starvation.

At Hames Fork, near Fort Bridger, the Trappers came out to meet us. There were about, from 60 to 75 of them. We were also joined by fifteen lodges of Iroquois, who had left the Hudson Bay Company, and joined Ashley at Cache or Willow Valley. They had met Ashley the year before, where they had made a satisfactory traffic of their peltries with them.

They brought in plenty of Beavers, that being the only fur that would pay the cost of transportation.

Beaver's fur cost in the mountains \$3 per pound.

They brought in the States \$5 and upwards and in St. Louis \$5.25 to \$6 per pound, and from \$6 to \$7 in New York.

The trading companies from the states would start from the Western boundary of Missouri, about the first of April when the grass was good. All mounted on pack animals, each man riding one and leading two. It took usually from 60 to 70 days to get through to the place of destination in the Fur Country.

Ashley & Smiths' Company was the only one from the States there. The Hudson Bay Company, under the treaty of 1818, operated in the Columbia Territory, which was left open to both countries for ten years and again in 1828 extended ten years longer. After a negotiation of many years the joint occupancy finally terminated in compliance with our alternative for "Fifty-four-forty or Fight!"

We remained in Cache valley only a couple of weeks, long enough to complete the traffic with the trappers.

After we left Cache valley, Jackson and Sublette met us on Bear river. Ashley then sold out his interest in the fur trade, to Smith, his partner, and to Jackson and Sublette, the new firm being known as Smith, Jackson & Sublette.

We now had buffalo meat in great plenty.

In fact we found the buffalo in great numbers at the head of Grand Island, after Ashley joined us. It was their grand crossing place in their annual migratory tramps from the Arkansa to the Forks of the Missouri.

They have been there until within four or five years.

While engaged in preparations for trapping the beaver, I will mention some peculiar traits of that sagacious animal. The beaver has a little bag under the tail, or more properly an oil sac near the anus.

A NARRATIVE OF COLONEL ROBERT CAMPBELL'S EXPERIENCES IN THE  
ROCKY MOUNTAIN FUR TRADE FROM 1825 TO 1835

---

The trapper takes this castoreum from this sac, and uses it as bait, it having served the beaver, by providing the where-with to oil himself.

While constructing their dams, some are seen bringing sticks and bushes for the purpose, while others dive to the bottom of the stream and bring up mud to plaster the sticks and bushes of the structure.

They are seen near these dams and at their "lodges" on the banks of the stream, where they ooze out this castoreum, which is understood to be a signal to other beavers. The trappers set their traps at these places. This castoreum, some of the old hunters use in this way. They take a piece of willow, strip off the bark and wash it, so as to leave no scent, as the beaver's sense of smell is exquisite, and then put castoreum on it.

The willow is attached to the trap and floats over it, when the beaver attracted to the smell approaches and is caught. The animal flounders about until drowned, but if he gets on the bank, with the trap, he has been known to bite off his feet to regain his liberty.

The trappers generally set out from camp with eight traps each. When they moved camp they cached what provisions were not necessary for the hunt, as dependence was made on game.

Arriving at good hunting ground a stop was made of some two or three days in a place, or even for one day.

They then set their traps for three or four miles up and down the stream. These trappers consisted mostly of men hired in St. Louis for eighteen months. Then there were what were called free hunters, who lived entirely on what they killed. We seldom had any bread.

When the supplies were brought up in the Summer, about two pounds of bread each, for one-hundred men were brought in for the feast, made once a year, - and only then did they have bread.

Flour cost one dollar for a pint cupful

The trappers would made a feast of batter fried in melted buffalo tallow - a sort of fritter and call their friends around to partake.

Each man brought his pan and his knife, and very little liquor would be sold out - except to the old trappers. The single men among the trappers would mess half a dozen together. The air was pure and perfectly healthy. Every man, on-going to the cities would come back after spending his earnings. It was a bold, dashing life.

From this part of the country they could not carry buffalo skins away, owing to the cost of land transportation.

After the formation of the Company, the partners, Smith, Sublette and Jackson divided up the country between them.

Smith took a party of fifteen or twenty men, and started to go below Salt Lake, where he suffered from want of water.

Eventually they got down on the Colorado river and fell in with a band of the Mohaves.

In crossing the river, part of the men got over, leaving ten on the other side, when the Mohaves, to the number of thirty began to maneuver about in a hostile manner, Smith and the balance of the men with him attacked and killed four out of the thirty. Isaac Gallraith, a powerful man, died from his wounds, subsequently, on the Arkansas, about fifty miles from Bent's fort.

They then went to California. Smith and Turner came back poor and joined us the next Summer, at Sweet Water Lake, which empties into Bear Lake, where the rendezvous of Smith, Jackson and

A NARRATIVE OF COLONEL ROBERT CAMPBELL'S EXPERIENCES IN THE  
ROCKY MOUNTAIN FUR TRADE FROM 1825 TO 1835

---

Sublette was then established.

When Smith left for Colorado, Jackson and Sublette with myself ascended the Snake river and tributaries near the Three Tetons and hunted along to the forks of the Missouri, following the Gallatin, and trapped along across the head waters of the Columbia.

We then came back and wintered in Cache valley, and got our goods which we had cached the season before. On our trip we were abundantly supplied with buffalo, elk, deer and bear all the time.

While we were out and encamped at the forks of Snake river, the Blackfeet came in the day time and took the two fastest horses, belonging to our Iroquois, and cleared themselves.

They got the start and we could not follow.

They knew all about horses, as they were noted for their horsemanship.

The Blackfeet were always at war with us because we were trading with Indians that they were at war with. They were at war with the Snakes, the Crows, the Flatheads and the neighboring tribes. They had fierce contests, and great care was taken to avoid them when on their marauding expeditions.

They would cut off bears feet, and use them as moccasins to steal up and capture horses.

They came up one night, but our Iroquois understood the signs. We had our animals picketed and guarded at night and always had three reliefs in the night. Every man had to mount guard, except the leader of the expedition. It depended on the strength of the party, how many would be on guard. Twenty or thirty men were considered equal to any emergency. It was the habit, to have out two-thirds trapping, the other taking care of camp, no matter how large the party would be.

We came back, as I said, to cache valley and wintered there. On the first of January Sublette with one man, names Mose Harris, started for St. Louis after supplies. As soon as the river broke up we started on a hunt to the waters of seeds-ke-deeagie (Prairie Hen river) so called by the Crows (agie, river) now called Green river. The name is very euphoneous, as pronounced by the Indians. It was called Verde, (Green) by the Mexicans.

It was always thus known to the trappers, and excited their utter disgust, when changed to Verdancy, from Green the American appellation.

An incident occurred in the fall before returning to Cache valley, that created some excitement in the party. We came across the tracks of a bear, and while following it, Jim Bridger, who was in advance, saw a smoke on the head waters of the Missouri.

We, Sublette, Bridger and myself determined to see what it was. As we habitually had to be on the alert when hostile Indians were suspected in our vicinity, we dashed along, until we came to a place where the Indians had camped a month before, leaving some burned logs, from which the smoke still issued. The exploit became known for a long time in camp as "the battle of the burned logs."

When Sublette started to St. Louis for supplies, Jackson and myself returned and rendezvoused at the head of Sweet Water Lake, where Sublette brought up the supplies in the Spring of 1827.

The supplies were furnished by Ashley.

Mr. Bruffee (of Washington County, Mo.) and Hiram Scott, who was the leader of men and knew all about managing men - took the leadership of the party, Bruffee attending to the financial part. Then, Smith started down with another party to California with some 12 or 14 men.

The expedition turned out unsuccessful.

A NARRATIVE OF COLONEL ROBERT CAMPBELL'S EXPERIENCES IN THE  
ROCKY MOUNTAIN FUR TRADE FROM 1825 TO 1835

---

Smith and his party marched through to California, and thence along the coast as far as Umpqua river, collecting furs and loading their pack animals. They found it impracticable to cross the river. Smith took one of his men and proceeded up the river to find a fording place. While absent, his party in camp were attacked by Indians, and all but one of the twelve massacred. The Indians took all the mules, furs and baggage, and everything the company had. The man who escaped fell in with Smith and he with his two companions travelled through a savage and inhospitable country, 300 miles to Fort Vancouver where they met with members of the Hudson Bay Company.

Out of sympathy the company sent a party to the scene of the massacre.

They buried the victims and recovered most of the property from the savage robbers.

In addition to this kind treatment Gov. Simpson proposed to take Smith and all his furs to London, where he could obtain high prices for them. But Smith replied that he had already been under too much obligation to the company and declined the generous offer.

He sold his furs to the company and leaving Vancouver he traversed the country, rejoining his partners, Sublette and Jackson in 1829.

In 1830 they all quit the country having made \$100,000 a large sum for those days.

In 1831, Smith was killed by the Comanches on the Arkansas, while going out to New Mexico. He has a brother, a farmer, now living near De Soto, Mo.

Going back in my statement to the Summer of 1827, Jackson and Sublette that fall came down to St. Louis to get their supplies for the next year.

I then took charge of the Iroquois, and others of the party and went out trapping in the Flathead Country, on the head waters of Missouri and Columbia, and on the Deer Lodge and Bitter Root Rivers. We trapped all through there.

An incident occurred that caused us trouble.

Towards the close of the Fall Season, the Nez Perces joined the Flat Heads to hunt buffalo on the Hellgate river.

The Deer Lodge and the Little Blackfoot forms the Hellgate, and the latter river and the Bitter Root form the Flathead.

The Bitter Root is so named after a bitter root which the Indians eat. They make a feast on it, known as bitter root, which is agreeable to the taste. It is a white root with three or four prongs; very pleasant to the palate after one has become accustomed to eating it. It fills the place of the Bread fruit and would be a good substitute.

Another root called commace, is baked like a "pone" of bread and they slice it off.

It is a bulbous root like the onion; is sweet and pleasant to the taste, and the Indians make feasts of it likewise.

We came through the Shoshone Cave, or Big Hole of the Missouri, on Wisdom River - a valley fifty miles long, very broad and beautiful, situated on the top of the divide between the waters of the Atlantic and the Pacific.

The buffalo were very abundant and were seen in countless numbers.

The Indians would not allow any to be killed, as they wanted to make a "surround."

One of my men caught a beaver.

We had nothing to eat. My French cook roasted the beaver. I ate a small piece to quiet my appetite, as I had had nothing to eat for a day or two. Just after I ate, I felt pains, as did all the others who ate it.

A NARRATIVE OF COLONEL ROBERT CAMPBELL'S EXPERIENCES IN THE  
ROCKY MOUNTAIN FUR TRADE FROM 1825 TO 1835

---

The beavers were poisoned from eating the wild parsnip. Hence the name of the river, Malade. Every one who ate these beavers were poisoned. The result of the "Surround" was that the Indians came in with any quantity of buffalo meat but none of us would enjoy it. We had pains in the neck, head and other disagreeable sensations in the stomach and bowels.

The old trappers knew what was the matter and attributed our sickness to eating poisoned beaver. We had plenty of buffalo afterwards.

When the hunt was over we started to winter in Cache valley, there being good feed for the animals. The buffalo ranged into the valley just above.

Salt Lake was too far away for us to go for buffalo, although a good place to winter.

When, on our way in, we came on a camp of Blackfeet, at the head of the Jefferson, we camped there.

Some of our men went to the village and found they had fortifications built up to protect them.

The Blackfeet came into our camp and we were suspicious of trouble.

We started off early in the morning to go on the Snake river, and the Indians followed us. At a little creek I brought our men under shelter of a bank.

The Indians attacked us, and our men fired upon them. Old Pierre, the chief of our Iroquois was killed. He had advanced too far.

One of the most notable incidents was, that we had a Flathead Indian and a squaw accompanying us. He started to fight the Indians. His squaw followed and cheered him on. The poor fellow was shot through the head, but we brought him into camp. He lived four or five days after he was shot. The eventful valley in which Pierre met his fate, has perpetuated his name as "Pierre's Hole."

We remained there several days.

We found a portion of old Pierre's remains - a portion of his feet - in the Blackfeet village - after they left.

Whilst we remained there, two Indians, who had been out stealing, were coming down in an opposite direction. The Iroquois shot them, and they were the first Indians that I saw scalped. The Iroquois put their feet on the dead body, fastened their fingers in the hair, and running the knife around the skull, yanked the scalp off in an instant. It was a horrid sight.

Our Iroquois and the party with me concluded to go no further and returned to the Flathead camp, where they remained during the winter.

I with one Frenchman and a Flathead Indian, came on to Cache valley, reached there safely and after remaining a few days I went out on my mule to hunt.

Whilst I was gone, a party of Crows that had been visiting the Snakes at Salt Lake took four of our horses; the Indian and Frenchman whom I had left in charge concealing themselves. (Two years afterwards I saw the horses in the Crow village.)

When I returned to the camp it was deserted.

After a while my Flathead Indian, discovered me. He met me and said he thought I and the Frenchman were killed, he having separated from the latter. The next morning I went off to reconnoiter these same Indians, between Willow valley and Salt Lake, and saw the Indians camped there. My Flathead said if I would give him a knife, he would go down in the night and steal a horse to replace the one he had lost. He offered to steal one for me also. I objected, and dissuaded him from making the attempt.

We remained in the Mountains three days, to keep out of their way. We then came back into the

A NARRATIVE OF COLONEL ROBERT CAMPBELL'S EXPERIENCES IN THE  
ROCKY MOUNTAIN FUR TRADE FROM 1825 TO 1835

---

valley and found our trapper party. They found the Frenchman that they supposed had been killed.

His name was James Fourness and he lived at Kansas City until he was over one hundred years old.

After these parties came in, I took a party and went over to Sweet Water Lake where we had made a cache the previous summer.

A terrible snow storm came on which lasted several days. We had to go to the Soda Springs on Bear river, a long distance out of the way. The result was, all our animals died from starvation. The snow was four feet deep on a level.

It was one of the most severe winters ever known. I cached my goods there and went back to our camp in Willow or Cache valley. I then disposed of my goods there to the trappers and started back on snow shoes, with four dogs and a train which I got from our hunters.

On the second day, all gave out except the halfbreeds. We travelled on to the mouth of Portneuf where Fort Hall was subsequently built. There I found Mr. Samuel Tullock with a party of trappers and a brother of Sublette was with him - also Mr. Peter Skein Ogden, with a portion of the Hudson Bay Company's trappers, all encamped together, snow bound. They could go no further. Tullock, when the Winter broke up, in the Spring, was attacked by Blackfeet up the Portneuf River. The attack occurred in the morning, and they were robbed of all their horses, and had four men killed, Sublette's brother among them. He was known as Pinckney Sublette. The year before, while awaiting at the head of this lake for the party to arrive from St. Louis, the Blackfeet attacked the Snakes, and the Snake warriors with William Sublette went out to assist them when Tullock was wounded on the wrist, and his hand withered from the effects of the wound.

In the fight on the Portneuf river, a good many of the Blackfeet were killed and the rest driven off. A prominent Snake chief, a young man was killed, besides several others on our side. The Snakes killed two fine horses to bury with the chief.

I wanted the horses badly. Sublette behaved bravely.

I staid in camp, in charge of everything.

The families of those killed disposed of all the bodies. One of them placed a buffalo robe on Sublette's tent and said to him, "You are a great warrior. I seen it. My "bonick," (Sublette) behaved cooly".

I then prepared to leave to join my party, who were with the Flatheads, on Flathead river.

We packed our bedding on the dog train.

I had two half breeds, Mountain Indians, with me. We carried no tent for ourselves.

At night we shovelled off the snow with our snowshoes, for the dogs tent.

We killed buffalo to live on. We fed our dogs at night so that their food could digest, while they were at rest. We passed through Shoshone Cove, and crossed the Bitterroot river. All the country to the West was free from snow.

This was due to its being much lower in elevation. We went down the Mountain to the plain. We hung up our snow-shoes on a tree, and made little sacks for saddlebags, where there was no snow. We crossed the Hellsgate to Wild-Horse Mountain, and found our party who had left us the season before, feeding on the flesh of wild horses. It was very good food.

There were no buffalo in that part of the country. The flesh of the young colt is delicious. They had wild onions for a condiment. I had been forty-four days on snow-shoes and my ankles became

A NARRATIVE OF COLONEL ROBERT CAMPBELL'S EXPERIENCES IN THE  
ROCKY MOUNTAIN FUR TRADE FROM 1825 TO 1835

---

lame when I took them off. We then hunted and trapped along and came to Sweet Water Lake again, which is about twenty miles long.

The powder brought up in the Summer of 1827, was of an inferior quality.

It was so bad, that it became a saying, that the men would snap the gun and lay it down on the ground, before it went off. The Indians knew this.

We were at the foot of the Lake and going up towards the head. In the morning we were attacked by the Blackfeet just as we were starting from camp. Four of the trappers who had been up at the head of the Lake came down and had joined me the night before. They managed to get some good powder.

My cook, who had the tents packed on the horses was found killed early in the morning.

I led the party and got to a Willow Spring and prepared for defence. We fought for four hours. We knew of four Blackfeet being killed by our fire.

Presuming on our poor powder they charged on us and were shot down. We didn't get their scalps. We then found that our ammunition was getting short. We were cut off.

The Indians flanked us and got in ahead of us. We held a council of wars.

We knew that the encampment at the head of the Lake - 18 miles distant - had ammunition, that we sorely needed.

The question was, how to get out, and get a communication with the camp. I proposed that I would go through to the encampment with two horses. A little Spaniard volunteered to go with me and we started. We dashed right in the face of the enemy! As is it not their mode to stand a charge, they separated.

We dashed on, and as they saw this they gave way and fled before our onset.

They knew that we would soon reach reinforcements, and in turn surround them.

We went on a gallop; I and the little Spaniard. We were going at such speed, that my horse fell with me. The whole of one side of my face was skinned.

Reaching the encampment, I started back immediately with reinforcements and a supply of ammunition, and rejoined the balance of our party. The Indians had disappeared as soon as they saw we went out for help.

We lost half a dozen horses in the fight, but got off safely, except with the loss of one man killed and two or three wounded.

The Blackfeet were regarded among all the trappers in the countries of their enemies, - as dangerous, and as a consequence, mutual distrust and frequent bloody encounters ensued.

The events just recited occurred in the Summer of 1828. I intended returning to St. Louis that year and quit the country; but, instead of doing so, I was prevailed on to go over into the country of the Crows, as a partner with Bridger and others, now all dead.

Our party for this expedition consisted of twelve men. We commenced trapping on Powder river, and our operations extended on the Tongue, Big Horn, and all the streams that are now in Red Cloud's country. That fall Jackson and Sublette returned from St. Louis. They struck Laramie at Horse Creek, Sublette went into the Crow country, where two years before, two Crows had been killed, and no trader had ventured there since. I went into that country trapping as before stated. I then went up to the Cache river at Po-po agie where it joins the Wind river, and made a cache there to put in my beaver.

A war party of Crows that had been down to the Cheyennes and Arapahoes, were returning and

A NARRATIVE OF COLONEL ROBERT CAMPBELL'S EXPERIENCES IN THE  
ROCKY MOUNTAIN FUR TRADE FROM 1825 TO 1835

---

found my cache. They took 150 skins.

I was then with Long Hair, principal chief of the Crows. They had brought in some scalps and were having great rejoicings. They held a great dance, in which the braves boasted of their exploits. Among other things they boasted of having found my cache. The old Chief then came into my lodge and said to me "Have you been catching beaver?" "Yes!" I answered.

"What you do with it?" asked the chief.

"Put it in the ground," said I.

"Where is it?" he enquired.

I drew a plan of the ground, where my beaver had been cached.

The old chief then said, "You talk straight about it!"

He said for four years they had had no Whites trading among them and a War party found this place where the beaver was cached. "They opened it," said the chief, "and brought some along." They tell me they brought 150 skins. Now don't let your heart be sad. You are in my lodge and all these skins will be given back to you.

I'll neither eat, drink or sleep till you get all your skins. Now count them as they come in!

He then mounted his horse and harangued the village, saying to his people that he had been a long time without traders, and they must not keep one skin back.

Then the old squaws and old men would come and pitch the beaver skins into my lodge, until nearly all were returned.

The son-in-law of the chief, said to me, "Tell the old chief the skins were all in, and if any are missing, I'll give you the balance." I then told the old chief, the skins were all in, and the next day I invited two or three men into my lodge to satisfy him from their inspection, that the skins were all right; the old chief becoming satisfied, then broke his fast.

In the next spring we started out in two parties; to hunt in the same country.

One party had all their horses stolen by the Blackfeet. There were five in my party, with Fitzpatrick, who now found us.

We stood guard every night. At the end of the hunt we struck for the Red Buttes, in order to meet Sublette coming up. Not meeting him, I went to Sweet Water and over to Wind river, where we had our rendezvous, and waited there till he came up.

There, an unpleasant incident occurred.

A great bully of a Frenchman, named Bray, when Sublette came up, gave out liquor.

He had been out with Samuel Tullock, got dissatisfied and became quarrelsome, under the influence of drink. He abused Tullock and said he had but one hand, but could knock him down. He asked Sublette if his pistol was loaded. He kept on with his abuse, when Tullock struck him a blow with his fist. The Frenchman fell over and never breathed. It was justifiable though.

Mr. Tullock did not intend killing the man.

The Frenchmen in camp took Bray's part, but drinking liquor in camp was all stopped.

We buried the man there. The difficulty produced a terrible damper in camp.

I took charge of the party that season and brought it down to St. Louis, arriving there in the fall of that year. I had spent four years in the Mountains.

In the Spring of 1831 I was at Lexington, Mo., and met Fitzpatrick coming in on his way from the Indian Country. He had with him an Indian boy, named Friday, whom he found on the Plains.

The boy did not know what nation he belonged to. He belonged to the Arapahoes, as subsequent-

A NARRATIVE OF COLONEL ROBERT CAMPBELL'S EXPERIENCES IN THE  
ROCKY MOUNTAIN FUR TRADE FROM 1825 TO 1835

---

ly ascertained. Friday became a well known Character on the Plains.

I paid a visit to my relatives in Ireland in the Spring of 1832. Returning that Spring to St. Louis, I again started for the Indian Country, taking out with me a small outfit of goods, blankets, clothes, and only five men and fifteen horses. Ten of the horses were loaded with merchandise. I accompanied Mr. William Sublette, who led a party of fifty men.

Sublette was taking out goods to furnish the firm of Milton, Sublette, Fitzpatrick and Bridger in exchange for beaver.

Mr. Nathaniel J. Wyeth was also with us.

He lived at Fresh Pond, near Boston, where they harvested fresh ice, and, died there two years ago.

On our trip up we crossed the Laramie river, which was then in flood, just below the fort, on a raft.

Capt. Wyeth's party lost a good many of their things by the upsetting of the raft.

We swam our mules across. Mr. Wyeth had an idea of going to the Columbia River and establishing a profitable business in catching salmon in connection with the fur trade, and had invested capital and goods in the enterprise.

Mr. Fitzpatrick, who also joined us, had started out ahead to the Sweet Water, to get the Traders together, and meet us at Pierre's Hole, on the Headwaters of the Columbia, under the Three Tetons.

On his way out, a village of the Gros Ventres of the Upper Missouri, who had been making a visit to the Arapahoes of two or three years duration, were returning and discovering Fitzpatrick pursued him to the Mountains, on Green river and took his horses. He, after concealing himself for two or three days managed to escape.

As we came along, the same Indians came to our camp at night stole two or three animals and killed one of our mules.

This was some days after, as we, did not then know what had befallen Fitzpatrick.

Well, nothing further happened to us until we reached the point of rendezvous.

There we met the hunters and trappers, and a party of Flathead Indians, who had got in from the hunt, also the party commanded by Mr. Drippe connected with Choteau & Co. The latter were supplied with merchandise taken out to the firm by Mr. Sublette.

We had nearly got through with the exchange of our wares and merchandise with the trappers and Indians, when the camp was disturbed by an Indian alarm. A trapping party had started out preparatory to the fall hunt, and had fallen in with the Blackfeet that had followed our trail, which had become obliterated by the rains and the length of time that had elapsed since we came in.

A halfbreed, Antoine Godin, and a Flathead Indian, discovering they were Blackfeet who were always at war, rode up in advance. They were met by a chief who was unarmed, bearing the pipe of peace.

But Godin, aware of Indian perfidy and suspecting treachery, ordered his Flathead companion to fire on the Blackfoot, as his hand was extended in pretended friendship, and he fell to the ground. A messenger came back to the main camp and told us they were fighting Blackfeet.

On receiving this information, we started out from camp, leaving a sufficient number of men to guard it. The Indians got into a thicket of willows, at a Beaver dam, forming a masked battery.

They put their horses in there and hung up their lodges to prevent our seeing them.

A NARRATIVE OF COLONEL ROBERT CAMPBELL'S EXPERIENCES IN THE  
ROCKY MOUNTAIN FUR TRADE FROM 1825 TO 1835

---

William Sublette and myself rode out together. We mutually agreed that whoever survived, the survivor should wind up our affairs.

When we came to the fortified place, firing commenced by the Indians and we were satisfied there was a large force of them. They had placed themselves in a position for defence.

We then arranged a place for the wounded to be brought.

A few of us crawled up between the willows. Sublette, myself and Sinclair, (St. Clair) there were two brothers of them. We crawled along on our hands and knees. Sublette was ahead, I second and Sinclair next to me. The Indians saw us and fired upon us, when within ten or fifteen paces of them and killed Sinclair. He was shot through the body. He was a quarter Cherokee. The Indians were concealed behind a breastwork of logs, and were well fortified against small arms.

We kept firing upon them. Sublette and myself had a pair of flint-lock pistols. In the lodge which was screened by buffalo skins, one of the Indians peered through a hole. Sublette fired and plugged him right in the eye.

I was within two steps of Sublette. Just at that time, and he told me, "Watch that place there is a chance for a shot at them." As he said this, three Indians, who were posted in another corner of the fortress fired and shot Sublette in the shoulder, and at the same time a man named Quigley was shot in the right side of the head. Neither shot proved fatal.

A portion of the bone in Sublette's arm was splintered by the shot, and I may anticipate by adding that some months afterwards, pieces of the bone were taken out by old Dr. Farrar at St. Louis.

When Sublette told me he was shot, I was watching to get a shot at them in the place he had just designated to me.

As he grew faint from the loss of blood, I bore him out of the thicket, and though disabled, he said, "Bring my gun along, we may get a shot at them yet." We fought on till nearly night. We left the Nez Perces to keep a watch on the enemy. Sublette was conveyed on a litter to our camp, six miles distant from the battle ground. In the battle one of our Nez Perce Chiefs, was shot in the breast. He told us before, that he could not be killed by a bullet.

He was hit on the breast bone by a spent ball which dropped to the ground.

It was big medicine that produced the charm, a big thing with the Indians. The chief of the Ban-nocks had the same belief; that he was invulnerable and could not be killed by a bullet. The Black-foot fled from their stronghold during the night.

There were three of our party killed in the fight, and the Blackfeet reported seventeen killed on their side. We found twenty-five dead horses, killed in the Blackfeet camp, and among the horses killed were two taken from Fitzpatrick.

In consequence of Sublette's wound we remained in camp for two weeks.

While there, Fitzpatrick joined us in a famished condition. He lost his powder horn, and had nothing to eat for many days.

I then sold out my merchandise to Fallon and Vanderburg, at this rendezvous. Then Sublette, being wounded, I took charge of the party, and made preparations to leave for St. Louis.

At that time the price of beaver rated at \$3 per pound, and brought about \$5 in St. Louis. There were eighty mules and we had 150 pounds on each mule.

When we hadn't the means of weighing, - 60 beavers were rated at 100 pounds.

When we trapped the first time in the country, they would average more. It would not take 60 beavers to make a hundred pounds, as the old beavers, before they were trapped out, weighed

A NARRATIVE OF COLONEL ROBERT CAMPBELL'S EXPERIENCES IN THE  
ROCKY MOUNTAIN FUR TRADE FROM 1825 TO 1835

---

more than young beavers.

The merchandise in demand consisted of blankets, beads, knives, kettles, clothes, etc.

Our party with mules and pack animals, formed a long cavalcade, as we started out.

A man who was shot in the battle, died soon after we started, from mortification.

He got off his horse and died in five minutes.

We then came to St. Louis. On the trip going out we had passed Captain Bonneville and his party on the Blue, and as we were coming back we passed him on the Green river and gave him an account of our fight with the Blackfeet.

Washington Irving passed us in Jackson County, Mo. We did not know him, nor he, us.

That winter, after my return to St. Louis, Sublette and myself formed a company partnership.

It was the same company that I went out to in 1833, furnishing supplies when we had our rendezvous on Green river.

We then determined to open trade on the Upper Missouri, near Fort Pierre, for buffalo, with the Sioux Indians. We accordingly established trading posts in the country of the Mandans and Gros Ventres, and at the Mandan village, on Knife river.

The Mandans lived in dirt lodges, dome shaped and in some respects, were in advance of other tribes.

Sublette went up in two keel boats, cordelling and sailing up the river. At the same time I went out to the Green River rendezvous.

While we were at Green River, I met Bonneville, Dripps and then there was our company, making three companies. We were located a mile apart for the purpose of not having our animals mingle. One night a mad wolf came into our three camps and bit ten or twelve men. He rushed into my camp and bit two of the animals.

One of them went mad, and three or four weeks afterwards died. It was a bull I had taken up from Lexington, Lafayette county, Mo., from the blue bunch grass pastures of that county.

The heifer that was bitten by the wolf at the same time, had a calf, and to anticipate my story, I will add here, that she died at the mouth of the Yellowstone, eight or nine months afterwards.

I had driven these cattle from Missouri to the Green river and then drove them down the Big Horn Mountains, where I constructed Bull boats, with which to descend the Big Horn to the mouth of the Yellowstone. In gliding down the stream, one of the boats came under a fallen tree, and upset, I under it. I got safely out and lost my gun, but the floating skins were picked up by the other boat.

When I reached the mouth of the Yellowstone I found Mr. Sublette there, who had left one of our boats at the mouth of the Sioux, near Fort Pierre, where we had a trading post and also a trading post at the Mandan village. He came up with the other boat to the mouth of the Yellowstone. There was a days difference in our time. We erected a stockade fort, with blockhouses on the angles, the dimensions being 130 by 150 feet.

Choteau and company had a fort above the mouth of the Yellowstone. Our fort was three miles, by land, six by water, distant from it.

Mr. McKenzie had charge of Fort Union of the Choteau or American Fur Company.

This fort was 300 feet square, with bastions armed with cannons. I was left in charge of my fort with thirty men and remained there that season. The Assiniboins were principally assembled there that Winter.

A NARRATIVE OF COLONEL ROBERT CAMPBELL'S EXPERIENCES IN THE  
ROCKY MOUNTAIN FUR TRADE FROM 1825 TO 1835

---

In October, Sublette came down to St. Louis and made arrangements for a division of the country, between Chouteau & Co., and Sublette & Campbell. Before this, an attempt had been made to make a division of the Territory, between the existing rival Fur Companies.

At the period referred to, the concerns of the Rocky Mountain Fur Company were managed by two resident partners Fitzpatrick and Bridger, and those of the American Fur Company by Vanderburg and Dripps. The competition between these two rival companies was prosecuted with unusual zeal, and resulted in disastrous effects. Fitzpatrick knew the evils of competition on the same hunting grounds and had proposed that the two companies divide the country between them, so as to hunt in different directions, but the proposition was rejected. By the division of Territory agreed upon between Sublette & Campbell and the American Fur Company, the boundaries were as follows. We commenced on the Arkansas, at a point South of the Platte, on the 24th degree from Washington; thence up to the Forks of the Platte, then to the dividing line of the waters emptying into the Missouri; thence we continued on that line to the Rocky Mountains, and thence on to the three forks of the Missouri, covering all west and south of that line. To Choteau Company was assigned all the Territory North and East of that line.

In the Spring, Sublette sent up a messenger to me, with the boundary treaty, and the conditions of sale, of our merchandise at the fort, to the American Fur Company as we now had to confine our trade in another direction.

I then turned over the goods to the American Fur Companies, and I sent a party of trappers across the country from the Yellowstone, with our furs, to our new fort. Meantime Mr. Sublette had sent up Mr. Potter to Laramie, where he established Fort Williams, so named after William Sublette, and now called Fort Laramie.

There I sent our furs. Having closed up our business at the mouth of the Yellowstone, I then came down to St. Louis.

During the Winter of 1834-35, the two Fur trapping companies - Fontenelle & Dripps and that of Fitzpatrick, Milton Sublette and Bridger, formed a partnership, and we (Sublette & Campbell) sold out to them.

I then went up from St. Louis in the Spring of 1835 to transfer over to the new company, the goods and animals that we had at Fort Laramie.

Having completed that business, I built a boat at this post and started down the North Platte, with buffalo robes, while a party by land, with mules, carried the beaver skins. The boat had a fine stage of water till I reached Scotts Bluffs.

There the quicksands rendered navigation impossible. The quicksand bars were all scattered about and the water was shallow. I constructed, then, at Scotts Bluffs, two Bull boats, putting in each three bull skins, sewed together like a crate.

I then procured some plum bushes, that made the ribs. We loaded the buffalo robes on these two boats, and brought the Mackinaw boat along. I went on in advance of the boats to Ash Hollow. The skins got somewhat wetted. The South fork of the Platte was full of water when the boats entered, and we came down finely.

Just below the forks of the Platte there was an Arickaree village. We were on the North side. The Indians were hostile. I took a dozen men and went on a little Island, where I prepared for defense. The Indians came across, but not with their guns.

I held a talk with them by signs, gave them some tobacco, and told them to go back, that my

A NARRATIVE OF COLONEL ROBERT CAMPBELL'S EXPERIENCES IN THE  
ROCKY MOUNTAIN FUR TRADE FROM 1825 TO 1835

---

mules would be frightened.

I traveled on the North shore, as fast as our mules would carry us. It was a beautiful moonlight night, and we camped without building fires. We took different trails, and went on till we reached the Pawnee Loupes village on the Loupes Fork of the Platte. There I learned that Gen. Dodge was going up with a regiment of Rangers - a U.S. regiment, merged into the first U.S. dragoons. He was going up the Platte, fifteen miles off. This news gave us confidence.

I crossed the Missouri at Omaha, and came down to St. Joe, then a trading post.

There I heard the first news that the boats were safe. In the fall of 1835 I arrived at St. Louis. In the fall of 1836 Sublette commenced business in St. Louis.

In 1851, I was again out in the Indian country and attended the grand council which lasted eighteen days, with the Sioux, Crows, Blackfeet and Cheyennes, at the mouth of Horse Creek on the North Platte.

I went out with Colonel David D. Mitchell, Superintendent of Indian Affairs at St. Louis, and Maj. Thomas Fitzpatrick.

The Secretary of the Council was Col. A.B. Chambers of the "Republican", and the Assistant Secretary, B. Grantz Brown.

Father DeSmet, who had just returned from the Yellowstone, accompanied me from Fort Laramie to the place where the council was held. The treaty then made is known as the treaty of 1852.

then in the employ of the

American Fur Company

CHAPTER I

Westward! Ho! It is the sixteenth of the second month A. D. 1830. and I have joined a trapping, trading, hunting expedition to the Rocky Mountains. Why, I scarcely know, for the motives that induced me to this step were of a mixed complexion, - something like the pepper and salt population of this city of St. Louis. Curiosity, a love of wild adventure, and perhaps also a hope of profit, - for times are hard, and my best coat has a sort of sheepish hang-dog hesitation to encounter fashionable folk - combined to make me look upon the project with an eye of favour. The party consists of some thirty men, mostly Canadians; but a few there are, like myself, from various parts of the Union. Each has some plausible excuse for joining, and the aggregate of disinterestedness would delight the most ghostly saint in the Roman calendar. Engage for money! no, not they; health, and the strong desire of seeing strange lands, of beholding nature in the savage grandeur of her primeval state, - these are the only arguments that could have persuaded such independent and high-minded young fellows to adventure with the American Fur Company in a trip to the mountain wilds of the great west. But they are active, vigorous, resolute, daring, and such are the kind of men the service requires. The Company have no reason to be dissatisfied, nor have they. Everything promises well. No doubt there will be two fortunes apiece for us. Westward! Ho!

All was at last ready, we mounted our mules and horses, and filed away from the Company's warehouse, in fine spirits, and under a fine sky. The day was delightful, and all felt its cheerful influence. We were leaving for many months, - even years - if not forever, the lands and life of civilization, refinement, learning order and law, plunging afar into the savageness of a nomadic, yet not pastoral state of being, and doomed to encounter hunger, thirst, fatigue, exposure, peril,

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

and perhaps sickness, torture, and death. But none of these things were thought of. The light jest was uttered, the merry laugh responded. Hope pictured a bright future for every one, and dangers, hardships, accidents, and disappointments, found no harbour in our anticipations.

The first day's march conducted us through a fertile and cultivated tract of country, to the Missouri river, opposite St. Charles. We crossed the stream in a flat boat, and passing through the village, halted for the night at a farmhouse a few miles beyond. Corn and corn-stalks were purchased for our horses, and corn bread and bacon for ourselves. We did not greatly relish a kind of diet so primitive, neither did we the idea that it was furnished us merely because it was the cheapest that could be obtained. Having ascertained, however, that nothing better was to be had, we magnanimously concluded to accept that instead of the alternative - nothing - and I, at least, made out a hearty supper.

It is not necessary to mention every trifling accident that occurred during our journey through the state of Missouri. Our numbers prevented us from enjoying the comforts of a house to lodge in, and when we could not find room in barns or other outbuildings, we slept on the bosom of mother earth, beneath our own good blankets, and the starry coverlet of heaven. No unpleasant effects resulted from this exposure, and though all unused to a mode of life so purely aboriginal, I even enjoyed it. Sleep more refreshing, and dreams more sweet were never vouchsafed to me than those which waited upon my grassy couch beneath the sky canopy of night. In fair weather nothing could be finer, but a cold driving storm made all the difference in the world. In such an event we arose, took up our beds, and walked - to the nearest door, which we ordered instantly to unfold and yield admittance, on pain of our displeasure. The conscious door trembled at the summons, but never hesitated to obey the mandate, and thereupon we entered and spread ourselves and blankets on the floor, if wet - to dry, if dry - to snore.

On the twenty-first we entered the Eighteen-mile prairie, east of Franklin, beneath a bright sky, and a balmy air. A few miles and the weather changed sadly. A terrible storm set in, which we were obliged to face and brave, for shelter was out of the question. The snow and hail melted and froze again on our hair, eye-brows, and neck-cloths, and we suffered much during almost the whole day from its driving violence. At evening we re-entered the woodlands, and the storm ceased to annoy us. Two days after this, we reached and passed through the village of Franklin, which a pitiless monster was in the act of swallowing up. The river is every year encroaching on the bank that forms the site of the town, and several buildings have already made an aquatic excursion. Others seem preparing to follow. Near the village we met with innumerable flocks of parquets - the first I had seen in a wild state - whose beautiful plumage of green and gold flashed above us like an atmosphere of gems.

We crossed the Missouri at Arrow-rock ferry on the twenty-fifth, and shortly after overtook a party of fifteen Canadians, who had preceded us a few days from St. Louis, and who were henceforth to be our companions to the end of the journey. The country had already begun to assume a more uncultivated and dreary aspect; plantations were much less frequent, - we were approaching the limits of civilization. We now moved from farm-house to farm-house, remaining at each so

---

By W. A. FERRIS

---

long as we could obtain sustenance for ourselves and horses, in order that the condition of the latter might be improved, and to give time for the vegetation, to which their diet would soon have to be restricted, to increase sufficient for the purpose. In the meantime our leisure hours were occupied and amused by the surprising relations of a few of the Canadians who had formerly been to the mountains, and who did not scruple to impose on the credulity of the “mangeris de lard,” as they term those who are unacquainted with the wild hap-hazard sort of life peculiar to the remote and desolate regions to which our journey tends. Each of these veterans seemed to have had a “most enormous experience” in mountain adventure, and certainly if their own stories could have been taken for it, they were singly more than a match for any given number of bears or Blackfeet. Some of their narrations were romantic enough, with a possibility of their being true, but the greatest number savoured too much of Munchausenism to gain a moment’s belief. I soon found that a current of rude but good natured humour ran through their veins, and that, though quite disposed to quiz, they were by no means disposed to quarrel with us. We easily came to a good understanding together. They told as extravagant yarns as they pleased, and we believed as little as we liked. Both had reason to be pleased with this arrangement, and many an hour I sat and listened to extempore adventures, improvised for the occasion, compared to which those of Colter and Glass, (both of which I had read years before,) were dull and spiritless. One told of coursing an antelope a week without intermission or food, over a spur of the Wind Mountains, and another of riding a grizzly bear, full tilt, through a village of Blackfeet Indians! There was no end to their absurdities.

## CHAPTER II

Messrs. Dripps and Robidoux, who were to be our conductors to the Council Bluffs, overtook us on the fifth, bringing with them an addition to our strength of fifty more - mules! As these our new leaders (not the mules) were noted for anything but a want of energy, we were soon again in motion, and recrossing the Missouri near Mount Vernon, continued our course to a plantation not far from Liberty, the last village on our route, where we remained for two weeks, waiting the arrival of wagons from St Louis, with merchandize for the Indian trade, which from this point has to be conveyed to the mountains on pack horses.

The only incident by which the monotony of our stay was at all relieved, was a stab which one of our men received in a drunken frolic, from a stranger whom he had without doubt insulted. This affair produced at first some little excitement, and even threatened serious consequences. It was soon ascertained, however, that the injury was but slight, and, as the individual wounded was known to be a reckless, impudent quarrelsome fellow, who had beyond question provoked the broil in which he got his hurt, he found but little sympathy, and was forced to put up with the loss of blood and temper his insolence and ill-conduct had brought upon him. This lesson was not entirely lost to him, for it had the effect of amending his manners very materially, and so proved to be rather a providence than a punishment.

The long-expected train of wagons arrived on the nineteenth, and there was speedily a general

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

bustle in the camp, though never a lady near. We all set to work unloading the bales, cording and preparing them for packing, and making other necessary arrangements for prosecuting our journey. Our party now amounted to forty-five persons, and we had above a hundred beasts of burden. The men were supplied with arms, ammunition, pans, kettles, etc., and divided into six messes, each of which received its proportionate share of provisions, with an intimation that they must be carefully husbanded, as nothing more could be obtained until we reached the Council Bluffs, the intervening country being an unpeopled waste or wilderness. Pleasant intelligence this for the stomach, and some went supperless to bed - no, blanket - for fear they would otherwise have no breakfast on some subsequent morning. At last, all was in readiness, and early the following day we were on the march. Passing the boundary of those two great states, Missouri and Misery, and leaving the forest bordering the river, we emerged into an almost limitless prairie, embroidered with woodland stripes and dots, fringing and skirting the streams and rivulets by which it was not inelegantly intersected and adorned. The day was bright and fair, and this early part of our travel might have been pleasant, but for the unceasing annoyance of our mules, who seized every opportunity, and indeed when occasion was wanting, took the responsibility of making one, to give us trouble and vexation. Some were content to display the stupidity for which their sires are so proverbial, but the greater part amused themselves with the most provoking tricks of legerdemain, such as dexterously and by some cabalistic movement, tossing their packs, (which were lashed on,) into a mud-hole, or turning them by a practised juggle from their backs to between their legs, which, having accomplished, they scampered off in high glee, or stopped and commenced kicking, floundering, pawing, and bellowing, as if they were any thing but delighted with the result of their merry humours. Job himself would have yielded to the luxury of reviling, had his patience been tried by the management of a drove of packed mules, and it may be esteemed fortunate for his reputation that Senior Nicholas had not the wit to propose such an experiment upon his even-toned temper. As the Devil is ordinarily by no means wanting in shrewdness, the omission might perhaps be set down to his credit on the score of charity, but for his abominable taste in matters of diabolical vertûe, as shown by his penchant for sanguinary signatures to all compacts and bonds for bad behavior made with or exacted by him, in the course of his "regular dealings" with mankind, and hence it must be considered a clear case of ignorance or oversight, that this test, compared to which there is toleration for boils even, was not applied. A wicked wag at my elbow, inquires with an affectation of much interest, if Satan, having in the case of the good man Job, failed so signally to keep his word, was not liable to an action on the case for a breach of promise. I of course decline answering, and refer him to those more skilled in legal casuistry for a reply. Of all bores in the world, your quizzing, carping, text-torturing sceptic is the worst - next to mule driving; and those confounded mules would bore a two inch auger hole through the meekness of Moses himself, were he their master. Such kicks, caperings, perverseness and obstinacy! the task of St. Dunstan was a play-spell to this teasing, tormenting tax upon one's time and patience. The man in the song, who "Had a donkey wot wouldn't go," and yet didn't "wallop him," was a miracle of forbearance and - but such people live only in song!

Well, in spite of the obstinacy of our mules, night came at last, and we halted on the margin of a pretty rippling stream, turned our horses loose to crop the yellow beard on the prairie face of earth, and kindled camp fires for our evening meal. O what a luxury it is to have a whole night's

---

By W. A. FERRIS

---

rest before you, after a long day of toil, vexation, and weariness! Supper over and I indulging in reflections of a very indiscriminate kind, reposing on my elbow by the warmth of a genial blaze, when a blessless wight elbowed my repose by stumbling over me and adding an unexpected and quite too general ablution from his freshly filled kettle of water. Peace societies were not then thought of, and as I half suspected the rascal to have done it accidentally by design, as an Irishman might say, I started up in order to give him, - as one good turn deserves another, - a box on the ear for his carelessness. But fear collapsed the coward's limbs, he slipped down to his knees, and my blow, just grazing the stubble of his short crop, cut the empty air and whirled me sprawling over him. There was an attitude for a philosopher! I sprang to my feet now as thoroughly enraged as I had been before drenched, but my opponent had utterly vanished, and I saw and heard nothing save the echo of a chuckle that seemed to dance on the still quivering leaves of a bush he must have brushed in his flight. However, I had my revenge for a few hours later I thrashed him soundly - in a dream!

In the morning we collected our horses and pack animals, and after breakfast continued on our journey across the prairie which we found to be lacquered with numerous trails or paths beaten by herds of buffaloes, that formerly grazed these plains, vestiges of which were still every where to be seen. One of these trails bearing to the westward we followed until it terminated in an impenetrable thicket, when our bewildered guide struck off to the northward, on a hunt, as some one facetiously remarked, after the Great Bear, which he had the good fortune to find, though not, as may be supposed, until some time after dusk. We halted for the night in a beautiful grove near a fine spring, and had the inexpressible pleasure of ascertaining that it was a capital watering place, a fact that was fully proved by the torrents that poured down like another deluge, the whole night, and prevented us from getting a single moment's sleep. Some of our people took, from this cold water movement, such a decided distaste for the pure element that they could not bear to drink a single drop, for a long time after, that is when anything better, as rum or whiskey, could be had. For my own part the surfeit did not produce nausea, and I still loved the sparkling liquid, but I must confess in more moderate abundance and from any spring rather than a spring shower.

## CHAPTER III

We left ourself, at the close of the last chapter, in a most comfortless condition, that is to say, wet as a drowned rat, but very much consoled by the reflection that not a man in camp had a dry thread on his back. How gratifying it always is, to a person in distress, to know that his neighbours are at least as badly off as he is! There was no trouble in rousing the party that morning, for every man was up, not exactly bright to be sure, but quite early; and the number of big blazing fires, with human figures crouching and crowding round them, shifting sides and changing positions constantly, gave one no unapt conception of a certain place more than an ell in measurement, with its attendant imps and demons. Forty five persons doing duty *ex necessitate rei*, in the capacity of clothes-horses, had in it something indescribably ludicrous, yet, strange to say, there was not a smile on a single lip, and we all spread ourselves to dry with, the utmost imaginable gravity, specific and facial. After breakfast we gathered up our traps, literal as well as hyperbolic,

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

and proceeded on our journey.

For several days, we met with no adventure worth relating, and though our curiosity was constantly on the stretch, to find out how it was possible for our mules to play us so many tricks as they continually did, it still remains a mystery, as much so as any other species of animal magnetism, in vogue with beings of that order. We saw herds of deer daily, now and then a herd of elk, and of deer and buffalo more bones than we cared to pick. We met also with a great variety of wild fowl, which are common to the lakes and prairies of Illinois, and to whoever can catch them besides. Innumerable small streams crossed our course, or rather we crossed them, the beds of many of which, though any thing but down, were as soft as could be desired, and much more so than suited our convenience, for they often suited us with a covering infinitely more adhesive than agreeable. Some of them we bridged over, and so passed without taking toll of their richness, but others were destitute of trees or shrubs, and because they were naked we were obliged to denude ourselves, wade over and carry both our clothes and luggage, for our horses and mules could with difficulty flounder through when eased of their loading. Of the latter it may be here observed, that however firm the bed and consequently practicable the passage of a stream might be, they invariably insisted upon not attempting to cross until relieved of their burden, and the strongest argument scarcely sufficed to overcome this repugnance to such a proceeding. "It is quite astonishing," said a weather beaten wag one day with great simplicity, "how little confidence them animals has in themselves." Singular, but our impressions were quite the contrary, and we had often occasion to remark that their organs of self-esteem and firmness must be most surprisingly developed - pro-di-gous! as Dominie Sampson would say.

On the twenty-eighth we narrowly escaped losing our horses and baggage through the carelessness of one of our men, who kindled a fire and left it notwithstanding he had been repeatedly warned of the danger of so doing. During his absence the dry grass caught the blaze, and a fresh gust in a moment fanned it to a conflagration which wrapt the whole encampment in a sheet of flame. We rushed at once to rescue the baggage, but several bales of powder and other articles were already lost to view in the devouring element that rolled and billowed over the plain. We had barely time, the flames spread with such rapidity, to seize each a bale and fly for refuge to a small sand bar, beneath a high bluff. Here we stood and gazed with agony at the curling and darting flames as they swept over the prairie, threatening destruction to our horses, in which event our situation would have been indeed deplorable. Fortunately however the wind suddenly changed, and blew with equal violence in the opposite direction, driving the mass or sheet of flames away to the eastward, and leaving us and our poor beasts free from danger.

The bales were all cased with thick cowhide and passed the fiery ordeal without injury; even our powder, though the envelopes were scorched and blackened by the blaze, escaped explosion, and we had truly reason to be thankful for our great deliverance. Two of our horses were less fortunate than their companions, for they were overtaken by the flames and completely singed, presenting an extremely ludicrous but pitiable appearance. Is it not singular that these animals, not usually wanting in sagacity or courage, should when threatened by fire so quietly submit to their fate without making a single effort to escape? A few saddles, blankets, and other articles, among

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

which was all the extra clothing and only coat, of him whose inexcusable carelessness had thus exposed us, were lost by the fire. And this was fortunately the extent of the damage.

Resuming our journey we reached the Missouri on the thirty-first and crossed in a keel boat to Belle Vue, the trading house of Messrs. Fontenelle & Dripps, situate eight miles above the mouth of the Platte. We were here supplied with tents, which we pitched - not as the paddy did with grease - near the Papillon creek, about a mile below the fort. Our horses having become extremely weak and thin from scanty fare and hard usage, were now turned out to graze in fields of gigantic rushes which flourish in great abundance in the woodland bottoms bordering the river. As for ourselves having a long holiday before us, we employed our time in various ways, as hunting, fishing, and story telling, and making necessary preparations for continuing our route when our horses should have become sufficiently recruited to warrant them in a serviceable condition.

I shall not stop to mention all the silly things we did on the first of April, when people make such egregious fools of themselves in trying to befool others. "Oh! Ferris!" calls out one in over acted alarm, "there's a great copperhead just behind you!" "Yes, I see the rascal's face right between your two ears." Suddenly another cries in a simulated agony of terror, "Indians! Indians!" "Where? where?" eagerly asks some unsuspecting innocent in real fear. "April fool!" returns the wag with a chuckle, and then one tries very hard not to seem sheepish, but to look a whole folio of dignified philosophical indifference, in both of which he utterly fails as a matter of course, while the other builds a couple of triumphal arches with his eye brows, and hieroglyphs his face over with tokens of self gratulation at his successful foray, - fooled each to the top of his bent. In puerilities like these passed the day, as all-fools day usually passes, in country, camp, or court the world over. Vive la bagatelle! - hurra for nothing!

The four weeks of our stay at this point were undiversified by any occurrences worth relating, and we soon became heartily weary of the dull monotony of its daily routine, and as anxious to resume the line of march, as we had been before to hail a pause in its progression. The days dragged on heavily and slowly until the last of April came, when after packing up with the alacrity of pleasure, we packed off in high spirits and ascending a hill in rear of the trading house, bade a long but reluctant adieu to the scene of a wasted month, glad to find our feet again in the stirrups, and our faces once more, westward ho! We soon lost sight of Belle Vue, though belle vue was ever in sight, in whatsoever direction our eyes were turned. But the same cause that rendered the prospect beautiful, namely, several recent showers, had also made the roads almost impassable. Our mules were become more mercurial than ever and played off their old pranks with a skill greatly heightened by experience, much to the annoyance and vexation of the poor Jobs, who were compelled to manage, and yet - incredible hardship! - not permitted to kill them. Here or there might be seen at almost any moment, some poor devil smeared or bespattered with mire and water until he scarcely knew himself only by report, holding on to a restive mule with one hand, and with the other endeavouring to fish out of the mud a discharged cargo, left without leave by the gallows jade whose business it was to bear the burden. These knights of the cross (the poor mule drivers) as their crosses and losses of luck and temper occasioned them to be called, were cross from morning till night and yet I doubt if they were not naturally the best natured

---

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

fellows in the world; but mule driving is the d\_\_\_l and there is no more to be said about it, except that I pitied them until it came my turn to share their fate, and then I pitied the tiger for his tameness. We slept that night at a fine spring ten miles north of Belle Vue, and, oh strange inconstancy of man's mood! wished ourselves back by the quiet margin of the peaceful Papillon, whose rushy border we had rushed away from but a few hours before.

“Green grow the rushes O!

Green grow “

Good night!

## CHAPTER IV

And this is May-day, the festival of girlhood and happy youth, in many a town of many a land, where joyous hearts exulting hail its beautiful dawn, and the hours are winged and rosy with the exciting and rapturous scenes of a floral coronation. Ah, how sweetly rise in my memory the visions of fetes like these! I can almost fancy that I see one now - that again a laughing gay spirited boy I mingle in the mimic pageant, and assist at the pleasing ceremonial. There stands the rural throne, with its velvet dias, its mossy seat, and its canopy of flower-woven evergreens; there too, is the fairy-like Queen, a tall, graceful girl, the flaxen locks of whose infancy have been curled into golden ringlets, that cluster round her beautiful face, and fall in fleecy masses on her ivory shoulders, by the warm suns of some thirteen summers; and there, too, is a gallant gathering about her of maids of honour, pages, pursuivants, and - pshaw! what a fool I am to dream of scenes and seasons like those, in this far wilderness, and with these companions! Imagination! and thou, too, Memory! be silent, and weave no more the bright texture of romance!

Resuming our march, we followed a zig-zag trail through hills, and bluffs, covered with dwarf trees, and thick underbrush, for six miles, and descending into a pleasant vale, came upon the Trading-house of Mr. Cabina, eight miles below the Council Bluffs. Here we received supplies of ammunition and a “Code of Laws,” with penalties annexed, for the preservation of harmony and safety, in our passage through the immense plains - that still intervene between us and the end of our journey - which are roamed and infested by hordes of savages, among whom theft and robbery are accounted any thing but crime, and whose scruples on the score of murder are scarcely a sufficient shield against the knife or the tomahawk. Strength and courage alone, command their respect - they have no sympathy for trust, no pity for weakness. By the strong hand they live, and by the strong hand only are they awed. Our traveling code of “pains and penalties” was signed by Mr. Fontenelle, a veteran leader in the mountain service, who now assumed the direction of affairs and in all things showed himself to be an experienced, able, and efficient commander.

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

After a brief interval of rest, refreshment, and preparation, the word was given to march, and, leaving Mr. Cabina, his trading house, and the Missouri, we struck off across the prairie until evening, when we pitched our camp on the Papillon, twenty miles above its mouth. Next day we reached a branch of the Loup Fork, called the Elk-horn River - a clear, deep, rapid stream, fifty paces in width - and constructed a boat-frame of willow, which we covered with dressed buffalo-skins, sewn together for the purpose. After some trouble in adjusting and securing the parts, our boat was finished, and launched, but unfortunately the skins proved to have been spoiled and soon came to pieces. We had but one resource left, and that to ford the river, which was effected at a point where the greatest depth did not exceed four feet. Stripping ourselves, and wading back and forth we transported our baggage on our backs, piece-meal, whilst our horses were forced to swim over at another place. The water was quite chill, and as if to make the toil of crossing doubly unpleasant, we were showered with a storm of sleet, which belaboured our naked shoulders most unmercifully. However, we got every thing at last safely over, and as evening overtook us here, passed the night on the margin of the river. We started as usual, early on the following day, but proceeded only a few miles, when we were compelled to halt at a place called "The Hole," in consequence of a severe storm of sleet, accompanied by a fierce northern gale, which continued with unabated fury till the morning of the fifth. We began to grow familiar with hardships, as may well be imagined, from the toil, danger, and exposure, of scenes like these, but such weather was still - awful unpleasant!

The country now presented a boundless gently-rolling prairie, in one complete mantle of green, laced with occasional dark stripes of woodland, that border and outline the mazy courses of rivulets, which flow from every dell and hollow. Wild onions abound on the margin of all these streams, as the lovers of that valuable and very fragrant esculent may be pleased to learn; but I botanized no further. On the fifth we continued our march, with the bright sun of a beautiful day smiling upon and encouraging our journey.

Up to this period, we encamped without order, helter-skelter, just as it happened, allowing our horses to run loose night and day; but now, when we halted for the night, our camp assumed a somewhat martial appearance. The order of its arrangement was this, - a space of fifty yards square was marked out, one side of which was always along the brink of some stream. Four of our tents occupied the corners, and of the remaining four, one was placed in the middle of each side. The intervening spaces between the tents were barricaded by a breast-work formed of our baggage and horse furniture. The space within the square, was dotted with the iron heads of nearly two hundred hard wood pins, each one foot in length, and one and three-fourths inches in diameter, drove into the ground, to which our horses and mules were fastened. Each man was provided with a wooden mallet to drive the pins with, and when, just before sunset, all were put into requisition, such a din as they created, would be a caution to Paganini. Immediately after sundown, the words "catch up," resounded through camp, all hands flew to the horses, and all was noise and bustle for some minutes. Forty odd of us 'cordelling' our stubborn mules, - who the more you want them to go, the more they won't - into camp, with oaths and curses, not only loud, but deep - it was wicked, but, poor fellows they couldn't help it! - might have been seen, if one could for laughter have kept his eyes open, upon any such occasion. A few moments and all was

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

quiet again, horses and mules securely fastened to their respective pickets, and the men at their tents, seated around kettles of boiled pork and corn, with pans, spoons, and grinders in motion. Keen hunger made us relish the repast, which else the very dogs had refused, - however all contented themselves as well as they might with such fare, looking forward with a sort of dreamy delight to the time when rich heaps of fat buffalo meat, should grace and garnish our encampments.

After supper we reclined on our elbows about the fire, produced our pipes and tuned them to a smoke, recounted tales, puffed ourselves, and old times, and quizzed, joked and jested with one another until eight o'clock, when our humour was interrupted by the cry "turn out the first guard, " whereupon six of our companions, jumped up, seized their guns and blankets, and presently commenced strutting around camp, rifle in hand, while the rest retired not only to sleep, but also to be awakened, in the midst perhaps, of a pleasing dream, by a rough shake of the shoulder, and those most detestable words, "get up, sir, it is your watch, " - and capital time those watches keep too, except that they are apt to run a little too fast. Two hours, two mortal long hours, wrapped in your blanket may you sit on the prairie without fire, but with your rifle across your knees, and watch the stars, the moon, the clouds, or the waving grass, not forgetting to answer the watch-word repeated every half hour, by six poor wretches like yourself, "all's well." Rain or shine, wet to the skin or not, half starved with cold or hunger, no matter what, still you hear and echo those most applicable words, with perhaps, as once in a woeful storm of sleet, the rhyming jingling comment of some uneasy sleeper, - " 'Tis false as h\_\_l," the truth of which in your heart you are forced to admit. At the expiration of two hours another takes your place, and you may crawl to rest, to be brought again to your feet at day light by the cry "léve, léve," (get up). Three or four of the morning guard are ordered at dawn to scour the neighbouring hills on horseback, when if they discover nothing unusual, the horses are turned out to graze, under the charge of the "horse day guard," and the rest of the party cluster round their camp-fires to smoke or watch the bubbling kettle, till the morning meal. After breakfast all are busily employed in folding up their tents, pulling down the breast-works, and arranging the luggage so as to require as little time as possible for "loading up." When the sun is something over an hour high, the order "catch up," is again heard, and all hasten to catch and tow their animals into camp. Patience and forbearance, if you are blessed with those amiable qualities, will now be tested to the uttermost, supposing you to be honoured with the charge of two or more of those mongrel brutes with shrill voices and long ears. Few exist but will strive to do you an injury by some infernal cantrap or other. One bites your leg while you fasten the saddle girth, another kicks you while you arrange the croupper, a third stands quietly until his lading is nearly completed, and then suddenly starts and flounces until he throws every thing off, a fourth at the same interesting point stamps upon your foot, breaks away, and scampers off into the prairie, strewing the way with his burden, a fifth refuses to be loaded at all, and a sixth to stand still, be led or driven. In short there is no end to their tricks and caperings. But I spare the recital. Any one of the party having completed his arrangements for departure assists his messmates, and in half an hour or so, all are ready for marching orders, when our leaders take the front, and proceed at a fast walk, while we fall into line and follow, leading our pack horses, and carrying our guns before us across the saddle. At noon we halt for a couple of hours, after which we journey on until the sun appears but an hour and a half or such a matter above the horizon, when we stop for the night, turn out our horses, after "hobbling" them,

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

by tying the fore legs together to prevent them running away in case of an alarm, and arrange and fortify our encampment, as above related.

## CHAPTER V

We saw on the seventeenth several prong-horned antelopes; a timid, fleet, and beautiful animal, peculiar I believe to the region of the Rocky Mountains. Much I had heard and read of the swiftness and graceful motion of the antelope, but had no conception of the exquisite ease of its airy, floating perfection of movement, until I saw these glide away with the light and sylphic step of the down-footed zephyr, that scarcely touches the lawn over which it trips so sweetly and so swift. I can now understand, what I never could realize before, the poetry of motion. We reached on the following day a wide shallow stream called the Loup Fork, which rises near the Black hills, and flows eastward about five hundred miles, parallel with the Platte, into which it empties forty or fifty miles above the Missouri. We found no little difficulty in fording it, in consequence of the quick sands of which its bed is composed, giving way so readily beneath the pressure of our feet. At noon, however, all were safely across, and for the rest of the day we skirted along its southern margin. The following afternoon we passed a Pawnee village situated on the opposite bank of the river, and sent, as customary, a present of tobacco, powder, balls etc., to these tribute-taking lords of forest, field and flood, the heart of whose wild dominion we are now traversing. In the evening the principal chief a fine looking, hardy, and certainly hearty old codger, and two of his people, came with our messenger to pay us a visit and acknowledge our courtesy, when the pipe of peace was smoked with all becoming gravity, and he was so well pleased with his reception and our hospitality that he passed the night with us. The same evening one of our men by the name of Perkins, was severely burned by the accidental explosion of his powder horn. On the next day we reached and crossed the Platte river, which is here nearly a mile wide, but so shallow as to be fordable. It is full of low sleepy islands, and bounded on either side by rich bottom lands, often a mile two in breadth, but little higher than the stream itself, and apparently quite as level. The bed of this river is also formed of quicksands which are always shifting, and give its waters that muddy consistence so remarkable in the Missouri. Beyond the bottoms a rolling sandy prairie stretches its lazy level, but scantily covered with a coarse short grass, and even now and then in barren spots as nude as an antique statue destitute of the seemliness of a fig leaf. Occasional groves of aspen and cotton-wood deck the islands and bottoms of the Platte, and these are the only varieties of timber to be found.

Scarcely had we got under way on the morning of the eleventh, when we discovered several mounted Indians approaching at full speed, who soon gave us to understand that a large party of their people were close at hand coming to trade with us. Mr. Fontenelle not doubting but that they came for the express purpose of plundering us, immediately ordered a halt, and made preparations to give them a reception more warm than welcome. We picketed and hobbled our horses, examined our guns, and were directed to be ready for the worst. Hardly were these hasty preliminaries arranged, when the Indians, a large body of well mounted fine ferocious looking fellows, dashed in sight at the top of their speed. We formed a line in front of our baggage, all

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

wide awake for a nice cosy little game of ball, and quietly waited their approach. Our suspense was not of long duration for they whirled up in a breath to speaking distance and were ordered to stand, which they did in mid career, throwing their horses back upon their haunches, and halting about two hundred yards in advance of us, when their chief commenced a loud harrangue in the choicest guttural that could be conceived, much to our edification and delight. They appeared to be about one hundred and fifty strong, (only thrice our number), all admirably mounted, and all armed with bows and arrows, and spears, and a few with guns. They wore buffalo robes about their middle, but from the waist upwards were all magnificently naked. A few had on leggins of dressed skins, but generally save their robes and moccasins, they were just as nature made them, except in the matter of grease and paint. After some introductory chatterings, they informed us that they were on a hunting expedition for buffalo, that they intended us no harm, but on the contrary wished to trade with us in amity. They were then permitted to come up, and exchange a few skins, moccasins, etc. for knives, vermilion, and tobacco, pilfering the while every thing they could lay their hands upon without being discovered. The reciprocity of this kind of commerce being as the Paddy said, all on one side, we soon got tired of it, and unceremoniously packed up and off, and left them gazing after us in no small astonishment.

On the fourteenth, hurrah, boys! we saw a buffalo; a solitary, stately old chap, who did not wait an invitation to dinner, but toddled off with his tail in the air. We saw on the sixteenth a small herd of ten or twelve, and had the luck to kill one of them. It was a patriarchal fellow, poor and tough, but what of that? we had a roast presently, and champed the gristle with a zest. Hunger is said to be a capital sauce, and if so our meal was well seasoned, for we had been living for some days on boiled corn alone, and had the grace to thank heaven for meat of any quality. Our hunters killed also several antelopes, but they were equally poor, and on the whole we rather preferred the balance of the buffalo for supper. People soon learn to be dainty, when they have a choice of viands. Next day, oh, there they were, thousands and thousands of them! Far as the eye could reach the prairie was literally covered, and not only covered but crowded with them. In very sooth it was a gallant show; a vast expanse of moving, plunging, rolling, rushing life - a literal sea of dark forms, with still pools, sweeping currents, and heaving billows, and all the grades of movement from calm repose to wild agitation. The air was filled with dust and bellowings, the prairie was alive with animation, - I never realized before the majesty and power of the mighty tides of life that heave and surge in all great gatherings of human or brute creation. The scene had here a wild sublimity of aspect, that charmed the eye with a spell of power, while the natural sympathy of life with life made the pulse bound and almost madden with excitement. Jove but it was glorious! and the next day too, the dense masses pressed on in such vast numbers, that we were compelled to halt, and let them pass to avoid being overrun by them in a literal sense. On the following day also, the number seemed if possible more countless than before, surpassing even the prairie-blackening accounts of those who had been here before us, and whose strange tales it had been our wont to believe the natural extravagance of a mere travellers' turn for romancing, but they must have been true, for such a scene as this our language wants words to describe, much less to exaggerate. On, on, still on, the black masses come and thicken - an ebless deluge of life is moving and swelling around us!

LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

---

## CHAPTER VI

Since leaving the Loup Fork we have seen very little timber, and latterly none at all. We have, however, hitherto found plenty of drift-wood along the banks of the river, but to-day, the nineteenth, there is not a stick of any description to be seen, and as the only resource, we are compelled to use as a substitute for fuel, the dried excrement of buffalo, of which, fortunately, the prairie furnishes an abundant supply. I do not, by any means, take it upon myself to defend the position, but certainly some of the veterans of the party affirm that our cooking exhibits a decided improvement, which they attribute to this cause, and to no other. That our steaks are particularly savoury I can bear witness.

At our noon encampment on the twenty-first, we discovered several objects on the brow of a neighboring bluff, which at first we took to be antelopes, but were soon undeceived, for they speedily transformed and multiplied themselves into several hundreds of Indians, who came rushing like a torrent down upon us. All was now excitement and confusion. We hastily collected our cattle, drove them into camp, and fastened them, built a breastwork of our baggage, primed our guns afresh, and prepared to stand upon our defence. The Indians by this time came up, made signs of friendship, and gave us to understand that they were Sioux. They formed a semicircle in front of our position, and displayed four American flags. Many of them had on long scarlet coats, trimmed with gold and silver lace, leggins and mocasins richly, though fantastically ornamented, and gay caps of feathers. Some wore painted buffalo robes, and all presented a lively, dashing appearance. They were, without exception, all finely mounted; and all armed - some with swords, shields, and lances, others with bows and arrows, and a few with guns.

After some consultation among themselves, they informed us, with much gravity, that it was customary for whites passing through their country to propitiate their friendship by a small present, which was immediately acceded to, and a liberal gift of ammunition, knives, trinkets, and paints bestowed. Several of their chiefs passed through our camp while this was doing, and we observed that some of them wore large silver medals. During the whole time the interview lasted, the rain came down in torrents, and the air was besides extremely cold. Wet to the skin, and chilled to the very marrow, we were compelled to stand to our posts, with limbs shivering, and teeth chattering, while the Indians warmed themselves at fires made of the buffalo dung we had collected. I never in my life had a stronger desire to pull trigger on a red skin than now, but they gave us no sufficient provocation to authorise hostilities; and to our great relief, after getting from us all they could beg, and stealing all they could slyly lay their hands on, they took their departure, and returned to their own camp.

The following day was raw, wet, and cold, and the "prairie chips" having now become so saturated with water that they could not be coaxed to burn, we had no alternative but to freeze or move camp. Preferring the latter, we resumed our weary march, and fortunately, after six miles travel, found a welcome plenty of drift-wood, when we again halted to enjoy the luxury of a good fire in a rain storm in the open prairie. Blessings on thy head, O Prometheus! that we have even the one

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

comfort of a cheerful blaze.

We saw a wild horse next day, on the opposite side of the river, and made an effort to catch him, but did not succeed. An Indian, ordinarily well mounted, would have caught him with a noose almost in no time; but luckily for him, we were not Indians. One singular fact, often remarked, but never, that I know of, chronicled, is this, that a horse carrying a rider will easily overtake one not mounted, though naturally much the fleetest. I cannot account for this, but it is nevertheless true, and can be proved by an abundance of testimony.

We traversed on the twenty-fourth, a narrow tract of country, covered with light sand, and destitute of every kind of vegetation, save a species of strong grass, covered with knot-like protuberances, which were armed with sharp thorns that pierce the foot through the best of moccasins. These grass-knots are called "Sand-burrs," and were a source of great inconvenience to several poor fellows who, as a punishment for having slept on guard, were compelled to trudge along on foot behind the cavalcade.

On the twenty-fifth we saw a herd of wild horses, which however, did not wait a very near approach, but dashed off, and were soon lost in the distance. We had a visit in the afternoon from three Sioux, who came into camp, and reported that a large collection of Arrapahoes and Gros Ventres lay in wait for us at the Black Hills, determined to give battle to all parties of whites who should attempt to pass them. It was little uneasiness this intelligence gave to the men of our party; we were growing wolfish after some kind of excitement, and would have fought a whole raft of them in our then present humour, for the recreation of a play spell. It may well be questioned, however, if our leaders, who had the responsibility of a double charge, were quite so indifferent to the matter. But n'importe.

We reached on the following day the "Nose Mountain," or as it is more commonly called, the "Chimney," a singular mound, which has the form of an inverted funnel, is half a mile in circumference at the base, and rises to the height of three hundred feet. It is situated on the southern margin of the North Fork of the Platte, in the vicinity of several high bluffs, to which it was evidently once attached; is on all sides inaccessible, and appears at the distance of fifty miles shooting up from the prairie in solitary grandeur, like the limbless trunk of a gigantic tree. It is five hundred miles west from the Council Bluffs.

We encamped on the twenty-seventh opposite to "Scott's Bluffs," so called in respect to the memory of a young man who was left here alone to die a few years previous. He was a clerk in a company returning from the mountains, the leader of which found it necessary to leave him behind at a place some distance above this point, in consequence of a severe illness which rendered him unable to ride. He was consequently placed in a bullhide boat, in charge of two men, who had orders to convey him by water down to these bluffs, where the leader of the party promised to await their coming. After a weary and hazardous voyage, they reached the appointed rendezvous, and found to their surprise and bitter disappointment, that the company had continued on down the river without stopping for them to overtake and join it.

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

Left thus in the heart of a wild wilderness, hundreds of miles from any point where assistance or succour could be obtained, and surrounded by predatory bands of savages thirsting for blood and plunder, could any condition be deemed more hopeless or deplorable? They had, moreover, in descending the river, met with some accident, either the loss of their arms or powder, by the upsetting of their boat, which deprived them of the means of procuring subsistence or defending their lives in case of discovery and attack. This unhappy circumstance, added to the fact that the river was filled with innumerable shoals and sand-bars, by which its navigation was rendered almost impracticable, determined them to forsake their charge and boat together, and push on night and day until they should overtake the company, which they did on the second or third day afterward.

The reason given by the leader of the company for not fulfilling his promise, was that his men were starving, no game could be found, and he was compelled to proceed in quest of buffalo. Poor Scott! We will not attempt to picture what his thoughts must have been after this cruel abandonment, nor harrow up the feelings of the reader, by a recital of what agonies he must have suffered before death put an end to his misery.

The bones of a human being were found the spring following, on the opposite side of the river, which were supposed to be the remains of Scott. It was conjectured that in the energy of a dying despair, he had found strength to carry him across the stream, and then had staggered about the prairie, till God in pity took him to himself.

Such are among the sad chances to which the life of the Rocky Mountain adventurer is exposed.

## CHAPTER VII

At about noon on the twenty-eighth we discovered a village of Indians, on the south side of the river five miles above, and sent three men forward to watch their movements whilst we made the necessary preparations for defence. In a short time our spies returned, closely following by about fifty of the Indians, who dashed up in a cloud, and gave us to understand that they were "Chayennes." They repeated the story told by the Sioux, respecting the Arrappahoes Gros Ventres, and remaining about us till night when all but one disappeared.

In the course of the evening it was whispered about that the Indian in camp was an Arrappahoe, (with whom we were at war,) and one of the men became so excited on the subject that he requested permission to shoot him, but was of course refused.

During the night this individual, with two others, made an attempt to desert, but was detained by the guard. To such a pitch of desperation were his feelings wrought up that on the following morning he left us to return alone to St. Louis, notwithstanding, as he acknowledged, fear alone had impelled him to attempt desertion. It was a singular case, the very excess of cowardice having

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

determined him to an undertaking from which the boldest would have shrunk appalled.

We afterwards heard that he succeeded in reaching St. Louis alive, but that he suffered the extreme of misery both from starvation and maltreatment of the Indians, some of whom seized him near the Council Bluffs, stripped him entirely naked, scourged him most unmercifully, and then let him go. In this situation he found his way to the garrison near the Platte, more dead than alive. Here he was kindly received, supplied with food and clothing, and nursed up until his health was quite recruited, when he returned to St. Louis, and reported that the company had been attacked and defeated by the Indians, himself alone escaping.

On the day he left us we reached a fine grove of cotton wood trees of which we made a horse pen - this is always done in the Indian country when timber can be obtained, as a necessary protection for our cattle, in case of attack. Save a few isolated trees, this is the only timber we have seen for fifteen days.

We discovered on the thirtieth, a solitary Indian lodge, pitched in a grove of aspen trees, which, as it was the first I had seen, was an object of some curiosity. The manner of its construction was this: - thirteen straight pine poles were placed equidistant from each other in the circumference of a circle, ten or twelve feet in diameter, and made to meet in a point eleven feet from the ground, where four, crossing a foot from the end, are tied together, to support the rest. The conical frame thus formed is covered with dressed buffalo skins, cut and sewed together in a proper shape, which much resembles the shape of a coat. A pole fastened at top and bottom to this covering serves to raise it by, the top of which is allowed to rest against the others. Then the loose sides are drawn around the frame and fastened together with strings or wooden pins, to the height of seven feet, except that an oval aperture three feet high is left for an entrance. Above the closed parts, are two projecting wings or corners with pockets on the outside for the reception of two poles, calculated to piece them in various positions, in order to avoid the smoke, which but for some such contrivance, would greatly incommode the inmates, particularly if the wind should happen to come from an unfavourable quarter. The bottom of the covering is then secured to the ground on the outside with wooden pins, and the lodge is thus complete. If it be well pitched the covering sets smoothly to the poles and is tight as a drum head. A skin fixed to hang loosely over the aperture serves the purpose of a door, and this concludes the description of any lodge hereafter mentioned, though some are larger and others less in proportion.

As we approached the lodge the first object that presented itself was the lifeless body of a male child about four years old. It was lying on the ground a few paces from the lodge, and was horribly maimed and disfigured, evidently by repeated blows with a club, it bore also the mark of a deep wide stab in the left side. Within the lodge on a raised platform lay the scalpless bodies of two grown Indians, with their instruments of war and the chase beside them - it being the Indian custom to bury with the dead such articles as they believe will be required on a journey to the land of Spirits. Both the bodies were hacked and mangled in a manner truly savage and revolting. They were Chayennes, and had been killed in a battle with the Crows, five days previous. The child was a prisoner taken from the Crows the preceding winter, and was thus barbarously

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

murdered by way of retaliation. Achilles sacrificing at the tomb of Patroclus - is both a precedent and a parallel. Poetry has almost hallowed the cruelty of the Greek, but the inhumanity of the savage is still fearfully conspicuous; yet which was the worst, the refined Hellenian or the barbarous Chayenne? We crossed the Platte in bull-hide canoes, on the second of June, and encamped a short distance above the mouth of Laramie's Fork, at the foot of the Black Hills, six hundred miles west of the Council Bluffs. Laramie's Fork rises in the Black Hills, between the northern and southern forks of the Platte, and falls into the former after a northeast course of six hundred miles. The rich bottoms bordering this stream are decked with dense groves of slender aspen, and occasional tall and stately cotton woods.

Since passing the Sioux country we have seen herds of buffalo almost daily, but never in such countless numbers as then astonished our sight. Our hunters kill more or less of them every day, and they form the staple article of food; but they are still poor and tough, and would hardly be considered eatable could any thing else be procured, which is not the case.

The Black Hills are a chain of mountains less remarkable for height than for scenery, which is of the most romantic order. They extend up the Platte one hundred miles, and are noted as a place of refuge and concealment for marauding Indians, - they form consequently a dangerous pass for hunting and trading parties. They are partially covered with pine and cedar shrubbery, which gives them when viewed from a distance, a dark forbidding appearance, and hence their name. On a nearer approach, however, they present a less repulsive aspect, and finally exhibit a pleasing variety of shapes, and colours, slopes and dells, bluffs and ravines, which together form occasional landscapes of singular picturesqueness and beauty. Some of these hills are composed of a deep crimson-coloured sand stone, others of a bright yellow, grey, white or brown rocky formation, and all partially covered with soil. Some are as bald of vegetation as the naked prairie, and one, rearing its barren peak far above the rest, is still crowned with a diadem of snow. Entering the region of this range of hills, the Platte was seen to the right of our trail, winding its devious way, at times through fine timbered bottoms, again between dark walls of cut rock, and occasionally through beautiful unwooded valleys occupied by herds of buffalo quietly grazing and all unconscious of the approach of death in the form and guise of old Sonsosay, our veteran hunter, who might have been seen crawling like a snake through the long grass, until a sudden burst of thunder starting herds and echoes from their repose, showed that he had them within reach of his unerring rifle, where horns and hoofs were alike unavailing.

## CHAPTER VIII

On the eighth, we saw for the first time, a grizzly bear, a large fierce formidable animal, the most sagacious, most powerful, and most to be feared of all the North American quadrupeds. We shall have occasion elsewhere to note instances of the prowess, cunning and courage of this remarkable animal, and shall relate, in their proper connexion, some of the many anecdotes concerning it, which are current among the Indians and trappers of the Rocky Mountains, the stock of which is constantly increasing, as adventure goes on, and brute and human meet in mutual strife. The one

---

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

we saw, was at a distance, and looked nearly as large as a buffalo, for which they are often mistaken, even by experienced hunters.

We re-crossed the Platte again, on the eleventh, at the Red Hills, - these are two high cherry-red points of rock, separated by the river, which here turns away to the southward. On the following day we left the Platte and the Black Hills together, and pursued our never-varying course, westward, through a sandy plain, covered with wild sage, and at evening encamped near a fine spring. Next day's march brought us to Sweet-Water River, which rises in the southeastern extremity of the Wind Mountains, and flows eastward one hundred and fifty miles, falling into the Platte, a few miles above the Red Hills. This river owes its name to the accidental drowning in it of a mule loaded with sugar, some years since. We halted at evening under the lee of an immense rock half imbedded in the earth, which is nearly a mile in circumference, and from one to two hundred feet in height. It bears the name of Rock Independence, from the circumstance of a party having several years ago passed a fourth of July, with appropriate festivities, under its ample shade. Except a chain of rocks, some of which closely resemble hay-stacks, running parallel with Sweet Water, the face of the country is a barren, sandy, rolling prairie, destitute of trees and bushes, and every species of vegetation, save occasional patches of coarse grass and wild sage, and scattering clusters of dwarf willows, on the margin of the river.

On the fourteenth, we passed a small lake, highly impregnated with glauber salts, the efflorescence of which, covers the margin of the lake to the depth of several inches, and appears at a distance like snow. We made a cache on the nineteenth, of some goods, intended for future trading with Crow Indians, who rove at some seasons, on the tract of country we are now passing. Cache, derived from the French verb cacher, to conceal, is applied in this region to an excavation for the reception of goods or furs, commonly made in the following manner. A proper place being selected, which is usually near the border of some stream, where the bank is high enough to be in no danger of inundation, a round hole two feet in diameter is carried down to a depth of three feet, when it is gradually enlarged, and deepened until it becomes sufficiently capacious to contain whatever is destined to be stored in it. The bottom is then covered with sticks to prevent the bales from touching the ground, as otherwise they would soon contract moisture, become mouldy, and rot. The same precautions are observed to preserve them intact from the walls of the cave. When all is snugly deposited and stowed in, valueless skins are spread over the top, for the same excellent purpose, and the mouth is then closed up with earth and stones, beat down as hard as possible, to hinder it from settling or sinking in. The surplus earth taken out, is carefully gathered up and thrown into the stream, and the cache finally completed, by replacing stones and tufts of grass, so as to present the same uniform appearance, as the surrounding surface. If the cache is made in a hard clay bluff, and the goods perfectly dry when put in, they will keep years without damage. At this period we were in view of the Wind Mountains, which were seen stretching away to the northward, their bleak summits mantled over with a heavy covering of snow.

On the twentieth, we reached a fountain source of the Sweet Water, near a high, square, table-like mound, called the Pilot Butte; and the next day ascended an irregular plain, in which streams have their rise, that flow into both the Atlantic and Pacific Oceans, halting at night on the Sandy,

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

a small river that takes its name from the barren country through which it runs. It has its source in the south-eastern point of the Wind Mountains, where also the Sweet Water, Platte, and Wind River of the Bighorn, take their rise, and empties into Green River after a south west course of sixty miles. From the dividing plain or ridge, we saw vast chains of snow-crowned mountains, stretching far away to the west and northward, and revealing but too plainly the toil and hazard that await our future progress. The southern point of the Wind Mountains, rose bluffly to the northeast, distant fifteen miles, and, strangely contrasting their snowy summits with the dark forests of pines that line and encircle their base, were seen stretching away to the northwestward the looming shapes of this range or spur of the far-reaching Andes, until their dark forms and dazzling crests were lost in the distance, blending in the haze and mingling with the clouds. After a weary march, on the twenty-first, we reached Green River, a fine, clear, deep and rapid stream, one hundred and fifty yards wide, which takes its rise in the Wind Mountains, with the sources of Lewis River and the Yellow Stone, and flows south-east, south, and finally south-west, four hundred miles, to its junction with Grand River, when it becomes the Rio Colorado of the West, one of the most magnificent streams in the world, and descending the mountains, rolls its sublime volume away, many hundreds of miles through Upper and Lower California, until at last it reaches and empties into the gulf of that name. From the southern point of the Wind Mountains, one or two snowy peaks rise, dimly visible, far to the southward: - within the intervening space, a broken, sandy plain, perfectly practicable for loaded wagons, which may cross it without the least obstruction, - separates the northern waters of the Platte, from those of the Colorado.

We crossed Green River on the twenty-sixth in bull-hide canoes, and halted for the night on its western margin, where we were nearly victimized by moschetoes, which during the five days of our vicinity to this stream, kept sucking at the vital currents in our veins in spite of every precaution that could be taken. Leaving Green River the next day, we encamped after a hard journey of twenty-five miles, on one of its branches, called Ham's Fork. From this point, several persons were despatched in different directions in quest of a party of hunters and trappers, called Free Men, from the circumstances of their not being connected with either of the rival Fur Companies, but holding themselves at liberty to trade with one or all. They rove through this savage and desolate region free as the mountain air, leading a venturesome and dangerous life, governed by no laws save their own wild impulses, and bounding their desires and wishes to what their own good rifles and traps may serve them to procure. Strange, that people can find so strong and fascinating a charm in this rude nomadic, and hazardous mode of life, as to estrange themselves from home, country, friends, and all the comforts, elegances, and privileges of civilization; but so it is, the toil, the danger, the loneliness, the deprivation of this condition of being, fraught with all its disadvantages, and replete with peril, is, they think, more than compensated by the lawless freedom, and the stirring excitement, incident to their situation and pursuits. The very danger has its attraction, and the courage and cunning, and skill, and watchfulness made necessary by the difficulties they have to overcome, the privations they are forced to contend with, and the perils against which they must guard, become at once their pride and boast. A strange, wild, terrible, romantic, hard, and exciting life they lead, with alternate plenty and starvation, activity and repose, safety and alarm, and all the other adjuncts that belong to so vagrant a condition, in a harsh, barren, untamed, and fearful region of desert, plain, and mountain. Yet so attached to it do they become,

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

that few ever leave it, and they deem themselves, nay are, with all these bars against them, far happier than the in-dwellers of towns and cities, with all the gay and giddy whirl of fashion's mad delusions in their train.

Continuing our journey, we passed up Ham's Fork thirty miles, and then made a halt until all our people returned, who reported that no traces of the Free Men could be found. We then resumed our march, and on the seventh of July, ascended a steep snow-clad pine-covered mountain, when we came in view of a beautiful valley, watered by a shining serpentine river, and grazed by tranquil herds of buffalo. At evening we halted on the margin of Bear River, after a very fatiguing and toilsome march of thirty miles. This river is from fifty to eighty yards in breadth, clear and deep, with a gentle current, and is bordered by fertile though woodless bottoms. It rises in the Eut Mountains, and flows northward above one hundred miles, when it turns to the westward, and after a further course of seventy-five miles, discharges itself into the Big Lake.

We killed here a great many buffalo, which were all in good condition, and feasted, as may be supposed, luxuriously upon the delicate tongues, rich humps, fat roasts, and savoury steaks of this noble and excellent species of game. Heretofore we had found the meat of the poor buffalo the worst diet imaginable, and in fact grew meagre and gaunt in the midst of plenty and profusion. But in proportion as they became fat, we grew strong and hearty, and now not one of us but is ready to insist that no other kind of meat can compare with that of the female bison, in good condition. With it we require no seasoning; we boil, roast, or fry it, as we please, and live upon it solely, without bread or vegetables of any kind, and what seems most singular, we never tire of or disrelish it, which would be the case with almost any other meat, after living upon it exclusively for a few days. Perhaps the reason why the flesh of buffalo is so superior to the beef of the United States, may be found in the fact, that during the severities of winter, they become reduced to mere skeletons, and thrive with the grass in spring, mending up constantly as the season advances, until in summer, their bones are thickly enveloped with an entire new coat of flesh and fat.

While we remained in the neighbourhood of Green River, we were again exceedingly annoyed by moschetoes. They appeared in clouds both in the morning and evening, but disappeared in the heat of the day, and with the sun at night. Parties were here a second time sent out in various directions, in search of the Free Men, but they all returned again unsuccessful. Some of them saw an encampment of a party of Indians, who had passed two days before, about Sixty miles above on this stream. They were supposed to be about one hundred and fifty strong, and were evidently on some expedition that required great secrecy and caution. They encamped in a very small circle, and removed every thing from camp, that would lead to a discovery of their nation. When they departed, they went into the hills, and were so cautious, that our spies found it not only impossible to follow the trail, but even to designate the course they had taken. The trails and encampments of a party of hunters who had passed very early in the spring, were also seen. Nothing else unusual was observed.

## CHAPTER IX

On the sixteenth, I departed with Mr. Dripps and three others for Cache Valley. We passed up the river a few miles, crossed, and followed a rivulet westward to its source in the mountain, which we then ascended to its summit. The crest of the mountain was ornamented with a few scattering cedars, here and there a small grove of aspen, and occasional patches of wild sage. From this elevation bleak snow-clad pyramidal peaks of granite were beheld in all directions jutting into the clouds. Stern, solemn, majestic, rose on every side these giant forms, overlooking and guarding the army of lesser hills and mountains that lay encamped below, and pointing proudly up their snow-sheeted crests, on which the stars at evening light the sentinel fires of ages.

From the precipitous western side of the height on which we stood, one of the most agreeable prospects imaginable, saluted and blessed our vision. It was the Little Lake, which from the foot of the mountain beneath us, stretches away to the northward washing the base of the cordillera that invests it. It is fifteen miles long and about eight in breadth and like Nemi,

“Navelled in the hills,”

for it is entirely surrounded by lofty mountains, of which those on the western side are crowned with eternal snow. It gathers its waters from hundreds of rivulets that come dancing and flashing down the mountains, and streams that issue not unfrequently from subterranean fountains beneath them. At the head of the lake opposite, and below us, lay a delightful valley of several miles extent, spotted with groves of aspen and cotton wood, and beds of willows of ample extent.

When first seen the lake appeared smooth and polished like a vast field of glass, and took its colour from the sky which was a clear unclouded blue. It was dotted over by hundreds of pelicans white in their plumage as the fresh-fallen snow. While we yet paused, gazing rapturously upon the charmed prospect, and feasting our eyes upon its unhidden beauties, we were overtaken by a tremendous gale of wind accompanied with rain, which dissipated in a moment a lovely cottage Fancy had half constructed upon the quiet margin of the sleeping lake. Beautiful to behold is a fair young female in the soft slumber of health and innocence, but far more beautiful when startled to consciousness from her gentle rest, and bright colours chase one another across her cheeks and bosom. So with the lake, which far from losing a single attraction when roused by the wind from its repose, became even more enchanting than before; for the milk-white billows rolling like clouds over its deep blue surface seemed to add a bewitching something to the scene that did not appear to be wanting until the attention of the observer was directed to it, when it became too essential to be spared.

Admonished by the storm, we dismounted from our horses, and led them in a narrow winding path, down the steep mountain side, and reaching the valley below, halted for the night at a pleasant spring near the margin of the lake. The next day we crossed a low mountain, south of the lake, to Cache Valley Creek, which we followed into a narrow defile, nearly impassable to

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

equestrians. On either side, rose the mountains, in some places almost, and at others quite perpendicularly, to the regions of the clouds. The sun could be seen only for a short time, and that in the middle of the day. We were often compelled while struggling over the defile, to cross the stream and force our way through almost impenetrable thickets, and at times, to follow a narrow trail along the borders of precipices, where a single mis-step would inevitably have sent horse and rider to the shades of death. We saw a number of grizzly bears prowling around the rocks, and mountain sheep standing on the very verges of projecting cliffs as far above us as they could be discerned by the eye. Such was the wild and broken route which for two entire days we were obliged to pursue. We killed a grizzly bear on the evening of the eighteenth, and emerging from the mountain-pass early on the following day, came to Cache Valley, one of the most extensive and beautiful vales of the Rocky Mountain range.

This valley, called also by some, the Willow Valley, is situated about thirty miles due west of the Little Lake, from which the passage is so nearly impracticable, that it requires two days to perform the distance - at least by the route we came. It lies parallel with the Little Lake, extending nearly north and south; is sixty miles long, and fifteen to twenty broad, and is shut in on every side by lofty mountains. Numerous willow-skirted streams, that intersect and diversify it, unite and flow into Bear River, which crosses the valley, and after cutting its way through a low bald mountain, falls into the Big Lake, distant twenty miles to the west.

Cache Valley is abundantly fertile, producing every where most excellent grass, and has ever for that reason, been a favorite resort for both men and animals, especially in the winter. Indeed, many of the best hunters assert that the weather is much milder here than elsewhere, which is an additional inducement for visiting it during that inclement season. It received its name from a melancholy incident that occurred in it a few years ago. The circumstances are briefly these: -

A man in the employ of Smith, Sublette and Jackson, was engaged with a detached party, in constructing one of those subterranean vaults for the reception of furs, already described. The cache was nearly completed, when a large quantity of earth fell in upon the poor fellow, and completely buried him alive. His companions believed him to have been instantly killed, knew him to be well buried, and the cache destroyed, and therefore left him

Unknelled, uncoffined, ne'er to rise,

Till Gabriel's trumpet shakes the skies,

and accomplished their object elsewhere. It was a heartless, cruel procedure, but serves to show how lightly human life is held in these distant wilds.

In this country, the nights are cold at any season, and the climate perhaps more healthy than that of any other part of the globe. The atmosphere is delightful, and so pure and clear, that a person

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

of good sight has been known to distinguish an Indian from a white man, at a distance of more than a mile, and herds of buffalo may be recognized by the aid of a good glass, at even fifteen to eighteen miles.

Passing down the valley, we met a number of grizzly bears, one of which of a large size, we mistook for a buffalo bull, and were only convinced of our error when the huge creature erected himself on his haunches, to survey us as we passed. These animals are of every shade of colour, from black to white, and were seen singly in the prairies, busied in digging roots, which constitute their chief subsistence until fruits ripen in the fall.

The object of our visit to Cache Valley, was to find the Free Men, but our search for them proved fruitless. We were unable to discover any recent traces either of whites or Indians, and retracing our steps, halted at the lake beneath the shade of an aged cotton wood, in the branches of which a bald eagle sat quietly on her nest, apparently indifferent to our presence, nor did she leave it during our stay. While here, we killed one of the many pelicans which were disporting on the lake, and found that it measured eight and a half feet between the tips of its extended wings.

After our return to camp, six others of the party were sent northward, on the same errand, but they were equally unsuccessful. They were absent eleven days, and saw in their route abundance of fine salt, and likewise a number of curious springs, of which a description will be given on some future page.

On the tenth day of August, a village of Shoshonees or Snake Indians, entered the valley of Bear River, fifteen or twenty miles above us, and encamped on the margin of the stream. Some of them paid us a speedy visit, and testified their friendship for us by giving us each a hearty hug. Two days after the arrival, we moved up the valley, and encamped half a mile below them. Their village consisted of about one hundred and fifty lodges, and probably contained above four hundred fighting men. The lodges were placed quite close to each other, and taken together, had much the appearance of a military camp. I strolled through it with a friend, to gratify my curiosity, as to their domestic manners. We were obliged to carry clubs, to beat off the numerous dogs, that were constantly annoying us by barking, and trying to bite our legs. Crowds of dirty naked children followed us from lodge to lodge, at each of which were seen more or less filthy but industrious women, employed in dressing skins, cutting meat into thin strips for drying, gathering fuel, cooking, or otherwise engaged in domestic labour. At every lodge, was a rack or frame, constructed of poles tied together, forming a platform, covered over with half-dried meat, which was curing over a slow fire. The women were all at work, but not so the men. Half of them were asleep in the lodges, and the rest either gaming, keeping guard over their horses, or leisurely strutting about camp. They are extremely jealous of their women, though I could not help thinking, with but slight occasion, when I surveyed the wrinkled, smoke-dried unprepossessing features of the latter, and the dirt and filth by which they are surrounded. Cupid must have a queer taste, if he can find marks for his arrows among the she snakes of this serpent tribe. We spoke to several of them, but they either feigned not to hear, or retired at once. After gratifying our curiosity, which did not require long, we purchased a few buffalo robes, and skins of other kinds, for trifles of little value

---

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

to us, yet by them prized highly, and returned sadder though wiser to our own encampment.

Most of the Rocky Mountain Indians are given to priggish, as we have already had a taste of proof. The Snakes are by no means deficient in this accomplishment, and at almost every visit they made to us many little articles acquired a trick of vanishing with the most marvelous dexterity. However we left them on the sixteenth, and returned to Ham's Fork, by way of a small stream, called Muddy, from the turbid appearance of its waters. This little stream rises against Ham's Fork, and flows south of west thirty miles, emptying into Bear River, nearly opposite to the spring which marks the pass to the head of Little Lake. It is noted as being the best route from Ham's Fork to Bear River, there being no steep ascents or descents in the whole distance.

On Ham's Fork we cached our goods, and separated into three parties, headed respectively by Messrs. Fontenelle, Dripps, and Robidoux, who had each his portion of hunting ground specified, in order to avoid interference with the rest. Mr. Fontenelle was to hunt to the southward on the western tributaries of Green River; Mr. Dripps to the northeast on the sources of the same stream, and Mr. Robidoux northward on the head waters of Lewis River.

We separated on the twenty-third, and departed in quest of adventures and beaver, - my unlucky stars having induced me to join Mr. Fontenelle's party, which met with the least of either. We rambled about in the Eut mountains, on the sources of Black's Fork, and Henrie's Fork, explored them to their outlets, and returned to the caches after a month's absence, having starved one half of the time. After leaving Ham's Fork, we saw no buffalo until our return, and killed no game of any kind, except one elk, two or three goats, and a few beaver. We were nicely frightened by a party of Crow Indians, who crawled up to our encampment one dark night, and fired a volley over our heads. We sprang to our feet, but before we could return the compliment, they came into camp shouting Ap-sah-ro-ke, - Ap-sah-ro-ke, (Crows,) and laughing heartily at the confusion their novel manner of introducing themselves had occasioned us. From them we ascertained that the Free Men who had caused us so much unavailing search, were on the Yellow Stone River. Two of our men were sent with the Crows, to raise the cache on Sweet Water, proceed with them to their village, and trade until further orders. Previous to their departure, the Crows gave us a few practical lessons in the art of pilfering, of which they are the most adroit and skilful professors in all this region, if not the world. No legislative body on earth ever made an appropriation with half the tact, facility, and success, that characterize these untaught sons of the forest.

## CHAPTER X

On the twentieth of September, five of us left the party to 'hunt' several small streams in the vicinity of Bear River. We proceeded to the mouth of the Muddy, and followed Bear River down fifteen miles to the mouth of Smith's Fork, where we saw recent traces of brother trappers and Indians. The same evening I was thrown from my horse, by which my gun was broken so as to render it entirely useless. The feelings of a trapper may better be imagined than described, after losing his only means of subsistence and defence, in hourly danger of his life and thrown entire-

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

ly upon the charity of his comrades, from whom should he get accidentally separated, he must either perish miserably, or suffer privations and agonies compared to which death were mercy, before he could find the company.

From Smith's Fork we passed down to Talma's Fork, - so named in honour of the great French tragedian, - eight miles below. The plains of this stream as also those of Bear River, were covered with buffalo, one of which we killed, and after packing the meat travelled up the fork fifteen miles into the mountains, where it divides into three branches of nearly equal size. On the middle one of these branches two miles above the fork, we found a large quantity of beautiful white salt, formed by the total evaporation of a pond, on the rocks forming the bed of which it was encrusted. From this point we passed up to the head of the western fork, and thence crossed to a small stream called Beaver Creek, from the uncommon labours of those industrious animals, which are here observed, forming a succession of dams for several miles. We first tasted the waters of the Columbia river which has its source in this little stream, on the first of October, after which we continued our hunt down the creek to its mouth, twenty miles from its fountain head, and all the way confined between high mountains. The narrow bottoms along it were occasionally covered with bushes bearing a delicious fruit called service berries, by the American hunters, and pears (Des Poires) by the Canadians: a species of black hawthorn berries, wild currents, goose berries, black cherries, and buffalo berries were also at intervals abundant.

At the mouth of Beaver Creek the mountains retire apart leaving a beautiful valley fifteen miles long, and six to eight broad, watered by several small streams which unite and form "Salt River," so called from the quantities of salt, in a chrysalized form, found upon most of its branches. At the northern or lower end of the valley we observed a white chalk-like appearance, which one of our party, (who had been here with others in quest of the Free men) recognized to be certain singular springs. His account of them excited my curiosity and that of one of my companions, so much that we determined upon paying them a visit. With this intention we set out early one fine morning and reached our place of destination about noon, after an agreeable ride of three or four hours.

We found the springs situated in the middle of a small shallow stream, in the open level prairie. Rising from the middle of the brook, were seen seven or eight semi globular mounds self-formed by continual deposits of a calcarious nature, which time had hardened to the consistency of rock. Some of them were thirty or forty feet in circumference at the base, and seven or eight feet high. Each of them had one or more small apertures (similar in appearance to the mouth of a jug) out of which the water boils continually, and these generally, though not invariably, at the top of the mound. The water that boils over, deposits continually a greenish, slimy, foeted cement, externally about the orifices, by constant accretions of which, the mounds are formed. The water in these springs was so hot, that we could not bear our fingers in it a moment, and a dense suffocating sulphurous vapour is constantly rising from them. In the bases of the mounds, there were also occasional cavities from which vapour or boiling water was continually emitted. Some of the mounds have long since exploded, and been left dry by the water. They were hollow, and filled with shelving cavities not unlike honey-comb. These singular springs are known to the Rocky

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

Mountain hunters by the name of the Boiling Kettles, and are justly regarded as great curiosities. After spending a couple of hours very agreeably in examining these remarkable fountains, we returned to camp, well satisfied for the fatigue of thirty miles' travel, by the opportunity we had enjoyed of perusing one of the most interesting pages of the great book of nature. A fair day and a beautiful prospect, enhanced the pleasure and reward of our excursion.

Leaving the valley, we returned slowly back to Talma's Fork, trapping many small streams by the way, near some of which we saw considerable deposits of pure salt. We had a severe storm of rain, on the twenty-third, which finally changed to snow. Except occasional light showers, this was the only interruption to fair weather that we had experienced since we left the caches. On the twenty-seventh, we were greatly alarmed by one of the party (Milman) returning at full speed from a visit to his traps, and yelling in tones of trepidation and terror, that fear had rendered less human than the screams of the panther. We sprung to our arms, rushed our horses into camp, and awaited his approach with feelings wrought up to the highest pitch of excitement between suspense and apprehension. As he approached nearer, however, his voice becoming less unearthly, at length relaxed into something like human speech; and guessing at his meaning, rather by the probability of the case, than by any actual sounds he uttered, we made out the words "Indians! Indians!" The lapse of a few moments brought him up, exclaiming, "Boys, I am wounded!" We saw at once that a well-directed ball had been intercepted by his gun, which thus evidently saved his life. The ball had been cut into several pieces by the sharp angle of the barrel, one of which, glancing off, had lodged in the fleshy part of his thigh. The same bullet, previous to striking his gun, had passed through the neck of his mule, and grazed the pommel of his saddle. He was also struck in the shoulder, by an arrow, but both wounds were slight.

After recovering his wonted control over the faculties of speech, he gave us the following particulars of the affair, which was ever afterwards facetiously termed "Milman's Defeat." Whilst jogging along, three or four miles from camp, and calculating the probable sum total of dollars he should accumulate from the sales of furs he purposed taking from his traps that morning, his dog suddenly commenced barking at some invisible object which he supposed to be a squirrel, badger, or some other small animal, that had taken refuge in its burrow. Satisfied of his own sagacity in arriving at this conclusion, he advanced thoughtlessly, until he reached the top of a gently - ascending knoll, whence, to his utter astonishment and dismay, he discovered the heads of seven or eight Indians, peeping ferociously up from a patch of sage, not thirty steps beyond him, and at the same instant three guns were fired at him, by way of introduction. This sort of welcome by no means according with his notions of politeness, he wheeled about with the intention of making his stay in the vicinity of persons whose conduct was so decidedly suspicious, as brief as possible. His mule seemed however far less disposed to slight the proffered acquaintance, and positively refused to stir a single peg. In the meantime, the Indians starting up, showered their compliments in the shape of arrows upon him with such hearty good will, that he was forced to dismount, intending to return their kindness with an impromptu ball from his rifle; but ere he could effect this, the Indians, divining his purpose, and overcome by so touching a proof of friendship, bowed, scraped, and retired precipitately, in all likelihood to conceal their modest blushes at his condescension. Just then, too, madam Long Ears, probably resenting their unceremonious departure,

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

betrayed symptoms of such decided displeasure, that Milman was induced perforce, to remount, after he had withdrawn an arrow from his shoulder, but before he had accomplished his purpose of presenting the red-skins with the contents of his gun, free gratis, in exchange for their salute; and he was borne away from the field of his achievements with a gallantry of speed that would not have discredited the flight of Santa Anna from the battle-plain of San Jacinto, but which Long Ears had never displayed, unless fear lent the wish of wings to her activity. Milman did not, he said, discover that he had been struck by a ball, until he saw the blood, which was just before he reached camp.

Shortly after the return of Milman, two Indians, to our surprise, came coolly marching up to camp, who proved, on their approach, to be Snakes, a young savage and his squaw. They had left their village at the mouth of Smith's Fork, for the purpose of hunting big-horns, (Rocky Mountain sheep,) in a mountain near by, from which he discovered us. We questioned him until we were perfectly satisfied that he was an innocent, harmless fellow, and in no way associated with the party which had fired upon Milman, though we strongly suspected them to be Snakes. He soon took his leave, and shortly disappeared in the forest of pines, which encircle the bases of all lofty mountains in this region. We departed also, not doubting but that the Indians who attacked Milman, would hang about, seeking other opportunities to do us injury.

Passing up the east fork of the three, into which Talma's Fork is subdivided, we crossed it and ascended a high mountain eastward, on the summit of which we halted at midnight, and, having tied our beasts to cedars, of which there were a few scattered here and there, threw ourselves down to sleep, almost exhausted with fatigue, and still haunted by fears of murdering savages, who might have dogged our footsteps, and be even now only waiting the approach of dawn to startle us with their fiendish yells and arrows, and take our - scalps. At day break we resumed our weary march, forced our way, though with great difficulty through a chaos of snow banks, rocks and fallen pines, to the east side of the mountain, and at last descended to the source of Ham's Fork, on which we passed the night. The next day we reached an open valley of considerable extent, decked with groves of aspen, and beds of willows, and grazed by a numerous herd of buffalo. Midway of this valley, on the western side, is a high point of rock, projecting into the prairie and overlooking the country to a great distance. Imagine our surprise when we beheld a solitary human being seated on the very pinnacle of this rock, and apparently unconscious of our approach, though we were advancing directly in front of him, - and he so elevated that every object however trifling, within the limit of human vision seemed to court his notice; and what made it still more singular, there was evidently no person in or near the valley except ourselves. We halted before him, at a short distance, astonished to see one solitary hero, who seemed to hide himself from he knew not what - friends or foes; but firm as the giant rock on which he sat as on a throne, seemed calmly to await our approach, then to hurl the thunder of his vengeance upon us, or fall gloriously like another Warwick, disdainful to ask what he can no longer defend. With mingled feelings of respect and awe we approached this lord of the valley, gazed admiringly up at the fixed stolidity of his countenance, and lo! he was dead.

I afterwards learned that this Indian was taken in the act of adultery with the wife of another, and

---

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

put to death by the injured husband. He was a Shoshone, and was placed in this conspicuous position by the chief of the tribe, as a warning to all similar offenders.

On the thirty first we reached the caches where we found Robidoux with a small party of men. Fontenelle and Dripps, together with the Free Men, and a detachment of a new company, styled the Rocky Mountain Fur Company, were all in Cache Valley, where they intended to establish their winter quarters. Robidoux remained here twelve days, awaiting promised assistance from Fontenelle, to aid him in transporting the goods to Cache Valley. At the end of that time, impatient of their slow coming, and admonished by the more rapid approach of starvation which was already grinning at us most horribly, he resolved to re-cache a part of the goods, and start with the balance.

We set off in the midst of a severe snow-storm, accompanied with chilling winds, which blew directly in our faces, and, having braved with the best temper we could, a whole day of such exposure, encamped at evening on the margin of Muddy Creek. We were met next day at noon, by the expected party. They continued on to raise the cache we had left, whilst we journeyed down to the mouth of the Muddy, there to await their return. In the meantime, hunters were dispatched in pursuit of game, who brought back with them, at the expiration of two days, the flesh of several fine bulls.

The report of Milman's defeat, was received in Cache Valley, from a party of Snakes some time before we arrived, with the additional information, that the young Indian who paid us a visit on that memorable morning, was killed on the evening of the same day, and his wife taken prisoner, though she escaped the night following.

On the third day after we reached Bear River, the party dispatched for that purpose, returned with the contents of the cache, and on the fifth we arrived in sight of the camp, exchanged salutes, and hastened to grasp the honest hands of our hardy old comrades, glad to meet and mingle with them again after a long absence, and listen to their adventures, or recount our own.

## CHAPTER XI

We remained about ten days in the northern point of Cache Valley, in a small cove frequently called Ogden's Hole, in compliment to a gentleman of that name of the Hudson Bay Company, who paid it a visit some years since. Meanwhile, the men amused themselves in various ways, - drinking, horse racing, gambling, etc. and at the same time, Mr. J. H. Stevens, an intelligent and highly esteemed young man, gave me the following account of his adventures with Robidoux, which was confirmed by others of the party.

"After leaving you," said he, "we trapped Ham's Fork to its source, crossed over to Smith's Fork, and there fell in with a party of Iroquois, who informed us that Smith, Sublette and Jackson, three partners who had been engaged in the business of this country for some years past, had sold out

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

to a new firm, styled the Rocky Mountain Fur Company. This arrangement was made on Wind River, a source of the Big Horn, in July of last year. From that place parties were sent out in various directions, amongst which was one led by Fraeb and Jarvis, consisting of twenty two hired men, and ten free Iroquois, with their wives and children - which departed to hunt on the waters of the Columbia. The Iroquois, however, became dissatisfied with some of the measures adopted by the leaders of the party, and separated from them to hunt the tributaries of Bear River, where we found them. Robidoux engaged three of them, and the others promised to meet us in Cache Valley, after the hunting season. One of those hired, was immediately despatched in pursuit of Dripps, who joined us at the Boiling Kettles, on Salt River, from whence we proceeded to its mouth, and there fell in with Fraeb and Jarvis. Arrangements were now made for both companies to hunt together, and we travelled thence sixty miles to the mouth of Lewis River, and down Snake river eighty or ninety miles to Porteneuf. Here we cached our furs, and thence continued down Snake River to the falls, forty or fifty miles below the mouth of Porteneuf. These falls are a succession of cascades by which the river falls forty or fifty feet in a few rods. "At the Falls we separated into two parties, one of which was to hunt the Cassia, and other streams in the vicinity, whilst the other, consisting of twenty two men, myself included, was sent to the Maladi. Our party left Snake River, and travelled north of west, through a barren desert, destitute of every species of vegetation, except a few scattering cedars, and speckled with huge round masses of black basaltic rock. At noon, we entered on a tract of country entirely covered with a stratum of black rock, which had evidently been in a fluid state, and had spread over the earth's surface to the extent of forty or fifty miles. It was doubtless lava, which had been vomited forth from some volcano, the fires of which are now extinct.

"We proceeded on over this substance, hoping to cross the whole extent without difficulty, but soon met with innumerable chasms, where it had cracked and yawned asunder at the time of cooling, to the depth often of fifty feet, over which we were compelled to leap our horses. In many places the rock had cooled into little wave-like irregularities, and was also covered with large blisters, like inverted kettles, which were easily detached by a slight blow. One of these was used as a frying pan, for some time afterwards, and found to answer the purpose quite well. In the outset of our march over this bed of lava, we got along without much trouble, but were finally brought to a full stop by a large chasm too wide to leap, and forced to return back to the plain. At this time we began to feel an almost insupportable thirst. The day was an excessively sultry one, and the lava heated to that degree that we were almost suffocated by the burning atmosphere, that steamed up from it. We had, moreover, lived for some time past, upon dried buffalo meat, which is alone sufficient to engender the most maddening desire for water, when deprived of that article.

"One or two individuals, anticipating the total absence of any stream or spring on the route, had providently supplied themselves with beaver skins of water, previous to our departure in the morning, but this small supply was soon totally exhausted. At dark we found ourselves involved in a labyrinth of rocks, from which we sought, without success to extricate ourselves, and were finally obliged to halt and await the rising of the moon. Meantime we joyfully hailed the appearance of a shower, but greatly to our chagrin, it merely sprinkled slightly, and passed over. However it was not entirely lost, for we spread out our blankets and eagerly imbibed the dampness that

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

accumulated, but the few drops thus obtained, provoked rather than satisfied the wild thirst that was raging within us.

“At the expiration of a couple of hours, the moon rose, and we proceeded cautiously in the direction of a blue mountain, where we conjectured that the river Maladi took its rise. Through the rest of the night we toiled on, and at length we saw the sun climbing the east. But the benefit of his light was a mere feather in the scale, compared with the double anguish occasioned by the added heat. Some of the party had recourse to the last expedient to mitigate their excessive thirst, and others ate powder, chewed bullets, etc. but all to no purpose. At eight o'clock, we reached a narrow neck of the rock or lava, which we succeeded in crossing. Some of our companions explored the interior of frightful chasms in search of water, but returned unsuccessful. Subordination now entirely ceased. Every one rushed forward without respect to our leaders, towards a rising plain which separated us from the blue mountain which had been our guiding beacon since the night. On reaching the summit of the plain, the whole valley about the mountain presented a sea of rock, intersected by impassable chasms and caverns.

“Orders were now given for every one to shift for himself, and exercise his best judgement in the endeavour to save his life. One of the men immediately turned his horse from north west, which had been thus far our course, to the north east, and declared that if any thought proper to follow him, they would be rewarded by the taste of water before night. We all followed him, rather because the route seemed less difficult, than from any well-grounded hope of realizing his promise.

“Our suffering became more and more intense, and our poor animals, oppressed with heat and toil, and parching with thirst, now began to give out, and were left by the way side. Several of our poor fellows were thus deprived of their horses, and though almost speechless and scarcely able to stand, were compelled to totter along on foot. Many of our packed mules, unable to proceed any further, sank down and were left with their parched tongues protruding from their mouths. Some of the men too, dropped down totally exhausted, and were left, beseeching their companions to hasten on, and return to them with water, if they should be so fortunate as to succeed in reaching it.

“At length, when all were nearly despairing, and almost overcome, one of our companions who had outstripped us to the top of a hill, fired off his gun. The effect was electrical. All knew that he had found water, and even our poor beasts understood the signal, for they pricked up their drooping ears, snuffed the air, and moved off at a more rapid pace. Two or three minutes of intense anxiety elapsed, we reached the top of the hill, and then beheld what gave us infinitely more delight than would the discovery of the north west passage, or the richest mine of gold that ever excited, the cupidity of man.

“There lay at the distance of about four miles, the loveliest prospect imagination could present to the dazzled senses - a lovely river sweeping along through graceful curves. The beautiful sight lent vigour to our withered limbs, and we pressed on, oh! how eagerly. At sunset we reached the margin of the stream, and man and beast, regardless of depth, plunged, and drank, and laved, and

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

drank again. What was nectar to such a draught! The pure cool reviving stream, a new river of life, - we drank, laughed, wept, embraced, shouted, - and drank, shouted, embraced, wept, and laughed again. Fits of vomiting were brought on by the excessive quantities we swallowed, but they soon passed off, and an hour or so saw us restored to our usual spirits.

“We spent that night and the following morning in the charitable office of conveying water to our enfeebled companions, who lingered behind, and the poor beasts that had been also left by the way, and succeeded in getting them all to camp, except the person and animals of Charbineau,\* one of our men, who could nowhere be found, and was supposed to have wandered from the trail and perished.

\*This was the infant who, together with his mother, was saved from a sudden flood near the Falls of the Missouri, by Capt. Lewis, - vide Lewis and Clark's Expedition. [W. A. F.]

## CHAPTER XII

“Next morning,” continued Stevens, “several successive reports of firearms were heard apparently at the distance and direction of a mile or so below camp. Supposing the shots to have been fired by Charbineaux, one of our men was despatched in quest of him, but he shortly after returned, accompanied by several trappers who belonged to a party of forty, led by a Mr. Work, a clerk of the Hudson Bay Company. These men were mostly half breeds, having squaws and children. They live by hunting furred animals, the skins of which they dress and exchange for necessaries at the trading posts of that company, on the Columbia and its tributaries.

“Two days before we met them, five of their hunters were fired upon by a party of Indians, who lay concealed in a thicket of willows near the trail. One of them was killed on the spot, and a second disabled by a shot in the knee. An Indian at the same moment sprang from the thicket and caught the wounded man in his arms, who, well knowing that torture would be the consequence of captivity, besought his flying comrades to pause and shoot either the Indian or himself. Heeding his piteous cry, one of the retreating hunters, more bold, or more humane than the other two, wheeled and fired, but missed his aim, and hastily resumed his flight. The exasperated savage, at this, let go his hold, pursued, overtook, and killed the unlucky marksman, while the wounded man crept into a thicket and effectually concealed himself till night, when he made his escape. The bodies of the two dead men were found the next day; both had been stripped and scalped. Beside one of them lay a gun, broken off at the breech, and charged with two balls without powder. They were buried as decently as circumstances would permit, and the place of interment carefully concealed to prevent their last repose being rudely disturbed by the Indians, who frequently, with a fiendish malice, tear open the graves of their victims, and leave their bones to bleach upon the soil.

“The river on which we were now encamped, and the fortunate and timely discovery of which had saved us from the last extremity of thirst, is called ‘La Riviere Maladi,’ (Sick River,) and owes its

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

name to the fact that the beaver found upon it, if eaten by the unwary hunter, causes him to have a singular fit, the symptoms of which are, stiffness of the neck, pains in the bones, and nervous contortions of the face. A party of half-starved trappers found their way to this stream a few years since, and observing plenty of beaver 'signs,' immediately set their traps, in order to procure provisions. At dawn the next day, several fine large fat beavers were taken, and skinned, dressed and cooked, with the least possible delay. The hungry trappers fed ravenously upon the smoking viands, and soon left scarce a single bone unpicked. Two or three hours elapsed, when several of the party were seized with a violent cramp in the muscles of the neck; severe shooting pains darted through the frame, and the features became hideously convulsed. Their companions were greatly alarmed at their condition, and imagined them to be in imminent danger. However, at the expiration of an hour, they were quite recovered, but others had meantime been attacked in the same way. These also recovered, and by the following morning all had passed the ordeal, save one, who having escaped so much longer than the rest, fancied himself entirely out of danger, and indiscreetly boasted of his better constitution, laughing at what he called the effeminacy of his companions.

"During the very height of his merriment, which by the way, was any thing but agreeable to his comrades, he was observed to turn pale, his head turned slowly towards his left shoulder, and became fixed, his mouth was stretched round almost to his ear on the same side, and twitched violently, as if in the vain endeavor to extricate itself from so unnatural a position, and his body was drawn into the most pitiable and yet ludicrous deformity. His appearance, in short, presented such an admirable and striking portraiture of the 'beautiful boy,' that his companions could not help indulging in hearty peals of laughter at his expense, and retorted his taunts with the most provoking and malicious coolness. When he recovered he was heard to mutter something about 'whipping,' but probably thought better of it afterwards, as he never attempted to put his threat into execution. Indeed, he subsequently acknowledged that he had been justly treated, and was never, from that time forth, heard to speak of his 'constitution.'

"Notwithstanding that we were well aware of these facts, we could not resist the temptation of a fine fat beaver, which we cooked and eat. But we were all sick in consequence, so much so, in short, that I do not believe a single one of us will ever be induced to try the same experiment again, no matter how urgently pressed by starvation."

There is a small stream flowing into the Big Lake, the beaver taken from which, produce the same effect. It is the universal belief among hunters, that the beaver in these two streams feed upon some root or plant peculiar to the locality, which gives their flesh the strange quality of causing such indisposition. This is the only mode in which I ever heard the phenomena attempted to be explained, and it is most probably correct.

"We trapped the Maladi to its source, then crossed to the head of Gordiaz River, and trapped it down to the plains of Snake River, from whence we returned to Cache Valley by the way of Porteneuf, where we found Dripps and Fontenelle, together with our lost companion Charbineaux. He states that he lost our trail, but reached the river Maladi after dark, where he discovered a village

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

---

of Indians. Fearing that they were unfriendly, he resolved to retrace his steps, and find the main company. In pursuance of this plan, he filled a beaver skin with water, and set off on his lonely way. After eleven day's wandering, during which he suffered a good deal from hunger, he attained his object, and reached the company at Porteneuf. The village he saw was the lodges of the Hudson Bay Company, and had he passed a short distance below, he would have found our camp. But his unlucky star was in the ascendant, and it cost him eleven day's toil, danger, and privation to find friends."

Such was the narrative Mr. Stevens gave me of the adventures of Robideaux's party.

## CHAPTER XIII

From Ogden's Hole, we passed by short marches down Cache Valley forty miles to Bear river, where we remained at the same encampment a whole month. During this time it stormed more or less every day, and the snow accumulated to such a depth that four of our hunters, were compelled to remain away from camp for thirty four days, the impossibility of travelling having prevented their return from an expedition after game. In all December the snow lay upwards of three feet deep, throughout Cache Valley; in other parts of the country the depth was still greater. In the latter part of this month, we separated from Fraeb and Jarvis, and crossed over to the Big Lake, a distance of thirty miles which we accomplished in four days. The "Big Lake" is so called in contra-distinction to the Little Lake, which lies due East from it fifty miles, and which has been described in a former chapter. It is sometimes also called "Salt Lake," from the saline quality of its waters. An attempt has been recently made to change the name of this lake to Lake Bonnyville, from no other reason that I can learn, but to gratify the silly conceit of a Captain Bonnyville, whose adventures in this region at the head of a party, form the ground work of "Irving's Rocky Mountains." There is no more justice or propriety in calling the lake after that gentleman, than after any other one of the many persons who in the course of their fur hunting expeditions have passed in its vicinity. He neither discovered, or explored it, nor has he done any thing else to entitle him to the honour of giving it his name, and the foolish vanity that has been his only inducement for seeking to change the appellation by which it has been known for fifty years, to his own patronymic, can reflect no credit upon him, or the talented author who has lent himself to the service of an ambition so childish and contemptible.

The dimensions of the Big Lake have not been accurately determined, but it may be safely set down as not less than one hundred miles in length, by seventy or eighty broad. It was circumnavigated a few years since by four men in a small boat, who were absent on the expedition forty days, and on their return reported that for several days they found no fresh water on its western shore, and nearly perished from the want of that necessary article. They ascertained that it had no visible outlet, and stated as their opinion that it was two hundred miles long and one hundred broad, but this was doubtless a gross exaggeration. I ascended a high mountain between Bear River and Webber's Fork, in order to obtain an extensive view of it, but found it so intersected by lofty promontories and mountains, not only jutting into it from every side, but often rising out

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

of its midst, that only thirty or forty square miles of its surface could be seen. Its waters are so strongly impregnated with salt that many doubt if it would hold more in solution; I do not however think it by any means saturated, though it has certainly a very briny taste, and seems much more buoyant than the ocean. In the vicinity of the Big Lake we saw dwarf oak and maple trees, as well on the neighboring hills as on the border of streams. This was the first time since leaving the Council Bluffs that we have seen timber of that description.

About the first of February we ascertained that a number of Caches we had made previous to our leaving Cache Valley, had been robbed by a party of Snakes, who without doubt discovered us in the act of making them. However the "Horn Chief," a distinguished chief and warrior of the Shoshonee tribe, made them return every thing he could find among them into the Caches again, though a multitude of small articles to the value of about two hundred dollars were irrecoverably lost. I had almost forgotten to record a debt of gratitude to this high souled and amiable chief for an act of chivalry that has scarce a parallel in the annals of any age or nation, in respect either of lofty courage, or disinterested friendship. The Horn Chief is noted for his attachment to the whites, numbers of whom owe to him not only the protection of their property, but the safety even of their lives. He is the principle chief of the Snakes, and forms a striking contrast to his people, being as remarkable for his uprightness and candour as they are noted for treachery and dishonesty.

While we remained near the Snake village on Bear River, the preceding autumn, they formed a plot to massacre us solely for the purpose of possessing themselves of our arms and baggage. Relying on their professions of friendship, and unsuspecting of ill faith, we took no precautions against surprise, but allowed them to rove freely through camp, and handle our arms, and in short gave them every advantage that could be desired. The temptation was too much for their easy virtue. Such an opportunity of enriching themselves, though at the cost of the blackest ingratitude, they could not consent to let slip, and therefore held a council on the subject at which it was resolved to enter our camp under the mask of friendship, seize our arms, and butcher us all on the spot.

In these preliminary proceedings the Horn Chief took no part, he having preserved the strictest silence throughout the whole debate. But when the foul scheme was fully resolved upon and every arrangement made for carrying it into effect, he arose and made a short speech in which he charged them with ingratitude, cowardice, and the basest breach of faith, and after heaping upon them the most stinging sarcasms and reproaches, concluded by telling them he did not think they were manly enough to attempt putting their infamous design into execution, but to remember if they did, that he would be there to aid and die with those they purposed to destroy.

Early the following morning the Snakes assembled at our camp with their weapons concealed beneath their robes; but this excited no suspicion for we had been accustomed to see them go armed at all times and upon every occasion. None of their women or children however appeared, and this was so unusual that some of my companions remarked it at the time; still the wily devils masked their intention so completely by an appearance of frank familiarity and trusting confi-

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

dence, that the idea even of an attack never occurred to us.

At length when they had collected to more than thrice our number, the Horn Chief suddenly appeared in the centre of our camp, mounted on a noble horse and fully equipped for war. He was of middle stature, of severe and dignified mien, and wore a visage deeply marked by the wrinkles of age and thought, which with his long gray hairs showed him to have been the sport of precarious fortune for at least the venerable term of sixty winters. His head was surmounted by a curious cap or crown, made of the stuffed skin of an antelope's head, with the ears and horns still attached, which gave him a bold, commanding, and somewhat ferocious appearance.

Immediately upon his arrival he commenced a loud and threatening harrangue to his people, the tenor of which we could not comprehend, but which we inferred from his looks, tone of voice and gestures, boded them no good, and this opinion was strengthened by their sneaking off one after another until he was left quite alone. He followed immediately after, himself, leaving us to conjecture his meaning. However he afterwards met with the Iroquois, and informed them of the whole matter, and the same time showing the tip of his little finger, significantly remarked that we escaped "that big."

It appears they were assembling to execute their diabolical plot, and about to commence the work of blood when the Horn Chief so opportunely arrived. He instantly addressed them, reminded them of his resolution, dared them to fire a gun, called them cowards, women, and in short so bullied and shamed them that they sneaked away without attempting to do us any injury. It was not for months afterwards that all this came to our knowledge and we learned how providential had been our deliverance, and how greatly we were under obligation to the friendship, courage, and presence of mind of this noble son of the forest, whose lofty heroism in our defence may proudly rival the best achievements of the days of chivalry.

Some days after the robbery of the Caches, seventeen horses were stolen from a detachment of our party which had been sent to Cache Valley for provisions. They were about sixty in number, and supposed to be Blackfeet. They departed in the direction of Porteneuf. This misfortune prevented our obtaining supplies of meat, and we were consequently reduced to the necessity of living on whatever came to hand. Famished wolves, ravens, magpies, and even raw hide made tender by two days boiling, were greedily devoured. We lived or rather starved in this manner ten or twelve days, daily expecting the arrival of our hunters with meat, but they came not, and we were compelled to return to Cache Valley where we halted on the first of March on Cache Valley Creek. We saw in our route several boiling springs, the most remarkable of which bursts out from beneath a huge fragment of rock, and forms a reservoir of several rods in circumference, the bottom of which was covered with a reddish slimy matter. The waters of these springs was as hot as in those on Salt River. They are situated near the trail that leads from the head of Cache Valley to the Big Lake.

We found the snow in Cache Valley reduced to the depth of eighteen inches, but covered with a crust so thick and firm that it cuts our horse legs, making them bleed profusely, and the trail of

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

our poor beasts was sprinkled with blood at every step, wherever we went.

During the month of March, we proceeded slowly to Bear River, starving at least one half the time. Our horses were in the most miserable condition, and we reduced to mere skeletons. Our gums became so sore from eating tough bull meat, that we were forced to swallow it without chewing; and to complete our misery, many of us were nearly deprived of sight from inflammation of the eyes, brought on by the reflection of the sunbeams on the snow.

Early in April wild geese began to make their appearance, - a happy omen to the mountain hunter. The ice soon disappeared from the river, and the days became generally warm and pleasant, though the nights were still extremely cold. About this time three Flathead Indians came to us from the Hudson Bay trappers, who had passed the winter at the mouth of Porteneuf, and reported that the plains of Snake River were already free from snow. This information decided our leaders to go there and recruit our horses preparatory to the spring hunt, which would commence as soon as the small streams were disencumbered of their icy fetters; and we set about the necessary arrangements for departure.

## CHAPTER XIV

On the fourth of April, having cached our furs, and made other necessary arrangements for our journey, we set off, and proceeding but slowly, though with great fatigue, owing to the great depth and hardness of the snow, which though encrusted stiffly, would by no means bear the weight of our horses, - accompanied but a few miles, when we halted for the night at a spring source, in the northern extremity of Cache Valley. The following day we crossed a prairie hill, and encamped at evening at the fountain source of the south fork of Porteneuf, having seen on our route great numbers of buffalo, and many with young calves. We found the snow next day increased to the depth of from three to five feet, and floundered along through it for a few miles, though with the greatest toil and difficulty. Buffalo were quite as numerous on this day as the preceding, and we caught thirty or forty of their calves alive in the snow. Quite as many more were observed either killed or maimed by the frightened herds in their fugitive course. We rested that night on the south side of a hill, which the wind had partly denuded of snow, leaving here and there spots quite divested of it; but found neither grass nor water, both of which were greatly needed, and but scant supply of sage (wormwood) which we were obliged from the absence of every other, to use as a substitute for fuel. Water we obtained both for ourselves and horses, by melting snow in our kettles, - a tedious and vexatious process. The exertion of another day sufficed us to reach a point where fuel was more abundant, and of somewhat better quality, - a few scattered clusters of large willows furnishing us the necessary firewood to our comfort. We killed a number of buffalo, but upon any one of them the least particle of fat could not be found, and our fare was therefore none of the best, as may well be imagined.

On the morning of the eighth, several men were sent out with directions to drive, if possible, a herd of bulls down the river. Could this have been effected, we should have had a tolerable road

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

for our feeble horses to follow, but no such good fortune was the reward of our endeavours, for the buffalo refused absolutely to move, and were all, to the number of fifty and upwards, killed on the spot. Disappointed of this hope, we had no alternative but to resume our weary march as before, which we did at sunrise, on the following day. At first, we got along with tolerable ease, but as the forenoon advanced, the warmth of the sun so melted and softened the crust of the snow, that our horses plunged in at every step, and speedily became quite exhausted from the excessive fatigue of constantly breaking through, and forcing their way under such disadvantage. There was no alternative but for us to carry them, since they could neither carry us nor themselves even, and we therefore procured poles, and transported them two miles through the snow to a hill side, which was accomplished only at the cost of incredible labour, hardship and misery. In addition to this, we had our baggage, which lay scattered along the whole distance, from one encampment to the other, to collect and bring in on our shoulders, a work of immense toil, as at almost every step the crust gave way and engulfed us up to our armpits in the damp snow. However, we had the pleasure of seeing everything safe at camp in the evening, except three or four of our poorest horses, which being unable to extricate from the snow, we were obliged to abandon to their fate.

All hands were employed on the tenth, in making a road. We marched on foot one after another in Indian file, ploughing our way through the snow to the forks of Porteneuf, a distance of six miles, and back again, thus beating a path for our horses, the labour of which almost overcame our strength. When we returned, many of us were near dropping down from fatigue, so violent had been our exertion. At three o'clock next morning, rousing our weary limbs and eyelids from their needful rest and slumber, we pursued our journey, and succeeded in reaching a narrow prairie at the forks, which was found nearly free from snow. Here we remained over the following day, to refresh our half-dead horses, and rest our nearly exhausted selves. In the mean time we were visited by two hunters of the Hudson Bay Company, who gave us the grateful information that our troubles were nearly at an end, as the snow entirely disappeared after a few miles below. Six miles marching on the thirteenth, brought us out of the narrow defile we had hitherto with so much labour threaded, and into a broad and almost boundless prairie, which far as the eye could reach, was bare, dry, and even dusty. The sensation produced by this sudden transition from one vast and deep expanse of snow which had continually surrounded us for more than five months, to an open and unincumbered valley of one hundred miles in diameter, over which the sun shed its unclouded warmth, and where the greenness of starting verdure gladdened the eye was one of most exquisite and almost rapturous pleasure. Our toils were past, our hardships were over, our labours were at an end, and even our animals seemed inspired with fresh life and vigour, for they moved off at a gallop, of their own accord, evidently delighted to find their feet once more on terra firma. Since our departure from Cache Valley to this point, where Porteneuf leaves the mountains, we have made a distance of sixty miles, which to accomplish, has cost us nine day's toil.

We moved leisurely down Porteneuf on the following day, a distance of four miles, and came upon the camp of Mr. Work with the Hudson Bay trappers, (who it will be remembered, were met by Robidoux's party in the fall), with whom we pitched our quarters. From these people we procured some excellent dried meat, which, having been cured and prepared in the fall, when the buffalo were in good condition, was really most welcome; and of which we partook heartily,

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

believing, half-famished as we were, that more delicious food never feasted the appetite of man. In consequence of a storm of sleet that lasted for two days we were forced to remain here until the morning of the seventeenth, when the sun re-appeared, and we departed, though owing to a quarrel Mr. Works had with one of his men, which resulted in the fellow joining our party, not until we had narrowly escaped flogging the "Nor'westers" as the Hudson Bay people are sometimes called, since the junction with that company of one called the Northwest Fur company, of recent date. One of Mr. Work's people, foolishly imagining that Mr. Fontenelle had seduced or at least encouraged the man to desert, presented his gun at the breast of our leader, but was withheld from firing by the interference of a more sensible comrade. Astonished and angered at the recklessness and audacity of the action, we sprang from our horses, cocked our rifles, and prepared to give them battle, should they presume to offer any further show of hostility. Matters, however, soon assumed a more serious aspect, and we left them to pursue our journey. Immediately after our departure they signified their good will in firing a salute, by the way of bravado, to which, however, we did not think worth while our while to pay any attention. A collision that might have been bloody and fatal, was thus happily, though narrowly, avoided, for in the excitement and passion of the moment, a single shot, fired even by accident, would have been the signal for a deadly encounter. Our progress was necessarily slow from the extreme debility and weakness of our horses, and after marching a few hours, we halted for the night on the margin of a pleasant spring, beneath a grove of cedars, three or four miles west of Porteneuf. Continuing our route, we reached Snake River, and followed it slowly up to the forks where we opened our spring hunt.

From the mouth of Porteneuf, Snake River flows westward to the falls between forty and fifty miles below, when it gradually turns northward and finally after receiving the waters of several large tributaries, which rise to the westward of the Big Lake, unites itself with Salmon River. It will be recognized on maps of the country as the south fork of Lewis River, but is known among Rocky Mountain hunters by no other name than Snake River, or which is the same thing, "Sho-sho-ne-pah," its ancient appellation, in the language of that Indian tribe. Near the mouth of Porteneuf, it is a broad, magnificent stream, two hundred yards wide, clear, deep, and rapid, bordered by groves of towering cotton wood and aspen trees, and clustering thickets of large willows, matted and bound together by numerous vines and briars. On either side, a vast plain extends its level from thirty to fifty miles in breadth, bounded by ranges of lofty mountains, which in some places are barely visible, owing to their great distance. On the east side of the river, the plain is barren, sandy, and level, and produces only prickly pear, sage, and occasional scanty tufts of dry grass; on the west side the plain is much more extensive than on the opposite, stretching often away to fifty and even sixty miles from the river; it is irregular and sandy, covered with rocks, and like the other, barren of vegetation, except prickly pear and sage - the northern part is a perfect desert of loose, white, sand, dreary, herbless, and arid. It presents everywhere proofs of some mighty convulsion, that sinking mountains to valleys, and elevating valleys to mountains, has changed the aspect of nature, and left the Rocky Mountains in the picturesqueness and grandeur of their present savage and sullen sublimity. Scattered over this immense plain, there are innumerable mounds or masses of rock cracked in the form of a cross at top, (quere, by cooling or the heat of the sun?) the most remarkable of which are three of mountain altitude, situated midway between the mouth of Porteneuf and the mountains northward. Near the largest of these gigantic

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

masses there is a district of some extent covered with huge blocks of black rock, varying in size from a finger stone to a house, which at a distance bear a close resemblance to a village of sombre dwellings.

There are several small rivers flowing from the mountains on this side towards Snake River, not one of which ever reaches it; they are all absorbed by the sand, the strata of which it is evident from this circumstance, must be deep. On the east side, however, there is Porteneuf, and a small river called the Blackfoot, which rises with the sources of Salt River and flows sixty miles westward, to its junction with Snake River, fifteen miles above the mouth of Porteneuf. The Blackfoot is fifty paces in breadth, and is bordered by dense thickets of willow - near the mouth there is a large solitary mound or hill, called the "Blackfoot Butte." Between the Blackfoot and Porteneuf, there is a rich and continuous bottom of excellent grass, where deer are always numerous.

## CHAPTER XV

From the mouth of the Blackfoot, Snake River turns gradually away to the northeast. At the distance of twenty miles, its garniture of grass-covered bottoms and groves of trees entirely disappear, giving place to a more harsh and sterile border, where instead of a rich soil and luxuriant vegetation we find only rocks and sand, with an occasional dwarf cedar, scattering prickly pears, and a gigantic growth of that which flourishes where nothing else can, the everlasting wormwood, or as it is always here called "sage." Twenty miles further up and we come to the junction of "Gray's Creek," a small stream scantily fringed with unneighborly clusters of willows, which rises in "Gray's Hole," between Blackfoot and Salt River, and thence flows north thirty miles and twenty west to its union with Snake River. Fifteen miles above the mouth of Gray's Creek are the "Forks of Snake River," otherwise the junction of "Lewis River" with "Henry's Fork." The first named flows from a cut in the mountain to the southeast, the latter rises with the sources of Madison River in a range of fir covered hills called the "Piny Woods," and runs a southwest course of seventy miles or so to its junction with Lewis River. The country through which it passes after emerging from the Piny Woods is a barren sandy waste, and it is rendered totally unnavigable even for canoes by a succession of falls and rapids. It derives its name from the enterprising Major Henry, who visited the Rocky Mountains shortly after the return of Messrs Lewis and Clark, and built a trading house near its mouth, the remains of which are still visible, bringing sadly to mind the miserable fate of the party left in charge of it, who were overpowered by the Indians and all massacred. It is the "Mad River," mentioned in Chapter V of Coxe's Narrative of adventures on the Columbia River. Lewis River rises with the sources of the Yellow Stone Lake, and flows southward to Jackson's Hole, when it expands to a lake of thirty or forty miles extent, called the "Teton Lake" from a remarkable mountain overlooking it, which bears the name of the "Trois Tetons." From Jackson's Hole it makes a gradual and graceful sweep to the northwest, until it issues forth from the mountains twenty miles above its mouth, where on the north side a perpendicular wall of rock juts into the plain to a considerable distance, while on the south side its margin is lined by

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

a grove of dwarf cedars that stretches away from the pass or cut several miles. After leaving the mountains it becomes divided into a great number of channels separated from each other by numerous islands, some of which are miles in extent, but others of comparatively small dimensions. Many of these streams or channels are not again united but pursue their several courses till they meet and mingle with the waters of Henry's Fork. There is a high rocky mound in the angle between the two streams, and another on the north side of Henry's Fork, which present the appearance of having been once united. Both these mounds are large and lofty and may be easily seen from the plain at a distance of from thirty to forty miles. There are likewise two or three similar but smaller mounds on an island in Lewis River, their summits just appearing above the forest of cottonwood trees by which they are entirely surrounded and nearly concealed. Noble groves of aspen and cottonwood, and dense thickets of willow border all these streams and channels, and form almost impenetrable barriers around the verdant prairies covered with fine grass and delicate rushes which lie embowered within their islands. Deer and elk in great numbers resort to these fair fields of greenness in the season of growth, and during the inclemencies of winter seek shelter in the thickets by which they are environed, where rushes of gigantic size, exceeding in stature the height of man, are found in wild profusion. Flowing into Henry's Fork there is, a short distance above Lewis River, a small stream called Pierres Fork. It rises in Pierre's Hole, and has a westerly course of sixty miles to its mouth. Twenty miles above the forks of Snake River, Henry's Fork is subdivided into two streams of nearly equal magnitude, one of which before leaving the mountains bounds over a lofty precipice, thus forming a most magnificent cascade. Lewis River is about two hundred miles long, and receives in its course several streams which I shall hereafter have occasion to notice.

During our journey to the forks of Snake River, we saw and killed numbers of Buffalo, and saw also hundreds of their carcasses floating down the river, or lodged with drift wood upon the shoals. These animals were probably drowned by breaking through when endeavoring to cross the river on the ice. At Gray's Creek we came in view of the "Trois Tetons," (three breasts) which are three inaccessible finger-shaped peaks of a lofty mountain overlooking the country to a vast distance. They were about seventy miles to the northeast, when observed from that point. Their appearing is quite singular, and they form a noted land mark in that region. During our march we had several hard showers of rain, and occasionally a storm of sleet, but the weather was generally mild and pleasant.

From the Forks of Snake River we continued up to the forks of Henry's Fork, trapping as we went and taking from forty to seventy beaver a day. Some of them were large and fat, and when well boiled proved to be excellent eating. Our cuisine was not of the best perhaps, but we made up in plenty what we lacked in variety, and on the whole fared very tolerably. As we ascended Henry's Fork, trees and grass again disappeared, and the waters of both branches were frequently compressed to narrow channels by bold bluff ledges of black rock, through which they darted with wild rapidity, and thundering sound.

A small party of hunters was sent to the "Burnt Hole," on the Madison River, in quest of beaver, but returned back without success. The Burnt Hole is a district on the north side of the Piny

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

woods, which was observed to be wrapped in flames a few years since. The conflagration that occasioned this name must have been of great extent, and large forests of half consumed pines still evidence the ravages at that time of the destructive element. The Piny Woods are seen stretching darkly along like a belt of twilight from south of east to northwest, distant from us about thirty miles.

From Henry's Fork we passed westward to the head of "Kammas Creek," (so called from a small root, very nutritious, and much prized as food by Indians and others, which abounds here,) a small stream that rises with the sources of the Madison, flows southeast forty or fifty miles, and discharges itself into a pond six miles northwest from the mouth of Gray's Creek. This pond has no outlet, its surplus waters pass off by evaporation, or are absorbed by the sand. During our stay on this stream, several Indians were seen lurking about, and evidently watching an opportunity to steal our horses, or commit some other depredation upon our party.

On the twenty-eighth of May, two of our men, Daniel Y. Richards, and Henry Duhern by name, went out as usual to set their traps, but never returned. We ascertained subsequently, that they were butchered by a war party of Blackfeet Indians. Four of our men, crossing over to the southeastern sources of the Jefferson, discovered a number of mounted Indians, and fled back to camp in alarm. At the same time, a party of Flathead Indians came to us from a village four days' march to the northwestward. They informed us that they had a skirmish a few days previous with a party of Blackfeet, two of whom they killed. Several of the Flathead warriors were immediately dispatched to their village with a present to the chief, and a request that he and his people would come and trade with us. During their absence, we moved westward to a small stream called "Poison Weed Creek," from a deleterious plant found in its vicinity. The waters of this creek also, are drunk up by the thirsty sands. Large herds of buffalo were driven over to us before the Flatheads, many of which we killed, and about one out of a dozen of which was found fat enough to be palatable. Several of the young Flatheads in the mean time joined us in advance of the village. The day previous to their coming, one of their tribe was killed by the Blackfeet, who also caught a Flathead squaw some distance from the village, whom they treated with great barbarity - they ravished her, cut off her hair, and in this condition sent her home.

Two or three days after their arrival, the whole village, consisting of fifty lodges of Flatheads, Nezperces, and Pend'orielles, came in sight, but unlike all other Indians we have hitherto seen, they advanced to meet us in a slow and orderly manner singing their songs of peace. When they had approached within fifty paces, they discharged their guns in the air, reloaded, and fired them off again in like manner. The salute of course, was returned by our party. The Indians now dismounted, left their arms and horses, and silently advanced in the following order: first came the principle chief, bearing a common English flag, then four subordinate chiefs, then a long line of warriors, then young men and boys who had not yet distinguished themselves in battle, and lastly the women and children, who closed the procession. When the Chief had come up, he grasped the hand of our Partizan, (leader,) raised it as high as his head, and held it in that position while he muttered a prayer of two minutes duration. In the same manner he paid his respects to each of our party, with a prayer of a minute's length. His example was followed by the rest, in the order

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

of rank. The whole ceremony occupied about two hours, at the end of which time each of us had shaken hands with them all. Pipes were then produced, and they seated themselves in a circle on the ground, to hold a council with our leaders respecting trade.

The Flatheads probably derive their name from an ancient practice of shaping or deforming the head during infancy, by compressing it between boards placed on the forehead and back part, though not one living proof of the existence at any time of that practice can now be found among them. They call themselves in their beautiful tongue, "Salish," and speak a language remarkable for its sweetness and simplicity. They are noted for humanity, courage, prudence, candour, forbearance, integrity, trustfulness, piety, and honesty. They are the only tribe in the Rocky Mountains that can with truth boast of the fact that they have never killed or robbed a white man, nor stolen a single horse, how great soever the necessity and the temptation. I have, since the time mentioned here, been often employed in trading and travelling with them, and have never known one to steal so much as an awl-blade. Every other tribe in the Rocky Mountains hold theft rather in the light of a virtue than a fault, and many even pride themselves on their dexterity and address in the art of appropriation, like the Greeks deeming it no dishonour to steal, but a disgrace to be detected.

## CHAPTER XVI

The Flatheads have received some notions of religion either from pious traders or from transient ministers who have visited the Columbia. Their ancient superstitions have given place to the more enlightened views of the christian faith, and they seem to have become deeply and profitably impressed with the great truths of the gospel. They appear to be very devout and orderly, and never eat, drink, or sleep, without giving thanks to God. The doctrines they have received are no doubt essential to their happiness and safety in a future state of existence, but they oppose, and almost fatally, their security and increase in this world. They have been taught never to fight except in self defence, or as they express it, "never to go out to hunt their own graves," but to remain at home and defend manfully their wives and children when attacked. This policy is the worst that could be adopted, and is indeed an error of fatal magnitude, for the consequence is that a numerous, well armed, watchful, and merciless enemy, with whom they have been at war from time immemorial, emboldened by their forbearance, and puffed up with pride by their own immunity, seek every occasion to harass and destroy them, - steal their horses, butcher their best hunters, and cut them off in detail. Fearing to offend the Deity, they dare not go out to revenge their murdered friends and kinsmen, and thus inspire their blood-thirsty foes with a salutary dread of retributive justice; and hence they are incessantly exposed to the shafts of their vindictive enemies, outlying parties of whom are almost constantly on the watch to surprise and massacre stragglers, unrestrained by the fear of pursuit and vengeance. Under the influence of such an untoward state of things, they are rapidly wasting away, in spite of courage, patriotism, and many virtues that have no parallel in the Rocky Mountains. Though they defend themselves with a bravery, skill, and devotion that has absolutely no comparison, proving on every occasion their great superiority in dauntlessness and address, no advantages of daring and prowess can over-

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

come the evil effects of their defensive policy, and the probability is that in a few years more the noblest race of uncivilized men, will become utterly extinct.

Many anecdotes of Messrs. Lewis and Clark, who were the first white men they ever saw, are related by the Flatheads, and some of the old men in the village now with us, were present at their first interview. An intelligent Flathead, known to the hunters by the name of "Faro," related to me many curious incidents in their history, and among others an account of this first interview with the whites, which, though obtained two years later in point of time, may not be uninteresting in this connexion. I give it nearly in his own language.

"A great many snows past," said he, "when I was a child, our people were in continual fear of the Blackfeet, who were already in possession of fire arms of which we knew nothing, save by their murderous effects. During our excursions for buffalo, we were frequently attacked by them, and many of our bravest warriors fell victims to the thunder and lightning they wielded, which we conjectured had been given them by the Great Spirit to punish us for our sins. In our numerous conflicts, they never came in reach of our arrows, but remained at such a distance that they could deal death to us without endangering themselves. Sometimes indeed their young warriors closed in with us, and were as often vanquished; but they never failed to repay us fourfold from a safe distance. For several moons we saw our best warriors almost daily falling around us, without our being able to avenge their deaths. Goaded by thirst for revenge, we often rushed forth upon our enemies, but they receded like the rainbow in proportion as we advanced, and ever remained at the same distance, whence they destroyed us by their deadly bolts, while we were utterly powerless to oppose them. At length, 'Big Foot,' the great chief of our tribe, assembled his warriors in council, and made a speech to them, in which he set forth the necessity our leaving our country. 'My heart tells me,' said he, 'that the Great Spirit has forsaken us; he has furnished our enemies with his thunder to destroy us, yet something whispers to me, that we may fly to the mountains and avoid a fate, which, if we remain here is inevitable. The lips of our women are white with dread, there are no smiles on the lips of our children. Our joyous sports are no more, glad tales are gone from the evening fires of our lodges. I see no face but is sad, silent, and thoughtful; nothing meets my ears but wild lamentations for departed heroes. Arise, let us fly to the mountains, let us seek their deepest recesses where unknown to our destroyers, we may hunt the deer and the bighorn, and bring gladness back to the hearts of our wives and our children!'

"The sun arose on the following morning to shine upon a deserted camp, for the little band of Flatheads were already leaving the beautiful plains of the Jefferson. During one whole moon we pursued our course southwestward, through devious paths and unexplored defiles, until at last, heartsore and weary, we reached the margin of salmon river. Here we pitched our camp, and whilst the women were employed in gathering fruits and berries, our hunters explored the surrounding mountains, which they found stored with abundance of game, as the stooping trees and bushes that grew around our lodges, told us on our return; we likewise made the joyful discovery that the river was alive with salmon, great numbers of which were taken and preserved against future necessity. The Great Spirit seemed again to look kindly upon us. We were no longer disturbed by our enemies, and joy and gladness came back to our bosoms. Smiles like little birds

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

came and lit upon the lips of our children, their merry laughter was a constant song, like the song of birds. The eyes of our maidens were again like the twinkling stars, and their voices soft as the voice of a vanishing echo. There was plenty in every lodge, there was content in every heart. Our former pastimes were renewed, our former fears were forgotten. Pleasant tales again wooed the twilight, and the moon was the only watch that we kept upon our slumbers. Our hunters went out in safety, there was no blood upon the path. They came back loaded with game, there was no one to frighten away the deer. Peace hovered around our council fires, we smoked the calumet in peace.

“After several moons, however, this state of tranquil happiness was interrupted by the unexpected arrival of two strangers. They were unlike any people we had hitherto seen, fairer than ourselves, and clothed with skins unknown to us. They seemed to be descended from the regions of the great “Edle-a-ma-hum.” They gave us things like solid water, which were sometimes brilliant as the sun, and which sometimes showed us our own faces. Nothing could equal our wonder and delight. We thought them the children of the Great Spirit. But we were destined to be again overwhelmed with fear, for we soon discovered that they were in possession of the identical thunder and lightning that had proved in the hands of our foes so fatal to our happiness. We also understood that they had come by the way of Beaver-head River, and that a party of beings like themselves were but a day’s march behind them.

“Many of our people were now exceedingly terrified, making no doubt but that they were leagued with our enemies the Blackfeet, and coming jointly to destroy us. This opinion was strengthened by a request they made for us to go and meet their friends. At first this was denied, but a speech from our beloved chief, who convinced us that it was best to conciliate if possible the favor of a people so terribly armed, and who might protect us, especially since our retreat was discovered, induced most of our warriors to follow him and accompany the strangers to their camp. As they disappeared over a hill in the neighborhood of our village, the women set up a doleful yell, which was equivalent to bidding them farewell forever, and which did any thing but elevate their drooping spirits.

“After such dismal forebodings imagine how agreeably they were disappointed, when, upon arriving at the strangers encampment, they found, instead of an overwhelming force of their enemies, a few strangers like the two already with them, who treated them with great kindness, and gave them many things that had not existed before even in their dreams or imaginations. Our eagle-eyed chief discovered from the carelessness of the strangers with regard to their things, that they were unacquainted with theft, which induced him to caution his followers against pilfering any article whatever. His instructions were strictly obeyed, mutual confidence was thus established. The strangers accompanied him back to the village, and there was peace and joy in the lodges of our people. They remained with us several days, and the Flatheads have been ever since the friends of the white men.”

CHAPTER XVII

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

Gambling seems not to be disallowed by the religion of the Flatheads, or rather perhaps is not included among the number of deadly offences, for they remain incurably addicted to the vice, and often play during the whole night. Instances of individuals losing everything they possess are by no means infrequent. Their favourite game is called "Hand," by the hunters, and is played by four persons or more. - Bettors, provided with small sticks, beat time to a song in which they all join. The players and bettors seat themselves opposite to their antagonists, and the game is opened by two players, one of each side, who are provided each with two small bones, one called the true, and the other false. These bones they shift from hand to hand, for a few moments with great dexterity, and then hold their closed hands, stretched apart, for their respective opponents to guess in which the true bone is concealed. This they signify by pointing with the finger. Should one of them chance to guess aright and the other wrong, the first is entitled to both true bones, and to one point in the game. Points are marked by twenty small sharp sticks, which are stuck into the ground and paid back and forth until one side wins them all, which concludes the game. The lucky player, who has obtained both the true bones, immediately gives one to a comrade, and all the players on his side join in a song, while the bones are concealing. Should the guesser on the opposite side miss both the true bones, he pays two points, and tries again; should he miss only one, he pays one point. When he guesses them both, he commences singing and hiding the bones, and so the game continues until one, or other of the parties wins. They have likewise a game called by the French name of "Roulette." This game is played by two persons with a small iron ring, two or three inches in diameter, having beads of various colours fastened to the inside. The ring is rolled over a piece of smooth ground by one of the players; both follow it and endeavour to pitch arrows so that the ring may fall upon them. The beads are of different values, and such only count as may happen to be directly over the arrow. The points, of the game are counted by small sticks, and the winning of a stated number determines it. Throwing arrows at a target with the thumb and finger, is a common game with the boys; shooting at a mark is also much practiced.

The women are as much addicted to gaming as the men. They play at Hand, and have also a game which is never played by the other sex. Four bones eight inches in length, which are marked on one side with figures common to two of them, are thrown forward on a buffalo robe, spread down for the purpose. If the white sides of all the four fall uppermost, they count four, and throw again; if two figured ones of the same kind, and two white ones are up, they count two, but if one odd one should be turned, they count nothing, and the adverse party takes the bones with the same privilege. This game is won by the party which gets an expressed number of points first.

Horse racing is a favourite amusement, with the Flatheads. In short races they pay no attention to the start, but decide in favour of the horse that comes out foremost. Sometimes in long races they have no particular distance assigned, but the leading horse is privileged to go where he pleases, and the other is obliged to follow until he can pass and take the lead. These races generally terminate in favour of bottom rather than speed. Occasionally they have club races, when they enter such horses, and as many of them as they please, run to some certain point and back, when the foremost horse is entitled to all the bets. These games and races are not peculiar to the Flatheads,

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

but are common to all the tribes we have met with in the country.

We remained on Poison-weed creek with the Flatheads until the 19th of June, when Messrs. Fontenelle and Dripps, with thirty men departed for St. Louis. They were accompanied by twenty Flatheads to Cache Valley, where they expected to meet the Rocky Mountain Fur Company, under a mutual agreement to return together to St. Louis. The remainder of our party, with the Iroquois amounting to twenty-five persons, set out at the same time for Salmon River, in company with the Flatheads. A Snake Indian came into our camp on the 22d, and informed us that he was one of two hunters, who escaped from a general massacre of the inmates of six lodges on Salmon river three days previous. Himself and companion returning from a hunting expedition, instead of the friends and relatives they expected to meet them and welcome them home from the fatigues of the chase, found only scalps and desolate lodges. Old and young, weak and strong, homely and fair, had met a common doom; not one was left alive of all they had so lately parted from in health and happiness. It was a sad tale, yet no uncommon one in this region of barbarism and inhumanity.

The next day four of the Flatheads who went with Fontenelle, returned and reported that he had a slight skirmish on Snake river with a party of Blackfeet, of whom they killed one, and took five horses, his own party sustaining no loss or injury.

On the 28th day of June we ascended a creek that flows from Day's defile, and unites with another from the north called Cotas Creek, both falling into a pond situated at the eastern extremity of a point of the mountain jutting down in the plain on the south side of Day's Creek. Day's defile receives its name from John Day, a noted hunter, who died and was buried here a few years since. We journeyed slowly, being engaged in procuring and drying meat for our subsistence during the fall hunt, which it is intended to make in a rugged country on the sources of Salmon river, where white men had never penetrated, but where beaver was said to be abundant. A Snake Indian, engaged for a guide, states that buffalo are no where to be found in that wild district, and hence the necessity of securing a good supply of provisions to be taken with us.

From the outlet of Day's Creek, we proceeded up forty miles to its source, and thence continued over a narrow pass between two mountains which we found so free from all obstructions that even wagons might cross with ease, and which conducted us to a large valley watered by a small stream called Little Salmon River, which flows through it in a western course. The source of this stream, though only ten or twelve feet wide, was yet so deep as to be unfordable, except at occasional points. Some of our men, ignorant of its depth, attempted to ford it, but only escaped drowning, by clinging to the branches which were interlaced and bound together by wild vines, forming a complete canopy over the stream. Their horses were carried some distance down by the impetuosity of the current before we could reach and rescue them.

We passed through a defile, on the first of July bearing southward, which was dotted occasionally, with banks of snow, which were however rapidly disappearing. This defile brought us to a small valley watered by Gordiaz river, which, rising with the sources of the Malade, against those of

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

Salmon river, flows eighty to one hundred miles eastward, gradually decreasing in breadth and depth, until it finally disappears in the plains of Snake river twenty-five miles north of the mouth of the Blackfoot. We found this valley covered with Buffalo, many of which we killed; we remained here until the 5th to dry the meat.

We now separated from the Flatheads, (except a few lodges, who remained with us,) and crossed a mountain to the westward, when we reached a torrent bounding over the rocks in that direction, which we followed for several miles, until it falls into a large one from the southwestward. This we ascended to its source, a small lake, one or two miles in extent, of great depth and perfectly transparent, situated in a hollow corner or cavity on the summit of a mountain. From hence we travelled westward over a harsh rugged pine covered country, destitute of valleys, but abounding with deep ravines, and dark gulfs. The sides of the mountains were often so abrupt that our horses were continually falling down, and frequently fell fifty or sixty feet before they could recover their footing. In some places the fallen pines were so numerous, and withal so interlocked with each other, that we were forced to cut a passage through.

The northern declivities of all these mountains were covered with snow banks, or chaotick masses of snow and rock intermingled, which had fallen from the summits. All the streams that wind through the deep cavities or gulfs between these mountains, are roaring and tumbling torrents, which flow eastward, and fall into Salmon river. Over these mountains, gulfs, ravines and torrents, and a thousand other obstacles we pursued our difficult and toilsome way, often at the imminent hazard of our lives, and compelled often to retrace our weary steps; sometimes journeying above the clouds, and again through passages so deep and dark, that no straggling sunbeam ever pierced their gloom. Thus alternated our course over mountain heights, and through tartarian depths.

## CHAPTER XVIII

After a tedious and toilsome march, we at length encamped on the 13th in a prairie, forming the central portion of a large valley half grown up with lofty pines, which is watered by one of the largest and most westerly of the sources of Salmon river. Here we found a party of "Root Diggers," or Snake Indians without horses. They subsist upon the flesh of elk, deer, and bighorns, and upon salmon which ascend to the fountain sources of this river, and are here taken in great numbers. These they first split and dry, and then pulverize for winter's provision. They often, when unable to procure fish or game, collect large quantities of roots for food, whence their name. We found them extremely anxious to exchange salmon for buffalo meat, of which they are very fond, and which they never procure in this country, unless by purchase of their friends who occasionally come from the plains to trade with them. We have not seen a vestige of buffalo since leaving the valley of Gordiez river.

From observing that many of these Indians were clad with robes and moccasins made of dressed beaver skins, we were induced to believe that the information we had previously received in re-

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

gard to the abundance of those animals in this vicinity was true. Our enterprising hunters forthwith engaged one of these Indians to serve as a guide, and set out on a trapping expedition, not doubting but that they should return in a few days with horse loads of fur. Meanwhile such of us as remained to take care of camp, were employed in taking salmon, which was easily effected by driving them up or down the river, over shoals and rapids where we killed them with clubs and stones, and frequently even caught them with our hands.

Our horses were daily so much annoyed by flies, that they were forced to assemble in crowds for their mutual defence, and were seen switching and brushing one another continually with their tails in the most affectionate and friendly manner. Hence I infer that among animals, of an inferior order to man at least - the strongest bands of friendship are forged more by interest than inclination. Our poor beasts from having nothing else to rub against, in the open prairie, were compelled to rub against each other to get rid of their tormenters, and thus necessity forced them to mutual kind offices, and established among them a community of friendly feelings and acts of generosity. Are the ties of social and political union among men often of a more refined and liberal character than that which bound together these poor, fretted animals in an intercourse of mutual amelioration?

At the expiration of ten days our hunters returned with ill success impressed most audibly upon their downcast visages. They reported that their guide conducted them about fifty miles further west and showed them a small group of beaver lodges, from which they caught some thirty of those animals. This accomplished they desired the Indian to proceed. He then led them to the summit of a lofty mountain, overlooking a vast plain watered by several streams, whose borders were garnished with groves of aspen and cottonwood trees, and pointing down with his finger inquired, "Do you see those rivers?" "Yes," returned the trappers, "but are there any beaver there?" "No," answered the Indian, with animation, "but there is abundance of elk." In the first heat of their indignation they could scarcely refrain from killing the poor Indian, who beheld with astonishment their anger at the receipt of information, which in his simplicity he had supposed must give them great delight. A moment's reflection, however, satisfied them that their guide meant well, though he had deceived them sorely. The truth was that the Indian imagining they hunted merely for food, had prepared them what he thought would be a most agreeable surprise, in leading them to where instead of the humble beaver they would find the lordly elk. There was nothing left for them to do but to return to camp, which they did with all expedition, leaving the wandering guide gazing alternately at the inviting prospect spread before him, and at the retreating cavalcade of retiring trappers and vainly striving to read the riddle of their disappointment and departure.

Having thus satisfied ourselves that our visit to this now interesting country was a complete failure, we determined to retrace our steps with the utmost possible despatch to the plains, and make our hunt elsewhere. Accordingly on the 24th we commenced our return travel, (I had almost spelt it with an ai, instead of an e, more, however, for the sake of the truth than a bad pun;) and for some time wandered about in almost every direction, to avoid the numerous obstacles that impeded nearly every step of the way, though our general course was towards the rising sun.

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

During our journey, I witnessed the process of cooking "Kamas," a small root about the size of a crab apple, which abounds in many parts of this country, in the rich bottoms that border most of the streams and rivers. The mode of preparing this root, is almost identical with that by which the south sea Islanders cook their cannibal and swinish food, and the west Indians their plantain. The squaws, by whom all the avocations of domestic labour are performed, excavate round holes in the earth two feet deep, and three in diameter, which are then filled with dry wood and stones in alternate layers, and the fuel fired beneath. When the wood consumes the heated stones fall to the bottom, and are then covered with a layer of grass, upon which two or three bushels of kamas roots, according to the capacity of the whole, are placed, and covered with a layer of grass, and the whole coated over with earth, upon which a large fire is kept burning for fifteen hours. Time is then allowed for the kamas to cool, when the hole is opened, and if perfectly done, the roots which were before white, are now of a deep black colour, not disagreeable to the taste, and having something the flavour of liquorice. Thus prepared, the kamas is both edible and nutritious, and forms no inconsiderable item of food with many of the Rocky Mountain tribes.

We found ourselves in the beginning of August, much to our satisfaction again in a level country, and far from the sombre folds of the mountain-wrapping pine in the dense forests of which the brightest day is but a starless twilight, and the fairest evening but a thick and blackened night. We rested from our mountain toils - toils in a double sense - in a beautiful valley twelve miles long, and from four to five broad, intersected by several willow and aspen bordered streams, tributary to Salmon River, which flows through the valley in a northeast direction. The river is here one hundred yards wide, clear, shallow, and arrowy swift. We had a shower of rain on the fourth, the first that has fallen since the middle of June.

On the eleventh, we fell in with the Flatheads, from whom we had parted a month before. Nothing worthy of record had chanced among them since our separation. In the afternoon, two horsemen were observed on a neighbouring bluff, but concealed themselves or fled ere they could be reached by a party of Flathead warriors, who were speedily mounted and in pursuit.

After this period we returned by way of the valley, of the Gordiez river, and little Salmon river to Day's Defile. During our route we saw traces of footmen, and one evening, heard the reports of firearms from a neighboring mountain, but saw no strange Indians, and met with no disaster of consequence. We killed several grizzly bears and a variety of other game. From the head of Day's creek, we crossed a mountain eastward to "Cota's Defile", so named from a man who was shot while performing a sentinel's duty, one dark night, by an Indian. On the 19th we had a snow storm of several hours duration. In the valleys the snow melted as fast as it fell, but the surrounding mountains were whitened with it for two days.

Cota's Defile brought us to the head waters of the east fork of the Salmon river, in an extensive valley, thirty miles long and ten to twelve in breadth. The principal stream is forty paces wide, bordered with willows, and birch and aspen, and flows northwestward fifty miles to Salmon river. From the summit of Cota's defile we saw a dense cloud of smoke rising from the plains forty or

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

fifty miles to the southeastward, which we supposed to have been raised by the Flatheads, who accompanied Fontenelle to Cache Valley, and who were now in quest of the village to which they belong. The Indians with us answered the signal by firing a quantity of fallen pines on the summit of a high mountain.

It may seem to the reader a trifling matter to note the track of footmen, the report of firearms, the appearance of strange horsemen, and the curling vapour of a far off fire, but these are far from trivial incidents in a region of country where the most important events are indicated by such signs only. Every man carries here emphatically his life in his hand, and it is only by the most watchful precaution, grounded upon and guided by the observation of every unnatural appearance however slight, that he can hope to preserve it. The footmark may indicate the vicinity of a war party hovering to destroy; the report of firearms may betray the dangerous neighbourhood of a numerous, well armed, and wily enemy; strange horsemen may be but the outriding scouts of a predatory band at hand and in force to attack; the rising smoke may indeed curl up from the camp of friends or an accidental fire, but it more probably signals the gathering forces of an enemy recruiting their scattered bands for the work of plunder and massacre. Thus every strange appearance becomes an important indication which the ripest wisdom and experience are needful to interpret; and the most studious care and profound sagacity are requisite to make the most advantage from. It is only in this manner that the hunter's life is rendered even comparatively secure, and it is thus that the most trivial occurrence assumes a character of the gravest moment, freighted as it may be with the most alarming and perilous consequences.

## CHAPTER XIX

On the 25th of August we again separated from the Flatheads, except a few lodges which accompanied us wherever we went, and entering a narrow cut in the mountain on the east side of the valley, followed the stream that flows through it to its source, and thence crossing a prairie hill descended into Horse Prairie fifteen miles north of the East Fork valley. Horse Prairie is a pleasant rolling plain fifty or sixty miles in circumference and surrounded by lofty mountains. In the middle of the valley there is a conical rocky mound rising from the plain on the north side of the stream, and directly fronting a high rocky bluff on the opposite side. These elevations, separated by a few hundred feet, at a distance convey the idea of a formidable gateway. The borders of the creeks and rivulets in this valley are scantily adorned with clusters of small willows. The largest of these creeks flows through the valley to the northeastward, and is the most southwesterly source of the Jefferson. The Sho- sho-ne Cove, where Capt. Lewis in advance of the canoes and with one attendant, discovered the first Rocky Mountain Indian whose confidence he endeavored to win by friendly signs and the offering of trinkets, but who, timid as a hare, fled in the mountains westward and crossed the Salmon River, is in this valley.

A trapper of our party by the name of Perkins was fired upon on the 27th from a thicket near which he happened to be passing, but fortunately escaped uninjured, though the ball passed through the left breast of his coat. His horse, alarmed by the sudden report of the gun, sprang

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

forward throwing off by the action his fusil which he was carrying carelessly across his saddle, seeing this an Indian sprang forth instantly from the thicket and pounced upon it, but before he could bring it to bear upon the trapper the latter by dint of whip and spur and a fleet steed had contrived to get beyond his reach. A party of hunters returned with Perkins to the scene of his discomfiture, but the Indians had already taken their departure, and that with such precipitation that several trifling articles were overlooked in their haste and left behind them.

We left Horse Prairie on the last day of the month, and crossing the mountain northwestward, descended into the Big Hole. This is an extensive valley of sixty miles length, and fifteen to twenty broad, bounded on every side by lofty, irregular and picturesque ranges of mountains, the bases of which are girded with dense forests of fir which in some places encroach upon the prairie domain. Above the pine region, the mountains present immense pointed masses of naked rock, hiding their giant heads among the clouds where the eye vainly strives to follow; and often even piercing through the misty realm, where storm spirits hold their frolic revels, so that their gray peaks are often seen flashing and basking in the sun while the thickening vapours below are sending down torrents of rain, and it may be belting their hoary forms with lightning lines of fire, and beating their stolid breasts with blows and bolts of thunder, or darkening the atmosphere with heavy falls of snow and hail. The caverns or gulfs - they are not vales - between these worlds of rock are heaped with the snows of ages.

This valley is watered by innumerable willow-fringed streams that unite and form Wisdom River, which flows a little east of north, and, after leaving the valley, eastward, to its junction with the Jefferson distant eighty miles.

On the first of September I discovered the burrow of a species of beautiful small spotted fox, and wishing to obtain one of their skins, sent an Indian boy to camp for a brand of fire designing, if possible, to drive them out by the aid of smoke. The careless boy scattered a few sparks in the prairie, which, the dry grass almost instantly igniting, was soon wrapped in a mantle of flame. A light breeze from the south carried it with rapidity down the valley, sweeping everything before it, and filling the air with black clouds of smoke. Our absent trappers returned at full speed, expecting to find camp attacked or at least the horses stolen, but were agreeably disappointed on learning the real nature of the accident. It however occasioned us no inconsiderable degree of uneasiness as we were now on the borders of the Blackfoot country, and had frequently seen traces of small parties, who it was reasonably inferred might be collected by the smoke, which is their accustomed rallying signal, in sufficient force to attack us. Our party consisted of thirty armed men, a mere handful when compared to the prairie-reddening parties of Blackfeet which are often seen here. Clouds of smoke were observed on the following day curling up from the summit of a mountain jutting into the east side of the valley, probably raised by the Blackfeet to gather their scattered bands, though the truth was never more clearly ascertained.

We were detained on the tenth, by a storm of snow which covered the earth to the depth of several inches, but disappeared on the following night. During our stay at this encampment we found the petrified trunk of a large cedar half imbedded in the earth. Next day we left the Big Hole by

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

its northern extremity and crossed a mountain to the Deer Horse Plains. This is a valley somewhat larger than the Big Hole, and like that surrounded by mountains, generally however low, barren and naked, except to the south and east where lofty and snowclad peaks appear. All the streams by which it is intersected are decorated with groves and thickets of aspen, birch and willow, and occasional clusters of currant and gooseberry bushes. The bottoms are rich and verdant, and are resorted to by great numbers of deer and elk. The several streams unite and form "La Riviere des pierres a fleches," (Arrow Stone River,) thus named from a kind of semi-transparent stone found near it, formerly much used by the Indians for making points of arrows. This river is one of the sources of Clark's River, and flows through the valley to the northeastward. The valley owes its singular but appropriate name to a natural curiosity situated near the river a few miles from the eastern side. The curiosity referred to is a semi-spherical mound some fifty paces in circumference and fifteen feet high, rather flattened at top, and covered with turf and a sickly growth of yellow grass. There are several cavities in the highest part of the mound, the largest measuring a foot in diameter, in all of which water is seen boiling a few inches below the surface. The earth is heated but not to such a degree as to prevent vegetation, except about immediate edges of the cavities. This mound, like those on Snake River, has been evidently self-formed by continual deposits of calcareous cement, hardened to the consistence of rock. How the soil came upon its summit is matter of inquiry, perhaps by the encroachments and decay of the creeping vegetation of years. The ground about its base is low and marshy, and several transparent pools of tepid water near by, are famous resorts for bathing by the Indians. These waters are slightly impregnated with salt, which quality renders the place attractive to deer, and it is seldom without visitors of this description. Animals as well as men have their favourite (not to say fashionable,) watering places, and this is one of them. Clouds of vapour are continually emanating from the mound, which at a distance on a clear cold morning might readily be mistaken for smoke, - the mound itself has much the resemblance of an Indian Cabin, and hence which the name by the valley is designated. The water within the mound is so hot one cannot bear a finger in it for a moment. The presence of sulphur is shown by the unmistakable, and any thing but fragrant smell of the vapour.

On entering the Deer House Plains we were alarmed by the cry of Indians from the advance guard of the party, but almost as quickly freed from apprehension by the arrival of a Pen-d'orielle, who gave us to understand, that one hundred lodges of his tribe lay encamped eight miles below. - Early next day they removed their quarters and took up a position in the immediate vicinity of our own, when we ascertained that they were on their way from the Flathead Trading House of the Hudson Bay Company to buffalo, and were living upon a mixed diet of roots and expectations, the latter in much the larger proportion - plainly they were nearly starving. It is a well ascertained fact, that buffalo confine their range to the eastern side of an imaginary line commencing at the south on the west side of the Arkansas, in about Latitude 38 north and Longitude 28 west from Washington, and running thence around the headwaters of the Arkansas, crossing the sources of the Rio Grande, Blue River (its principal branch) and Salt River, then turning from north to west in a nearly direct course - crossing Green River above the mouth of Ashley's Fork, - to the Big Lake at the mouth of Bear River, thence crossing Salt River a short distance below the junction of Porte Neuf, and through the sources of Salmon River to a point in Latitude 44E40' north, and Longitude 33E20' west or nearly, thence around the sources of Clark's River on the

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

east, and thence in a north west direction west of the Missouri, and its principal sources to Lat. 49 north and Longitude 34E20' west, where it passes the limit of my observation and inquiries to the northward. East of this line they range back and forth across the great plains of the Mississippi and Missouri, retiring towards the mountains in the winter, and in spring spreading themselves over the vast prairies, and almost blackening the waste by their countless numbers, from the Pawnee hunting ground, to the far off ranges of the Rocky Mountains.

As the line described almost skirts the Deer House Plains buffalo are seldom found west of this valley, and rarely even here, which was now the case. Indeed we have seen none since leaving the east fork of the Salmon River, though Horse Prairie is a famous resort for them, and they sometimes penetrate to the Big Hole.

We were annoyed almost beyond endurance by the hundreds of famishing dogs belonging to the Indians. They devoured every leathern article that lay within reach, even to the bull-hide thongs, with which we fastened our horses. We were compelled to keep guard by turns or risk the entire loss of our baggage, their depredations were so bold and incessant. I performed my watch at the salient angle of our tent, armed with an axe, which I hurled among them without respect to "mongrel, puppy, whelp or hound," and not infrequently sent some of them back yelping a serenade of pain to their sleeping masters. Once, however, on returning with the axe which I had thrown unusually far, I discovered a scury cur, coolly trotting off with my saddle bags, which the rascal had stolen from within the protection of the tent. It is needless to say that I pursued and recovered them, but ere I could return to my post, I perceived three large fellows marching leisurely homeward, with a bale of dried meat, weighing not less than forty pounds. Grounding an inference hereupon that in spite of the axe and my utmost efforts they would prove victorious, I thought it advisable to let my manhood take care of itself, and call up my dreaming companions. No sooner said than done, when we called a council of war, and deeming discretion with such an enemy the better part of valour, we suspended all our baggage in a tree that overhung the tent, and went to rest without apprehension of the consequences. In the morning we found every thing safe as we had left it, while our less careful neighbours were seen busily collecting the scattered relics of the night's devastation. One of them lost above forty dollars' worth of furs, and another, a jolly old Frenchman, drew his pipe from his teeth to swear with more emphasis that the scoundrelly dogs had devoured his axe.

## CHAPTER XX

We departed southeastward for the Jefferson River on the morning of the fifteenth, accompanied by all the Indians; and picturesque enough was the order and appearance of our march. Fancy to yourself, reader, three thousand horses of every variety of size and colour, with trappings almost as varied as their appearance, either packed or ridden by a thousand souls from squalling infancy to decrepid age, their persons fantastically ornamented with scarlet coats, blankets of all colours, buffalo robes painted with hideous little figures, resembling grasshoppers quite as much as men for which they were intended, and sheep-skin dresses garnished with porcupine quills, beads,

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

hawk bells, and human hair. Imagine this motley collection of human figures, crowned with long black locks gently waving in the wind, their faces painted with vermilion, and yellow ochre. Listen to the rattle of numberless lodgepoles trained by packhorses, to the various noises of children screaming, women scolding, and dogs howling. Observe occasional frightened horses running away and scattering their lading over the prairie. See here and there groups of Indian boys dashing about at full speed, sporting over the plain, or quietly listening to traditionary tales of battles and surprises, recounted by their elder companions. Yonder see a hundred horsemen pursuing a herd of antelopes, which sport and wind before them conscious of superior fleetness,- there as many others racing towards a distant mound, wild with emulation and excitement, and in every direction crowds of hungry dogs chasing and worrying timid rabbits, and other small animals. Imagine these scenes, with all their bustle, vociferation and confusion, lighted by the flashes of hundreds of gleaming gun-barrels, upon which the rays of a fervent sun are playing, a beautiful level prairie, with dark blue snow-capped mountains in the distance for the locale, and you will have a faint idea of the character and aspect of our march, as we followed old Guignon (French for bad-luck) the Flathead or rather the Pen-d'oreille chief slowly over the plains, on the sources of Clark's River. Exhibitions of this description are so common to the country that they scarcely elicit a passing remark, except from some comparative stranger.

Next day we separated into two parties, one of which entered a cut in the mountains southward, while the other (of which was I,) continued on southeastward, and on the 17th crossed a mountain to a small stream tributary to the Jefferson. In the evening a Pen-d'oreille from the other division, joined us and reported that he had seen traces of a party of footmen, apparently following our trail. We ourselves saw during our march, the recent encampment of a band of horsemen, and other indications of the vicinity of probable foes. Pursuing our route, on the following day we reached and descended into the valley of the Jefferson twenty-five miles below the forks. This valley extended below us fifteen or twenty miles to the northward, where the river bending to the East, enters a narrow passage in the mountain between walls of cut rock. The plains are from two to five miles in breadth, and are covered with prickly pear, - immediately bordering the river are broad fertile bottoms, studded with cottonwood trees. The River is about one hundred yards wide, is clear, and has a gentle current,- its course is northward till it leaves the valley. We found the plains alive with buffalo, of which we killed great numbers, and our camp was consequently once more graced with piles of meat, which gave it something the appearance of a well stored market place. From starvation to such abundance the change was great, and the effect was speedily apparent. Indians, children, and dogs lay sprawling about, scarcely able to move, so gorged were they with the rich repast, the first full meal which they had, perhaps, enjoyed for weeks. The squaws alone were busy, and they having all the labour of domestic duty to perform, are seldom idle. Some were seen seated before their lodges with buffalo skins spread out before them, to receive the fat flakes of meat they sliced for drying. Others were engaged in procuring fuel, preparing scaffolds, and making other preparations for curing and preserving the fortunate supply of provisions thus obtained. Even the children were unusually quiet and peaceable, and all would have been exempt from care or uneasiness, had not the unslumbering cautiousness of the veteran braves discovered traces of lurking enemies.

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

On the morning of the 19th several of our men returned from their traps, bearing the dead body of Frasier, one of our best hunters, who went out the day previous to set his trap, and by his not returning at night, excited some alarm for his safety. His body was found in the Jefferson, about five miles below camp, near a trap, which it is supposed he was in the act of setting when fired upon. He was shot in the thigh and through the neck, and twice stabbed in the breast. His body was stripped, and left in the water, but unscalped. - In the afternoon we dug his grave with an axe and frying pan, the only implements we had that could be employed to advantage in this melancholy task, and prepared for the sad ceremony of committing to the earth the remains of a comrade, who but yestermorn was among us in high health, gay, cheerful, thoughtless, and dreaming of nothing but pleasure and content in the midst of relations and friends. Having no coffin, nor the means to make one, we covered his body in a piece of new scarlet cloth, around which a blanket and several buffalo robes were then wrapped and lashed firmly. The body thus enveloped was carefully laid in the open grave, and a wooden cross in token of his catholic faith placed upon his breast. Then there was a pause. The friends and comrades of the departed trapper gathered around to shed the silent tear of pity and affection over a companion so untimely cut off; and the breeze as if in sympathy with their sorrow, sighed through the leaves and branches of an aged cottonwood, which spread its hoary and umbrageous arms above his last resting place, as though to protect it from intrusion; while in contrast with this solemnity merry warblers skipped lightly from limb to limb, tuning their little pipes to lively strains, unmindful of the touching and impressive scene beneath. At length the simple rite was finished, the grave closed, and with saddened countenances and heavy hearts the little herd of mourners retired to their respective lodges, where more than one of our ordinarily daring and thoughtless hunters, thus admonished of the uncertainty of life, held serious self-communion, and perhaps resolved to make better preparations for an event that might come at almost any moment, after which there can be no repentance. But it may be doubted if these resolutions were long remembered. They soon recovered their light heartedness, and were as indifferent, reckless, and mercurial as ever. - Frasier was an Iroquois from St. Regis, in Upper Canada. He left that country seventeen years before, having with many others engaged in the service of the Norwest Company, and came to the Rocky Mountains. Subsequently he joined the American hunters, married a squaw by whom he had several children, purchased horses and traps, and finally as one of the Freemen led an independent and roving life. He could read and write in his own language, was upright and fair in all his dealings, and very generally esteemed and respected by his companions.

It commenced raining in the afternoon of the following day, and continued without intermission during the night. Taking advantage of the storm and darkness, a party of Blackfeet boldly entered our lines, and cut loose several horses from the very centre of the camp. An alarm having been given the Flathead chief arose and harranged his followers, calling upon them to get up and prepare to oppose their enemies, not doubting but that an attack would be made at day break. When he had concluded, a Blackfoot chief, who last summer deserted from his people and joined the Flatheads, in a loud voice and in his native tongue, invited all who were lurking about camp, to come in and help themselves to whatever horses they had a mind to, asserting that as the whites and Flatheads were all asleep, there could be no hazard in the undertaking. Scarcely had he done speaking, when the Blackfeet, to testify their gratitude and appreciation of this disin-

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

terested advice fired a volley upon him. Fortunately, however, no one was injured by the firing, though several lodges were perforated by their balls. In the morning we were early on the alert, but the Blackfeet had all departed, taking with them seven or eight of our best horses. As there was no help for it, we had to put up with the loss, and the next day having finished drying meat, we struck our tents, and departed southward up the Jefferson.

Previous to our reaching this river we had exacted a promise from the Indians to accompany us to the three forks of the Missouri, but since the death of Frasier they refused to fulfill their engagement, asserting that we shall certainly fall in with a village of Blackfeet, who will dispute with us every inch of ground, and thus render the expedition to no purpose, for trappers would forget their employment when death was grinning at them from every tree and cluster of willows. Our route was therefore necessarily somewhat changed, and on the 23rd we reached the Philanthropy, and halted two or three miles from its mouth. This is a deep muddy stream thirty paces in breadth, flowing for the last twelve or fifteen miles of its course through an open valley, and finally discharging itself into the Jefferson, which it enters from the northeast, a short distance from Wisdom River, a branch proceeding from the Big Hole. All these streams are bordered by fine grass bottoms, and groves of trees and willows. Six miles above the forks, on the west side of the Jefferson, there is a bluff or point of a high plain jutting into the valley to the brink of the river, which bears some resemblance to a beaver's head, and goes by that name. Hence the plains of the Jefferson are sometimes called the Valley of Beaver Head. These plains are everywhere covered with prickly pear, which constitutes one of the greatest evils - Indians aside - that we have to encounter in this country where moccasins are universally worn. The thorns of the prickly pear are sharp as needles, and penetrate our feet through the best of moccasins; they are extremely painful and often difficult to extract. In the evening we were joined by a Nezperce Indian who brought intelligence that the Rocky Mountain Fur Company were encamped in the Big Hole.

## CHAPTER XXI

On the 24th we moved up the Philanthropy a few miles, and killed numbers of buffalo, which were numerous in all directions. In the afternoon a party of strange mounted Indians came into the plain in pursuit of a herd of buffalo, but discovering our camp fled precipitately to the mountains. We were joined in the evening by twenty-five lodges of Nezperces. For several days nothing of interest occurred. On the 27th we followed the course of the river through a narrow defile of a mile in length, and descended into an open valley which we found covered with buffalo. The old chief immediately encamped and desired that no person should leave camp for that day, but remain and rest the horses, as by so doing they would be able to hunt the buffalo the next morning to much better advantage. His directions were complied with, as it was necessary to lay in a supply of meat for future use, and with fresh horses much greater execution could be done than if they were fatigued. The doomed bisons were therefore allowed a few hours respite.

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

An Indian about noon brought us a note from Jervais, a partner in the Rocky Mountain Fur Company, stating that he was left with three men to trade with the Nezperces; that his partners had gone northwest to hunt the sources of Clark's River, and that Fitzpatrick, one of the partners in that Company, had been killed on his way to St. Louis with one companion the spring previous. Fraeb, who was with Jervais the fall before, left Cache valley in August for St. Louis in order to bring out an equipment next spring. The object of the note was to inform our Freemen where little conveniences could be procured in exchange for furs. In the course of the afternoon a party of horsemen boldly entered the valley, but quickly perceiving the danger fled for their lives. The Flatheads were speedily mounted and in pursuit, but with the exception of one who was overtaken and killed, they gained the mountains in safety. During the night a fire was kindled on the neighbouring mountain, and we heard the reports of several guns in that direction, but the Indians did not approach our camp.

On the 28th we passed the body of an Indian killed the day before, and the squaws agreeable to an ancient custom, gave it repeated blows as they went by. It was totally naked, scalped, and pinned to the ground by an arrow through the heart. Beside it lay a half worn garment, in which we recognized the pantaloons worn by Richards when he was killed in the spring. It was hence conjectured that this Blackfoot had a hand in the murder. If so the bloody deed was in part avenged, for his bones were left to moulder here, as were those of poor Richards near Kamas prairie. A party of our trappers, to day, a few miles from camp, discovered an Indian on the summit of a mound who beckoned them to come to him, and disappeared behind the hill. They wisely declined a more intimate acquaintance, and returned to camp without further investigation. It was probably a decoy to an ambush.

After laying in a sufficient store of dried buffalo meat, we passed southward, over ranges of prairie hills to a small stream that flows into the Jefferson below the Rattle Snake cliffs. There the Indians left us on the third of October, and we, continuing our journey, passed down the stream to its mouth, and thence up the Jefferson through the Rattle Snake Cliffs to the forks where Lewis and Clark left their canoes. One of these streams rises with the sources of the Madison and Kamas Creek, and flows northwestward to its junction with the other, which has its rise in Horse Prairie. Ascending the latter two miles above its mouth, we entered Horse Prairie at a narrow gap between two high points of plains. Here we found the Flatheads from whom we separated on the east fork of Salmon River, with the trader Jervais and several "engages," (hired men.)

On the 8th two of our men accompanied by three or four Indians departed for the Trois Tetons, to meet Mr. Dripps who was expected this fall from the Council Bluffs, with an equipment of men, horses, and merchandise. The same day two Indians came to us from the band which left us on the third. They stated that a large party of mounted Blackfeet came near them on the sixth, but departed without firing a gun, probably awed by their numbers. We left Horse Prairie on the eleventh, and crossed the mountains westward to the east fork of Salmon River, following the same trail that guided Lewis and Clark there so many years before Us. Here we fell in with another village of Nezperces, whom we had not before seen. Accompanied by these Indians we continued down Salmon River to the forks, about twenty miles, and thence six or eight miles to an abrupt

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

bend westward where the river, leaving the valley enters a dark passage through rugged mountains, impassable for horsemen. The valley of the Salmon River is separated from the Big Hole, to which we crossed, by a mountain capped with a succession of bleak points of naked granite, the stern majesty of which makes an impression upon the beholder such as few scenes of earthly grandeur can equal.

On the 29th the Rocky Mountain Fur Company returned, having finished their hunt on the waters of the Missouri without molestation from the Indians. Shortly after leaving Cache valley, however, they were attacked on the Blackfoot by a large party of the enemy. The attack was made at day break, immediately after the horses were turned loose, which was unusually early. It was still so dark that neither party could see the sights on their guns, and hence they overshot each other, doing little mischief on either side. As soon as the firing commenced, the horses broke into camp and were refastened to their pickets. The Indians, finding that they should get nothing by fighting, resolved to try what could be effected by begging. A party then marched coolly up to camp and announced themselves Creas. "They said," says my informant, "that they mistook us for Snakes and professed to be very sorry that they had commenced firing before ascertaining who we really were. Not a few of us raised our guns to punish their unparalleled impudence, but were restrained by our leaders, who believed or affected to believe their improbable story. We ascertained from them that the party was composed of one hundred Blackfeet and thirty-three Creas, and that several of them were slightly wounded in the fray. Our leaders made them a present, and suffered them to depart in peace much against the wishes of some of our exasperated men. Two of our trappers, who were absent from camp at the time of the attack never returned, and were doubtless killed by them. This occurred on the 15th of August."

On the 19th of the same month, four men (D. Carson, H. Phelps, Thos. Quigley and J. M. Hunter) left camp in Gray's Hole, and proceeded down Gray's Creek, in quest of beaver, about fifteen miles; during the time occupied in going this distance, they had set all their traps, and found the day too far spent, to look for a safe encampment, which is a rare thing here at best; however they halted near the brink of the river, where the margin was partially decked with here and there a lone cluster of willows, or birch, with some few intervening rose briars. The bottom or level margin of the river, extended but a few paces from the water's edge, and was there terminated by abrupt rocky hills, of considerable height, overlooking the bottoms, as well as the surrounding country, to a great distance. "We lay as much concealed as possible, in such an open place," says one of these men, whose account was corroborated by all the others; "and passed the night without disturbance; but just at day break, our ears were saluted with the shrill noise of the warrior's whistle, quickly answered by the re-echoing yells of a multitude of Indians, who were rushing upon us. We sprang from our beds, and in a twinkling one of our guns was discharged in their faces, which somewhat dampened their ardour, and they fell back a few paces; at the same time we sprang into the best position, the place afforded; the Indians re-appeared the next instant, and poured showers of lead and arrows around us. We saw no means of avoiding death, but resolved to sell our lives as dearly as possible. We mutually encouraged each other, and resolved if practicable, to fire but one gun at a time and wait until it was reloaded before firing again, unless the Indians should rush upon us, in which case we were to single out each one his man and send them

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

before us to eternity. In short, each time they approached, the foremost was made to bite the dust, and the others fled precipitately; they were recalled, however, by the animated voice of a chieftain, who induced them to charge, time after time, upon us, but each time they advanced, the dying groans of a companion so completely unmanned them, that they fell back, again and again. At length, finding that they could not dislodge us, they fired upon and killed our restless horses, who were fastened a few paces from us, save one, which broke loose, and fell into their hands alive. In the mean time, others commenced throwing stones which fell thick around us, but fortunately did us no injury. After some time they departed, and ascended a high rocky hill some distance from us, where one of them stepped out before the rest, waved his robe five times in the air and dropped it to the ground, he then took it and disappeared with the others behind the hill. We immediately collected our blankets, saddles, &c. together with some articles the Indians had left, and concealed them as well as we could, intending to return for them, and set out for camp, which we reached without accident the same evening.”

Early the next morning, a strong party set out with these men, to aid them in collecting their traps and baggage, but the Indians had already carried off every thing. They examined the battle ground and found several places where the ground was soaked with blood, and wads of buffalo wool were strewed about clogged with blood, with which they had stopped their wounds; trains of blood likewise marked the route of the fugitives, to twenty four stone pens where they had slept, which were mostly covered with proofs of the number of dead or wounded, that had lain in them. The persons, who visited the place, say that they cannot conceive how four men could be placed so as to escape death, where they were situated. The ground was literally ploughed up by balls, and all acknowledge that it was one of the most extraordinary escapes, ever heard of. The Indians were the same who attacked camp on the 15th. There were one hundred and thirty-three of them. The battle lasted from day break until ten o'clock, and these men fired about thirty shots, most of which were supposed to have taken effect.

## CHAPTER XXII

A day or two after the arrival of the Rocky Mountain Fur Company, our men who were despatched about a month since to meet Dripps, returned, and reported that he had not reached the place appointed, but that Fraeb, who started for St. Louis last summer, fell in with Fitzpatrick, on the Platte, at the head of thirty men with pack horses. Fraeb immediately headed the expedition, which he was now conducting to this place, whilst Fitzpatrick returned to St. Louis, to bring out an equipment in the spring.

This last enterprising gentleman, departed in the month of February last, though necessarily exposed to every privation and hardship, to cross the whole extent of that immense plain, from the Rocky Mountains to the state of Missouri; which must needs be performed on foot, and a great part of the way on snow shoes, at that dreary season of the year. So hardy was this enterprise esteemed, that it was a matter of considerable speculation, among the brave Mountaineers, whether he would reach his place of destination, or not! He had promised, in case he should reach that

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

place in safety; to bring an equipment to his partners in Cache Valley by or before the first of July. They awaited his arrival a month after the time had expired, and the opinion became universal, that he had been killed, or perished on the way. He reached the settlements, after a series of sufferings, and ascertained that his patrons Smith, Sublette, and Jackson, had left the state of Missouri two days before with a large assortment of goods for Santa Fe.

Notwithstanding the fatigue our traveller had already undergone, he immediately procured a horse, and again entered the uninhabited prairies in pursuit of his friends, whom he overtook after several days hard riding. They persuaded him to go on with them to New Mexico, promising to give him an equipment at Toas, which would not be more than twenty days march from Cache Valley, whither he could arrive in time to meet his companions in the month of July.

Several days after his arrival among them, the party was charged upon by several hundred Comanche Indians; however, they were so terrified at the discharge of a six pounder, that they fled in alarm and adjourned the attack sine die. Shortly after this, one of the leaders of the party, Mr. Jerediah Smith, (a gentleman, whose life for several years in the Rocky Mountains, was a constant series of bold adventures, defeats, narrow escapes, and attendant miseries,) was killed during a lone excursion in search of water, for want of which, the party suffered two days, a thirst rising nearly to madness. A young man, employed by the company as clerk, whose name I did not learn, was likewise killed about the same time.

A few days after the last event, a large party of "Gross Ventry of the Prairie," encamped around them, but betrayed no evil intentions. The Chief said that he had buried all his resentment towards the whites, and should never annoy them any more. Probably the appearance of one hundred men, well armed, in a camp well fortified by the waggons and baggage added to the ever primed big gun continually pointed towards them, produced this salutary, though perhaps temporary effect.

The party reached Toas, on the Rio del Norte; and Fitzpatrick having received his equipment, departed for the mountains; but being unacquainted with the route, and having no guide, he missed his way, and fell on to the Platte, where he met with Fraeb as before mentioned. Fraeb met also on that river with a party of fifty men, led by a Capt. Ghant. They were all on foot, and led about their own number of pack horses, and were destined for the mountains.

Two days after our express returned, three others of our men who were confident that Dripps would come on this fall, set off to meet him. Fraeb arrived one or two days after their departure, and camp presented a confused scene of rioting, and debauchery for several days, after which however, the kegs of alcohol were again bunged, and all became tranquil.

The men provided themselves with lodges, and made preparation for passing the winter as comfortable as possible. We purchased all the dried meat the Indians could spare, together with robes, and "appishimous" (square pieces of robes, used under our saddles in travelling, or under our beds in camp,) in addition to our former stock of bedding. Our arrangements completed, we

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

---

had nothing to do, but to make the time pass as easily as possible. We assembled at each others lodges, and spent the evening merrily, by listening to good humoured stories, and feasting on the best the country afforded, with the frequent addition of a large kettle of coffee, and cakes.

On the 6th of November, one of the three men who departed sometime since, to meet Dripps; returned, and reported that himself and comrades had been east of Snake River, but, that during their journey, they had seen several war parties of foot Indians who pursued them until they finally resolved to return, fearing that they would discover their encampment some night, and steal their horses, if not their lives. On the evening of the third day of their journey homeward they encamped in a dense thicket of willows, on the east fork of Salmon River, where they imagined themselves quite secure; but the following morning, a rustling of leaves and brushes, betrayed the approach of something unusual. They immediately sprang from their beds, and by this movement, discovered their place of concealment to the wary Indians, who now commenced firing upon them. One of them Baptiste Menard, was soon severely wounded in his thigh, and his groans served to increase the ardour of the enemy, who now pressed forward with resolution; but the first who presented himself was sent to the other world, by a well directed shot, which at once put an end to the action. The Indians lost all their courage with their friend, and immediately departed, taking the horses with them. After they were gone, our men conveyed their wounded comrade a mile or two, to a place of more security, and remained until dark, when my informant departed to get assistance from camp. He had not proceeded far, however, when the Indians discovered him, and gave chase, but he escaped in a thicket of willows; and thence continued his progress, without interruption, until he reached camp, which he did the next evening; having walked fifty miles since he left his companions. The morning after his return, a party of volunteers set out for the wounded man and his companions and returned with them on the third day afterwards. This man Menard, was shot in the hip and the bones so fractured that he remained a cripple for life.

About this time, a large party of Flatheads, and others, departed for buffalo, promising to return in the coming moon. Two or three days after, one of them returned with the news, that they had recovered some stolen horses from a party of Blackfeet, and taken two of their scalps. On the 21st of December, two men from Mr. Work's party, (Hudson Bay Company) arrived and stated that Mr. Work was encamped two day's journey above, on the east fork. They had been to Beaver Head, and were continually harrassed by the Blackfeet, who killed two of them, and severely wounded a third. They killed, however, several of the enemy, and captured a number of horses. They saw the body of a man in the Jefferson River, below Beaver Head, which our hunters believed to be the body of Frazier, whom we had buried there.

On the 23rd we separated from the Rocky Mountain Fur Company, and passed southward up Salmon River, to the western extremity of little Salmon River valley, forty miles above the entrance of the east fork.

The river was all the way confined by lofty mountains on either side, and numerous points jutting into it, rendered the journey extremely toilsome, for our jaded horses. However, our difficulties

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

ended when we entered the valley, though we continued twenty miles up it, and encamped with a few lodges of Flatheads, on the 3d of January 1832. In this valley we killed upwards of an hundred head of buffalo, which were numerous for sometime after we arrived. Heretofore the weather has been warm, and pleasant during the day time, but the nights extremely cold. The rivers have been frozen for a month past, but the valleys are still free from snow.

I departed with three others on the 25th, to procure some trifling articles from the Rocky Mountain Fur Company. We returned down Salmon River, and reached a village of Nezperce Indians, late in the evening of the second day, with whom we remained one night. The hospitable Indian I chanced to stay with, treated me with great kindness, and contrary to my expectation refused any remuneration whatever. From him I learned that the Rocky Mountain Fur Company were encamped twenty miles above, on the east fork, together with forty or fifty lodges of Flatheads, and Nezperce's. We continued our journey the next morning, and reached them late in the afternoon. They were encamped opposite to a pass to Horse Prairie, well known to the Blackfeet, who had lately stolen twenty horses, and fled by that route to the Missouri.

The second evening after we arrived, soon after dark, a party of Blackfeet approached camp, and several of them boldly entered, at different points, cutting loose our horses in their way. One of them mounted a beautiful horse, and slowly rode through both encampments. During his progress he was challenged by the guard, but gave the usual Flat Head answer and passed on; soon after his departure, the owner of the horse discovered that he was missing, and imagining that he had broken loose, departed with a companion in quest of him. They proceeded silently about fifty yards from camp, and met a Blackfoot who came running up to them, thinking they were some of his comrades; but quickly discovered his mistake and fled. They brought him to the ground, however, by a well-directed shot, and about twenty others immediately sprang up from the sage, and fled into the woods bordering the river. The Flat Heads raised the scalp of the dead Indian, by cutting around the edge of the hair and pulling off the entire skin of the head from the ears up. The taking, or raising of a scalp is done in this way, by all the mountain tribes. We ascertained next morning that the Blackfeet had taken seven or eight horses. The Indian killed, as stated above, was a tall, bold-featured, handsome fellow, unusually white, and about twenty-two years of age.

Two days after this affair, an express arrived from Mr. Work's party, who were at this time with a large band of Pen-d'oreilles, at Beaver Head; they had lost several horses, which were stolen by the Blackfeet, and had hemmed up a body of those Indians, so that neither party could injure the other; but could yet talk freely on both sides. The Blackfeet stated that the white chief, at the mouth of the Yellow Stone River, (McKensie of the A.M.F. Co.) had built a trading house at the mouth of the Maria; and had already supplied the Blackfeet, with one hundred and sixty guns and plenty of ammunition; and they were now, only awaiting the arrival of a large band of Blood Indians from the north, to commence a general war of extermination of all the whites, Flat Heads and others in this part of the country. The day after the express arrived, I departed with my companions, and reached our own quarters without accident about the third or fourth of February.

## CHAPTER XXIII

The fine valley in which our camp was situated, is thirty miles long, and twelve broad; it is intersected by willowed streams, and large bottoms, covered with rich pasturage, hence it is a favourite resort for both deer and buffalo. The only trees are a few orchard-like groves in the head of the valley, and pines of every variety, on the abrupt sides of the surrounding mountains. The principal stream flows northwestward into Salmon River, which runs northward through the lower extremity of the valley. On the 9th of February, we passed up to the head of the valley and left the Indians, who had hitherto accompanied us behind. Previous to this time, we had scarcely seen a particle of snow in this valley; but we were now detained, by a snow storm of four days continuance, which left the lowlands covered to the depth of one foot. However on the 15th we passed through Day's defile, where we found the snow two feet deep, and covered with an icy crust that cut our horses' legs so that they bled profusely. We proceeded slowly, and employed our best horses successively to break the road, until we reached a small patch of willow on Day's Creek in view of the plains of Snake River. The day was intensely cold, and many of us frost bitten, notwithstanding we had taken the precaution to envelope ourselves with blankets, and buffalo robes. At this evening's encampment, we found nothing but small willows for fuel, and even a scarcity of them. At midnight we were brought to our feet by the cry of Indians, and sprang out to our horses, twenty-five of which were missing. We saw several pairs of snow shoes, and as many packed dogs, but the Indians had vanished with our horses, and the night was so extremely cold, that no person could be induced to follow them, though we had every reason to believe that they could be soon overtaken. Many of our companions intended to set out in pursuit at day break, but the drifting snow so completely erased all trace of the robbers, that no one could designate the course they had taken.

After this period, we continued slowly down the extremity of Day's Creek, whence we were in full view of the Trois Tetons; the three buttes of Snake River, and the mountains east of the river. The three buttes of Snake River, are three gigantic, solitary, or isolated mounds, rising from the plains, midway from Snake River, near the mouth of Porteneuf, to the mountains northward. They are fifteen or twenty miles asunder, and the most westerly richly deserve the name of mountain. It is covered with pines, abounds with big horns, and is crowned with snow almost the year around.

From the extremity of Day's Creek, we continued southward in the direction of the middle butte, fifteen miles to Gordiez River, which was quite dry when we reached it. There were several cotton wood trees scattered along the margin, but none of those long grass bottoms, common to other streams are to be found here: in lieu of them a sandy uneven plain appears, covered with black rocks, and wormwood, extending as far as the eye can reach, and likewise covered with pools of water from the melting snow, which is rapidly disappearing. We saw near the margin of the river, the trail of an Indian village that had passed two or three days since to the westward. Fifteen of our party immediately set out in pursuit of them, hoping to hear something of our stolen horses. The following day we passed under the south side of the middle butte, and encamped in a large grove of cedars, two miles from Gordiez River. The next day we continued about the same dis-

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

tance, and halted in the sage on the open plains. We saw large herds of buffalo during our march, and killed several, which to our surprise, were as fat as they generally are in the summer season. In the evening, two hundred Indians passed our camp, on their way to the village, which was situated on the lower butte. They were Ponacks, as they are called by the hunters, or Po-nah-ke as they call themselves. They were generally mounted on poor jaded horses, and were illy clad with shirts and leggins, of dirty torn or patched skins, moccasins made of buffalo skins, and old buffalo robes, half divested of hair, loosely thrown over the shoulders, and fastened by a string around the middle. They were generally ugly, and made a wretched appearance, illy comparing with their bold, handsome and well clad neighbours, the Flatheads. They gave us to understand, that a party of whites were now in Cache valley. On further enquiry, we were satisfied that it could be none other than Dripps, who we supposed had got thus far, on his way to Salmon River last fall, but was prevented from continuing his journey, by the bad condition of his horses, and almost total want of grass on the route.

The next day we reached Snake River, opposite to the mouth of Blackfoot. The same evening the party of fifteen who left us on Gordiez River, returned, having gained no information of their horses. They went to the village of Ponacks at the western butte, and represent them to be miserable, in the superlative sense of the word.

On the 4th of March we crossed the river on the ice, and encamped near the mouth of Blackfoot. The plains are now entirely free from snow, though they are not dry. On the 5th John Gray and David Montgomery, departed for cache valley, to ascertain if Dripps was there, or not. A day or two afterwards, the Ponacks came and encamped a short distance below us. On the 10th we left our thriving neighbourhood, and halted at a spring east of Porteneuf: - the same evening two of our hunters brought in Gray, (one of two men who left us on the 5th) whom they found lying half dead in the cedars, near Porteneuf. He gave us the following account of his unfortunate trip to Cache Valley.

“We proceeded,” said he, “by way of the south fork of Porteneuf to Cache Valley, without accident, and sought throughout the northern extremity, for traces of the whites, but were unable to find the least evidence of their having been there at any time during the winter. Hence we concluded, that the story told to us by the Ponacks, was a falsehood invented solely to draw from us a present, which is usually given to Indians on the receipt of good news. This conviction added to numberless traces of foot Indians, that appeared wherever we went, induced us to return back to camp with the least possible delay. In the afternoon of the 8th we discovered a small herd of buffalo, and succeeded in killing one of them, after firing several ineffectual shots. Our appetites had been quickened by two days starvation, which urged the adoption of bold and prompt measures. We quickly secured the tongue, with other choice pieces, and proceeded in quest of fuel, at a rapid pace. During our progress, we saw what greatly resembled an Indian, laying upon the ground, with his buffalo robe thrown over him. We hesitated a moment, but concluded it to be the carcase of a buffalo, and continued on. At length, we reached a small lake, which is the source of the south fork of Porteneuf. It had been frozen over in the early part of the winter, and was since covered with water to the depth of one foot, which was encrusted with a sheet of ice, though not

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

strong enough to bear one. Near the margin, were several clusters of large willows, which were now surrounded by ice and water; they supplied us with fuel, which we conveyed to the bank, beyond the reach of the water, and kindled a fire, by which we roasted and devoured our meat, with tiger-like voracity, until our hunger was allayed.

“By this time the sun was disappearing behind the western hills, and being fully aware of the danger of remaining in such an open place all night, I remarked to Montgomery that we had better saddle our horses, and proceed down the creek, until after dark, and pass the night in some of the groves of cedars which were scattered along the entrance of ravines, in our route. He objected to this measure, and added that wiser men than ourselves had encamped in worse places. Finding that remonstrance would be useless, I immediately cut away some of the briars in the centre of a bed of wild rose bushes, and spread down our blankets. At dark we lay down, and my companion slept soundly. For my own part, I was alarmed in the early part of the night by some unusual noise, which might have been occasioned by the trampling of our horses; but which, together with a train of thoughts foreboding evil, effectually prevented me from closing my eyes to sleep at all.

“I arose early in the morning, but it was yet light, and commenced kindling a fire, in the course of which, having occasion for my powder horn, I called to Montgomery to hand it to me. He immediately arose and stepped out, but sprang back to his bed the next instant exclaiming Indians! Indians! At one bound I was with him, and the Indians commenced firing upon us. The rose bushes which surrounded us, only served to conceal us from view but offered no resistance to their balls, one of which grazed my neck. I immediately exclaimed “Montgomery I am wounded.” The next instant he arose with his gun to his face, in a sitting posture, but ere he had time to shoot, his gun dropped from his hands, streams of blood gushed from his mouth and nose, he fell backwards uttering a groan, and expired. I sprang up, and presented my gun to the advancing Indians, determined to kill one of them, but they threw themselves down in the grass. I then wheeled and fled through the breaking ice of the lake, and exerted my utmost strength, to gain the opposite bank. Some of the Indians were instantly in close pursuit, whilst others deliberately fired from the bank. One of their balls grazed my thigh and another cut out a lock of my hair, and stunned me so much that I could with difficulty keep my feet; however, I succeeded in reaching the bank, but had the mortification to see the foremost of my pursuers step ashore as soon as I did. At this moment, a thought crossed my mind, to surrender all I had and they would spare my life; but the recollection of the cruelties they have ever practiced upon prisoners, always terminating in death, awoke me to reason, and I redoubled my efforts to gain a ravine, which led into the mountain. As I reached the entrance, the loud, harsh voice of the chief, calling back my pursuers, fell upon my ears like strains of the sweetest music; but I continued running until overcome by exertion, I fell down quite exhausted. After resting a few moments, I ascended the mountains and dragged myself through the snow until dark, in the direction of Snake River, at which time, I descended to the margin of Porteneuf, and followed its course.

“My mocasins became worn out and left my naked feet to be cut and lacerated by the ice and stones, and at the same time, I was drenched by a shower, which chilled me through. I endeavored to kindle a fire, and make use of the powder in my gun for the purpose, but was unsuccess-

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

ful. There being no alternative, I was compelled to crawl along or freeze. My feet, now became extremely painful, and I found they were frozen. Being no longer able to support myself upon them, I sought a stick with which I hobbled along some distance, but at length found myself in a field of prickly pears, that pierced me to the very soul. Here, for the first time, I wished for death and upbraided myself for running from the Indians. I stopped and plucked the thorns from my bloody feet, proceeded and the next moment was again upon them. At length, I crawled into the willows, bordering the river, and to my great joy found a quantity of bull rushes. Fortunately, I happened to have a pen knife, with which I cut as many as I could grasp in my arms twice, and bound into three separate bundles; these I fastened together with willows, launched it without difficulty, and embarked upon it, allowing it to be carried along by the force of the current.

“In the afternoon of the following day, I reached the nearest point from Porteneuf to camp, and abandoned my floating bed. With a stick in one hand and my gun in the other, I set out; but the torture from my feet was such, that I fell down, unable to proceed farther. In this situation, whilst revolving in my own mind the chances for getting to camp, a distance of twelve miles, I was discovered by the two hunters whose presence gave me a thrilling sensation of joyful deliverance, indescribable. One of them immediately dismounted, and placed me upon his horse, which he slowly led to camp.”

When Gray reached his own lodge, his mangled frozen feet were examined; they were swollen to twice their natural size, and were quite black; however, at the expiration of two months, he was quite well, and the circumstances of his so narrow escape almost forgotten. He left his powder horn, shot-pouch, belt, and knife at the field of death, which will account for his want of success, when endeavoring to kindle a fire; and for being compelled to construct his raft with a pen knife, which is a rare instrument in this country, because it is useless, save in such a peculiar case.

## CHAPTER XXIV

After Gray's return, we moved camp over to Porteneuf. This stream rises between Blackfoot, and the Sheep Rock of Bear River, and flows fifty or sixty miles westward, to its junction with Snake River. On the south side, a point of mountains juts down nearly to Snake River; but on the north side, the mountains disappear. Fifteen miles above its mouth, the river enters the plains, through a narrow opening in the mountains, somewhat resembling a huge gate way, hence it is called Porteneuf, (New gate.) The banks of this stream are garnished with impenetrable thickets of willow, briars, and vines, matted together; bluff ledges of rock, where the country has evidently sunk, and here and there near the fork, remains of boiling springs. After this period, we continued to the source of the south fork of Porteneuf, and on the evening of the eighteenth, reached the spot where Montgomery was killed; the blood appeared quite fresh on the grass, where he had lain, but nothing could be found of his remains, save a few small bones. In justice to the memory of a careless, good-natured, brave, but unfortunate comrade, we resolved to call the pass, from Cache Valley to Porteneuf, “Montgomery's Pass.”

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

On the twentieth we reached Bear River in Cache Valley, having seen during our journey, traces of foot Indians. Some of our hunters saw twenty Indians some distance from camp in the valley. On the twenty-third, several hunters arrived from a company of fifty, who had passed the winter in the southern extremity of this valley, and were now encamped a few miles east of us. This party was fitted out at Fort Union, at the mouth of the Yellow Stone; and was led by a Mr. Vanderburgh. Four of their men were killed in Cache Valley, during the winter, and as many others left them in the fall, but never returned. They were well-supplied with meat during the winter, and never had occasion to go down to the lower end of the valley; hence the reason why Gray and Montgomery did not fall in with them. From them we ascertained that a certain district where we intended to make our hunt, had already been trapped by a party from Toas, last fall. This information induced us to join Vanderburgh, and proceed with him forty miles northward, up Bear River, to the Sheep rock. This river was confined all the way, by cedar-covered or prairie-hills, and ledges of black rock.

The "Sheep Rock," is the high, rocky, abrupt termination of a mountain, south of the river, which flows around it, through a deep canal of cut rock, from the southeast. At the Sheep Rock is a beautiful cove or horse-shoe-like valley, two or three miles in diameter, bounded on the north and west by irregular hills, covered with fragments of black rock, and scattering cedars. From south to northeast, it is surrounded by lofty mountains, through which the river meanders, before it reaches the valley. There are groves of cedars in and about the cove, which likewise betrays an unusual volcanic appearance. The plain is covered, in many places, with a substance resembling ashes; the rocks have a black, blistered appearance, as if burnt; and there are the remains of many boiling springs similar to those on Salt River, which have long since exploded. Some of them present little knolls of a beautiful yellow, tasteless substance, several paces in extent; others present the hollow mounds of cement, that were formed by deposits from the waters, which have long since disappeared. There is a spring in the middle of the valley, the waters of which taste precisely like soda water, if drank after the effervescence has ceased. Some of these boiling springs were situated on the highest mounds, and others in the valley. We saw the skeletons of five persons bleaching in the grove of cedars, near the valley, supposed to be Indians. The country here is yet covered with water from the snows, which have just disappeared.

From the Sheep Rock, we followed the zig-zag course of the river seventy-five miles, and again entered a beautiful valley, fifteen miles long from north to south, and five or six broad; at the southern extremity, the outlet for the Little Lake enters, and falls into Bear River. The margins of both rivers are here decorated with dense groves of cottonwood and aspen trees, and thick underbrush, and the valley is a great resort for both animals and wildfowl, particularly geese, who always deposit their eggs in the old nests made by hawks and ravens, in the trees; great numbers of eggs are collected by passing trappers, in the spring. We reached this valley on the tenth of April; at this time our trappers branched out in various directions in quest of beaver.

On the thirteenth we continued twelve miles eastward, over prairie hills to Talma's Fork, a small stream that interlocks with the sources of Salt River, and flows southward into Bear River. It receives its name from an Iroquois who discovered it. Bear River has again meandered into a valley,

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

at the mouth of Talma's Fork; thus far it varies from fifty to one hundred yards wide, is rapid and seldom fordable; its naked borders present nothing but an occasional lone cluster of willows, save in Cache Valley, and at the outlet of the Little Lake, where groves of trees beautify its margin.

On the fourteenth we passed eight miles southeastward, to Smith's Fork; this is a large well wooded creek, that rises with the sources of Ham's Fork and Salt River, and flows southeastward into Bear River. It commands a narrow valley until near its junction with the latter, where two high points of mountain, jutting towards it on either side, leave a narrow passage for the water. This stream is noted for the great numbers of beaver taken from it, and receives its name from the late Jerediah Smith, of the firm of Smith, Sublette and Jackson.

On the fifteenth we forded Bear River, at a place unusually shallow, passed twelve miles southeastward and re-encamped on its margin. From the south of Smith's Fork, the mountains, which have hemmed up the river more or less, since our departure from Cache Valley, expand, leaving an open plain five or six miles wide, bounded on the east by a high mountain, and on the west by a low one, which is abrupt on the western side, and overhangs the Little Lake. Through this plain, the river forms a gentle curve from east to south; the valley on the east side is apparently as level as the surface of still water; but on the western side, has a very gentle ascent, until it reaches the abrupt base of the mountain. The river is from fifty to eighty yards wide; is deep, and has a gentle current; its borders are in many places naked of bushes; but generally here and there, a solitary cluster of willows afford a resting place for the ravens, or a shelter for the wolves. The plains were graced with hundreds of antelopes, either gamboling about, or quietly feeding in groups, with ever watchful sentinels to apprise them of danger.

On the sixteenth we passed a few miles above the mouth of Muddy, and killed several buffalo from a large herd, which were the first we have seen since we left the valley, at the outlet of the Little Lake. We likewise saw great numbers of geese and ducks, which have just made their appearance in the river. On the twenty fourth we recrossed Bear River, and encamped on its eastern margin; during the afternoon a well known Flathead Indian, named Paseal, who accompanied Fontenelle and Dripps to St. Louis last summer, returned with the agreeable intelligence that Dripps, at the head of forty-eight men, was encamped at the entrance of Muddy. We moved down on the following day, and encamped with him: we now ascertained that he left the council Bluffs about the first of October, but owing to want of grass, and the jaded state of his horses, was compelled to stop, and pass the winter at the foot of the Black Hills. In the mean time he despatched three men and an Indian to us on Salmon River, who ought to have reached that place previous to our departure, but they have not been heard of since. Two or three of the following days were devoted, by many of the men to inebriation; a chilling storm of sleet, attended their out of door revels.

On the twenty-ninth I set out with three others, to raise a small cache of furs we had made on Rush Creek in Cache Valley. We proceeded by way of the Little Lake forty-five miles to the head of Cache Valley, and thence thirty-five, by night, to Rush Creek. This is a small stream (that flows into Bear River, on the south side,) bordered by dense thickets, and at this time was not fordable.

---

LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

I followed the brink several hundred yards, in hopes of finding a shoal, where we could cross without wetting our fur; at the same time one of my comrades who was mounted, entered the brush a short distance above me, for the same object. Soon after, hearing a noise like that of some large animal splashing in the water, I ran to the spot, certain that my comrade had attempted to cross, where the river was deep and his horse endangered. Imagine then my agony and surprise when a formidable grizzly bear came rushing, like a wounded buffalo towards me. I instinctively cocked my gun, and intended to discharge it into his open mouth, when he should rear himself to clasp me; but to my great joy he passed a few feet from me, and disappeared in the neighbouring thickets.

We returned the following night to the head of Cache Valley, and were saluted by the barking of several dogs during our route; however the night was dark, and we rode briskly until we were beyond the reach of either dogs or Indians. We suffered from exposure to a snow storm, of two or three days continuance, but at length reached camp at the mouth of Smith's Fork, after a march of five days and two nights.

## CHAPTER XXV

On the eighth of May, we continued northwestward, down Bear River, and reached the Horse-shoe Cove on the twelfth. A mile or two above the Sheep Rock, and a few yards from the river, is a bed of chalk white substance, called "the white clay," which possesses the cleansing property of soap, and is used by the hunters as well as the natives, instead of that commodity. It is found in various parts of the country, and is sometimes called 'white earth.' On the following day we passed northeastward, through cedar hills, which opened into a plain, decked with groves of cedar, and bluff ledges of rock, where the country, or at least portions of it, have evidently sunk. In the course of our route, we frequently marched several miles over a level plain, and suddenly came to an abrupt precipice, twenty or thirty feet high, where we sought vainly to find a place sufficiently oblique to admit of descending without danger. When safe below, we continued our progress in like manner, over a level country some distance, until another precipice obstructed our progress. High lone mounds, rising out of level bottoms, are not uncommon. We encamped fifteen miles northeast of the Sheep Rock, on one of the sources of Blackfoot.

Near our encampment were found an American riding saddle, and a rifle that was stripped of the lock and mountings. These articles were recognized to have been the property of Alexander, one of four men, who left Vanderburgh near the Big Lake last fall. Heretofore it had been believed that they were killed by some of the Blackfeet, who were lurking about Cache Valley last fall and winter. That opinion was mournfully confirmed by the circumstance of finding these articles, eighty miles indeed from that place, but directly in the route of the Blackfeet to their own country. We likewise saw ten Indian forts in a grove of cedars, that had been but recently evacuated.

On the fourteenth we continued in the same direction, about the same distance, and halted at the brink of another source of Blackfoot. Previous to this time for several days, we have had raw

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

disagreeable weather, but it is now quite pleasant. Buffalo and antelopes, have been continually in sight since we left Smith's Fork. Next day we passed northwestward, through a plain intersected by numbers of small streams, flowing through deep canals of cut rock, which unite and form Gray's Creek, which is likewise confined between barriers of cut rock. This valley, or rather district, is called Gray's Hole, after John Gray, a half breed Iroquois, who discovered it some years since. This person is the same who was with Montgomery when he was killed.

In a narrow bottom beneath the walls of Gray's Creek, we found a party of trappers, headed by Bridger, one of the partners in the R. M. F. Company. Their encampment was decked with hundreds of beaver skins, now drying in the sun. These valuable skins are always stretched in willow hoops, varying from eighteen inches, to three feet in diameter, according to the size of the skins, and have a reddish appearance on the flesh side, which is exposed to the sun. Our camps are always dotted with these red circles, in the trapping season, when the weather is fair. There were several hundred skins folded and tied up in packs, laying about their encampment, which bore good evidence to the industry of the trappers. They found a rifle, as well as ourselves, which was likewise robbed of the lock and mountings. It belonged to one of two men, who disappeared a day or two previous to the battle, in August last. Both of these rifles were unusually heavy, and were doubtless left by the Indians for that reason.

On the nineteenth I departed from camp, accompanied by two Indians, to seek the Flatheads, and induce them to come to the forks of Snake River, where our leaders wished to meet them, for the purpose of trading. We passed ten miles over rocky hills, to the plains of Snake River; thence fifteen, to the mouth of Gray's Creek, and forced our horses to swim over Snake River, which we crossed on a raft ourselves. We halted a short time on the western margin, to bait our horses, and again proceeded northwestward. Six miles from the river, we passed a small lake, which is the termination of Cammas Creek, and has no outlet. We continued our course four miles beyond the lake, and halted in the sage after dark without water. We started at daybreak on the twentieth, and directed our course towards Cotas defile. During our march, we saw great numbers of buffalo running in various directions, which convinced us that they had been alarmed by Indians. This startled us in no small degree for we did not doubt but that they were Blackfeet, and should they discover us in the open plains, escape with our jaded horses would be impracticable. However, after suffering a fever, occasioned by thirst and excitement, and marching thirty-five miles over the heated plains, we reached Cotas Creek, and gladly threw ourselves down to sip the refreshing waters that flow from fields of snow in view. Our minds, however, were not yet free from apprehension, for just before we reached the river, three horsemen appeared coming towards us at full speed; two of whom came near enough to satisfy themselves that we were certainly men, and then turned and fled up the river. We immediately cooked and eat several choice pieces of a buffalo we were fortunate enough to kill in the morning, and remained until dark watching by turns the appearance of Indians, but saw nothing save here and there a veteran bull, quietly feeding around us; or large herds of buffalo in the distance. At dark we saddled our horses, and departed cautiously up the river, carefully avoiding to ride near the margin. Soon after our departure, our horses turned towards the river, and neighed, a certain sign that they saw or smelled horses; we continued, however, without annoyance, about ten miles, and halted to pass the night on the steep

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

side of a hill.

The next morning at daybreak, we were on the march, and passed through a narrow space between two bluff ledges of rock, into a large plain, where Cotas Creek, and the east fork of Salmon River, both take their rise. We continued twenty miles down the plain, when we discovered a large party of horsemen meeting us at full speed. We hastily ascended an eminence, unsheathed our guns, and with no little anxiety awaited their approach. As they came near, we hailed them in Flathead, and they immediately discharged their guns in the air, which relieved our minds at once from apprehension. We followed their example, and descended to them. They were Flatheads, and Nezperces, and had just started for buffalo; but after hearing our mission, they furnished us with fresh horses, and returned with us at half speed, about six miles, to the village. Here we found the men Dripps sent in quest of our party from the Black Hills last winter. They reached the village last spring, a few days after we left Salmon River.

The Indians had had a battle with the Blackfeet three days before I arrived. They lost twelve men killed, and several others severely, if not mortally, wounded; besides upwards of a thousand head of horses, which were taken by the Blackfeet. The latter left sixteen of their comrades dead on the field. The action lasted two days, and was so obstinate at the commencement, that six or eight of the Flathead tents were cut up by their enemies, and several of the latter killed in camp. There were about a thousand of the enemy, who came for the purpose of annihilating the Flatheads, root and branch. Previous to the commencement of the fray, they told the Flatheads that McKensie had supplied them with guns by the hundred, and ammunition proportionate, and they now came with the intention of fighting, until "they should get their stomachs full." After the battle, when as usual in such cases they were crying for the loss of their friends; the Flatheads demanded sarcastically, if they had "got their stomachs full," to which they made no reply, but immediately departed for their own country. Sixteen of their scalps were triumphantly displayed by the Flatheads, who courageously defended their own slain, and prevented the Blackfeet from taking a single scalp. Several of the Flathead horsemen were killed in the spring, previous to the battle, amongst whom was the brother of Pascal, one of the Indians who accompanied me.

On the twenty-second we departed, and bore southeastward up the plain. The wounded Indians were carried on a kind of litter simply constructed, by fastening the ends of two long poles to opposite sides of a pack horse, and tying cross bars six feet assunder, to prevent the long poles from approaching to, or receding from each other. A buffalo robe is then fastened loosely to the four poles, and the wounded person placed upon it. These litters, of which there were eight or ten, were followed by numbers of young men, ever ready to administer to the wants of the sufferers. Among the latter, was a young man who was shot through the knee; - his leg was swelled to an enormous size, yet he would not allow himself to betray the least symptoms of pain, and exultingly gloried in his misfortune.

We reached the narrows at the head of the plain, and the source of Cotas Creek on the twenty-third. Considerable anxiety was now manifested by the Indians. They were without either provisions or ammunition, and were consequently only prevented from pushing forward, to where

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

both could be obtained, by the inability of their wounded companions, to endure the torture occasioned by long marches.

On the twenty-fourth we passed down Cotas defile, and fell in with a party of Flatheads, who left the village previous to the battle. They were well supplied with both dry and fresh meat, and at the same time were surrounded by buffalo, numbers of which were killed by our party. These Indians were probably the same discovered by us, and believed to be Blackfeet, on our way up four days since. After this period we moved slowly down Cotas Creek as far as the mountains jut down into the plain, on either side, and killed numbers of buffalo, which were numerous in all directions. In the meantime three of the wounded Indians died, and were decently buried. They were enveloped in skins lashed around them, previous to interment, and their graves after being filled with earth, were surmounted by little comical heaps of stones, which is the only mark by which the resting place of these heroes may hereafter be designated.

## CHAPTER XXVI

On the 2d of June, a party of hunters arrived from our own camp, which was situated a few miles above the forks of the Snake river. The following morning I departed in company with one of the hunters, for camp; we passed twenty miles North of East, through a sandy plain decked with great numbers of Rocky mounds, which were all cross cracked, at the top, leaving cavities in some cases, large enough to shelter both men and horses, from the balls or arrows of Indians. The largest are one hundred feet high, and overlook the country far, in every direction. They appear a secure asylum to small parties of men, who, if once within them, may bid defiance to hundreds of Indians. A mountain of white sand, thirty miles in extent, is situated six or eight miles north of the forks of the Snake River. I have crossed several points of it, with difficulty, owing to the depth my horse sank into the sand. In most places it is entirely destitute of all herbage, and at a distance resembles a snow clad mountain. We reached camp in the afternoon, and ascertained that nothing worthy of recollection, had occurred since I left it. The trappers were all in camp, having ceased to trap, and the Springs hunt was considered over.

The next day the Indians reached us, and were requested to accompany us to Pierre's Hole, where we expected to meet Fontenelle, with supplies from St. Louis. They agreed to accompany us, if we would remain with them a day or two, to rest their jaded horses. In the meantime the brave Indian who was shot through the knee, died, and was buried on the margin of Henrie's fork.

After this period we continued slowly up Henrie's fork, and halted two or three days on the East fork, to dry meat, knowing that we should remain one or two days at rendezvous, and that buffalo would soon be driven far from us. We killed hundreds daily during our stay on Henrie's fork; and continued thirty miles South Eastward over prairie hills, decked with groves of Aspen trees, to the Northern extremity of Pierre's Hole. This pleasant retreat is twenty miles long, and two wide, extending from South-east to North-west; and is surrounded by lofty mountains, save on the west side, where prairie hills appear. It is watered by numbers of small streams, which unite and form

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

Pierre's fork, a fine stream thirty or forty paces in width, which cuts its way out of the valley, in a deep canal of bluff rocks. On the east side of the valley, three majestic peaks of naked rock, rise far above the rest, and are well known to mountain rovers by the name of "The Trois Tetons." The mountains are very abrupt, as far as the pines extend, and the huge pyramids above are absolutely inaccessible. This valley is noted for the large extent of excellent pasturage, along the borders of its waters; and has been selected as a pleasant place for a general rendezvous, by the R. M. F. C., Vanderburgh and ourselves: it receives its name from an Iroquois chieftain, who first discovered it; and was killed in 1827, on the source of the Jefferson River. On reaching this valley, we found the Rocky Mountain Fur Co. already here, awaiting the arrival of Mr. Fitzpatrick, with supplies from Saint Louis. Mr. Vanderburgh expected a Mr. Provenu, with an equipment from fort Union, at the mouth of the Yellow Stone; and we as anxiously looked forward for Mr. Fontenelle, who was expected from the Council Bluffs.

Some days after we entered Pierre's Hole, a party of trappers returned, having made their hunt to the Southward. They saw Captain Ghant, at the head of fifty or sixty men, on Green river; he had procured horses from the Spaniards of New Mexico, and had made his hunt on the sources of the Arkansas, and tributaries of Green river, without molestation by the Indians. Two men were despatched by the R. M. F. Co. about this time, to meet the Saint Louis companies, and six of our men followed a few days afterwards for the same object.

On the 29th of June, the two men despatched by the R. M. F. Co. returned in a miserable plight; they had proceeded as far as Laramie's fork, at the foot of the Black hills, and were robbed by a party of Crow Indians, of their horses; after which they retraced their steps to camp, and suffered extremely for want of provisions, or from cold, rain, and fatigue. Throughout the month of June, scarcely a day passed without either rain, hail, or snow, and during the last three days of the month, a snow storm continued without intermission, the whole time, night and day; but disappeared from the earth a few hours after the sun reappeared.

On the third of July, one of our men who was sent in quest of the St. Louis companies returned, and reported that William Sublett, at the head of one hundred men, was now on his way here. This numerous company was composed of fifty hired men; a party of twenty-two men, detached from Ghant's company; a party of thirteen men from the Rio del Norte, and a Mr. Wythe with ten or twelve followers, who was on some secret expedition to the mouth of the Oregon, or Columbia River. We learned that Mr. Fitzpatrick left the company at the Red Hills, with two horses, and set out to reach us, in advance of Sublett; but had not since been heard of. Two or three nights before our express reached them, their camp was fired upon by a party of unknown Indians, but no one injured. Several horses were stolen, however; from Sublett, our express could learn nothing of Fontenelle; and determined to proceed on until they should meet him, but the day after their departure from Sublett's Camp, they were charged upon by a party of mounted Indians, who compelled them to return.

On the 8th Sublett arrived, and halted in the middle of the hole, with the R. M. F. Co., for whom he brought one hundred mules, laden with merchandise. The same evening Mr. Thos. Fitzpatrick,

---

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

to our great joy, came into camp, though in a most pitiable condition. It appears that this traveler, on his way to Pierre's Hole, came suddenly upon a large Village of Indians, who mounted their horses and immediately gave chase; however, he had fortunately taken the precaution to furnish himself with two horses, previous to his departure from camp, one of which had the reputation of being fleet. This last he led by the halter, ever saddled, and bridled, as a resource in case he should be compelled to seek safety by flight. So soon as he found himself discovered and pursued, he sprang upon his favorite horse, and fled, directing his course towards the mountains, which were about three miles distant. When he reached the mountains, the Indians were so far behind, that he hoped to elude them by concealment, and immediately placed his horse in a thicket, and sought a crevice in the rocks, where he concealed himself. In a few moments the blood hounds came up, and soon discovered his horse; from his place of concealment he saw them searching every nook and crevice, for him, and the search was not discontinued, until the next step would have placed him before the eyes of a blood thirsty set of wretches, whose clemency in the first instance, is yet to be recorded. Fortunately for him, the search was abandoned, and the Indians returned to camp, at the same time he chose a point, whence he could discover any passing object, in the plain beneath him; and determined to remain, until the company should pass, and join them at that time. At the expiration of three days, he discovered six men, passing in the valley, and immediately descended the mountain to join them, but ere he could effect this, a party of Indians appeared from another quarter, and gave chase to the six men, who wheeled and fled; in the meantime, he fled back to his place of refuge. At length he became confident, that the company had passed him without his knowledge, and set out for Pierre's Hole in the night; his moccasins became worn out, and he was forced to make others of his hat, he likewise lost his powder in swimming a river, and suffered from the combined effects of hunger, cold, and fatigue, until he was reduced to a mere skeleton, and could scarcely be recognized when he finally reached camp. He informs us, that the Indians were doubtless a band of Grosvents of the prairie, who passed from the Missouri to the head of the Arkansas three years ago, and were now on their return to their own country. They are the same Indians who encamped with Smith, Sublett and Jackson, on the Arkansas last summer, and there buried their hatchets and animosity together. But it appears from their proceedings this far, that they have raised both since.

## CHAPTER XXVII

On the 17th a party of trappers, of the Rocky Mountain Fur Company, having received supplies for the fall hunt, left the company, and passed ten miles up the valley, intending to cross on to Lewis River, near the mouth of Salt River. The following morning they discovered a party of strange Indians near the margin of the stream, some distance above them, and several of the men immediately departed to ascertain who they were. As they approached, the chief advanced to meet them, armed with nothing but the calumet of peace; but he was recognized to be a Grosventre and in a twinkling was sent to eternity. At the same time the Indians, who perhaps numbered fifty men, besides women and children, entered a grove of cottonwood trees, and without loss of time proceeded to make a breastwork, or pen of trees impenetrable to balls. In the mean time an express was despatched to inform us, and in a few minutes the plains were covered with whites,

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

and friendly Indians, rushing to the field of battle. On their arrival, however, the enemy had completed an impenetrable fort, fifty feet square, within which they had fastened their horses. A general fire was immediately opened upon the fort, and was warmly kept up on both sides until dark. In the mean time a plan was formed by the whites to burn them up in their fort, and quantities of dry wood and brush were collected for that purpose; but the Indians on our side objected to this project, on the ground that all the plunder would be lost, which they thought to appropriate to their own use. At length night came on, and the whites, who were provoked at the Indians, for not consenting to annihilate the enemy at once, departed for their respective camps; the Indians soon followed, and left such of the enemy as survived, at liberty to depart and recount their misfortunes to their friends. We lost in this engagement, two men killed, one mortally wounded, and many others either severely or slightly. The Indians on our side, lost five killed, and many wounded, some supposed to be mortally. The following morning, a large party of both whites and Indians returned to the fort. In it were the dead bodies of three Grosventre Indians, a child, twenty-four horses, and several dogs. Our Indians followed the route of the fugitives several miles, and found their baggage, which they had concealed in divers places, as well as the bodies of five more Indians, and two young women, who were yet unhurt, though their heartless captures sent them to the shades, in pursuit of their relations without remorse. Amongst the dead horses were those lost by Mr. Fitzpatrick some days since; but those stolen from Sublett about the same time, were not among the number; hence we supposed that a larger party of Indians were yet behind.

After this period we enjoyed fine weather, and nothing occurred worthy of remembrance, until the 27th. This evening five of seven men who departed for St. Louis, three days since, returned, and informed us that they were attacked yesterday, by a party of Indians in Jackson's Hole, and that two of their number, Moore and Foy, killed. The survivors saved themselves by flight, but one of them was wounded in his thigh.

On the 30th William Sublett departed on his return to St. Louis. He had been detained here much longer than he intended, owing to a wound he had received on the 18th. During the first day's march, Stevens, the person who was wounded in his thigh, several days since, died, and was interred in the southeastern extremity of Pierre's Hole. On the first of August we had a hail storm of one hour's duration. Until this period we had anxiously awaited the appearance of Provenu and Fontenelle; but they came not, and we became apprehensive that they had lost their horses on the way, and were thus prevented from reaching us, according to promise however, Dripps and Vanderburgh resolved to move over to Green River, and learn if possible something definite. We set out on the 2d and reached the head of Pierre's Hole on the 3d. On the 4th we crossed the mountain, and descended into a large prairie valley, called Jackson's Big Hole. It lies due east of the Trois Tetons, and is watered by Lewis River, which leaves the valley through a deep cut in the mountains, impassable for pack horses; hence trappers have to cross the mountains to Pierre's Hole, in order to avoid greater obstacles, which present themselves at any other pass. The waters of this river, in the head of the Hole, expand into a lake of considerable magnitude, which I believe is identical with one attached to the Big Horn River, on the maps of the United States, for I have never heard of any lake on the sources of that river, although our trappers have explored every spring source of it. This lake is called the Teton Lake, from the mountain that overlooks it.

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

The river flows through the valley in a southwest direction, and near the lower end of the hole, a large branch from the southeast falls into it. Those streams are bordered by aspen and cottonwood trees, and groves of cedars, in some parts of the valley. The Hole is surrounded by lofty mountains, and receives its name from one of the firm of Smith, Sublett and Jackson.

We crossed Lewis River at a well known ford, where its waters are separated by several Islands, and are expanded to the distance of several hundred yards; but are fordable at this season for pack horses, if led carefully over, following the bars or shallow places. In the evening we halted on a spring, four miles east of Lewis River, after marching twenty-two miles. On the 5th we passed six or eight miles southeast, and halted on the margin of the stream, flowing from that direction. During our march, some of the hunters saw the bones of two men, supposed to be those killed from a party of seven, in the latter part of July. On the sixth we entered a dark defile, and followed a zig-zag trail along the almost perpendicular side of the mountain, scarcely leaving space in many places for the feet of our horses; we all dismounted, and led our animals over the most dangerous places, but notwithstanding this precaution, three of them lost their footing, and were precipitated sixty or seventy feet into the river below; two were but slightly injured, having fortunately fallen upon their loads, which preserved them from death; but the other was instantly killed. At length we came out into an open valley after a march of fifteen miles, and halted in its eastern extremity. This small valley is called Jackson's Little Hole, in contradistinction to its neighbor, which we left yesterday. It was covered with herds of buffalo, numbers of which fell before our rifles, and supplied us with fresh meat, an article we had not possessed since we came into Pierre's Hole. We saw several encampments of a large village of Indians, who had been in the valley five or six days since. They were doubtless Grosventres of the prairie, and were prevented from passing by way of Pierre's Hole, most likely, by the reception met with by a small party, who reached that Hole in advance of the main village.

On the 7th we ascended a high abrupt hill, covered with dense groves of aspen trees, and came in view of a vast plain, gently descending eastward to Green River, which flows through it south-eastward. The plain was literally covered with buffalo, numbers of which we killed, and halted at a spring on the summit of the hill. On the 8th we descended the plain to a stream flowing into Green River, and halted on its margin; during the day we discovered a party of horsemen several miles to the northward, who were supposed by some, to be our long expected company, and by others were believed to be the Grosventres, who we all knew could not be far in advance of us.

To our great joy, however, they proved to be the former, headed by our old friend Fontenelle, who had passed from St. Louis to the mouth of the Yellowstone River in a steamboat, and thence with pack horses to this place. He had about fifty men, and three times that number of horses, and was aided by Mr. Provean in conducting the expedition. He fell in with the Grosventres two days since, on Green River and although they numbered five or six hundred warriors, want of ammunition prevented them from making an attack upon him; they denied having any knowledge of whites in this part of the country, notwithstanding we had given them sufficient cause to remember us, at least for a few days. He likewise saw a company of one hundred and twenty men, with twenty covered wagons, and numbers of pack horses, led by one Captain Bonyville from New

LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

York, who was at this time constructing a fort on Green River, a few miles below us.

## CHAPTER XXVIII

On the 12th all arrangements, for the journey being completed, Mr. Fontenelle departed with thirty men, and the furs we had collected during the past year, for Fort Union at the Yellow Stone; at the same time Messrs. Vanderburgh and Dripps, who were now jointly acting for the American Fur Co., departed at the head of about ten men, intending to hunt on the source of the Missouri. We reached a spring, on the summit of the hill, east of Jackson's Little Hole, in the evening; and halted for the night. On the 14th we passed through the Narrows, between Jackson's Holes; and avoided some of the difficulties we met with on our previous passage, by crossing the river, several times. In the evening we halted for the night near the remains of two men, who were killed in July last. These we collected, and deposited in a small stream, that discharged itself into a fork of Lewis river; that flows from Jackson's Little Hole.

On the 16th we reached the head of Pierre's Hole, and found the bones of several Indians, who were supposed to have been killed during the battle in July last; and were transported here by their relations, though several miles from the battle field. Three days after we reached Henri's Fork amid clouds of dust which rose from our horses' feet, and filled our eyes. The plains were covered with buffalo, in all directions, far as we could discern them.

On the 20th I departed with two others, with orders to seek the Flatheads, and induce them to meet the company in Horse prairie, if possible, in eight days from this time. Our leaders intended to cache their goods at that place, and wished to meet the Indians, for the purpose of trading with them. Our company continued onward a north course, whilst we passed north of the sand mountain, and bore a trifle south of west, in the direction of Cota's defile. We reached Kamas creek at sunset, after a march of forty-five miles, during which we suffered extremely, owing to want of water, on the route; but allayed our parching thirst when we arrived; ate a hearty supper of dry meat, hobbled our fatigued horses, and slept in a thicket until sunrise. Next day proceeded on thirty-five miles, to Cota's creek, and halted until dark. During our march we saw traces of horsemen, who had passed by recently. At dusk we passed two miles up the defile, and halted in the logs, near the margin of the creek. On the 22nd we mounted our horses, at day break, and passed the narrows into a rolling plain, where we found several encampments made by the Flat heads twenty days since. At noon, we halted to bait our horses, and demolished a few pounds of dried meat, ourselves. At the expiration of two hours, we again departed; and proceeded down the plain, until near midnight, halting at length near the margin of a small stream. During the night our slumbers were disturbed by the bellowing of a herd of bulls, near us; and by the howling of a multitude of wolves, prowling about the buffalo. We were approached, by a formidable grizzly bear, who slowly walked off, however, after we had made some bustle about our beds. We made during the day and night, about fifty miles.

On the 23d we arose in the morning, and found ourselves in the valley of the east fork of Salmon

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

river. There were large herds of buffalo slowly moving up the valley, which led us to believe, that the Indians were not far below us. One of their encampments appeared to have been evacuated, but five or six days since; and was at this time a rendezvous for wolves, ravens, and magpies. We likewise saw numbers of salmon, forcing their way up the small streams, in this valley - many had so worn out their fins, that they could with difficulty avoid us when we endeavored to catch them, in our hands. With clubs and stones, we killed several of them, with which we regaled ourselves at noon, and my companions, amused themselves, whilst our horses were feeding, by adding to the numberless carcasses scattered along the shore, that had been taken and thrown away by the Indians. We passed through this valley, and halted some time after dark at the mouth of a stream from the south, after travelling forty miles.

On the 24th we passed between two high rocky points jutting into the river, and came out into an open plain two miles wide. Near the entrance, is a bed of stone, which is frequently used as a substitute for soap. It is but little harder than chalk, of the same color, and when manufactured into pipes, and burnt, becomes a fine glossy jet color, and equally hard as stoneware. In this plain we discovered an encampment that appeared to have been made so recently, that we were confident of finding the Indians before night; however, we followed the trail to the forks of Salmon River, passing several other encampments, which were now occupied by bears, wolves, ravens and magpies, which were preying upon the yet undevoured particles of dried meat, and fragments of skins scattered around them. At dark we halted near one of these encampments in the forks of Salmon River, after riding about forty miles. In the night we were serenaded by the growling of bears and wolves, quarelling for the half-picked bones about them.

## CHAPTER XXIX

On the 25th we continued down Salmon River to a high abrupt plain, jutting down on the east side, which leaves a narrow trail along the brink of the river for several hundred yards, over-hung by a frowning precipice some hundred feet high. Through this we passed, and came into a small prairie, decked with huge fragments of rocks, trees, and willows. On the neighboring hills, we discovered a colt that had been left by the Indians, and likewise an encampment on the margin of the river that had evidently been left yesterday; we followed the trail over ranges of prairie hills, and finally found an encampment that had been left this morning, the Indians having crossed the mountains in the direction of Bitter-root River.

Having already exceeded the time allotted us by our leaders, and being aware that they would not wait more than a day beyond the time for us; I was forced to abandon the pursuit, or risk not seeing the company, until the expiration of the fall hunt which would subject me to complaint, as well as danger; and every hour's ride being two from the place of rendezvous, I turned my horse up a small stream, and followed it eight miles into the mountains that separate the valley of Salmon River from the Big Hole. During this jaunt, we killed a grey wolf which was fat, and made us a tolerable supper; we likewise wounded a grizzly bear, but in his rage, he broke down bushes and saplings with such ease, that we concluded that it would be imprudent to meddle with him any

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

more. We made about twenty-eight miles today, including deviations.

On the 26th we started at sunrise, and reached the head of a ravine, in the opposite side of the mountains, at sunset; after a toilsome and continual march of five or six miles, including necessary deviations from our general course. The distance attained will be proof enough of the existence of obstacles in this day's march, which was one of the most fatiguing I ever attempted. The sides of the mountains were very steep, and were covered with green or fallen pines, of which the latter were so interlocked with each other, and so numerous, that we were continually forced to leap our horses over them, and were frequently compelled to retrace our steps and seek some other passage. Here, an avalanche of huge rocks, trees, and snows had been precipitated from the summit of the mountains, and the sharp fragments left in the route, if slightly disturbed, would immediately resume their headlong course downward, and presented a barrier not only impassable for horses, but even for men. From this we turned, and sought to wedge our way through the pines in another direction, but suddenly came to the brink of some frightful ravine several hundred feet deep, but so narrow that a mountain goat would over-leap it without hesitation. Here we again turned, and followed the sharp edge of a very narrow ridge, between two dark profound caverns, which yawned in immeasurable depth and obscurity, almost beneath our feet on either side. Continuing our progress, we at length reached a small cove at the head of a ravine above the regions of pine, which was covered with banks of snow, and was nearly surrounded by a naked wall of rock, which forms the base of the huge pyramids that constitute in general the summits of the Rocky Mountains.

With great difficulty we succeeded in gaining the top of the wall between two peaks, and halted beside a vast bank of snow, from which little rills were trickling down either side of the mountains, that fall, both into the sources of the Missouri and Columbia. From this height we surveyed with pleasure, the apparently level prairies and bottoms bordering Salmon River on the one side, and the more extensive and fertile valley of Wisdom River on the other. After refreshing ourselves by a cool draught from a rivulet, which formed a reservoir a few feet from its source, we commenced our descent, which was by far more rapid and dangerous than our ascent, though infinitely less difficult. At dark we reached a cove in the upper region of pines, and gladly threw ourselves down to sleep, overcome by fatigue, having walked and led our horses the whole time, since we set out in the morning.

On the 27th we followed the ravine to a small stream, which flowed several miles with uncontrollable fury, but at length reached a point where the barriers on either side of the ravine expanded, leaving room for a beautiful little lake, two or three miles in circuit, of perfect transparency, which was surrounded by gigantic pines. From this point we continued six or seven miles and reached the open prairie of the Big Hole. During our march we killed a fine black-tailed deer, and saw the trail and an encampment of the R. M. F. company, who had passed through this valley eight or ten days since; in the afternoon we continued fifteen miles up the Hole, killed a white-tailed fawn, and halted for the night in a point of pines.

On the 28th we ascertained that the company had not passed, and chose a situation whence we

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

could discover, any passing object in the southern extremity of this valley. Here we constructed a pen of dry poles, and covered it with branches of the balsam fir, to shelter us from storms, as well as the missiles of Indians, in case of attack, being determined to await the arrival of the company, at this place. We ate to day the small portion we had saved of the buck, and nearly finished the fawn. In the afternoon, it commenced snowing, and continued all night; the following day it snowed without intermission until we lay down to sleep. On the morning of the 30th we arose, and found the prairies covered with snow to the depth of one foot; though the storm had abated, however, the plains are so warm, that it must rapidly disappear.

On the 31st we saddled our horses, and passed two miles across the valley in quest of food, having had nothing to eat, save part of a famished wolf since yesterday morning. The snow disappeared from the plains at noon, and discovered to us traces of buffalo, which we followed into the hills on the east side of the Hole. We found the herd grazing in a narrow bottom; they were so unusually wild, however that we succeeded only in stopping a bull by one of our balls, whilst the other disappeared instantaneously. In the mean time we approached, and opened fire upon the wounded one, but night overtook us and we were obliged to leave him on his legs, after firing at him ten or twelve times. We retired supperless to a neighboring thicket, and passed the night.

September first, early in the morning we departed, hungry as bears, in the direction of the bull we wounded and left last evening. As we approached, the presence of thirty or forty wolves, proved to us, that some of our balls had been well directed; yet we could not find meat enough for breakfast, that was not torn or mangled by them. However our appetites were so well sharpened, that we were not long in cooking some half picked bones, which were quickly fastened to our saddle cords, preparatory to going in quest of firewood. In the mean time the wolves, and the multitudes of ravens, remained a few yards off, politely waiting for us to serve ourselves; hinting, however, by an occasional growl, or scream, for us to be as expeditious as possible. As soon as we departed, they simultaneously sprang or flew to the carcase, with such intimacy, that ravens were seen picking at a bone, in the mouth of a wolf.

Immediately after our departure, three men entered the valley from the eastward, and charged furiously toward us, but as they came from a point we expected the company, we rightly conjectured that they were hunters, in advance of camp. In a few moments they came up, and before we had made our usual brief inquiries, the company appeared, and we passed with them, twelve miles, northward down the valley. Nothing had occurred in camp since our departure worth noticing.

## CHAPTER XXX

In the two following days we travelled fifty miles, and reached the northern extremity of the Big Hole, in the same part of this valley. We saw two or three bears, antelopes and deer, and great numbers of young ducks, yet unable to fly, in the streams.

On the fourth we passed into the Deer-house plains, and saw the trail, and several encampments,

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

of the Rocky Mountain Fur Co.; but no game, save one antelope.

On the fifth, we passed twenty five mile, west of north, down this valley. In the mean time, our hunters killed three grizzly bears, several goats, deer, and two buffaloes; the latter, however, is seldom found in this country; though it abounds in black and white tailed deer, elk, sheep, antelopes, and sometimes moose, and White mountain goats have been killed here.

On the sixth, we left this valley, and bore northward over a low mountain, to a small stream that flows into the Arrow-stone river; the country below us, is a succession of isolated hills, partially covered with pines, and fragments of rock, or extremely small bottoms, intersected by prairie hills. On the seventh, we traversed a low mountain, to a small stream, flowing northwestward, through an irregular plain. During the day we espied a party of horsemen, at the distance of two miles, who immediately ascended an eminence, discharged their guns in the air, and reflected the rays of the sun upon us with a mirror. Some of our party went to them, and ascertained that they were Snakes, who had been on an expedition against the Blackfeet. They had succeeded in capturing a woman, with a young child, whom they put to death; and decamped with twenty horses, which they stole the same day. On the eighth, we continued down the stream fifteen miles, to a large valley, surrounded by mountains; of which those on the north were exceedingly lofty; here we again intersected the trail of the Rocky Mountain Fur Co., and judging from the fresh appearance of their traces, that they were but a short distance before us, we immediately followed, determined to overtake them, and by this means share a part of the game, which is usually found in advance of a company, but never behind. We followed the principal stream, that flows into this valley, called Blackfoot, which flows into the Arrow-stone river, at a place called Hell-gates up into the mountains, about five miles, and halted in a small bottom, for the night.

On the ninth, we continued the pursuit twenty miles farther into the mountains. During our march we saw an encampment, that was left this morning, in which fires were yet burning.

On the fourteenth we crossed the mountains, to the waters of the Missouri, a short distance above the mouth of Dearborn's river; and encamped on a small stream, with the Rocky Mountain Fur Co. From the summit of the mountain, the country presented a vast plain, dotted by table and pointed clay bluffs; which were extremely regular and picturesque, resembling fortresses, or castles, surmounted by towers and domes, which at a distance, appeared so magnificent and perfect, that one could hardly persuade himself, that they were the productions of nature; so strongly did they resemble the works of art. - Those, who have had the pleasure of seeing the elegant and correct representation of scenery on the Missouri, in that splendid collection of paintings, CATLIN'S PICTURE GALLERY, consisting of Indian portraits, views of their Villages, Buffalo Hunts, Religious Ceremonies, Western Landscapes, etc., can form a tolerable idea, of the imposing and romantic prospects, that abound in this section of the country. This extensive plain was bounded by the horizon to the north and eastward, but rugged mountains presented themselves in every other direction. The Missouri winds its way through it to the northward, towards the mighty falls, described by Lewis and Clark, in all their terrific grandeur. We found the Rocky Mountain Fur Co. like ourselves, in a starving condition. They reported that a party of Indian trappers, supposed

---

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

to be Black Feet, had preceded them a few days, and consequently the country was almost destitute of game; some times they had succeeded in killing a grizzly bear, or black tailed deer, which divided amongst eighty men, was but a mouthful for each; though generally they had retired to bed supperless. This had been precisely the case with ourselves, since we left the Deer-house Plains. We likewise learned, that a young man named Miller, who belonged to this Company, and who was wounded at Pierre's Hole, during the battle in July last, died a month afterward, and was interred in Cotas defile.

On the 11th, hunters were despatched in quest of provisions, and returned in the evening successful; having killed a bull, together with several deer, and antelopes. In the mean time, the trappers went in search of beaver, but generally returned with their traps, of course unsuccessful. On the 12th both companies raised camp, and proceeded together southeastward, over rugged hills, to a small stream flowing eastward, towards the Missouri. During our march, we killed several black tailed deer, which were numerous in the pines, with which the hills were covered. We continued our course next day, over the same description of country, following a road composed of several parallel trails, a few feet asunder, which was evidently much used by the Black Feet, as no other Indians pass here with lodges.

Near the trail on the summit of a hill, we saw a quantity of broken bows and arrows, together with remnants of Indian garments, which induced some of our comrades to believe that a party of Indians had been defeated here a year or two since; notwithstanding, bones, which are usually found on battle fields, were not seen. Others, however, inferred that these articles had been sacrificed to the malignant Deity, after some unfortunate expedition, in which they had sustained irreparable losses.

In the evening of this day we reached a small branch, which unites with others, and is then called Vermillion river from a bed of red earth found near it, which is used by the Indians for painting their faces and clothing. Here we remained the following day, to rest our horses; whilst some of the trappers explored several small streams, in search of beaver.

On the 15th we again continued our course, over a low spur of the mountain, to a small stream that led into a fine prairie valley, eight miles wide, and fifteen in length from north-west to south-east. The Missouri is separated from it by a range of pine covered hills. Its course is marked by a chain of lofty mountains, which extend parallel with it, on the east side, and were distant about fifteen miles from us. Several of our hunters brought in today the flesh of several deer and big horns, both of which are numerous on the hills.

On the 16th, the R. M. F. Co., together with Mr. Dripps, at the head of fifty of our men, directed their course towards the three forks of the Missouri, south-east-ward. During our progress we met a severe storm of sleet, which we were compelled to face, until we reached a suitable place to encamp.

On the 17th we arose, and found the country mantled with snow, which was still rapidly falling;

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

however, we descended the mountain, and crossed a high hill, into the deer house plains, after a long march of twenty-five miles. The storm abated at noon, but the ground was covered with snow to the depth of several inches.

On the 18th we continued twenty miles up the valley, and saw numbers of rabbits, which were pursued in various directions by our dogs, as well as a herd of elk; yet our hunters were unable to kill anything, though the carcass of a wolf would have been acceptable at this time; having killed nothing, save one or two deer, since we separated from Dripps. The following day we reached the mountain, at the head of this valley; but saw no game save a herd of antelopes, whose vigilant sentinels baffled the efforts of our hunters to approach them; and thus we starved in view of plenty.

## CHAPTER XXXI

On the 20th we crossed the mountain, and encamped on the Jefferson, about thirty miles below Beaver Head. Here, our hunters were partially compensated for their bad-luck previous to this time; for they brought into camp the flesh of one bull, several elk, deer, and antelopes, upon which we feasted fully.

The next day being Friday, some of our catholic comrades conscientiously kept lent, having eaten so much the day before, as to be utterly unable to violate this custom of the church, had they even felt so disposed; they are however, by and by, not often so forcibly reminded of the propriety of compliance with religious observances, though the expediency of those rites is often illustrated in a similar manner.

In the afternoon, accompanied by a friend, I visited the grave of Frasier, the Irroquois, who was killed and buried here last fall, being desirous to ascertain what was generally believed already, namely, that his body had been stolen from the grave, robbed of its covering, and thrown into the Jefferson by the Black foot Indians. This opinion originated from the circumstance of finding the body of a man in the river last fall, and was now fully confirmed by the grave being open.

After this time, we continued southward up to the Philanthropy, and killed elk, deer and antelopes; and caught some beaver, on the route. Fifteen miles below Beaver Head, is a quarry of green stone, that is semi-transparent, and easily cut with a knife. It is highly prized by the Indians, for manufacturing into pipes. It is situated in a bluff, on the west side of the river; overlooking the plain. In the vicinity of the Philanthropy, we saw several fine herds of buffalo, and our hunters reported that the plains were covered with them near Beaver Head.

On the 24th several Black Foot-Indians were seen lurking about the thickets that skirt the river, evidently watching an opportunity to kill some of our trappers, who being aware of their design, always go out in parties of several together, for mutual safety.

After this period we continued southeastward, following the course of the Philanthropy, and

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

trapping it in our route, about twenty miles to the head of this plain, where the river flows from a narrow defile, one or two miles in length. Continuing our course through the narrows, we re-entered the valley - where the Indians with us killed a Black foot last fall - and again reached the mountain, whence the river flows, after a march of fifteen miles.

On the first of October, we left the plain and followed a zig zag course of the river fifteen miles, into the mountains; halting in the evening in a narrow bottom, scarcely large enough to contain ourselves and horses; however, beaver signs were numerous, and we remained two nights, being amply compensated for the inconvenience of our situation, by the numbers of beaver we caught during our stay.

On the 30th we left the river, and ascended the mountain eastward, with inexpressible fatigue, owing to the obstructions that lay in our route, added to the perpendicularity of the ascent; though we succeeded in reaching the summit, without accident, and encamped beside a fountain on the south side, at the base of an enormous peak, that rises majestically far above the rest, is crowned with eternal snow, and overlooks the plains of both the Jefferson and Madison rivers.

On the 4th we arose early in the morning, and found the country covered with snow, to the depth of fifteen inches. Last evening the weather was pleasant, and bade fair to continue so. We halted late, and were nearly overcome by fatigue; hence we neglected our usual precaution, constructing cabins; which otherwise would have deprived us of the laugh we enjoyed, at the expense of our comrades, who successively popped out their heads as they arose, half supported, from the snow, by which they were completely buried, and which tumbling in, reoccupied their beds, the moment they left them. The day was extremely cold, and the snow continued falling so fast, that we were forced to remain; however, we prepared shelters for the coming night, and kindled large fires in the pines, by which we dried our bedding, and passed the day. On the 5th the storm had abated, though the atmosphere was still cloudy and cool; however, we descended the mountain, following a spring source until it increased to a large creek, having a rapid and noisy current. In the evening it recommenced snowing, and continued all night and the following day, without intermission.

On the 7th we raised camp, though the snow was still falling very fast, and the company crossed a low spur of the mountain, in a northeast direction, fifteen miles to a parallel stream. In the mountain I, with several others, in quest of buffalo continued our course eastward ten miles, to the junction of this stream, with the Madison river. This branch of the Missouri is here eighty yards wide, quite shallow, and its bed is composed of smooth round rocks, of a black color. It commands a narrow valley, terminated on either side by abrupt and lofty mountains, through which it flows to the northward. Its borders were decked with a few black willows, of an inferior growth, which appeared to be out of place in their present situation. There are however several small streams flowing into it, whose borders are covered with aspen and pine trees, or thickets of common willows. After we separated from the company this morning, the storm increased so much that we could discover nothing, and with difficulty kept our course; but the cutting winds became less tedious, as we approached the river, and finally abated; in the meantime we discov-

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

ered a herd of buffalo, lying in a ravine sheltered from the storm, one of which we killed and went to camp. On the 8th the storm continued with fury all the day, yet regardless of its severity, we raised camp and passed over to the mouth of the creek, that we left yesterday; when we sheltered ourselves in a grove of dead aspen trees, which supplied us with an abundance of fuel. The snow is now more than a foot deep, in the bottoms bordering the river.

On the 6th our long absent friend, the sun, reappeared with such lustre, that one, without the gift of prophecy might have foretold, the rapid annihilation of the snow, which followed; leaving the country partially inundated with water. During the day, the Rocky Mountain Fur Company arrived from the three forks of the Missouri and encamped near us; they separated from Mr. Dripps at the forks, who continued up the Jefferson; whilst they trapped the Gallatin, and crossed to the Madison, a few miles below us. They had caught but few beaver, and were several times alarmed by parties of Indians, who were lurking about them, but as yet no person had been injured.

On the 20th the weather was disagreeable, and the prairie wet and muddy, which prevented either company from moving, though both were anxious to proceed. It was passed however, in the various amusements, incident to such a suspension of active operations; in which card playing was the principal; and, as if to illustrate the various subjects of conversation, and give emphatic form to particular photographs, the stentorian voices of the hardy hunters, were occasionally heard, practicing that fashionable folly and crime, profane swearing.

## CHAPTER XXXII

On the 11th the Rocky Mountain Fur Co. raised camp, and departed southward up the river, to accomplish their design of trapping its sources, before proceeding to winter quarters. Though desirous to imitate their example, and be moving, we were yet compelled to remain quiet, and pass this day, as we had the preceding one, in inactivity; as some of our absent trappers had not yet returned.

Oct. 12th. - This morning we raised camp, passed about fifteen miles down the river, and encamped on its margin. It here passes through a narrow valley, flanked on either side by a bold bank fifty or sixty feet in height; from the top of the bluff, however, a gently irregular plain is seen, extending fifteen or twenty miles, in a northeast direction, nearly ten miles in width and bounded on either side by lofty snow covered mountains; through which its channel, a deep canal with perpendicular rocky walls of considerable height, winds its devious way - Near our encampment we discovered a herd of buffalo, and killed five of them. On the succeeding day we travelled over the plains to the mountains, which we likewise crossed at a very low pass, and halted on a small fork, that flows through a range of barren hills, and discharges its waters into the Philanthropy. Our course was north of west, and we made about eighteen miles.

On the 14th we descended from the hills, and encamped near this run, eight miles below the narrows, on a small plain, surrounded by the most imposing and romantic scenery. During our

---

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

march we had an alarm of Indians from some of our hunters; and myself and others went to ascertain the truth. We proceeded, however, but a short distance when we found the remains of a cow, just butchered, and evidently abandoned in haste, which satisfied us that the butchers had fled for safety or assistance. We returned and reported the discovery to our partizan. In the mean time a rumor was current that a party would go and ascertain more of the matter, after we should encamp. Not doubting that it originated with our leader, previous to unsaddling, I went to him, and inquired if he thought it necessary for some of us to go. "No," said he, "for this reason; if there are many of them, and they are enemies, we shall see them soon enough; but on the contrary if they are but few, they are already far beyond our reach, in the neighboring mountains." I left him without making any reply, and turned out my horse; but observed him soon after in the act of re-saddling his own, which excited my curiosity to ascertain his intentions. I therefore approached him, and was informed that he had again considered the matter, and thought it best for some few of us to go, and gain, if possible, more positive information; as the trappers could not be persuaded to hunt when danger was apparent.

Accordingly we equipped ourselves, and sallied out of camp one after another, where we collected to the number of seven, a short distance from it. We proceeded up the river about three miles, and found a fire yet burning, near a cow evidently killed but a short time previous, and also perceived traces of Indians following a buffalo trail up along the margin of the river. The neighboring hills were covered with vast herds of these animals that appeared to be quite unalarmed, and from these favorable appearances, we were confident there were not more than seven or eight Indians in the party. We continued on about three miles further, directing our course towards the only dense grove of timber on this part of the river, where we were certain of finding them unless they had fled to the mountains. About fifty yards from the river, we crossed a deep gully through which a part of its current flows, during the spring tides, and were carefully scrutinizing the grove, on which every eye was fixed in eager curiosity, watching each wavering twig and rustling bough, to catch a glimpse of some skulking savage. Suddenly the lightning and thunder of at least twenty fusils burst upon our astonished senses from the gully, and awoke us to a startling consciousness of imminent danger, magnified beyond conception, by the almost magical appearance of more than one hundred warriors, erect in uncompromising enmity - both before and on either side of us, at the terrifying distance (since measured) of thirty steps. Imagination cannot paint the horrid sublimity of the scene. A thousand brilliances reflected from their guns as they were quickly thrown into various positions, either to load or fire, succeeded the first volley, which was followed by a rapid succession of shots, and the leaden messengers of death, whistled in our ears as they passed in unwelcome proximity. At that instant I saw three of our comrades flying, like arrows, from the place of murder. The horse of our partizan was shot dead under him, but with unexampled firmness, he stepped calmly from the lifeless animal, presented his gun at the advancing foe, and exclaimed "boys don't run;" at the same moment the wounded horse of a Frenchman threw his rider, and broke away towards camp. The yells of these infernal fiends filled the air, and death appeared inevitable, when I was aroused to energy by observing about twenty Indians advancing, to close the already narrow passage, between the two lines of warriors. Dashing my spurs rowel deep into the flank of my noble steed, at a single bound he cleared the ditch, but before he reached the ground, I was struck in the left shoulder by a ball, which nearly threw

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

me off; by a desperate effort, however, I regained my upright position, and fled. A friend (Mr. R. C. Nelson) crossed the gully with me, but a moment after he was called to return. Without considering the utter impossibility of rendering assistance to our devoted partisan, he wheeled, but at the same instant his horse was severely wounded by two balls through the neck, which compelled him to fly; he yet kept his eye for some moments on our friend, who seeing himself surrounded, without the possibility of escape, levelled his gun and shot down the foremost of his foes. The Indians immediately fired a volley upon him - he fell - they uttered a loud and shrill yell of exultation, and the noble spirit of a good and a brave man had passed away forever.

Thus fell Wm. Henry Vanderburgh, a gentleman born in Indiana, educated at West Point in the Military Academy, and, at the time he perished, under thirty years of age. Bold, daring and fearless, yet cautious, deliberate and prudent; uniting the apparent opposite qualities, of courage and coolness, a soldier and a scholar, he died universally beloved and regretted by all who knew him.

The Frenchman, who was thrown from his horse, was also killed; his name was Pilou.

I had not gone above two hundred paces from the ravine, before I heard Nelson calling for me to stop. I did so until he came up exclaiming "our friend is killed! - our friend is killed! let us go and die with him." Believing that I would shortly have to undergo the dying part of the affair, without farther assistance from the Indians than I had already received, I felt little like returning, and we continued our rapid flight. The blood ran freely from my mouth and nose, and down my body and limbs; I became so faint that I reeled on my horse like a person intoxicated, and with extreme difficulty prevented myself from falling. I gave my gun to one of my comrades, the three who first fled having now joined us, and succeeded in getting to camp, where I was taken down, and soon agreeably disappointed with the cheering intelligence that my wound was not dangerous, and I would shortly be a well man. It was probed with a gun stick, by a friend who had some knowledge of practical surgery, and dressed with a salve of his own preparation, by which it healed so rapidly, that after the expiration of a month I felt no inconvenience from it.

We found our comrades in camp greatly alarmed, and so confident that they would be attacked in it, that some of them, more terrified than the rest, openly expressed a determination to flee for safety. They were however, convinced by some of the more daring and sensible, of the propriety and necessity of remaining together, to secure, by a manly defence, the property in camp as well as their own lives; that by a cowardly separation they would not only lose all their effects, and expose themselves to greater insecurity, but would ever after bear the stigma of having basely and cowardly deserted their companions in the hour of peril, when a united and manly effort was alone necessary to insure safety. The timid convinced by these cogent arguments, and all somewhat reassured, it was determined to remain together, and for greater security moved a short distance at sunset, into a point of timber, where we could defend ourselves against thrice our number. Next morning we arose, having passed a very unpleasant night, unrefreshed and haggard, but satisfied that we should escape an attack; and a proposition was made that a party should go and inter the remains of our lamented friends. But few persons could be found willing to risk the chance of finding the bodies, without falling into the same snare; consequently the de-

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

sign was abandoned. However, we determined to go on to the caches, (which had been made in Horse-prairie during my absence, in quest of the Flat Heads, the preceding August.) Accordingly we packed up, and passed from the south side of the river to a point of mountain between this stream and the Jefferson, when we came in view of a large smoke at Beaver Head, towards which we had directed our course.

Aware now of the vicinity of an Indian village, to that place, and having had sufficient reason for believing them enemies, consternation again seized us, and we turned our course toward a grove of cotton wood trees, on the last named river; which we reached and halted at, after a march of fifteen miles. All hands immediately set to work, and soon constructed a strong pen of trees, large enough to contain ourselves and horses, and shelter us from the balls of our foes; which made us feel quite safe and fearless. We however kept a good look out from the trees, and guarded our horses close about camp, ready to drive them into the pen at a moment's warning, in case of the appearance of Indians. But the day passed away without incident, and the night also; yet we determined to remain in our present quarters, till we should be able to ascertain the extent of our danger, and the best means of avoiding it. To accomplish this object, some of our boldest comrades furnished themselves with our fleetest horses, and rode off in the direction of the village. - They had been but a short time absent, when they returned with the welcome intelligence, that the village was composed of about one hundred and fifty lodges of Flat Heads, Pen-d'oreilles, and others, which at once quieted all our fears, and camp again assumed its wonted bustle.

## CHAPTER XXXIII

Soon careless groups were idly loitering on the ground in various positions; others trying to excel one another in shooting; some engaged in mending their clothes or moccasins; here one fondling a favorite horse, there another, galloping, in wild delight, over the prairie; a large band of horses quietly feeding about camp; large kettles supported over fires by "trois-pied" (three feet) and graced to overflowing with the best of meat; saddles and baggage scattered about; and to finish the description, fifty uncovered guns leaning against the fort or pen ready for use, at any moment. Such was the aspect of our camp, which was now settled; and a stranger uninformed of the late disastrous occurrences, would not have discovered that anything had happened, to mar our usual tranquility.

Next morning a party went to seek and inter the remains of our murdered friends. In the mean time, we raised camp and moved to the Indian village. I was unable to use my left arm, which I carried in a sling, yet I walked about, and felt no inconvenience from it, except when riding fast, or when my horse stumbled in travelling. There was with the Indians, a "trader" from the Hudson Bay Company, and several "Engages," from whom we learned that Dripps had passed up to the caches a few days previous. In the evening our party returned, and reported that they could find no trace of the body of Mr. Vanderburgh, but had found and buried the Frenchman - Pilou. Having ascertained that these Indians would pass that place in a few days, we promised to give them a present, if they would seek, and inter the remains of the unfortunate Vanderburgh. - We

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

departed southward on the 18th, passed up the plain about twelve miles, and halted in a very fertile bottom on the Jefferson. Continuing our course on the succeeding day, we passed up this river about the same distance, through the Rattle Snake cliffs, and encamped on a very narrow level, at its margin. Above these cliffs the river is confined on either side, by high bald or rocky hills, through which it meanders leaving little or no ground on its borders; some few elk and antelopes are found here, and buffalo in abundance.

Leaving this place on the 20th we crossed several forks of this stream, one of which is nearly as large as the river itself, and rises in the mountains on the east side of the Big Hole. It commands a fine little valley at its head, called by some the "Little Hole" and is separated from Horse Prairie by a bald hill. Having made about the same distance as on the preceding day, we came into the valley, at the forks, where Lewis and Clark left their canoes. Our caches were situated near this place, and we found Mr. Dripps here, awaiting our arrival. We learned from him, that nothing uncommon or serious had occurred, save the loss of a few horses, which were stolen, and camp fired upon, by a party of Blackfeet Indians, during the night of the fifth; but no person was injured, though several trappers were still out hunting. - Here we remained until the 24th, when Mr. Dripps and company set out for Snake river, where he intended to pass the winter. I also departed with two men, and a small equipment for the purpose of trading with the above named Indians. We passed about fifteen miles through Horse Prairie to the "Gates," where I found a party of them, who had left Dripps two days since. These "Gates" are a high rocky conical elevation attached to a plain jutting into the bottom on one side of the river precisely opposite to the bluff rocky termination of a plain of considerable height, on the other side, but three or four hundred yards asunder; which gives to them the appearance of formidable gates, and they were thus named by Lewis and Clark.

We remained several days with the Indians, who were actively employed in hunting, to supply themselves with meat for food, and skins for clothing, against the approach of winter. A day or two after my arrival, a small party of men belonging to Capt. Bonyville's Company, and some few lodges of Flatheads, encamped with us. This party had been out in quest of buffalo meat for the company, the remainder of which, were employed in constructing a fort, on Salmon River. One or two nights previous to their joining us, their camp was boldly entered by several Blackfeet, who were discovered by a squaw; she immediately entered her husband's lodge, and informed him of their presence. Like a true brave, he sprang forth from his lodge, gun in hand, but was shot down at its entrance. All hands immediately flew to arms, but the ever cautious enemy had already disappeared in a neighboring thicket. Nothing deserving of record had happened to this company since we saw them in August on Green River.

Three days afterwards a party of twenty five trappers headed by Capt. Walker, belonging likewise to Bonnyville's expedition, arrived, and informed us that they had a skirmish with a party of Blackfeet some days since, in the Little Hole, but lost nothing except a few horses, and several rounds of powder and ball. About the same period, an express arrived from the Rocky Mountain Fur Company, stating that soon after separating from us, they fell in with a party of trappers, on the sources of the Madison, who had left Dripps on the Missouri below the three forks. They

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

were fired upon by a party of Blackfeet, and lost one man killed, and another severely wounded; a third left them about the same time, to look for a trail, and had not been heard from since; these things occurred near the three forks before named. The Rocky Mountain Fur Company crossed from the Madison, to the head of Pierre's fork of the Jefferson, where they encountered a party of about seventy Pagans, (Blackfeet). Two of their chiefs ventured up to camp unarmed, and were permitted to go in. They expressed a wish to bury all animosity, and establish peace and amity with the whites. - They promised to meet and trade with them on Snake river the coming winter; and sent word to the Flatheads, that they should pay them a visit in the spring, and if possible exterminate their race. They stated likewise that all the Pagan chiefs had resolved in council to kill and rob the whites no more. And at the same time they cautioned them to be on their guard against a party of more than one hundred Blood Indians, who were two days in advance of them, and might possibly "show fight." The Indians departed on the morning following, apparently much pleased with the whites, and particularly with some trifling presents they received.

Agreeable to the intelligence received from the Pagans, the Company fell in with the Blood Indians, and had a skirmish with them. The whites commenced the firing, and the Indians immediately displayed a white signal on a pole, and the firing ceased. Two of the chiefs then went into camp, and said they were sorry the whites had fired on them, as they wished to be friendly. McKenzie at Fort Union, had told them to exhibit a white flag, and the whites would permit them to come unmolested into their camps, and trade with them. They corroborated the statement of the Pagans, and said that they were now going against the Snakes. They also left the whites much pleased with the presents which they received.

The R.M.F. Company arrived soon after the express, and remained with us one day; after which we all departed, and travelled over the mountains to the east fork of Salmon River, about twenty miles; and from thence about the same distance to the forks, and finally, three miles farther to Bonnyville's fortification, situated on the west bank of the river, in a grove of Cottonwood trees. This miserable establishment, consisted entirely of several log cabins, low, badly constructed, and admirably situated for besiegers only, who would be sheltered on every side, by timber, brush etc.

## CHAPTER XXXIV

I was undeceived, at sight, respecting this "fort" which I had been informed, was to be a permanent post for trading with the Indians; but its exposed situation, and total want of pickets, proved that it was only intended for a temporary shelter for the company, during the winter.

On the seventh of November, several Indians came to us from the village we left at Beaver Head and reported, that they had halted on the spot where Vanderburgh was killed and that they succeeded in finding his bones, which the Blackfeet had thrown into the river; and had interred them, on the margin of that stream, near where he fell. After having been satisfied that their

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

statement was correct; I made them the promised present.

In the afternoon a detachment of the R.M.F. Company, which had been to the south westward on the snake river, and its tributaries returned and informed us, that they had been down near the Walla Walla trading house of the Hudson Bay Co., I but had made a "bad hunt" owing to the scarcity of Beaver in that quarter. They saw a village of Snakes and Ponacks, amounting to about two hundred lodges on Gordiez River; which was attacked a few days before by a large party of about one hundred and fifty Blackfeet; but it seemed they were greatly deceived in the number of their foes, for no sooner had the Snakes and Ponacks sallied out in battle order, than their enemies fled into a thicket of willows. The Snakes, however, fired the prairie which rapidly spread and soon gained the willows; they, being mostly dry, quickly disappeared in the devouring element, and the Blackfeet were compelled to reappear in the open prairie, but they were so terrified that they simultaneously fled, directing their course over a barren prairie, towards the nearest point of the mountains, distant some three miles. The Snakes, mounted on their horses, followed and continued charging and firing on them, until they reached the timber on the mountain, and could no longer proceed on horse back. The Snakes then returned back to their village, scalping their fallen enemies on the way, to the number of forty men, and five women. They were not however without loss, nine of their warriors being stretched in death on the plain, and among the number, the famous Horned Chief, remarkable for his lasting friendship to the Whites. This was the individual, it will be remembered, who alone prevented a diabolical plot to murder us on Bear river, in 1831.

Possessed of a superstitious idea, that the moon was his guardian deity, this extraordinary Indian imagined that she instructed him in dreams during his sleep; and he taught his followers to believe that he never acted but in obedience to her directions, and that he could not be killed by metal. He was the owner of an uncommonly fleet bay horse, with which at one race, he has killed two deer, and but for the lack of arrows would have dispatched a third, from the same herd. He thought his favorite deity had informed him that he would invariably be successful in war, when mounted on his favorite steed, and obedient to the divine inspiration, he always rushed headlong upon his enemies without fear of death, and rendered himself so terrible to them by his prowess, that his presence alone was often sufficient to put them to flight.

At one time, meeting a small party of Blackfeet Indians traveling on foot in the open prairie, regardless of danger, and alone, he rushed upon them, with his only weapon, a spear, and killed no less than six of their number. This great warrior, scorning to take the usual trophy of victory, returned to camp and told his young men, that if they wanted hair, with which to garnish their leggins; they would find some at a given place in the prairie. Several young warriors set out instantly, and soon returned, bearing six scalps to their astonished tribe.

This intrepid hero was shot through the heart with a ball, which immediately deprived him of life. The Snakes universally believe the ball to have been made of horn, as he had induced them to think, that he could not be killed by any metal.

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

Some time afterwards the R. M. Fur Co., took their departure up Salmon river, intending to pass the winter in Little Salmon river valley. A detachment of forty men, under Capt. Walker, were in the mean time making preparations for their removal to Snake river, where they were to pass that inclement season. I determined to go with this party to the mouth of Blackfoot, and thence to the forks of Snake river, where Dripps intended to await the coming spring.

After some delays, we set off on our journey, and passed about forty-five miles up the narrow and irregular valley, through which the Salmon river, confined to small and uneven bottoms by the mountains, runs. The Indian trail which we followed, crossed several steep high points, almost impassable to our now feeble horses. Our course from Bonnyville's Fort, gently turned from south to south west. At the termination of this distance, we again found ourselves in the open level country, near the lower extremity of little Salmon River valley. At this point we overtook the R. M. F. Company, and passed with them slowly up to the head of this valley, a distance of thirty miles, and there again departed from them. This company resolved to pass the winter here. We passed through Day's defile, and slowly down to the termination of Day's Creek, about fifty miles. We saw several encampments of the Ponacks, who had recently passed here, in the direction of Porteneuf; at this place, Mr. Fitzpatrick of the R. M. F. Co. joined us, with one man; intending to go with us to Dripps, with whom he had some business to transact. Departing thence, we directed our course towards the lower or south-western Butte, and halted on Gordiez River, after a march of twelve miles. We saw during the day several herds of buffalo, but killed none until after we had encamped, when one of our hunters succeeded in approaching a herd of bulls, and shot a very fine one.

Next day we continued our course, and halted at a small spring in a ravine on the N. E. side of the Butte, which is the only water found at this mountain; and even it is lost in the sand before reaching the prairie. After leaving the spring, we passed east of south, twenty-five miles without finding any water; and halted at a spring, five miles west of Snake river; and seven or eight above the mouth of Porteneuf. From this place, we crossed Snake River, and encamped in the rich luxurious bottom, on the East side of this stream, December 11th. Hunters were immediately dispatched in quest of game; they returned successful, and reported, that they had heard guns firing, seen buffalo running, and discovered a large smoke on the river, about twenty miles above. Several Ponacks came to camp the next day, reported that their village was on the Porteneuf, and that they had no knowledge of any whites on the river, except a party of Norwest trappers they had seen very far down it. Shortly after an express arrived, bringing information, that four men belonging to a detachment from Bonnyville's Company, which separated from him on Green River, were killed about a month previous, near the sheep Rock; and that the remainder of the party were in winter quarters in Cache valley.

## CHAPTER XXXV

On the 17th I set out in company with Mr. Fitzpatrick and four others, in search of Mr. Dripps. Travelling a distance of 70 miles up the river, to the forks, we fell in with some of his hunters,

---

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

who escorted us to their camp, on one of the numerous islands in Lewis' river. We remained here two days, which was agreeably passed, every lodge being graced with racks which were well filled with the best of meat. All were supplied with good quarters, and appeared to want for nothing this dreary country could afford, that would contribute to their comfort or amusement. We left this place on the 22d, on our return; Mr. Fitzpatrick to join his party on Salmon River, and I, for the men and baggage we had left at the mouth of the Blackfoot. We arrived at the quarters of Capt. Walker on the 24th, and passed the next day with this gentleman very pleasantly, receiving the best treatment his - in this country necessarily limited - means would afford. During the last two days, the snow hitherto rare, had fallen to the depth of seven or eight inches. With the design to purchase a few skins of the Ponacks, who were encamped at this time on a small stream near Blackfoot River, I visited their village on the 20th, and found these miserable wretches to the number of eighty or one hundred families, half naked, and without lodges, except in one or two instances. They had formed, however, little huts of sage roots, which were yet so open and ill calculated to shield them from the extreme cold, that I could not conceive how they were able to endure such severe exposure. Warmly clad as I was, I could hardly think it possible to pass one night in such a miserable shelter without freezing, unless supplied with the means of keeping a good fire, during the whole time. They kept small ones, burning in the centre of their cabins, and groups of half starved, and almost wholly frozen women and children, were squatting in a circular form round them, ever struggling, with a feeling and energetic devotion, still nearer to approximate the element they so fervently worshipped. In almost every family might be seen several dogs crowding between the children, to share with them a portion of the animal and artificial heat, diffused equally to all who formed the surrounding ring, which is generally involved or lost from view, in the dense clouds of smoke, which custom or habit had rendered less disagreeable to them, than would be imagined.

Having succeeded in procuring a few skins - their poverty forbade my getting many - left them on my return, reflecting on their intolerable indolence, and abject condition, and its natural consequence; feeling pity for their sufferings, and yet forced to blame their entire want of industry, which might in a great measure alleviate their hardships; for a few hours employment would suffice to form a cabin of grass and branches, infinitely more comfortable than their present abodes.

Three days after, I set out with several others to rejoin Mr. Dripps, whose camp we reached on the third day; nothing worthy of record having occurred on the march. We learned here, that during our absence a man who was lost on the Missouri, last fall, had returned to the company, having rambled about the mountains alone, for more than a month.

The first of January, 1833, or New Years day, was spent in feasting, drinking, and dancing, agreeable to the Canadian custom. In amusements such as riding, shooting, wrestling, etc. when the weather was fair, and in the diversion of card playing when the state of affairs without would not permit athletic exercises, the month of January passed away, during which, we had changed our camp three times, in order to obtain better grass for our faithful animals. The weather was generally fine, but little snow had fallen, and we usually found plenty of game near our camp - therefore time passed away not only comfortably but pleasantly. On the seventh of February, three of our

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

trappers went up the river about twenty miles in search of beaver, when they discovered five comical Indian forts, and supposing them tenantless, they approached them without apprehension intending to pass the coming night, in one of them; when they had arrived within a few paces of them; seven or eight Indians rushed out and fired upon them. One of their horses was shot down beneath his rider, who sprang up behind one of his comrades, and they fled unharmed back to camp, which they reached the same evening. We had on the twentieth an alarm from some of our hunters, stating the appearance of a large party of horsemen, on the opposite side of the river. Some of us concluded they were the same party of Indians, who had promised the R. M. F. Co. to come and trade with them on this stream during the present winter. A party sallied out to obtain information, and soon ascertained that a large herd of elk had caused the alarm. - These animals, when frightened or startled, throw up their heads, which their long necks enable them to do quite high, and have at a distance, much of the appearance of a band of horsemen - I mention this circumstance, because when they are advancing, or retiring, at a distance of three or four miles, the most sagacious Indians are often deceived by them; and cases when horsemen are mistaken for elk are by no means uncommon. The month of February, thus far, has been very pleasant; the days are mild and serene, and seldom miss the genial radiance of the sun - the nights, however, are by no means so comfortable, and the river is frozen to a depth of two feet. The snow has in many places quite disappeared, and the returning warblers have already announced the approach of gentle spring; whom we soon expected to see, arrayed in a joyous garb of leaves and flowers. Our hunters as usual leave camp about daylight, and generally return in time for breakfast, laden with supplies of meat of various kinds, so plentiful is game in this region. Several visitors from both the R. M. F. Co., and Walker's camp, arrived about this time, and from them we learned, that five men left the former company about the first of December, on Gordie's River in quest of meat, but were never afterward heard of; and the trail of a party of Indians going in the direction they had taken, was discovered a day or two subsequent. The possibility of their having voluntarily abandoned the company, and gone to the Spanish settlements or elsewhere, is at once refuted by the fact, that they left property behind them to the amount of several hundred dollars. They were without doubt killed by the Indians; their names were Quigley, Smith, Smith, the other two not recollected.

We remained quietly awaiting the disappearance of snow and ice, which was realized about the twenty-fourth of March. Geese and swans are now performing their migratory returns, and are continually seen flying over us; ducks are also observed in abundance. Our numerous company was now divided into two parties, one of them headed by a Spaniard named Alvaris, amounting to about forty men, departed up Henry's Fork, intending to hunt on the Yellow Stone River; and finally join us on Green River, at the expiration of the spring hunt. Mr. Dripps with the remainder, including myself, marched a short distance up Lewis River, and halted, the weather being yet so cold and wet, as to render travelling extremely uncomfortable.

## CHAPTER XXXVI

From this time forward until the 19th of April, the weather continued raw and windy, with fre-

---

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

quent storms of snow; yet many of our trappers were successfully employed in taking beaver. Four of them returned quite unexpectedly from an expedition to Gray's Hole this evening, considerably alarmed. They came suddenly, it appears, upon several forts in a grove of aspen trees, in that place, which were still tenanted, as ascending volumes of smoke proved to their surprise, and they immediately fled, pursued by a large body of Indians, who followed with such speed that it was for some time doubtful which party would arrive first at a narrow gorge, where the only chance of saving their lives presented itself. The certainty of death if they were overtaken, or their retreat through the pass cut off, urged them on with an energy and rapidity unknown to less pressing dangers. Even their horses seemed to comprehend the peril, and seconding with generous efforts the wishes of their riders, bore them safely on, till they reached the defile, passing through which into the open plain beyond, relieved them from further pursuit. The earth was at this time covered with snow, and from their being obliged to take a route very circuitous to the pass, owing to rocks, precipices, and other obstacles, which horsemen could not safely venture over, but which the light armed, strong limbed, and swift footed Indians easily threaded, in an almost direct course to the place, which if first reached by them, cut off the only hope of escape to the poor trappers, their danger was indeed imminent, and scarcely had they passed through the defile, before the yells of the disappointed savages, arriving at the place, proclaimed how determined had been their pursuit, and how timely their flight.

Five horsemen were seen on the 19th, on the margin of Snake river, down which they turned and fled, on finding themselves discovered. Who they were could not be ascertained, but they were supposed to be Blackfeet. - Two days afterwards, we discovered a large smoke apparently near the forks, probably proceeding from the fires of Alvaris, from whose camp four men returned on the 22nd, and reported they were still on Henry's Fork, having been prevented from advancing further by the snow, then two feet deep on Cammas prairie; and were waiting its disappearance. Next day they returned back to their own quarters.

We removed on the 24th to Gray's creek, about eight miles, and encamped in the vicinity of a herd of buffalo; several of which were killed by our hunters. In the evening a small party of trappers came in from Salt River, where they were to have remained during the hunt; they were driven to the necessity of returning, by the presence of hostile Indians. Our hunters on the succeeding day, killed a number of fine fat bulls, and as usual, we fared well.

To the reader, it may seem trifling to record the simple fact of our having heard guns fired in the cedars on Lewis river, and likewise in the direction of Gray's Hole; but to the hunter of the Rocky Mountains such an occurrence is an event of importance, and should by no means be unheeded. Surrounded by tribes of savages, whose ethicks counsel theft and murder on every occasion, and authorize treachery and cruelty without discrimination, nothing but the most watchful care, and sagacious prudence can render him even comparatively safe, in the midst of so many dangers as are constantly thrown around him, by a wicked and wily foe. True the report of fire arms may indicate the vicinity of friends, but they may much more likely herald the approach of enemies; and the most common prudence will show the importance of a careful attention to these and other alarms. The most important event in the march of a week, may be the report of a strange fusil, so

LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

uncertain are the circumstances it may produce, and so probable the vicinity of danger.

On the 26th we proceeded to Gray's Hole, twelve miles, where we remained until the 3d of May following. Scattered about the hills near our camp, I saw a great number of porous rocks, each having a cavity much like an oven, with invariably a single orifice; which in one of the largest was so small as scarcely to admit a wolf, yet the area within was sufficiently large to have contained several men. These rocks consist of a very coarse sand stone, extremely hard and nearly round, the cavities within were also generally circular, and what was very singular, though rocks of this species were numerous and of various sizes, yet each one had a similar cavern. Different species of rocks are found here in abundance, such as granite, limestone, etc., but none of these were of the form, or had the peculiarity which characterized the sand stone formation. Could the waves of the ocean, which was evidently once here, have washed these fragments of stone into such regular form, and by continued attrition have worn out those remarkable cavities? - their similitude refuses the probability of the suggestion. - Could their nuclei have been of perishable material, and in the lapse of ages, by decomposition have left those singular cavities? - the uniformity of their appearance, and the fact that each rock of the kind had one and but one aperture, will not allow the conclusion. Were they formed by the industry and ingenuity of man? - if so, to what purpose was an amount of labor expended at once so vast and so difficult? It must remain an enigma for the present. The investigations of philosophers may hereafter elucidate their origin and uses, now a mystery.

#### CHAPTER XXXVII

We changed our encampment several times further south, and finally proceeded eastward about fifteen miles and halted on a small stream, which passes here through a beautiful valley, skirted as usual by lofty hills, covered with evergreen pine. A young man by the name of Benjamin Hardister, who came out last summer with Bonnyville, but had left him and taken refuge in our camp in the winter, died on the evening of the 8th, of some complaint, the germ of which he had no doubt brought with him from the United States. With the assistance of a man behind him on the same horse, he rode eight miles during the day previous to his decease. We buried him as decently as circumstances would permit the next day, "and left him alone in his glory." On the 10th, we crossed the mountain with difficulty, in consequence of the narrow and irregular condition of the paths formed by buffalo, passing sometimes along the uneven bottom of the ravines, sometimes up the broken and steep declivity of their sides, winding often among fragments of rock, and occasionally through the almost impassible pine forests, that cover the middle region of the Rocky Mountains; and after a very tiresome march of twenty miles, found ourselves on Salt river, in a fine valley about fifteen miles long, by four broad, and surrounded by high mountains, whose bases are covered by dense forests of pine and aspen. The river runs through it in nearly a north direction, and several small creeks with willow and aspen timbered margins, flow into it from the mountain. The valley is level, having but little sage, is covered with short grass, like all other timberless plains, and is entirely free from those little holes, burrowed by badgers, often found in other valleys, which are highly dangerous to equestrians, and frequently cause serious accidents

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

to those, Indians and others, who kill deer or buffalo by running them on horseback. Instances of valuable horses crippled by stepping in these holes while running, are of frequent occurrence in plains where these holes are numerous. We found several bands of buffalo here, and had the good fortune to kill ten or twelve. - On the 14th several of us went up this river in quest of salt.

From the head of this valley, twelve miles from camp, we proceeded three miles through a range of hills, and came to the valley of the Boiling Kettles, already described; passing up a small branch that empties into Salt river on the same side, and a short distance above the Boiling Kettles, to its head, we found several low wet places where salt was found by elutriation in considerable quantities; in one, particularly, a layer of cubic and pyramidal crystals seven inches in thickness, found above a black, stinking, miry substance several rods in extent, furnished us with abundance. The salt found in the country is, however, more commonly attached to stones, in the bottoms of dried up pools, like ice, and requires a hard blow, in most cases, to separate them. Breaking from the strata as much salt as we could conveniently carry, we collected the fragments and put them into bags, which we lashed behind our saddles, and sallied out into the prairie on our return to camp. We visited several springs situated on the side of a bald hill, about half a mile from the Kettles. Extending several yards around these springs, the rocky cement, as well as the earth, is hollow, and the noise of our footsteps, increasing as we advanced, at length redoubled to that degree that some of my comrades refused to approach the several holes and caves found near the Kettles, which are much smaller than those in the plain, being in no instance more than two feet high. Like them, however, the water continually boils over from a small aperture from the top, ever depositing a slimy greenish matter which soon hardens into rock. There are likewise many cavities at the basis of the Kettles, several inches in diameter, from which the boiling water constantly exudes. The surplus water proceeding both from the Kettles and cavities above mentioned, flows down a plain several feet, till it empties into a deep pool three or four rods in diameter; and the outlet of this one becomes the inlet of another, two or three paces distant, of about the same magnitude. The water in both pools is of a bright yellow color, and vapors, disagreeably odorate, are continually emanating from it. Large quantities of sulphur have been deposited on the plain through which it passes, having a beautiful yellow appearance, which can be seen from every part of the valley; though at a distance it seems white. We remained about the springs some time, and set out for camp, where we arrived shortly after dark.

We passed down the river about four miles on the 15th, and encamped on its border. Snow had fallen during the past night to the depth of several inches, but disappeared about noon to-day. On the 10th, a party of us went up to the Boiling Kettles, to procure buffalo meat; we found the valley quite covered with them, but killed a few bulls only; however, the cows are poor and in most cases inferior to the bulls at this season of the year. We saw several bears, but they are not now eatable, except in case of absolute necessity. On our way back we halted for the night, shortly after dark, in the narrows, near a mound, having precisely the shape and appearance of a vastly large haystack.

The ranges of mountains which nearly surround the valley of the springs, as they follow the course of the river down on each side, become greatly approximated to each other, and confining

---

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

that stream to very small borders and compressed breadth, constitutes what is here termed the narrows; and again expanding or receding from each other, form Salt river valley.

At day-break, the next morning, we set out for camp, passed from the narrows into the plain, and down it several miles, when we discovered eight or ten objects at a distance having the appearance of elk or horsemen; proceeding on our course until we met them, they proved to be a party of trappers from Bonnyville's Company. They informed us that their camp was in the hills on a small stream a mile or so from the river; that they left Walker on Bear river, and came from the head of Black-foot to that of the stream they are now on. On the following day they moved down and encamped with us.

On the 19th we raised camp, and passed through this valley northward, and halted on Lewis river, a few hundred yards above the junction of Salt river with it, after a march of eight miles. This river is confined, a short distance above us, by formidable walls or bluff mountains, forming in some places very high and perpendicular banks, impassable for even those sure footed animals, mules; hence travellers are compelled to cross the mountains into Pierre's Hole, and then again to cross them to Jackson's Hole; when if it were feasible to pass up the river direct, two thirds of the distance we are forced to go, and the fatigue of crossing two mountains, might be avoided.

A narrow valley extended a short distance below our camp, through which the river runs in a north-west direction. The weather was, at this time, cloudy, with some rain, and the shelter of the little cabins, constructed with our blankets was found quite agreeable. About four miles below our camp, we forded the river, on the succeeding day, and proceeding about six miles further down, we halted at the mouth of a small creek, in the neighborhood of which we found wild onions in abundance, and also a species of lettuce in great plenty - weather continuing wet and disagreeable, time passed along rather heavily.

We passed six miles down on the 21st, to a fine valley about ten miles long, in which the river gradually turned to the westward, and at the head of which we rested for the night. Continuing our journey next morning, we went down to the other extremity of the valley, and again halted, having travelled in a direction nearly west, with weather still hazy and uncomfortable.

## CHAPTER XXXVIII

On the twenty-third, we ascended the point of a hill which juts in to the river at the lower end of the valley, and then passing over an irregular plain, northwest, a short distance, we reached a small stream, which we followed up into the mountains nine miles, and encamped. Our road, in many places, was almost impassable, in consequence of the thick dense growth of aspen, through which we were obliged to force our way, to the no small detriment of our clothing, and in great danger of losing our eyes, or being at least severely bruised by the numerous branches, which were continually flying back from a strained position, caused by the pack horses forcing themselves through; and which frequently coming against us with no gentle force, in their efforts to

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

regain their natural position, seemed determined to give us a practical lesson on the elasticity of that species of timber. By no means grateful for the instruction thus forcibly imparted, we were heartily rejoiced when the task was ended, and ourselves at liberty to retire and seek repose; fully impressed with the conviction that though to spare the rod, in many instances might spoil the child; yet its too free application on an occasion like the present, would hurt our feelings extremely, without being productive of any beneficial result.

The sun on the morning of the twenty-fourth arose clear and pleasant, and with the prospect of a fair day before us, we again started on our pilgrimage. We ascended a fork and crossed the mountains, when we arrived at the head of a stream flowing into Pierre's Holes; which we followed down into the plain, four miles; there leaving it, we passed over to the stream which marks the pass to Jackson's Hole, about two miles, and halted, very much fatigued, about one mile above the battle ground of last summer.

Next day, with one companion, I returned to Lewis river, in search of several horses which we lost while crossing the mountains the day previous. Again we passed over it, and searched every bottom on the several small forks in the mountain without success, when we went down to Lewis river, and finally found them quietly feeding in a ravine, to which they had strayed near the prairie. We succeeded in catching them and set off on our return at a round pace, which brought us to camp, some time in the evening. On the succeeding morning, in company with a friend or two, I visited the battle ground which was situate in a grove of aspen trees, several hundred yards in extent. The pen or fort was probably about fifty feet square, was composed of green and dry aspen timber, and though hastily, yet firmly constructed. It had sunk down in some places, however, from decay, below the height of two feet perpendicular. The besieged had excavated holes or cavities in the earth, within the pen, sufficiently capacious for two or three persons to remain in, quite below the surface of the ground. These holes extended entirely round the pen; and we ascertained that the Indians had fired, in most cases, from small holes at the surface of the ground, beneath the pen or breast work, which circumstance (happily for them) was not observed in the smoke and confusion of the battle, or they would have been annihilated in a few moments. The attack was principally made on the north side, where at every tree, sticks were still seen piled up against the roots, from which the besiegers fought; who had likewise raised a heap of brush and logs, a few paces from the pen or fort, to nearly or quite the same height; and had the Indian allies not objected, in the hope of capturing their arms, ammunition and other equipments, it would have soon been so greatly increased and advanced toward the pen, as to have insured its destruction, if fired, with all its contents and defenders. Parties were also stationed behind trees, and clusters of willows on the other sides of the fort, which was thus entirely surrounded. The trees both within and outside of the pen, were covered with the marks of balls, or of the axes successfully employed by our comrades, to exhume and save them; lead being very valuable in these remote regions, where it is so extremely necessary, both to the purposes of defence and subsistence. Bones, of both men and animals, lay scattered about, in and around the pen, bearing evident indications of having contributed their fleshy covering, to the sustenance of wolves and ravens; who undoubtedly gratified their gastronomical propensities, after a protracted fast, for some days subsequent to the conflict.

---

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

Mr. Fitzpatrick received information from the Blackfeet, whom he encountered last fall, that the Gros-Vent's after separating from Fontenelle on Green river, last August, passed over to the head of the Yellow Stone, and were there discovered and attacked by the Crows, who captured their horses, took many women and children prisoners, and killed a great portion of the men. Some few, however, of these unfortunate wretches escaped, and after enduring great hardships, reached their friends the Blackfeet, in a state of starvation, nakedness and suffering seldom met with, even among those prowling robbers who are frequently out from the villages for months together, in search of opportunities to steal horses from either whites or Indians, and hence are often necessarily exposed to cold, hunger, privation and danger, almost beyond the limits of human endurance.

On our return to camp, we learned that one of our men had been severely wounded by a grizzly bear, during an excursion for buffalo, in our absence. It appeared that himself and several others discovered one of these formidable animals, near a grove of willows on the margin of a small stream. They approached and mortally wounded him; but he succeeded in crawling into the brush. Our unlucky comrade, unwilling to let the animal escape, advanced to the bushes, and was at the same instant attacked by the enraged bear, who sprang upon and threw him. His companions were so paralyzed with the fear that he would be torn to pieces, that they could render him no assistance, with the exception of one, a well known one eyed Spaniard by the name of Manuel, a famous hunter, who, quick as thought, threw his gun to his eye, and fired; fortunately the ball was well directed, and the huge beast fell lifeless beside the prostrate man, who escaped with life, but was so severely bitten in the hand, arm and thigh, as to be unfit for duty for several weeks.

## CHAPTER XXXIX

We passed slowly over to Jackson's Hole, a distance of twenty miles, and halted, on the 31st, on a small "slough," west of Lewis river. This word is used in the mountains to designate that portion of a river separated from the main channel or current, by the intervention of an island. We passed some immense banks of snow on the mountain, but succeeded in getting over without accident; though not without difficulty; and after the fatiguing march of the day, were well drenched in the evening, by a shower of rain, which the reader may justly conclude, did not, in any degree contribute to our comfort or complacency.

Though very little pleased with the aspect of the weather on the morning of June 1st, when we arose but little refreshed, and found the rain still falling at intervals, yet we raised camp, passed up the valley about fifteen miles, and halted on the east side of the river; our course having been nearly north-east. We found a large herd of buffalo in the valley, and killed several; also a large bear, which paid with his life the temerity of awaiting our approach.

Next day we left the river, and travelled eastward about four miles, to a stream some forty paces in breadth flowing into it, called "Gros Vent's Fork," from that tribe having passed here some

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

years since on their way to the Anipahoes, with whom they are on terms of intimacy and often exchange friendly visits . This stream is quite shallow, having its bed formed of large round black rocks, over which the current dashes with noisy rapidity. Its borders are quite naked in some places, though generally a few scattering trees appear, overhanging the water. During the afternoon it rained considerably, and we found a pretty close approximation to our camp fires by no means detrimental to comfort.

On the 4th we went up this stream into the mountain eight miles, and halted at the mouth of a small fork. Our way, (it could hardly be called a road, though we were all on horseback,) was tolerable, if we except a dry red bluff, projecting into the run at high water, over which, at such times, passers are compelled to follow a narrow trail, scarcely wide enough to secure footing at the very brink of a frightful precipice, whose base is washed by the river, for several rods; but when the river is low, this may be passed below without danger. At the foot of the bluff, are the bones of many buffaloes and elk, that have been precipitated over it and killed.

June 5th we ascended the left fork five or six miles, and halted in a very small valley on the right fork of three into which the stream is subdivided. The "Trois Tetons" bear due west, consequently our course from Jackson's Hole has been directly east. This section of the country is graced with irregular clay bluffs of various colors, as red, yellow, white, etc., which give it a pleasant and variegated appearance.

We crossed over a low "divide" to a small stream on the 6th, which we followed to Green river, about ten miles distant from our last encampment, at which place we found several trappers who had been absent upwards of a month. They had caught some beaver, and met with no accident to interrupt their occupation.

With a single companion, I departed on the morning of the 7th, to ascertain if any of our long absent friends, who left us at "Pierre's Hole," with John Gray nearly a year since, had arrived at "Horse creek," the appointed place of rendezvous. Passing down the plains of Green river, twenty miles, we discovered several squaws scattered over the prairie engaged in digging roots, who informed us that a party of whites and Snakes, were now at Bonnyville's fort, a few miles below. We continued on our way down, and found at the place indicated by our informants, Capt. Walker with some of his men, also John Gray, and a small party headed by Fallen and Vanderburgh, who received an outfit from Wm. H. Vanderburgh, in Pierre's Hole last year. These different parties had made good hunts, without being molested by unfriendly Indians. One of the partisans, Fallen, went to Taos last winter for supplies, and on his return lost two Spaniards, "Engages," who were frozen to death on their horses. He also suffered greatly from cold and fatigue. One of Capt. Walker's men had been attacked by a brown bear, but escaped with a broken arm. Some fifty or sixty lodges of Snakes lay encamped about the fort, and were daily exchanging their skins and robes, for munitions, knives, ornaments, etc., with the whites, who kept a quantity of goods opened for the purpose of trading in one of the block houses, constituting a part of the fort. This establishment was doubtless intended for a permanent trading post, by its projector, who has, however, since changed his mind, and quite abandoned it. - From the circumstance of a great deal

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

of labor having been expended in its construction, and the works shortly after their completion deserted, it is frequently called "Fort Nonsense." It is situated in a fine open plain, on a rising spot of ground, about three hundred yards from Green river on the west side, commanding a view of the plains for several miles up and down that stream. On the opposite side of the fort about two miles distant, there is a fine willowed creek, called "Horse creek," flowing parallel with Green river, and emptying into it about five miles below the fortification. The river from the fort, in one direction, is terminated by a bold hill rising to the height of several hundred feet on the opposite side of the creek, and extending in a line parallel with it. - Again on the east side of the river, an abrupt bank appears rising from the water's edge, and extending several miles above and below, till the hills, jutting in on the opposite side of the river; finally conceal it from the sight. The fort presents a square enclosure, surrounded by posts or pickets firmly set in the ground, of a foot or more in diameter, planted close to each other, and about fifteen feet in length. At two of the corners, diagonally opposite to each other, block houses of unhewn logs are so constructed and situated, as to defend the square outside of the pickets, and hinder the approach of an enemy from any quarter. The prairie in the vicinity of the fort is covered with fine grass, and the whole together seems well calculated for the security both of men and horses.

## CHAPTER XL

On the 8th, I returned to camp, which had moved down and was now in a fertile bottom fifteen miles below the fort. Here we remained tranquilly, nothing worthy of record occurring until the evening of the 11th, when four of our trappers, who had been absent from camp some time, returned in a state of perfect nudity and most unparalleled misery. Their bodies were broiled by the heat of the sun to that degree, that the pain produced by coming in contact with our clothes was almost insupportable.

It seems that, four days previous, they prepared a raft for the purpose of crossing Lewis river; having before ascertained that it was not fordable, and when every arrangement was completed, they drove in their horses, which swam over safely, and landed on the shore opposite. Stripping themselves for greater security, they pushed off into the stream. The velocity of the current, however, capsized their raft, on which their guns, traps, saddles, blankets, beavers and clothes were fastened, and carried the whole under an immense quantity of floating drift wood, beyond the possibility of recovery; and they only saved their lives by swimming, which they with difficulty accomplished, and faint, weary, and despairing, landed on the other side, reduced by this unfortunate accident to a condition the most miserable and hopeless. - A few moments reflection, while taking a little rest, convinced them that their only chance of saving their lives, lay in endeavoring to find and reach our camp, naked and entirely destitute of arms, provisions, and other necessaries as they then were. With scarcely a ray of hope to cheer them on their dreary task, they mounted their bare backed horses, and started in quest of us. The burning heat of the sun parched their skins, and they had nothing to shield them from his powerful rays; the freezing air of the night chilled and benumbed their unprotected bodies, and they had no covering to keep off the cold; the chill storms of rain and hail pelted mercilessly on them, and they could not escape

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

the torture; the friction produced by riding without a saddle or any thing for a substitute chafed off the skin, and even flesh, and without any means of remedying the misfortune, or alleviating the pain, for they were prevented from walking by the stones and sharp thorns of the prickly pair, which lacerated their feet. They were compelled, though the agony occasioned by it was intense, to continue their equestrian march, till amidst this accumulation of ills, they reached our camp; where by kind treatment, and emollient applications, their spirits were restored and their sufferings relieved. Add to the complication of woes above enumerated, the gnawing pangs of hunger which the reader will infer, that they must have experienced in no slight degree, from the fact that they did not taste a morsel of food during those four ages of agony, and we have an aggregate of suffering hardly equalled in the history of human woe.

After the return of our comrades, as above related, nothing of note occurred for some time; during which we enjoyed the luxury of pleasant weather, and a fine air.

On the 25th, I departed, with some others, to meet the St. Louis Company, who were daily expected. We passed along the plain at the base of the wind mountains, a very extensive and lofty range, crossing several small creeks, which at some distance below us unite and form New Fork. While on our march we killed an antelope, and also a brown bear, which last we discovered on the open prairie, several miles from any timber, and immediately gave chase to him; but as soon as we approached to within a few paces, he wheeled and pursued those who were nearest to him; the superior fleetness of our horses, however, soon put us beyond his reach, and he again bounded off in another direction, we in turn again becoming the pursuers. We fired several shots at him, some of which, though well directed, only served to increase his fury. For a considerable length of time we were alternately pursuing or pursued, till finally after many shots had been fired at him, a ball penetrated the scull between his eyes, and simultaneously put a period to our sport, and his existence.

“At the close of the day” we retired to rest, in the open prairie, as usual, with a blanket for a bed, a saddle for a pillow, a robe for a covering, and the clear blue star-studded sky for a canopy. I slept, and gentle visions mingled with my slumbers; home, mother, sisters, brothers, passed before me in the pleasing panorama of a dream; again I seemed to tread the lovely streets of my native village, which had become a populous city. I sought and found the well remembered haunts of my childhood, and pressed in imagination, the friendly hands of the companions of my youth. The scene was too delightful to be real, and from the sweet delusions of fancy, I awoke to the unwelcome conviction of absence from home, and the certainty of comparative solitude, in the Rocky Mountains. We arose, and pursued our journey, “ere morn unbarred the gates of light,” and soon after sunrise discovered the plains covered with buffalo, but so unusually wild that the report of a single gun set them all at once in motion.

Few persons, even in these romantic regions, have ever witnessed so interesting a scene as was presented to our view from an eminence or high mound, on which we were fortunately situated, overlooking the plains to a great distance. Immense herds of bison were seen in every direction galloping over the prairie, like vast squadrons of cavalry performing their accustomed evolutions.

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

Platoons in one part filing off, and in another returning to the main bodies; scattering bands moving in various courses, enveloped in clouds of dust, now lost, and now reappearing to view, in their rapid movements; detachments passing and repassing, from one point to another, at full speed; and now and then a solitary patriarch of the mountain herds, halting for a moment behind the dashing cohorts, to ascertain, if possible, the cause and extent of the danger and alarm; but soon again with instinctive impulse, hurrying to join his less fearless files; and all rushing on, till forms and numbers disappear in the dust and distance, and nothing remains visible of the long black lines but dark clouds slowly sweeping over the distant plains, which soon dissolve, and leave no trace of the tranquil thousands of buffalo, so lately grazing in peaceful quiet on the wide plains beneath our wondering, wondering vision.

When these scenes of living interest had faded into absolute obscurity, we descended from the "Butte," and continued on our way as far as the Sandy, where we halted a short time for breakfast, which having despatched, we again set off, and soon after discovered the traces of two horsemen, going in the direction of our camp. - From the circumstance of our not having before seen them, which we must have done had they been on the plains; we concluded that when we stopped for breakfast they were on the same stream a short distance above us, and had started again shortly after we halted; also that they were sent express in advance of the St. Louis Company, to announce its arrival. We, however, continued on, passed over the high barren plain which separates the waters of the Platte from those of Green river, and having descended to Sweet Water, finally halted on its margin.

## CHAPTER XLI

On the 20th of July a young man by the name of Newell and myself, departed at the head of an equipment destined for the Flathead trade. Our little party consisted of six "engages" with pack horses, and five armed Indians, amounting in all to thirteen armed men. It was late before we separated from the company, yet, notwithstanding, we marched fifteen miles, killed a fine bull, and halted on the margin of a small spring, in the highlands, near Jackson's Little Hole. We passed through the hole on the succeeding day, and encamped in the narrows below. We fortified our little encampment with a breastwork of logs, or in other words, we enclosed it in a timber pen.

Leaving this, we passed the narrows, a corner of Jackson's Big Hole, crossed Lewis river, ascended the mountains, and on the 30th came into a region where the weather was fair, the sky cloudless above us, and the sun shining pleasantly, quite reverse to the appearance a short distance below. Gazing down, in the direction of Jackson's Hole, from our elevated position one of the most beautiful scenes imaginable, was presented to our view. It seemed quite filled with large bright clouds, resembling immense banks of snow, piled on each other in massy numbers, of the purest white; wreathing their ample folds in various forms and devious convolutions, and mingling in

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

---

one vast embrace their shadowy substance. - Sublime creations! emblems apt of the first glittering imaginings of human life! like them redolent of happiness, and smiling in the fancied tranquil security of repose; like them, liable to contamination by intercourse with baser things, and like them, dissipated by the blasts of adversity, which sooner or later are sure to arrest and annihilate them. Alike evanescent are the dreamy anticipations of youth, and the aerial collections of vapor. Such the reflections suggested by this lovely scene, which, though often on the mountains, I have never before seen below me. Clouds of this pure snow-white appearance, are, however, by no means uncommon; but those usually observed beneath us, when on the mountains, have a dark and lowering aspect.

Turning with reluctance to things of a more terrestrial nature we pursued our way down to Pierre's Hole, where we fortunately discovered and killed a solitary bull; being the only animal of the kind we had seen since leaving Jackson's little hole.

We passed in our route a well known hot spring, which bursts out from the prairie, on the east side of a valley, near a small willow skirted creek, and flows several hundred yards into Wisdom river. It boils up, at its head, in a quantity sufficient to form a stream of several paces in breadth, and is so hot at its source, that one cannot bear a finger in it for a moment; it gradually becomes cooler as it recedes from the fount and at its lower extremity is cold. The Indians have made a succession of little dams, from the upper end to the river; and one finds baths of every temperature, from boiling hot, to that of the river, which is too cold for bathing, at any season. Our Indians were almost constantly in one or other of these baths during our stay near the springs.

It may be proper to remark here, that we have been drenched with rain, more or less, every day since we left rendezvous. The mornings are generally cloudless and the rocks, mountains, and valleys, are gilded by the dazzling brightness of the sun; but the scene changes as the day advances, dense black clouds cover the face of nature, and heavy rains, though usually of short duration, follow; however, it generally clears up, and becomes warm again, before the sun disappears behind the neighboring mountains. Lightning and thunder are frequent during these storms, and the latter is sometimes distinctly heard, when the sky appears perfectly cloudless.

As we arose on the morning of the 11th of August, we discovered a smoke rising above the pines in the mountains, where we were compelled to pass; however, we packed our horses and started, but saw neither smoke nor other traces of Indians after we had commenced the ascent, we halted at noon on a small prairie, on the summit of the mountain, two hours, and then descended the steep north side, to the head of Bitter Root river. - We saw traces of several horsemen who had recently passed down the river, which is but a small creek here in the mountains, and has a very narrow bottom; we halted late at an old Indian encampment.

Next morning a Flat-head came to our camp, one of several now on the stream a short distance below us, who had separated from a village of Nezperces on Salmon river a few days since, and were now like ourselves in quest of their tribe. Under his guidance we passed down the river into a little valley, then over a high mountain point, and finally descended into a small prairie bottom,

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

where we found the comrades of our guide. We halted a short time to bait our horses, and departed accompanied by the Indians. At dark we halted on a small fork near the river, which has greatly increased in magnitude, and here skirts an open plain, several miles in extent on the east side, but a narrow irregular one, covered with dense pine timber, forming the base of the mountain, on the other.

On the 13th, we continued down this river, till evening and halted on it. The Indians with us, announced our arrival in this country by firing the prairies. The flames ran over the neighboring hills with great violence, sweeping all before them, above the surface of the ground except the rocks, and filling the air with clouds of smoke.

On the 14th we met several Flat-heads who, having been informed of our coming by an express despatched two days since, came to guide us to their village, which was situated half a day's journey below. We continued down through an open prairie, and halted late, on the margin of a finely timbered fork, on the west side, a short distance from the river.

On the 15th we passed about seven miles down to an open plain, some twelve miles in length and six in breadth, at the forks, formed by the junction of the Arrow Stone, which flows from the deer-house plains, and the stream we have followed for the last four days; these rivers are both clear, deep, rapid, and not fordable at high water. Bitter Root river is about fifty yards wide, and Arrow Stone something more. The former is but partially bordered by timber some distance above the forks, and the other quite bare; however, in the vicinity of the forks, both branches and the river below, are well decorated by large scattering pines and thick under brush, particularly on the west side. We found the village consisting of only fifteen lodges, situated on the margin of the Bitter Root, about one mile above the forks. As we approached they sallied out from their lodges and shook hands with us, as usual, made short prayers for us during this ceremony, and then passed away as if fearful of troubling us, whilst unpacking and arranging our baggage and lodgings. At length after we had finished pitching our lodge, and disposing properly our luggage, a multitude of women and girls came to us, bearing baskets of fruit and provisions, which they poured upon a blanket and disappeared to their respective habitations. We had suffered much with hunger for several days past, and seated around the blanket, gladly availed ourselves of present abundance to

“Satisfy as well we might,

The keen demands of appetite.”

The lovely little hillock, composed of Whortle, Service, Hawthorn, and White berries, rapidly disappeared before the united efforts of eight hearty and hitherto half starved lads; and leaving in it an “awful gap,” we arose, either satisfied, or ashamed to be seen devouring so voraciously the gifts of our generous friends; and prepare to receive the Chief and his retinue, who came as customary to smoke a pipe with us, and enquire our business. We seated ourselves in a ring on the grass, with our guests, and a pipe was immediately produced, and presented to a little hardy old veteran,

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

the Chief. He placed it in his mouth, when his attendant applied to it a coal, and the Chief taking two or three whiffs, passed it to the person on his right, who in turn took a few puffs, and returned it to the Chief; he again inhaled through it a few inspirations, and passed to the one on his left, and it continued then regularly round, until it was extinguished. One of the company prepared with tobacco and weed, cut and mixed in proper proportions, and a stick for cleaning the ashes out of the pipe, replenished it, and the same ceremony was repeated. In the mean time we informed them as well as we could, having no interpreter, of our objects in coming among them. They listened without speaking until we had done, when the old chief in the name of his people, tendered us his thanks for coming so far from our chief, through a dangerous country, to bring them munitions and tobacco, articles of which they were much in want; and promised to exert his influence with his young men, to encourage them to hunt and trade with us; supply us with fruit and provisions, and aid us otherwise as much as lay in his power.

He informed us that thirty of his people were massacred last spring, at one time, by a large party of Black-feet, on the east fork of Salmon river. The little devoted band had started expressly to retake horses from, or fight the Black-feet, who were, it appears, approaching in considerable numbers, at the same time, determined to fulfil a threat they had made last fall, that they would exterminate the Flat-heads, root and branch. The two parties met on the summit of the pass from that fork to Horse prairie, and a most desperate conflict ensued, which resulted in the total defeat of the Flatheads, who fought to the last, and perished to a man. The only individual of the party who escaped was separated from the rest in the early part of the action, and fled to tell the disastrous tale. There were among the slain several of the bravest warriors of the nation, who were well known to the hunters as hardy, bold, and heroic in war; sage and experienced in council, and hospitably courteous, even to inconvenience and self-privation, in their humble dwellings. The venerable chief dwelt on the virtues of each of these braves, and related many interesting anecdotes of daring feats and rare presence of mind, exhibited by some of them, in the most trying and hopeless situations. He betrayed the presence of hereditary superstition, in but a single instance: that of a warrior, who had been often wounded in battle by balls, not one of which had ever entered his body, (all having fortunately been nearly spent.) The old veteran declared it the firm belief of himself and friends, that he could not have been killed with a bullet, but must have been caught and then butchered by his enemies. It is believed that the Black-feet sustained great loss in this engagement; at least they abandoned the design of attacking the village, and returned to their own country.

The chief also informed us that he was now awaiting the arrival of the Pen-d'orielles from the Flat-head post, who were expected in twenty days, and should then proceed to hunt buffalo. These animals are never found west of the Big Hole, or the Deer house plains; consequently the Indians, during their stay here, subsist on dried meat, which they transport in bales of forty pounds or more, upon horses, from the buffalo range, or the haunts of deer and big horn, which are found on the neighboring mountains. They bring in daily horse loads of berries, and several kinds of roots, the most abundant and most prized of which, is small, white, extremely bitter of taste, and called by the Indians "Spathem;" it is found in great plenty in the plain of, and gives name to, Bitter Root river. It is prepared for food by boiling until it becomes like jelly; and is very disagree-

LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

able to the palate of one who has never before eaten it. During our stay here, we were employed in trading our goods for the only articles we wanted, namely, beaver and provisions; the best articles in our equipment for this purpose, was cut glass beads, with which the dress of the females are decorated.

## CHAPTER XLII

On the 30th of October we passed under the north east side of the sand mountains which rears its gigantic form in the centre of a vast plain, nearly one hundred miles in diameter, of the most sterile description; where, in gloomy desolation, it seems to mock the vegetating efforts of nature. With the sand hills that constitute its base, the mountain covers an area of some thirty miles in circumference, and is composed of fine white sand, extremely light, into which our horses sank above the knees, in passing over it. When the winds blow upon it, agitating the sand at the surface, it has a beautiful, undulating, wave-like appearance. The particles are so very small, and have so little apparent specific gravity, that large quantities are often removed by the gentle whirlwinds that sometimes occur, and scattered over the neighboring prairie.

On the main body of the mountain there are a few occasional dwarf shrubs, but the hills are absolutely destitute of herbage. No shells, nor any other marine organic remains, nor indeed any foreign substances, are found on the hills or mountains, among the pure crystals that constitute this singular structure, which, in solitary grandeur appears, when viewed from a distance, like a huge mountain of snow, at any season of the year. Though we have traversed many barren prairies, and crossed over many sterile tracts of territory, we have never before seen any sand of similar character or appearance, which therefore remains unique, and this singular protuberance of earth, an isolated enigma; for conjecture ever must be silent in respect to its origin. It stands alone, in a vast region of elevations, not one of which affords a parallel, or at all resembles it. Is it a proof that the ocean, once slumbering here, deposited this formation, and covered this country, the most elevated portion of North America, situated, as it is, at the sources of the Mississippi, Columbia, and Colorado? If so, the whole region affords no other instance, and even this lacks the strongest evidence of a former subaqueous condition, since there are no productions, or even relics, of an aquatic animal nature attending it. The whole vast plain in which it "towers alone," is covered with the evidences of volcanic action; can it then, in one of those tremendous efforts of nature, which scattered these fragments of rock over so great an extent, have been upheaved from the bed of the earth, and left as a monument of some mighty convulsion? The subject affords ample scope for curious speculation.

Having travelled about twenty-five miles since we set out in the morning, we halted on Henry's fork, about twenty miles above the Forks. Our horses were very much fatigued, and one of them entirely exhausted, was left in the way, being totally unable to proceed, though relieved from the weight of his lading. We discovered the traces, both of a horse and a mule, that had passed quite recently up and down the margin of this river. - The distance from Pierre's fork, when we left the village, to Henry's fork is about seventy miles.

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

October 31st we remained in camp to rest our weary horses. My companion Newell, however, with one more, departed to ascertain if Dripps had arrived at the Forks. During the day a fire broke out in camp, and filled the air with smoke, but caused no damage.

On the 1st of November, we raised camp, and crossed Henry's fork, but had not left the ford before Newell reappeared with information that a party of trappers, detached from Dripp's company, were now awaiting his arrival at the forks. We continued down the stream about eighteen miles, and encamped with them. Three of them, during a recent excursion for beaver on the sources of Henry's Fork, met with an adventure, which may not be deemed uninteresting, and will also exhibit the danger and hardships to which the trappers are constantly exposed, in this savage region. It is thus described by one of them, William Peterson, of St. Louis.

"On the 23d of September, having returned from my traps unusually early, I set about preparing some meat for breakfast; in the mean time one of my comrades, Chevalia, alarmed or surprised at the continuing absence of Piero, our companion, who had started to go a short distance below, to examine some traps and had not returned; went off to seek him, but in a few moments came running back, out of breath, exclaiming 'Indians! Indians! Indians!' I had barely time to inquire if they were near, when they appeared rushing toward us. We sprang into the willows, where we had taken the precaution to place our baggage when we came here, and I employed myself in arranging it, with alacrity, so as to shelter us from the shower of balls we expected momentarily. Chevalia amused them for some time by talking to them in the Sioux language, which they pretended to understand; happily I discovered at this critical instant, that they were actually taking advantage of the conference, to surround us, and thus cut off our retreat to the mountains; the sudden conviction of this truth, and the fatal consequences to us if they succeeded in effecting their object, induced us to spring at once into the creek, and follow the shallow current about two hundred yards, concealed from our enemies by the few small willows on its margin; when we were compelled to leave it, owing to the total want of obscurity, offered by its woodless borders; and cross a narrow neck of prairie, to a grove of aspen trees on the mountain side. Fortunately for us, the Indians had mistaken the course of our flight, and were some distance below, when we entered the open plain; but they quickly discovered us, and gave chase, as we penetrated the forest; finding that the timber continued we pushed forward, and at length crept into a dense thicket, hoping to elude them thus, but we were again discovered by the barking of a little dog with us, and forced to seek another place to hide in; we finally halted in a dark shadowed thicket, and choaked the dog to silence; while the Indians were yelling like so many deals, and hunting from one grove to another in every direction. We, however, remained quiet and undiscovered, until the sun was setting, when, all the noise having subsided, we ventured out to ascertain if possible, the fate of Piero, who imprudently left us in the morning, without his gun, which was now in my possession.

We returned to our camp, and found every thing removed, from which we concluded that the Indians had departed, and were encouraged to look for the body of Piero, not doubting that he was killed. On our way down to the "dams," (beaver) where we knew his traps had been placed,

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

we passed through a small prairie surrounded by willows; before leaving it, two Indians intently gazing on the ground, were observed, evidently following our tracks. I immediately placed one of my guns between my knees, and shot the foremost of them with the other, dead on the spot. My companion fled, and the surviving Indian slowly brought his gun to his eye, as if to insure my fate; but in a twinkling, the empty gun dropped from my hand, and the other was at my eye. The amazed red skin sprang into a thicket and escaped. - At this moment a volley of diabolical yells burst upon my ears from the adjacent willows. I seized my empty gun and ran for life, expecting to experience something more fatal, though scarcely more appalling than the horrid sounds that saluted me at every step. Unharmed, however, I reached our former place of concealment, to the no small gratification of my companion, whom I believe, had hardly deigned to bestow on the Indians a single glance, from the moment I fired until he found himself safely and snugly in our favorite quarters. During my flight I saw many of them, both in the little plain where I shot one, and in pursuit of me, but I could form no correct idea of their sum total.

After dark all became quiet, and we sallied forth from our hiding place, passed over the plain four miles to a neighboring stream, and remained there until morning, when we returned to the scene of our misfortune, with a slight hope that Piero had escaped the knives of the savages, and might be awaiting our reappearance. But as we approached camp they were again seen, and we fled to the mountain unperceived by them, giving up all expectation of ever beholding our comrade. The Indians were encamped a short distance below, on the margin of the stream, and we were in constant danger of being discovered and butchered by them. At length, however, we set out for snake river, and reached it after two day's march, without accident; but being unprovided with horses, and meeting no game, we were four days without food. Good fortune on the fifth, put a fat cow in our possession, and we remained to recruit ourselves until the following day, when we set out for the Buttes at the forks of snake river, to find, if possible, a party who were trapping that stream in canoes. After an anxious search we could perceive no traces of them, and concluded to return back to the cow we killed the day previous, and wait for the arrival of the company at the forks, as patiently as possible.

During our progress we discovered, with surprise, the tracks of a white man, a close examination of which, showed that his feet were widely different from each other. It occurred to me at once, that Piero had a deformed foot which I recollected to resemble the print of the unnatural one here. The hope of finding the old man yet alive, burst forth anew, and impelled us forward with fresh vigor in the direction indicated by his footsteps, which we followed a distance of two miles, that seemed but a step, filled as we were with the pleasing anticipation of shortly relieving his miseries. With a joyful swelling of the heart, that it is absolutely impossible to express, and that can only be imagined by such as have felt the thrilling ecstasy inspired by circumstances similar, I perceived my old friend and companion, on the margin of the river, at the distance of about half a mile, and fired off my gun, the usual token of delightful recognition, to attract his attention; he turned toward us - extended his arms in a transport of glad surprise - and overpowered by exhaustion and the excitement of feelings it were impossible to control, sank fainting on the ground. We ran to him - raised him up - chafed his temples; he recovered - clasped us to his heart - tears flowed profusely down his aged cheeks, and utterance entirely failed him. Never had

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

---

I before, never can I hope again, to experience such another moment of melting tenderness and joy. I could, I think, face death with heart and courage unappalled, not a drop would moisten my eye, and not a fiber tremble, but the scene I have vainly attempted to describe quite unmanned me, and our tears were mingled together. We supported him with us to our camp, tended him with affectionate care; for if there is in this world any circumstance, that can soften the heart, and awaken our affections to each other, it is a companionship in misfortune; but we could not deny him the gratification of eating until he had so much overcharged his stomach, as to make himself quite sick, from which he did not entirely recover in seven or eight days; during which time we killed seven buffalo, and fortunately fell in with a party of trappers, with whom we have since remained."

## CHAPTER XLIII

From Piero, whose real name is Jacques Fournoise, the former appellation having been given him by the Canadians, most of whom have nicknames, I received an account of his sufferings, which will, I hope, be a sufficient caution, to strangers particularly, who may hereafter visit the Rocky Mountains, never to leave, without their arms, their encampment or companions.

It appears that, on the morning before alluded to, he started for his traps with two beavers, both very large, on his way back to camp; and observed as he was about leaving the willows, a number of buffalo robes scattered about on the prairie. The startling Ruth flashed on his mind, like an electric shock; he regretted deeply his imprudence in venturing from camp without his gun, which left him now without the means of defence, or subsistence, and dared not attempt to reach it, where, in all probability, his comrades already were shipped, scalped, and covered with wounds - dead. He heard the sanguinary yells of the savages re-echoed back from the neighboring hills and mountains, and was induced, by his own peril, to seek concealment, which he finally effected in a dense cluster of willows. He heard the footsteps of his foes passing and repassing frequently during the day, but in the evening all was silent and he left his shelter to revisit camp. Arriving there, comrades, horses, baggage, all had disappeared, and he remained alone, unarmed, a wanderer in the barren plains of Henry's Fork, with misery, starvation, death, and such a death pictured to his imagination in their most gloomy colors. With such a vivid prospect of despair, he carried his beaver some distance up the stream, split the meat for drying, and remained in cheerless solitude during the night.

On the following morning early, he revisited his traps and found in them two beaver, with which and two of his traps, he returned; by the aid of the latter he hoped so to increase his store of provisions, as to render more remote the danger of perishing with hunger, and enable him, if possible, to await the arrival of the company at the Forks, where they were expected to be by the first of November. The reason that he did not meet with the Indians upon the night and morning that he visited the place of encampment was because he did not, in the first instance, leave his place of concealment until it was quite dark, and in the second, he went and returned before they were stirring.

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

He moved into the mountains several miles, when he dried his meat, and then sallied forth again into the plain, crossed Henry's fork, and proceeded with the intention of hunting beaver on a small branch. At length he found a dam, and leaving his meat, traps, etc., went across to examine it, but reached the opposite side just in time to discover himself to two parties of the copper-faced rascals, who were situated both above and below him, and who sprang up in chase as soon as they saw him. His fate for a moment seemed inevitable, but the energy of despair lent vigor to his aged frame, and activity to his feeble limbs, and with an agility that would have done credit to his youth, he ran across the bottom, several acres in extent, only covered with here and there a few scattering willows, in the hope of finding a dense thicket; when he reached the border of the plain, and heard the footsteps of the Indians fast approaching, death appeared inevitable. The child of luxury would unquestionably have sunk under the weight of opposing circumstances, and making no further effort to prolong a life equally dear, have fallen an easy victim to savage atrocity; but the hard buffetings of a mountain life had familiarized the old veteran to danger, and impressed it on his mind as a duty, never to yield to adversity, while a shadow of hope remained; and to scan, even in the most critical moment, the chances of success: his experience was even here not un-availing; he sprang into a cluster of willows, and crouched with deliberate caution, at the very moment the Indians passed him, pulling and tearing the branches asunder in every direction. Some of them at the same time, commenced making forts or lodges but a few feet from the spot where he was concealed; and at every moment he expected part of the branches that surrounded him, would be cut away for that object, and thereby expose him. It was still morning, and he studied to calm his agitation, and meet a doom he had reason to think unavoidable, with manly fortitude.

In the meantime the search continued with such unabated ardor, that he believed every bunch of bushes on the whole bottom, underwent an examination, except in the single instance that afforded him protection. Towards noon some of them commenced playing roulette, close under him, against the willows; others seated themselves around, and in one instance he felt the body of an Indian touching his own. His heart beat so violently that he fancied they must hear it, and would soon send him to eternity. Shortly one of them sprang up, seized a tin vessel, struck it thrice on the bottom, and started towards him. He now thought the Indian had discovered him while sitting by the bushes; but wished to make it appear to his comrades, as if magically effected, by virtue of the kettle. At this trying moment, his soul rose superior to his condition, and he had the presence of mind to consider that they might torture him if taken alive, and the firmness to prefer present death to prospective hours of agony; he grasped his knife, and determined to spring upon the first who approached him.

“Poor powerless man, and canst thou harbor then

A hope but death - a passion but despair.”

The Indian, however, passed him, examined several other clusters near, but shortly returned and again seated himself near his former position, and commenced crying, in the manner of those people, at the death of a friend. The day passed slowly away, the hours to him were attenuated to

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

many times their usual length, and he almost imagined night would never approach.

“In those suspended pangs he lay,

Oh! many, many hours of day!

How heavily it rolled away.”

And slowly night advanced; but it came at last, and the bloodhounds retired to slumber. A spark of hope rekindled in his bosom a new energy. He carefully removed the branches to make his escape from that tedium of terror, but as he was about to step forth from the thicket, the Chief hurried out of the fort, and harangued his people for some time; at length he reentered his lodge, and in a short time all became quiet. Our hero seized the opportunity, cut the willows until he was able to extricate himself without noise, and then carefully crawled out into the prairie; his legs had been cramped up all day and now refused to perform their usual office. With extreme difficulty he succeeded in dragging himself on his hands and knees some distance and after rubbing his limbs considerable time, to restore and accelerate the circulation of the vital fluids, he was enabled to resume an erect position, and walk off as fast as his years would permit.

During this painful midnight march, a large grizzly bear reared up on his hinder legs but few feet distant. - At any other time he says he should have been alarmed to meet so dangerous an enemy, but his feelings had been so lacerated by constant peril, that no new danger could appall him. With more of forbearance or pity, than his human foes had exhibited, the bear turned and retired, without adding brutal molestation to man-created misery; and Piero quietly pursued his way to the forks of Snake River, where he wandered about for some time in search of roots and buds to support his existence.

“Poor child of danger, nursling of the storm!

Sad are the woes that wreck thine aged form.”

Fearing at last that the company would not come to Snake River, he resolved to retrace his steps, and endeavor to find some of his traps. During the chill frosty nights, having no bedding, he cut up and covered himself with grass, his only means of shelter.

Finally, on his way back he was discovered, as we have before related, having eaten nothing for six days, save a very few roots and buds. His companions, judging from his emaciated condition when found, think that a few more days would have sufficed to close his earthly career. So wretched and hopeless was he, that when he heard the joy inspiring report of a rifle, and turned and saw friends, comrades, approaching him, the revulsion of feeling from despair to the fulness of hope, was too much for feeble nature to sustain, and with a single gesture of gratitude, and one wild loud throb of exultation, he fainted. With the same sensation, described by that master spirit, Byron, he must have thought, when he came to, and found himself in the arms of his com-

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

panions -

“Awake! - where am I? Do I see

A human face look kind on me?”

Yes, his sorrows were past, his woes forgotten, and for once he gave himself up to the luxury of gratitude and joy. The soul of the mountaineer was subdued, the warm tears coursed each other down his aged cheek; his limbs trembled with the vibration of ecstasy, he could not stand, and they all sat and wept and laughed together.

## CHAPTER XLIV

There were at the Forks three other small parties, who had been compelled to leave their traps and fly for safety, from the Indians. However they have since returned and collected them all, save forty, that probably fell into the hands of the savages. On the 2d of November Mr. Dripps arrived with the company, having been quite fortunate during the fall, and caught many beaver, losing neither men nor horses. He had seen no Indians, with the exception of a party of Snakes, and had received information from some source, not recollected, that a detachment of Bonnyville's company were attacked by the Crows on the head of the Yellow Stone river, and lost several horses, laden with merchandize, having also two men badly wounded. Likewise that Mr. Cerre, a gentleman of that party, had departed down the Big-horn in bull-hide boats, with the peltries thus far collected by them, destined for St. Louis. We heard, in addition, that the Crows had discovered a cache belonging to the same company, and robbed it; however, they must have been seen while constructing it, or it could not have been properly closed; for a well made cache is in no more danger of being discovered in these plains, than is any substance surrounded by the fibrous effects of organic nature. We were also told that Mr. Thomas Fitzpatrick at the head of a detachment of the R. M. F. Co., had their horses nearly all stolen by the Crows; which, however, they afterwards recovered; and report adds, that two of his men were killed. Capt. Walker was seen on Snake River, some distance below. His men had lost some traps taken by the Rootdiggers, and had killed one of them in return. The Crows have openly declared war against all hunting parties found trespassing on their territory. A party of trappers, detached from the R.M.F. Co., are also on Snake river; one of them, named Small, was killed by the accidental discharge of a gun some time since.

Trading houses have been established at the mouth of the Maria, and also at the mouth of the Big-horn by the American Fur Company; who likewise intend to erect one at the three forks of the Missouri, for trading with the Blood Indians. From the Indian signs we saw at the deer house, when with the Flat Heads, I concluded that this fort was already constructed - judging by the bits of blankets, cloth, etc., and other emblems of commerce observed there. From Mr. Fontenelle, and some others, no intelligence has been received since they left rendezvous.

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

On the second day after the arrival of Mr. Dripps, we selected a good encampment, affording wood, water, and grass in abundance, situated on Pierre's Fork, near the mouth, and removed to it. In a few days Mr. Pillet prepared to set off on his return to the Flat Heads; and having received some encouragement, I concluded to go with him: accordingly we started on the 12th; our little party was composed of some seven or eight white men and five or six Indians. Not a few of our friends, deeming our journey, in such small numbers, extremely perilous, expressed an opinion that we would be massacred by the numerous parties of Blackfeet, who ever haunt the country, through which we would have to pass, at this season of the year. However we were not dismayed, and marched over the hills, mountains, and plains with all possible dispatch, i.e., as fast as our fatigued and feeble animals were able to proceed, and reached the Flat Heads on the evening of the 27th, at Bitter Root river Forks. We followed the same route Newell and myself had pursued the previous summer, and which is indeed the nearest and best. With the single exception of cold winds, we were favored with pleasant good weather during our journey. But the nights were exceedingly cold, and our blankets and robes absolutely necessary. We found buffalo numerous the whole distance from Dripp's camp to the Big Hole, and we therefore lived well.

On the north side of the mountain we crossed, there was already one foot of snow, but the plains were yet entirely free. We saw several encampments made by the Flat Heads, since I left them; in one of these we saw a living colt with one thigh broken by a ball. At the mouth of the defile, (from the Big Hole to the Bitter Root,) we found several hundred lodge poles, left by them before attempting to pass over the mountains. One of them, painted red and black, was planted erect in the ground, and was probably intended to be emblematic of defiance to the Blackfeet. We caught on the mountain a fine horse, that had been lost by the Indians, and took him on with us.

On the east side of Bitter Root river, there is a singular curiosity, that I had not before observed, because it is situated under some rocky bluffs, almost impassable to horsemen, the proper road being on the west side of the river: it is the horn of an animal, called by hunters, the "Big-horn," but denominated by naturalists "Rocky Mountain Sheep;" of a very large size, of which two-thirds of its length from the upper end, is entombed in the body of a pine tree, so perfectly solid and firmly, that a heavy blow of an axe did not start it from its place. - The tree is unusually large and flourishing, and the horn in it some seven feet above the ground. It appears to be very ancient, and is gradually decomposing on the outside, which has assumed a reddish cast. The date of its existence has been lost in the lapse of ages, and even tradition is silent as to the origin of its remarkable situation. The oldest of Indians can give no other account of it, than that it was there precisely as at present, before their father's great grandfathers were born. They seldom pass it without leaving some trifling offering, as beads, shells, or other ornaments - tokens of their superstitious veneration for it. As high as they can reach, the bark of the tree is decorated with their trifles.

We met with a few Indians before reaching the Forks, who were hunting deer a short distance below the Sheep horn; and some of them accompanied us to the village, when we found Mr. Ermatinger and most of the Flat heads. His men, with the Pen-d'orilles, had departed towards the Flat-head post, and he had remained behind, for the purpose of seeing us, having been informed

---

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

of our approach, by an express despatched by Pillet, a day in advance of us. From him we learned that a young man had been killed near the Big Hole, since we left the villages, by the Blackfeet, and that the Indians had lost several little bands of horses; most of the young warriors being now in pursuit of the robbers.

On the 29th we again set out, in company with that gentleman, and passed northward through this valley and a narrow defile that led us out into a very small plain on the mountain, or rather in it, called Little Cammas Prairie, having made about fifteen miles. Mr. Ermatinger and myself departed on the succeeding morning, to overtake his men with the Pen-d'orilles. We descended the mountain into a fine valley called Cammas Prairie, watered by a beautiful, well timbered stream flowing northward; passed through it, and thence along a narrow defile where the river is confined on both sides by hills rising, though not perpendicularly, from the water's edge many hundred feet, and at length overtook the company who were in the act of encamping when we came up, having rode not less than twenty miles. The same evening Pillet arrived, and halted with us, and about the same hour an express came in from horse plains, with information to Mr. E. that some of his trappers had arrived there. Shortly after dark two Indians reached us from the Flat-head village, bearing a scalp, and informed us that the party who went in pursuit of the horse thieves, had returned with twenty-six of the stolen horses, and two trophies from the heads of their enemies.

## CHAPTER XLV

December first, we proceeded again on our journey, and found ourselves after a march of twelve miles, on the margin of a large clear river, ornamented with scattered pines on its borders, called the Flatt-head river.

On the 2d we succeeded, after considerable difficulty, in fording it, still deep and rapid, even at its lowest stage, and left it, passing through a large prairie, and finally halted at the entrance of a mountain pass, having marched about fifteen miles.

On the succeeding day we continued our toilsome progress over a low pine covered mountain, from the summit of which we descended into a large river valley, called Horse plains, watered by the Flatt-head river, which here joins with the Bitterroot. On the margin of the former, we found a party of young half-breeds, who had returned from their fall hunt, and brought in their furs for delivery to Mr. Ermatinger. These men are supplied with goods on this, the west side of the mountains, by the traders here, much cheaper than the Americans can afford them on our side; and consequently they are better clad, though, for want of buffalo, they do not fare as well as our hunters. There was likewise quite a village of Indians collected here, who never go for buffalo, nor do they in many cases possess horses to go with, even if they felt inclined to do so. Most of the families, have light canoes, with which they glide about on the river, and gather roots and berries, in their proper season; but in the winter they separate into small parties, and not unfrequently, into single families, who then seek the mountains, and pass that inclement season there, with little

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

knowledge of or communication with each other. - They assemble here, at certain seasons to exchange with the traders their skins for such articles as they may chance to want, or be rich enough to buy.

There was a cabin once erected in this valley, for the purpose of trade, but it was shortly afterwards consumed by fire. These Indians were anxious to trade for dried buffalo meat, and I think in many instances succeeded in exchanging some of their fish and roots, for more substantial viands. I had the pleasure of tasting some vegetables that had been conveyed here in two large open boats or barges, with goods from an establishment seven or eight days' journey below, called "Colville," at the Kettle falls.

When we arrived in this valley the danger was declared over, and our horses permitted to run loose night and day; however, a few nights after, thirty of them were stolen. Mr. Ermatinger lost eight or ten, and the others were the property of the Indians. Mine, as good fortune would have it, were not among the number missing.

On the 13th of December Mr. Ermatinger, having completed his arrangements, and stowed his furs into the barges, which were manned by his men, who were, I perceived, quite "at home" in them, set out with his companion, Pillet, for Colville. In the mean time a general breaking up of camp took place. In a few moments the lodges disappeared, and the bosom of the river was studded with bark canoes conveying whole families and their baggage down the stream with surprising velocity. I was greatly deceived in their canoes, for the squaws would lift them from the water on to the bank, and again set them into it, with such ease that I imagined they must be quite insufficient to the transportation of any heavy burden. Some of them, however, appeared loaded until there was no longer room for any thing more, and still floated securely. They were managed by the squaws, who, with paddles, direct their course with great steadiness, astonishing rapidity, and apparent ease and dexterity. Parties on horseback, at the same time set off in various directions, and finally I departed, with the family of a trader, to pass the winter in the Cotenas mountains. We travelled this day over a low spur, or point of mountain, east of Horse Plains, and halted in the pines on the margin of a small stream, that flows into the plains.

After a day or two, we passed into a small, though open valley, watered by a stream flowing westward, called Thompson's river, in honor of a gentleman formerly in the Hudson's Bay Co.'s service. We had several days fine weather, when Heaven seemed to be literally "smiling over us," and much enjoyed it.

At length, on the 20th, two "Canadian Voyagers" came to us from the Flatt-head post, where they had been in quest of some articles of commerce. They remained with us a part of the day, and set out for their place of destination. Two Pen-d'orielles Indians came and engaged to hunt for us; but one of them left us several days after, promising to return again soon.

In the mean time Mr. Montour and myself, set about constructing a log cabin, rather because we had nothing else to do, than from any necessity, as his lodge was uncommonly large, and quite

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

comfortable. Christmas was passed agreeably with the family of mine host, and we were rather more sumptuously entertained than on ordinary occasions. Our "bill of fare" consisted of buffalo tongues, dry buffalo meat, fresh venison, wheat flour cakes, buffalo marrow, (for butter,) sugar, coffee, and rum, with which we drank a variety of appropriate toasts, suited to the occasion, and our enlarged and elevated sentiments, respecting universal benevolence and prosperity, while our hearts were warmed, our prejudices banished, and our affections refined, by the enlivening contents of the flowing bowl. Our bosoms glowed with the kindling emotions, peculiar to the occasion. - Remote from our kind, and the thralling, contracted opinions which communication with a cheating world are apt to engender, when our stomachs were filled with substantial viands and our souls with contentment, we were at peace with all mankind and with ourselves, and had both time and opportunity to expatiate largely on honesty, charity, and philanthropy; which we did till our goblets (tin cups) were drained of their inspiring contents, and night summoned us to repose. Do not imagine, reader, that as we slept off the effects of our conviviality, we also slumbered away these enlarged and liberal views of ethics, honor, and integrity. No! With a praise worthy propriety, they continued to increase and multiply, until the next favorable opportunity offered for taking advantage of the ignorance and necessity of the Indians, in honorable barter; when, having occasion for them, they could no where be found, but had vanished, and like "the baseless fabric of a vision, left not a wreck behind." Sublime and intellectual as were these enlightened principles of morality, how vastly to be deplored is the fact that they are not more generally and permanently entertained. Alas! for poor human nature! Truth is too abstract and difficult to be comprehended - Justice too holy and intricate to practice - Honor too lofty and profound to be governed by - and all too obsolete and unfashionable to direct - in the vulgar concerns of trade. The most upright principles, the most equitable regulations, the most honorable expedients, all, all retire from their formidable enemy - selfishness; and intrigue is but another name for frailty, when opposed to the potential influence of interest. Such, at least, I have found the world though there are doubtless many, and I have met with some most honorable exceptions.

"Auro pulsa fides, auro venalia jura."

## CHAPTER XLVI

On the last of December, our remaining Indian hunters left us, promising to come back again in a few days, however, they never returned, - and the day passed as usual.

So ends the year 1833, but let it pass in silence to oblivion, with the thousands that have gone before, and must hereafter follow it. Its hopes, its fears, its expectations, can no longer excite or agitate; its perils, and privations, are already half forgotten; and even the severe disappointments it produced, have entirely lost the ability to disturb. Well! with all its imperfections on its head, let it descend to the dark void of by-gone eternity, and we, older if not wiser, will again look forward with eager curiosity, to the events which yet slumber in the bosom of another; with wishes that

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

will probably prove to be vain, with hopes that may be destined to experience disappointment, and with expectations that are doubtless doomed to be blasted; but which are all, notwithstanding their frailty and uncertainty, cherished with fondness, perhaps with folly.

The new year was ushered in with feasting and merriment, on dried buffalo meat, and venison, cakes and coffee; which might appear to people constantly accustomed to better fare, rather meagre variety for a dinner, not to say a feast. But to us who have constantly in mind the absolute impossibility of procuring better, and the no less positive certainty, that we are often compelled to be satisfied with worse, - the repast was both agreeable and excellent; for think not, that we enjoy, daily, the same luscious luxuries of cake and coffee, that announces the advent of 1834; by no means. Our common meals consist of a piece of boiled venison, with a single addition of a piece of fat from the shoulder of the buffalo; except on Sundays, when we have in addition a kind of French dumpling, made of minced meat, rolled into little balls enveloped with dough, and fried in the marrow of buffalo; which is both rich and pleasant to the taste.

Our house was now advanced to putting on the roof, for which we had cut a sufficient number of poles, intending, when properly placed, to cover them with grass, and finally with a coat of earth, sufficient to exclude rain or melting snow, in the spring.

On the 13th of January snow commenced falling on the hitherto uncovered earth, and continued without intermission for five days and nights; when the storm suddenly abated; and we enjoyed fair sunny weather, every day, during the remainder of the month.

In the mean time we had finished and moved into our house, which was rendered extremely warm and comfortable, by having the seams filled with clay, a chimney composed of sticks and mud, windows covered with thin transparent, undressed skins, which admitted sufficient light, and yet excluded the rain and snow; and a floor constructed of hewn slabs. After the building was completed, and the whole family snugly housed in it, the son of Mr. Montour, a young man of about nineteen, and myself employed ourselves in hunting deer on snow shoes; but in consequence of our not having rifles, our sport was quite limited.

We each possessed a fusil brought to this country expressly for the Indian trade, a light kind of gun which is used only by the hunters on our side of the mountains for running buffalo. However, my companion appeared quite expert with his weapon, and made several very good shots with it.

During these rambles we sometimes saw an animal resembling an otter, in size, shape and color, called a pekan or fisher; but for want of a dog to tree them, did not shoot any. We killed several martins, and saw the traces of a large animal of the cat kind, supposed to be a lynx.

At length, my companion and myself, having become tired of hunting, concluded to go to the Flatt-head house, where we knew several families of Indians were wintering, and engage one or two, to come and hunt for us. - We started on the last day of January, passed down Thompson's

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

river about ten miles, and encamped on its margin, in good time to clear away the snow several places in extent, prepare for a bed the branches of the balsam-fir, which we cut from the trees that abound here; and last, though not least, to kindle a fire and heap on the wood in plenty, which we did, and made, what would be called at home, a rousing one. In the evening we dried our moccasins, ate some dried meat, and finally threw ourselves down to sleep, covered by our two blankets; and as the night was pleasant we rested well, warm and comfortable.

Quite refreshed, we rose early next morning, and continued our journey. We went down the river several miles farther, killed a deer and encamped near it, in consequence of a severe storm of rain which commenced in the forenoon and continued all day. We however went out, killed another deer, and trailed it along the snow, with a great deal of difficulty and fatigue, to camp. After reaching it, we constructed a shelter of fir branches, aware that it would not exclude the rain, but in hopes that it would change to snowing. Placing again, a quantity of branches on the ground, we lay down upon them "to sleep, perchance to dream," both of which paid us visits, but neither of them remained long.

Next morning, February 2d, we rose, as the "Velchman" said to his "Vife," "vell vet," being literally drenched to the skin. The rain was still falling very fast but the air was warm, and the snow rapidly diminishing. We had some trouble to kindle a fire, every thing being wet. However, with some splinters of pine full of pitch we finally succeeded, and had soon a good fire. By it we dried our clothes, and then set out in quest of game, although it was still raining. I passed down the river some distance, and fired several shots without effect, but my gun soon became so wet that I could no longer get it off, though I had several opportunities, and was obliged to return to camp. My companion had the same ill luck, and was already there. We each saw the bones of several deer that had been caught and devoured by wolves. The wind was blowing from the south, and the rain still falling, when we again lay down for the night; not as people do in some parts of the world, dry, warm, with plenty of bedding, and a shelter from the storm; but wet to the skin, exposed to the pelting rain on a February night, in a latitude of about fifty degrees north; our only covering a couple of blankets, that would scarcely, if immersed in a fountain of water, have robbed it of a drop, and our bed the bosom of our dear mother earth, only overspread with a few wet branches, where we lay, and a fine coat of melting snow where we did not. The little cool rivulets, trickling down every part of us, and gliding along the skin on our backs, prevented sleep from injuring our delicate faculties, and kept us fully awake to the very romantic situation in which we were placed. However, the air was not very cold, and we rose rather early, if I remember right, for this fact was not recorded in the diary I kept while in the mountains, kindled a fire, and partially dried our clothing. We cooked a shoulder of venison and ate it for breakfast, and then, considerably refreshed, set out again in quest of game. I succeeded in killing a young buck, but my gun soon became wet and useless and I set out for camp, dragging the body of my deer along on the snow. On the way my companion joined me, and having been unsuccessful, assisted me with it to camp. In the evening, we came to the conclusion to abandon, for the present, our design of going to the Flatt-head house, because the snow had become so soft that it was almost impossible to get along with snow shoes; and quite so without them.

By W. A. FERRIS

---

We resolved to go back, and get horses to convey our present supply of provisions to the house. After dark we again lay down on a bed that could not be mistaken for one of down, and in a plight that will not, I presume, excite envy in any one, being precisely similar to our condition on the preceding evening, as it yet rained steadily, though slowly. Do not flatter yourself, reader, that we slept any, though we had been without for the last forty-eight hours; that was a luxury only contemplated in our extremely interesting situation; our enjoyments were entirely intellectual, and we could not abandon the pleasures of reflection even for a season, to waste our precious time in sleep.

The night, though lengthened to a degree that we would not have conceived possible, at last approached to a close.

We kindled a fire, prepared a scaffold to secure our meat from the wolves, placed a handkerchief as a flag above it, to frighten away the ravens and magpies, which are always numerous in this country, slung our blankets, and started for the house. The snow was now reduced to the depth of a foot, but very soft and saturated with water, so that we sank through almost to the ground at every step, even with our rackets on. However, we reached the house after dark, wet through, and nearly exhausted by fatigue; changed our apparel, and having ate a hearty supper, retired to enjoy a good nights rest in our beds. Oh! the luxury of such repose! after having been exposed to a storm of rain, for three whole weary days, and two sleepless nights. None can appreciate it, who have not experienced similar hardships.

It rained all night, but abated at the dawn of day, when

“Up rose the sun: the mists were curl’d

Back, from the solitary world.”

and the mellow rays of the sun again illumined nature with their cheerful splendor.

## CHAPTER XLVII

On the morning of the sixth we mounted two of our horses, and set out for our late encampment, where we had enjoyed so many hours of nocturnal contemplation. - The day was one of the finest imaginable, clear and warm, and every object tinted with the rich lustre of the radiant sun. Late in the afternoon we reached our venison, which remained as we had left it, untouched by beasts or birds. During our progress we had seen several deer, but could not get a shot at them. We kindled a fire and prepared a shoulder of venison for supper; but had no water, and being some distance from the river, could not get any without descending a steep rocky bluff, at the imminent hazard of our lives. We tasked our ingenuity to devise an expedient, and succeeded. Taking the digestive ventricle of a deer, which had previously been cleaned for food, we filled it with snow, and then putting in heated stones, continued the operation until we were at length the lawful

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

proprietors of a whole gallon of water; which auspicious event, was duly celebrated by proper rejoicings.

Having finished these important arrangements, eaten supper, and participated in the refreshing beverage so ingeniously procured; we laid down on the precise spot where we had spent three previous nights, and enjoyed an undisturbed repose.

On the day following we returned to the house, with another deer which we had the good fortune to kill by the way. The weather continued pleasant for some time forward, and on the tenth, two Indian boys came to us from a lake, two or three day's walk to the eastward; where the half-breeds we saw in the Horse Plains, were passing the winter. A child of one of them was burnt to death accidentally, by its clothes, which were of cotton, taking fire. In that quarter there had been as much snow, as in our vicinity. Next day the boys continued on, in quest of some relations at the Flatt-head house. - We told them to send up here one or two Indians to hunt for us, and they should be well rewarded.

We waited until the 17th for the arrival of some, but none came, and I finally resolved to go down and engage one or two myself. Taking my gun, blankets, a pair of extra moccasins, flint and steel, a hatchet, and my snow shoes, I passed down the river about twelve miles, where I found a comfortable bush cabin, and halted for the night.

In the morning the weather was pleasant, and I started down the serpentine course of the stream, hemmed in, on either side, by an indefinite number of high rocky bluffs, or points, with sides almost perpendicular, jutting into the river; on which, I was frequently compelled to climb, at the hazard of my neck. Had I followed a guide, no doubt much fatigue, danger and distance, would have been avoided, but ignorant as I was of the proper route, I was compelled to follow the tortuous course of the river; often to retrace my steps, and seek a more practicable passage, from some abrupt precipice, or perpendicular descent; till at length, quite overcome by fatigue, I sought refuge from the storm - which recommenced, soon after I started in the morning - in a cavern, which extended far beneath an immense rock, and afforded a comfortable shelter. When I halted here it was quite dark, and I was wet and benumbed with cold; however, I gathered a quantity of fuel, and succeeded, after considerable difficulty, owing to the wet condition of every thing I procured, in making a fire, the cheerful blaze of which, illuminated the interior of the cave, and enabled me to discover an excellent spring, a few paces in the interior, precluding thus the necessity of climbing down the steep bank of the river, fifteen or twenty feet to the water's edge, and exposing myself to the risk of falling in, of which there would be great danger. During the day, I had no opportunity to kill any game, nor did I see any signs of deer.

Fasting, and unrefreshed, I set out early on the morning of the 19th, scarcely able to see, in consequence of the snow, which was falling with almost blinding rapidity. I had, however, made but a short distance, when I discovered the traces of two Indians; and proceeding but a little way further, found two squaws in the act of butchering a deer. By signs, they informed me that I would find several Indians a short distance below. - I continued on, till I found about fifteen men

---

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

and boys, warming themselves by a fire of large dimensions. - They were from the Flatt-head house three days since, and came here to hunt; they directed me to follow a small trail, which they pointed out in the snow, and that I would find a house. I traced along the path about half a mile, and came to a large bush cabin.

In the evening the Indians all returned, having had pretty good success in their hunt; and we slept in a circle not more than ten feet in diameter, with a fire in the centre; though there were seventeen souls in all, not estimating in this number two dogs, as their having souls is yet a matter of dispute with metaphysicians. They, however, considered themselves as of us, by insisting on places in the circle; which, notwithstanding sundry kicks, cuffs, and other dogmatical demonstrations of hostility, they retained during the whole night.

In the morning following we started for the house, passed out into the plain, at the mouth of Thompson's river, several miles in extent, and occasionally intersected by woodland. Our party was divided in this place; two of them I despatched to the house of Mr. Montour; and, with the exception of two others who accompanied me, the remainder departed down the river. Under the direction of my guides, I passed across the plain several miles, to the Flatt-head house, situated on the river bearing the same name. This establishment formerly consisted of seven hewn log buildings; but all are now going to decay, except the one inhabited by the Indians who accompanied me. They supply themselves with firewood, at the expense of the other buildings. They are entrusted with the secret of a cache, made in one of those decayed houses, containing the goods which yet remain of Mr. Ermatinger's stock last fall. He would be there shortly, they informed me, on his way to the plains. During my stay at the fort, the Indians went out daily to hunt, and seldom returned unsuccessful.

On the 24th, an Indian by the name of Pillet (so called after the Trader) came and invited me to go and sup at his camp, which he assured me, was not far distant; I gave a ready consent, as he would be greatly obliged by my compliance, and I would not wound the feelings of a Pen-d'orielle by a refusal, if it could conveniently be avoided. We passed down the river some distance, crossed it on the ice, and continued over hills and hollows, through a grove of pines, about four miles, to his lodge; which was situated on the margin of a small stream in the mountain, and was constructed of weeds. Though it appeared better calculated to exclude the warm rays of the sun, than to keep out the cold; a cheerful fire within counterbalanced the evil; and I was seated opposite to a good natured squaw, and two or three children. My considerate host set before me a vessel, filled with the choicest morsels of deer and lynx, both fat and tender, of which I partook freely. The flesh of the latter is far superior to the meat of the deer; and is the best I ever tasted, except that of the female bison. After finishing my repast, I ascertained that he had passed the winter thus far here, with his family, quite remote from any of his people; that he had killed, during his stay here, forty-six deer, two lynxes, two pekans, three martins, one beaver, one otter, and several muskrats. He appeared quite intelligent and devout, prayed for his family before eating; and so pleased me, by his courteous yet dignified conduct, and amiable disposition, that I concluded to remain at his lodge, until the arrival of the trader. Time passed agreeably here, and I made considerable progress in acquiring the Flathead language; in which my kind entertainer seemed delighted to

LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

instruct me.

## CHAPTER XLVIII

On the first of April, Pillet departed for the Cotena trading house, in company with the three men from that place; and on the same day, a half-breed arrived, with information, that his friends would be here in a day or two from the Flatt-head lake.

On the eleventh an Indian reached us in advance of a party coming on from Bitter-root river; he said that three Flatt heads had been killed in that quarter, by the Black feet. The Indian, Pillet; whom the reader will recollect as my kind entertainer a few days since, came here on the twelfth, to receive a present I had promised him in return for his hospitality. He informed me with sorrow, that "Tloght" had been severely wounded in a contest with a lynx, and that he was much afraid he could never recover. I felt really grieved for him, knowing the value of the friend he was likely to lose; but lest the reader should feel an emotion of regret that he might afterwards think misplaced, I hasten to inform him that Tloght, the poor wounded Tloght, was of the canine species. Yes, reader! he was, though one of the noblest of his kind, only - a dog - a large powerful black hound, exceedingly swift, and well trained to hunting. He has often caught and killed deer of the largest kind, unaided; he was also fond of hunting lynx, and animals, very strong and fierce; and indeed, I have been more than once indebted to the courage and agility of Tloght, for a most delicious meal of the flesh of this animal. On one occasion, when Pillet was hunting with his faithful dog; the latter treed a lynx - which the Indian killed, - and there found in the snow beneath the tree, no less than three fine deer, which the lynx had killed, and buried there; all of which, through the sagacity of his dog, became a prize to the hunter. The name - Tloght - which was borne by this fine animal, signifies Fleetest; and is but a literal expression of his speed. Pillet, was a poor Pen-d'orielle, whose sole reliance for the support of his family and himself, was on his dog, and his own exertions. He had no horses, his other dog was quite inferior, and Tloght was the most valuable of his possessions. It will not then be wondered, that the story of this misfortune to the gallant Tloght, should have been the first intelligence communicated to me by the simple savage; or that he should dwell with a melancholy eloquence, on his virtues, and abilities, and deplore his calamity. I sympathised with him, and made him a present of an axe and a kettle, for which he expressed his thanks in terms of warmest gratitude; and we parted, mutually pleased with the interview. I never saw him again.

On the thirteenth I left Flatt head post in a barge loaded with about a ton of merchandise, for the Horse plain, and manned by four stout Canadians; who propelled it with poles where the water was shallow, but when its depth would not admit of this mode of locomotion, recourse was had to paddles. We halted at sundown, opposite to a rock called "Le Gros Rocker". By noon on the following day, we reached House Prairie and encamped with a few lodges of Indians, who were awaiting the arrival of Mr. Ermatinger. In the afternoon, a Canadian reached us from Bitter Root river; he informed me that my fellow trader of last summer, was now with the Flatt heads. Mr. Ermatinger came up in the evening by land, with a quantity of goods upon pack horses. From

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

this period until the twenty-third; Mr. Montour and myself, having purchased an equipment from the Hudson Bay Company; were employed in arranging bales, purchasing provisions, and making preparations for our departure to the Flatt-heads. We crossed over a point of the mountain, - around which the river winds, making a large curve in its course; - to the opposite side of the bend, following the same route, on which we had passed in December last; which we reached on the evening of the twenty-third. Leaving the Flatt-heads, we ascended a small branch, called Wild Horse Creek, to Cammas prairie; crossed over the mountain, and halted on the Arrowstone river, on the twenty-ninth. During our journey, we saw wild horses galloping in bands over the plains, almost daily; several of which, were caught by our Indians and domesticated, with but little trouble. They pursued them, on very fleet horses until sufficiently near to "leash" them; when thus captured, they exert all their remaining force in fruitless endeavors to escape; and finally become gentle from exhaustion. In this situation they are bridled, mounted, and then, whipped to action. Other horses are usually rode before, that they may be induced to follow. If then they move forward gently, they are caressed by the rider; but on the contrary, most cruelly beaten if they refuse to proceed, or act otherwise unruly; a few day's practice seldom fails to render them quite docile and obedient. The process of catching wild horses, by throwing a noose over the head, is here called "leashing," and all Indians in the mountains, as well as those who rove in the plains east of them, are quite expert at it; although in this respect, far behind the inhabitants of New Mexico, who not only catch wild horses, cattle, buffalo, and bears; but even leash them by the feet, when at full speed, so as to render them quite incapable of moving. However, two experienced "leashers" are requisite to the complete capture of a large bull bison, or a full grown grizzly bear, and in both cases the feat is attended with considerable danger.

On our arrival at the Arrow stone river, we found it too high for fording, and immediately commenced making rafts. In the meantime, the squaws sewed up all torn places or holes in their lodges, then conveyed them, and their baggage, to the brink of the stream. The lodges were next spread on the ground and folded once in the middle, the baggage of several families were then placed on one, taking care to put the heaviest articles at the bottom; the lodge was then firmly drawn from every side together at the top, and there strongly fastened by a thong, or rope, so that the whole appeared like a large ball four or five feet in diameter. About half way up the side two long cords or "leashes" (such as they use in catching horses,) were attached, and the ball then launched into the water, which buoyed it up like an egg-shell; several squaws and children then embarked upon it, and secured themselves from falling, by clinging to the cord which held it at the top. After all these arrangements were completed, two naked mounted Indians, seized the long cords between their teeth, and pushed out into the river; making their horses swim and carry them and tow one of their families and baggage at the same time. When I observed them start, I was fearful that the ball would upset and endanger the lives of the women and children; but was agreeably disappointed seeing them turning and returning, as the cords slackened or strained on it, horizontally; until it reached the opposite shore in safety. The river appeared in a few moments literally covered with these balls, all in the same manner constructed; all surmounted by women and children, and each towed over by two Indians on horseback. In short, they all crossed without accident, and transported our baggage over at our request, we having found our rafts quite insufficient. Ermatinger and myself, however, with several of his men, passed over on a raft; but

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

the velocity of the current carried us down a considerable distance with fury, and it was for some time doubtful, where we should be able to effect a landing, but we finally passed so near a point of willows, which overhung the river, that we succeeded in arresting our rapid course by clinging to them, and got to shore, a mile below the landing place of the Indians, at which we all encamped.

## CHAPTER XLIX

On the thirtieth, Mr. Ermatinger and myself, having learned that a party of Flatt-heads were encamped on Bitter-root river some distance above the mouth, set off in a gallop to see them. We arrived about noon, and had hardly gone through the tedious ceremony of shaking hands with them, before a large party arrived from Buffalo, with my old comrade Newell and several "engages" in company. From him, I ascertained that Dripps had received last fall an express from Fontenelle; stating that two of his men had been killed during the fall hunt, supposed by the Blackfeet, that Dripps had passed the winter at the forks, where I left him last November, found buffalo as numerous as during the preceding winter, and had met with no accidents. Late in the afternoon our party arrived, and we all concluded to remain here some time to recruit our horses.

In the evening of the third of May, while a party of the Indians were amusing themselves at a war dance, one of them, a spectator, carelessly resting his chin on the muzzle of his gun, was instantly killed by the unexpected discharge of its contents into his brain. The gun was probably, accidentally exploded by the foot or knee of some person passing in the crowd. On the day following, the corpse was carefully dressed with a clean shirt, and blanket, then enveloped from head to foot, like an Egyptian Mummy, with robes and skins, well lashed around him, and finally committed to the silent keeping of the grave.

At length, our horses having become in good travelling condition, Mr. Montour and myself determined to set out in search of Americans, with whom we had resolved to trade; and started accordingly, on the tenth. Our party was composed of Mr. Montour, his son, two "engages," two Nez-perces, four Pend'orielles, one Cotena, one boy, four women and two or three small children. From the number of dialect in our camp, I am convinced, that a stranger would have been greatly puzzled to determine, which of the five languages continually spoken there, was predominant. However, we understood each other sufficiently well, to prevent mistakes; and the Indians comprehended one another, though they cannot be induced to convey their ideas in any tongue except their own. This custom would in a great measure prevent a proper understanding in many instances, were it not for their numerous signs, which constitute a kind of universal communication, not to say language, at once understood by all the various Indians in the mountains. These signs are made with their hands or fingers, in different positions, with rapidity; and are so extremely simple, that a person entirely unacquainted with them, will readily conceive a great portion of what may be expressed by them.

We passed, nearly southward, up the river some distance to a high point of mountain - projecting in the plain quite to the river's margin. We passed the Sheep Horn, which appears to have been

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

garnished lately, with arrows, feathers, beads, pieces of scarlet, etc. in addition to the ornaments observed there in the fall. These little offerings, the superstitious natives ignorantly imagine will conciliate or gratify, the Deity, whom they suppose to have placed the horn in that singular position, that it may remain an eternal monument of his kind care for them, by continually reminding them, that it is their constant duty to remember and adore him. A confession or acknowledgement of their faith is made manifest, by the contribution of some little trinket or other trifling present. We crossed over the point, and descended into a fine little valley, inhabited by an extensive village of prairie dogs, where we finally halted on the second day about sunset. On the twelfth we crossed the mountain without difficulty, and encamped in the edge of the Big Hole. We saw several forts, made by the Black-feet since we passed here last fall. Next morning the last of our provisions, amounting to but a small piece for each person, was eaten for breakfast. We hoped, however, to kill something soon, and followed the Indian trail across this hole to Wisdom river, on which we halted for a short time, to bait our horses. It commenced raining soon after we started, and continued all day. Notwithstanding the storm however, we set out again, and proceeded to the warm springy where we encamped. The Indians expressed a desire to return back to the village. We were all cold, hungry and wet, and were but scantily supplied with sage roots and small willows for fuel. Not a few faces were chattering like rattle-boxes, and the prospect seemed fair for an uncomfortable night. A dram of Demarara rum, and a pint of hot coffee to each individual, was made to answer for fire and supper, and a night's meditation in a cold wet blanket for lodging, though they were considered by some as rather poor apologies for these common comforts. There was no choice, however; and during the night the drowsy phantom, continually flitting about like an "ignis fatuus," though often near, invariably eluded our grasp, as we essayed to catch it, and having spent the whole night in such fruitless endeavors, we arose, and collected our horses, who had broken loose from their pickets during the night, and rambled down the plain several miles. Having breakfasted, as we last night supposed, we set out, notwithstanding the storm, which still continued with violence; leaving the Big Hole behind us, we bore eastward over high bold hills into the Little Hole, which we followed, gradually turning to the southward, until near night, when we halted at its southern extremity. Our Indians killed during the march a cow that was poor and unpalatable; but were however, more fortunate in the evening, when they brought in the meat of a bull in much better condition. On the morning of the fifteenth we set out in fine spirits, to which a good night's rest, a full stomach, and a fair pleasant morning had severally contributed; and passed over a rising plain south-eastward, through Horse prairie, and halted for the night on a small stream, that flows into the eastern extremity of this plain. We saw during the day large herds of buffalo, killed several in fine eating order, and fared "pretty well considering," as a brother yankee would say, after a good meal. On the succeeding day we passed a high conical mound or spur, which it is, of the mountain, that is visible from any part of Horse prairie, and halted in the evening on the head of a creek, in an open valley, called by the Indians "Sin ko lats sin la," or "Hanged Man's Prairie," from the circumstance of one having been punished in that mode here by his fellows, for some crime several years since. We made that day twenty-five miles, our course south-east.

CHAPTER L

---

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

On the seventeenth, we ascended a bold hill, and came in view of the plains of Snake river, and the "Trois Titons", which bore nearly East; we descended the rough irregular plain, and halted at evening on the waters of the Columbia. The face of the country here is extremely broken, and intersected by small streams, that are separated from each other by high bluff rocky hills. We saw immense herds of buffalo in the plains below, which were covered in every direction by them, as far as the eye could distinguish. We were cautioned by our Indians during the march, to prevent our horses feeding by the way, in consequence of a poisonous herb, resembling a parsnip, which abounds there, and causes death shortly after being eaten.

On the eighteenth, we travelled South-Eastward down to the great plains, and halted on Poison Weed Creek. We observed columns of sand moving in various directions; raised by whirlwinds, though the day was fair and the air still, without a breeze or even zephyr. These singular columns, when passing over the plain with great rapidity, would often suddenly stop, as if to gather more force and a denser cloud of dust, for some moments, revolving round with accelerated velocity; then again progressing slowly, move off in quite a different direction from that in which they run, before halting; with faster flight they would wing their way along, until again they would pause at some sand hill, to increase their speed or condense their substance, and again pass away with volume and vigor apparently renewed; until they would finally dissolve and disappear. The most extensive and remarkable of these whirling pillars, were seen to rise on the hills, at the base of the Sand Mountain, and large quantities of the beautiful fine white sand of which they are composed, were scattered over the plain by these aerial phenomena.

I had heard in the summer of 1833, while at rendezvous, that remarkable boiling springs had been discovered, on the sources of the Madison, by a party of trappers in their spring hunt; of which the accounts they gave, were so very astonishing, that I determined to examine them myself, before recording their descriptions, though I had the united testimony of more than twenty men on the subject, who all declared they saw them, and that they really were, as extensive and remarkable as they had been described. Having now an opportunity of paying them a visit, and as another or a better might not soon occur, I parted with the company after supper, and, taking with me two Pen-d'orielles, set out at a round pace, the night being clear and comfortable. We proceeded over the plain about twenty miles, and halted until daylight on a fine spring, flowing into Cammas Creek. Refreshed by a few hours sleep, we started again after a hasty breakfast, and entered a very extensive forest called the Piny Woods, which we passed through, and reached the vicinity of the springs about dark, having seen several small lakes or ponds, on the sources of the Madison; and rode about forty miles; which was a hard day's ride, taking into consideration the rough irregularity of the country through which we had travelled.

We regaled ourselves with a cup of coffee, and immediately after supper lay down to rest, sleepy, and much fatigued. The continual roaring of the springs, however, for some time prevented my going to sleep, and excited an impatient curiosity to examine them; which I was obliged to defer the gratification of, until morning; and filled my slumbers with visions of water spouts, cataracts, fountains, jets d'eau of immense dimensions, etc. etc.

---

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

When I arose in the morning, clouds of vapor seemed like a dense fog to overhang the springs, from which frequent reports or explosions of different loudness, constantly assailed our ears. I immediately proceeded to inspect them, and might have exclaimed with the Queen of Sheba, when their full reality of dimensions and novelty burst upon my view, "The half was not told me."

From the surface of a rocky plain or table, burst forth columns of water, of various dimensions, projected high in the air, accompanied by loud explosions, and sulphurous vapors, which were highly disagreeable to the smell. The rock from which these springs burst forth, was calcareous, and probably extends some distance from them, beneath the soil. The largest of these wonderful fountains, projects a column of boiling water several feet in diameter, to the height of more than one hundred and fifty feet - in my opinion; but the party of Alvarez, who discovered it, persist in declaring that it could not be less than four times that distance in height - accompanied with a tremendous noise. These explosions and discharges occur at intervals of about two hours. After having witnessed three of them, I ventured near enough to put my hand into the water of its basin, but withdrew it instantly, for the heat of the water in this immense cauldron, was altogether too great for comfort, and the agitation of the water, the disagreeable effluvia continually exuding, and the hollow unearthly rumbling under the rock on which I stood, so ill accorded with my notions of personal safety, that I retracted back precipitately to a respectful distance. The Indians who were with me, were quite appalled, and could not by any means be induced to approach them. They seemed astonished at my presumption in advancing up to the large one, and when I safely returned, congratulated me on my "narrow escape." - They believed them to be supernatural, and supposed them to be the production of the Evil Spirit. One of them remarked that hell, of which he had heard from the whites, must be in that vicinity. The diameter of the basin into which the water of the largest jet principally falls, and from the centre of which, through a hole in the rock of about nine or ten feet in diameter, the water spouts up as above related, may be about thirty feet. - There are many other smaller fountains, that did not throw their waters up so high, but occurred at shorter intervals. In some instances, the volumes were projected obliquely upwards, and fell into the neighboring fountains or on the rock or prairie. But their ascent was generally perpendicular, falling in and about their own basins or apertures. These wonderful productions of nature, are situated near the centre of a small valley, surrounded by pine covered hills, through which a small fork of the Madison flows. Highly gratified with my visit to these formidable and magnificent fountains, jets, or springs, whichever the reader may please to call them, I set out after dinner to rejoin my companions. Again we crossed the Piny Woods, and encamped on the plains at Henry's fork.

## CHAPTER LI

Resuming our journey early on the morning of the twenty-first, we crossed Henry's Fork, and continued on till we arrived in the vicinity of Pierre's Hole; where the country assumes a rolling

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

appearance, and is dotted with an occasional grove of aspen trees. Entering this valley, we passed over to Pierre's fork, near which we discovered the trail of our company, and following it about three miles, at our rapid pace, overtook them as they were on the very point of encamping. Mutual congratulations over, I retired much fatigued to rest. From Mr. Montour, I learned that the hunters had killed several bulls, a bald eagle and a goose. They were greatly annoyed by suffocating clouds of dust, which arose from their horses' feet, filled their lungs and eyes, and the air around them, for some distance.

On the twenty-second, we remained to dry meat, which was prepared and packed, ready for transportation, by evening. Next morning we pursued our journey, passed South-Eastward to Pierre's Hole, and halted in the mountain, on a trail leading over it. We killed, during our march, five buffalos and an antelope. One of our Indians found in Pierre's Hole, a pair of boots, and some articles of clothing, that had evidently been there a long time, on the prairie; probably lost by some white man during last year. On the twenty-fourth we ascended the mountain, crossed an immense snow bank with extreme difficulty, descended the plain, passed through Lewis's rim, though so high that our horses were obliged to swim, and halted on a small stream several miles east of the river. Leaving the river on the twenty-fifth, we passed along this valley to the South-East point or extremity, when we reached a fork of this stream, and travelled up its narrow bottom, flanked on either side, at the distance of less than half a mile, by lofty mountains; climbing occasional hills or bluffs, which project in some instances quite to the river's margin; and halted at the commencement of the narrows, formed by the mountains closing upon the stream, until barely sufficient space remains for its compressed channel. We here found an encampment, made by a large party of whites, some ten days since, on their way from Salt river to Green river; I supposed it to have been made by Dripps, who wintered on Snake river.

On the twenty-fifth we passed, with our usual hazards and difficulty, though fortunately without accident, through the tortuous windings, abrupt elevations, and precipitous descents, of the Narrows, out of which we were glad to emerge; and entering Jackson's Little Hole, encamped on a small branch of this fork, at the East side of the valley. Antelopes and buffalos were found here; and an encampment made by the company whose traces we observed the day previous. On the twenty-seventh we ascended the steep, rough, aspen covered hill, forming the east boundary of this hole, and passing down on the opposite side, came into the plains of Green river. We now directed our course towards "Bonnyville's Folly," or "Fort Nonsense," as it was more frequently called; but had proceeded a few miles only, when we discovered two Indians so near us that they could not hope to escape though they betrayed considerable anxiety at our approach. When we reached them, however, their fears were quelled, we learned that they belonged to the party of Dripps, who were encamped on a small stream in the Wind mountain, east of Green river. On hearing this information, we turned our course to that stream, which we crossed without accident; and halted after sundown in the willows, on the border of a small branch; after a hard march of thirty miles, at least. Early the next morning we set out, found the trail of Dripp's party, followed it ten miles to a small stream, and then found an encampment, which had been that morning evacuated. We continued to pursue the trail, over a rough, rocky, hilly country, and finally descended to the margin of a fine little lake, about ten miles long and one broad; down which,

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

the trail passed to the western side, and finally conducted us to Dripps' encampment, in a narrow bottom, bounded on one side by a high, rocky, bold hill; and by the lake on the other; our course here, from Green river, was nearly East.

From Mr. Dripps we learned, that Fontenelle and others were in the Eutaw country, to the Southward, trapping still. This lake, fed by springs, constitutes the source of the Western branch, of the New Fork. The trappers informed me that there were several other small lakes in this side of the mountain, on the sources of the other branches of this fork. We remained here for several days, awaiting the return of some small parties of trappers. On the thirty-first, we made a short march to the outlet of this lake, for better grass, and killed on our way several buffalos. On the succeeding day, June the first, we collected all our horses together at camp, and blooded them indiscriminately, to make them thrive, and render them more healthy. This operation is performed every spring, and is considered quite necessary. Indeed horses who are bled, invariably fatted faster, and become strong, hardy, and active, much sooner than those who are not. June, the second, a party of trappers returned, who had been out since last fall; several of them saw Fontenelle this spring, in the neighborhood of Bear river. He had lost one man, killed, by the name of CHEVALIA. We moved several times, short distances parallel with Green river, and finally went to it. In the mean time, an express was despatched to Fontenelle, and several small parties of trappers, returned from various sections of the country, and related their adventures and escapes. The weather had been pleasant, we seldom failed to kill plenty of buffalos when we made an effort to do so, and we therefore fared and frolicked, when we chose, agreeably.

## CHAPTER LII

Several men bitten by a rabid wolf - Arrival in camp of two Eutaw squaws from the Snakes - Wild currants, goosberries, etc. - Mexican Indians

About this time we learned that two persons, who were bitten by a wolf, at last rendezvous, had died or disappeared suddenly. The circumstances during the hurry and bustle of business at rendezvous were by mistake not recorded in my journal, though they produced great excitement at that time. They were as follows: whilst we were all asleep, one night, an animal, supposed to be a dog, passed through camp, bit several persons as they lay, and then disappeared. On the following morning considerable anxiety was manifested by those who were bitten, under the apprehension that the animal might have been afflicted with the hydrophobia, and several of them took their guns and went about camp, shooting all suspicious looking dogs; but were unable to determine that any one was positively mad. During the day information came from the R. M. F. Co., who were encamped a short distance below us on the same side of the river, that several men were likewise bitten in their camp during the night, and that a wolf supposed to be rabid, had been killed in the morning. The excitement which this affair originated, however, gradually subsided, and nothing more was heard of mad-dogs or wolves. In the fall subsequent, one the persons who had been bitten, a young Indian brought from the council Bluffs by Mr. Fontenelle, after having given indications of the hydrophobia, disappeared one night from camp and was heard of no

---

more. The general impression being, that he wandered off while under its influence, and perished. Another individual died of that horrible malady, after having several violent spasms, while on his way from the mountains to St. Louis, in company with two others. Whether there have been any more instances of the kind, I am not informed.

On the twenty-fourth, two women arrived at our camp, in a starving condition. One of them had an infant at her breast, and was the wife of Cou-mar-ra-nap, a famous Eutaw chieftain; the other was a young, unmarried girl, of the same nation. They were taken prisoners by a party of Snakes, during the early part of the summer, and were conducted to the village, where they were condemned to die; but were saved by the timely interference of Capt. Walker, who humanely purchased their lives, and sent them to overtake us, as the surest means of getting to their own country in safety. They had followed our camp twenty days, living upon roots and berries, and had avoided the trails and most frequented places, for fear of again falling into the hands of their enemies. The Snakes declared war against the Eutaws last fall, for killing several of their tribe, who were caught in the act of stealing their horses. A few days after capturing the women, they stole the horses of a party of hunters, from the Rio del Norte, on a stream called the Euruta, and returned to their village with the booty.

On the twenty-ninth we passed southward over a rolling country, covered with cedars; and halted at a small stream, that discharges itself into Green river. The borders of this creek were covered with bushes, laden with fruit, which was now ripe. There were black, white, yellow and red currants, large as cherries; though to the taste, quite inferior to the common garden currants, being less sweet, and more acid; plump goosberries of a large size, likewise tempted the eye, but were equally sour. The bushes that bear them, frequently attain the height of eight or ten feet, in the rich mellow soil along the rivers; and at this season, are bent to the ground by the loads of fruit, with which they are encumbered. There was also a species of small tree, not unlike the hawthorn, armed with thorns, and covered with blue or lead colored leaves, which was completely enveloped with berries, either red or yellow, about the size of allspice or pepper grains. This fruit is extremely sour, and is commonly called "buffalo berries." They are prized by the Indians for abundance, surpassing by far, all other productions of this kind, and quantities of them are collected by the squaws for food. It may be remarked, in relation to goosberries, that we have frequently found them in other parts of the mountains of a delicious flavor, as well as of a very large size.

On the third of September, being within the territory of Mexico, three of the wild natives of this region, ventured into our camp. They were stark naked, and betrayed almost a total want of intellect, which was perhaps the result of extreme wretchedness and misery, to which they are continually exposed, from infancy until death. They spoke a tongue perfectly unintelligible to us, and evidently not well comprehended by each other; neither could they understand any of those expressive signs, and gestures, by which other Indians convey their ideas, with perfect success. Severe hunger, however, instinctively taught them to make us understand, that they wanted

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

something to eat, which indeed was all they could communicate. We gave them the carcasses of two beavers, together with the head and feet of a dog, which they warmed, a few moments, over the fire, and devoured with wolfish avidity. A Nezperce with our party, regarded them attentively, until they had finished their repast, when he arose, and with evident marks of astonishment, in his countenance, exclaimed "why my horse has got more sense, than those Indians!" It may be well to remark in this place, that the different nations in the Rocky Mountains are, for the most part, confined to certain districts, called by them, their own country; within which they rove, and become familiar with every trifling object; but are almost entirely ignorant of the country, or people, beyond their limits. The Indian who made the remark above, was born on one of the sources of the Columbia, but was not aware of the existence of this nation, until we brought him among them.

On the fourth, four of these Indians, who call themselves "Sann-pitch," came into camp, bringing to my surprise, several deer skins. I say, to my surprise, because from the hasty opinion I had formed yesterday, I imagined deer, to be the more intelligent animal of the two, and should have expected them with skins of the Sann-pitch, marching up to trade, almost as soon. However, in justice to the superiority of the latter, skins they brought, and made us understand, by simply pointing to the skins, and then toward our horses, that they wanted one of them. We quickly informed them, that our horses could not be disposed off for deer skins. They manifested a great deal of disappointment, and finally offered them for provisions, but were equally unsuccessful. These are by far, the most miserable human beings we have ever seen. The barrenness of their country, and scarcity of game, compel them to live by separate families, either in the mountains, or in the plains. In the latter, they usually select the most barren places to encamp, where there is apparently nothing but sand, and wormwood or sage. Here, the women and children are employed in gathering grasshoppers, crickets, ants, and various other species of insects, which are carefully preserved for food, together with roots, and grass seed. From the mountains, they bring the nuts which are found in the cores of the pine, acorns from the dwarf oaks, as well as the different kinds of berries, and the inner bark of the pine, which has a sweet acid taste, not unlike lemon syrup. In the mean time, the men are actively employed in hunting small animals, such as prairie dogs, squirrels, field mice, and larger animals, or birds, which fortune some times, places within the reach of their arrows. They likewise take fish, with simple instruments of their own invention, which will be hereafter described.

The Sann-pitch are generally quite naked, though in some instances a small piece of skin, is fastened before them. The women all wear a piece of skin, reaching from the middle, to the knees, and instances are not uncommon, where they possess a complete leathern shirt, but no other article of dress. They are extremely shy, and approach us with evident fear and caution. If in the plains, they conceal themselves from our approach, by crawling into the sage, or into gullies; but if discovered in the open prairie, where flight would be useless, they throw themselves flat upon the ground, in hopes of being mistaken for a rock, or other unusual appearance; which practice generally succeeds, if they were not discovered before putting it into effect.

## CHAPTER LIII

A bed of salt - Indian arrows - Brutal conduct of a hunter towards an aged Indian - Chanion of White River.

On the eight, I set out with others to procure salt, at a place discovered by our hunters yesterday. We passed three miles down the river, and found the salt in a slough on the west side of it. It was found on the surface of a black stinking mire, fifty or sixty paces in circuit; the upper strata was fine, and white as snow, to the depth of two inches; beneath which, was a layer of beautiful chrysalis, to the depth of five or six inches, that rested on the surface of the mire. We slowly sank into the latter to our knees, whilst scooping up the salt, and then changed places, for we could scarcely extricate ourselves at that depth; and concluded that if we should remain long enough in the same spot, we would at length disappear entirely. This opinion was corroborated by thrusting down a stick four feet in length, without meeting any resistance, more than at the surface. I gathered about a half bushel in a few minutes, and returned with my companions, who were equally fortunate, to camp.

\*\*\*\*\*

I observed during our stay on the Sarah, that the Indians had two kinds of arrows in their quivers, one of which was made of a single hard stick, feathered and pointed with transparent flint, artfully broken to a proper shape, and firmly fastened to the end of the arrow with sinews and glue. The others were made of a hollow weed, having six or eight inches of hard wood nicely inserted, and firmly glued into it; to the end of which the stone point is fastened, and is poisoned with venom from the fangs of a rattle snake. Hence the slightest wound from them is certain death. These arrows may be known at sight, by the natural joints of the cane; and the artificial one, where the wood part is inserted. They are not solely used in battle, as some have asserted; but are equally advantageous in hunting, for the slightest wound causes the animal to droop, and a few moments places it within the power of the hunter. The flesh of animals thus poisoned, is harmless in the stomach.

On the nineteenth, we continued northward, over a gently ascending plain, and encamped on a small stream, that flows into the Eutaw lake. During our march we encountered a feeble old Indian, whose age and infirmities, if they could not have insured him respect, ought at least to have shielded him from harm. Innocent and inoffensive, this miserable old man - destitute of the means of offense, and engaged in the harmless occupation of gathering roots, his only apparent means of subsistence, which he deposited in a willow basket on his back - was overtaken by one of our heartless comrades, who, having had a valuable horse stolen on the seventeenth, in a most unfeeling manner, inflicted a severe blow upon his head, with his gun. For once the fortitude of the Indian yielding to the frailty of nature, he gave utterance to a scream of agony, which was distinctly heard by all of us, though far in advance of them. I galloped back as soon as possible, and saw him covered with blood, while a few paces distant stood the hunter in the act of loading his gun, with the avowed intention of taking his life. I easily persuaded him, however, to leave the In-

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

dian without further molestation, and he accordingly proceeded with me to the company, heartily ashamed of his brutal conduct. Similar instances I am happy to say, are of rare occurrence.

On the twenty-ninth, we entered a narrow passage between two formidable walls of cut rocks, called by the hunters the Chanion of White river; which rose, perhaps, from one to two hundred feet in perpendicular height, and sixty or eighty yards asunder. This narrow space is chiefly occupied by the river, winding from one side to the other, as if enraged, at being thus confined. The walls are seldom accessible, and are surmounted in some places, by singular peaks of weather-worn sand stone resembling, when beheld at a distance, domes, turrets, steeples and towers, so strikingly that a single glance is sufficient to excite in the mind of the spectator, the idea of a flourishing village, and the vicinity of a civilized country. But, alas! a nearer and more careful view, dispels the pleasing illusion, changes those spires to solitary desolation, and turns the lovely creations of imagination, to naked cliffs and sandy deserts, far, far from the inspiring presence of home, and the affectionate relations of social life.

## CHAPTER LIV

Arrival to camp of twenty families of Eutaws - An Indian Chief - Several horses stolen from the camp, and attendant circumstances - Shaving materials, etc. found - Murder of a squaw by her husband.

On the first of November, we were joined by twenty families of Eutaw Indians, who were returning from Buffalo, having loaded their horses with dried meat. They had several stolen, whilst they were engaged in preparing their meat, for transportation, which induced them to retreat expeditiously, fearing an attack from their enemies, the Snakes. This was effected with so much rapidity, that they packed their horses unskillfully, and nearly ruined them; for, in consequence of such neglect, many of them had their backs completely skinned.

A party of Indians also came in from the southward on the fourth, and we immediately opened a brisk trade with them for furs, deer skins, etc. The principal chief is a hardy warrior, about forty years of age; evidently superior both in a mental and physical point of view, to any of his followers. His hair, which is of uncommon length, he wears coiled up in a knot on his forehead, secured by a thong; but differs from his tribe in no other particular, either of dress or ornament. The expression of his countenance is mild and thoughtful, and rather pleasing than otherwise. His keen wandering eye bespeaks intelligence, and his demeanor is dignified and impressive. He is reputed the bravest man of his nation; and has won, on the sanguinary field more trophies, than any of his warriors. He is known to the hunters by the name La Toque, which he has received from our French comrades, probably because his hair, has some resemblance to a cap. His followers do not steal, but are continually loitering about our encampment, curiously examining every thing they see, and never fail to ask for every thing they examine; hence they are even more intolerable, than some of their less honest neighbors.

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

On the tenth, we were alarmed early in the morning by the cry of "robbers," and immediately sallied out to collect our horses, - twenty of which belonging to the Indians were missing. We always fastened ours in camp at night, whilst the Indians frequently permitted theirs to run loose, and were consequently the sufferers. Unfortunately, one of our men had discovered maces of Indians, some distance below our encampment last night; but neglected to inform the chief, and thereby put him on his guard. The consequence of this neglect on our part, was a universal belief among the Indians that the robbers were Snakes, with whom they knew we were friendly, and that we had seen and given them the requisite information, to the accomplishment of their design. No arguments of ours could prevail against this opinion, which was based upon a circumstance that occurred last fall in the camp of Fallen and Vanderburgh. They were encamped at that time on a river thirty miles north of us, and had been accompanied by a family of Eutaw Indians, during their hunt, who intended to remain with them until spring. But on reaching that river they were joined by a party of Snakes, who watching a favorable opportunity, decoyed a young man of the Eutaw family from camp, and slew him. The whites whose interest taught them to remain friendly with both nations, refused to tend their aid to avenge the deed; and the exasperated father, with his wife, and children, left them the same night; but was pursued and overtaken by the Snakes, who massacred them all. The particulars of this murder the Eutaws heard from ourselves, but blaming the whites at large for the fault of a few, in permitting so flagrant an outrage on the rights of hospitality, to pass unpunished, they could view us in no other light, than as accomplices. Hence they doubted not, that we had formed an alliance with their enemies, to effect their destruction. Fully persuaded of this, the chief instructed the women to saddle their horses, and be ready to fly into the mountains, should his fears be confirmed; whilst himself and many of his boldest followers, set out in pursuit of the robbers. Several of our men, who wished to prove their suspicions groundless, accompanied them; but returned in the evening with some of the Indians, having continued the chase to Bear river, thirty miles to the northward; where the course taken by the robbers proved them to be Arrappahoes, with whom we were at war as well as the Eutaws. This fact immediately restored confidence between us, and our men having no other object in view, returned to camp; but twenty of the Indians still followed on.

On the seventeenth, some of the Indians returned from hunting with a razor, shaving box, two shirts, and a blanket, which they found near a small stream. They had lain exposed to the weather for months. But of their being found here, there were no marks on either of these articles, by which the mystery could be unravelled.

On the evening of the twenty-seventh, one of the Indians shot down his wife in a paroxysm of passion, for some trifling misdemeanor, and having thus satiated his demoniac rage, fled. The squaws immediately joined in a heart rending lamentation, and the men rushed out of their lodges, to avenge the deed. For some minutes the camp presented a scene of clamor and confusion, that bade fair to end still more seriously. The lodge of the murderer disappeared in a moment, his property was quickly destroyed by the enraged friends of the deceased, and his horses would have shared the same fate, had they been in the care of one less resolute than the chief, who stood beside them gun in hand, and forbade their approach on the peril of their lives. No one dared to oppose the haughty chieftain, who had set them all at defiance, and the outcry soon subsided,

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

though had the wretch who perpetrated the deed, fallen into their hands, I am confident he would have been torn to pieces in a moment.

## CHAPTER LV

Conmarrowap, a noted Chief of the Py-Euts.

On the twenty-third, Conmarrowap, a celebrated Chief, with his wife, and ten warriors, came into camp. This noted personage is a Eutaw by birth, but forsook his own people and joined the Py-Euts, after he became a man, and by his prowess and bravery, acquired such an ascendancy over the tribe of his adoption, as to become their principal chief. He has rendered himself as an object of terror to them, by an atrocious custom of taking their lives, for the most trivial offenses.. He is the subject of conversation every where among the Eutaws, by whom he is universally detested; all agreeing, that he deserves death, but none can be found daring enough to attempt its accomplishment.

He is the only Indian in the country, who ever dared to chastise a white man, in his own camp; and had not the partisans of the hunter interfered, his soul at that time would have taken its flight to eternity; for the high spirited trapper could not brook from the haughty Chieftain, an insult, that would have awakened a spirit of vengeance in the breast of the meanest Indian, and immediately leveled his rifle at the heart of his intended victim, who, perhaps for the first time in his life, betrayed emotions of fear. However, the comrades of the justly exasperated hunter, dashed his gun aside, and prevented the execution of a deed which would certainly have been avenged by the Indians; though the poor trapper shed tears of regret for the loss of an opportunity of appeasing his wounded honor, and at the same time punishing a savage tyrant. This evil genius once fell in with a party of trappers, some of whom are now present, and bored his finger in their ears, to make them more readily comprehend him; but I doubt whether this treatment rendered their understandings more susceptible to Eut -gibberage afterward. I heard one of these Indians seriously ask a hunter, with whom he was conversing, to allow him to spit in his ear, assuring him that if he would permit it, he must inevitably understand the Eut language thence forward; but he seemed more inclined to laugh at the folly of the proposition than to submit to the mode of instruction.

Conmarrowap's wife and her companion, after leaving us last Summer, fell in with the relations of the latter, who unhesitatingly killed and devoured the horse, we had given to the former. Leaving the inhospitable relations of her companion, she proceeded on, and reached her husband some days after. He had been sick during several weeks, and for some time was considered past recovery; but survived, and as soon as sufficient strength returned, set out to visit those who had robbed his wife. An altercation ensued, which resulted in the death of the man who was at the head of the family that had injured him though not until he had received a slight wound from an arrow himself. He lost all his horses last summer, when his wife was taken prisoner, yet he now had ten of the finest we have ever seen among the Indians. He says they were presented to him, by the passing traders from Toas to California; but it is much more probable that he took them by

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

force, as he has already done to our knowledge in many instances. All the hunting parties from Toas look upon him as a terrible fellow, and submit to his insults, which they dare not resent; although I have seen one or two individuals, who have sworn to take his life, the first opportunity that occurs, when they may not endanger themselves. During our stay on this river, one of the log huts was occupied by those trappers from Toas, who joined us last fall. They brought with them from the Sources of the Eurata, the flesh of several fine deer, which was piled upon some branches, in a corner of the room. Conmarrowap's wife entered the house one day and asked for some meat; but as the men did not immediately attend to her request, she departed without any; in a few moments Conmarrowap himself hastily entered, and without speaking, applied his herculian strength to tossing the meat to and fro, until he found the best deer in the lot, which he shouldered and with it disappeared; whilst those men sat in mute astonishment, nor dared to cast a glance of dissatisfaction towards him; though he was armed with nothing but a frown, from which they shrunk back with awe, having before felt the consequences of his displeasure. There is nothing uncommon in the appearance of this Indian, save a stern and determined look; he is now slender, of a middle stature, and has a dark, keen and restless eye; but before his sickness, was quite corpulent, a rare circumstance among Indians. There is less in his dress and manners, to distinguish him from his fellows, on ordinary occasions. He appears to be about forty years of age.

## CHAPTER LVI

## A Winter Encampment

The season having become far advanced, we pitched quarters in a large grove of aspen trees, at the brink of an excellent spring that supplied us with the purest water, and resolved to pass the winter here. Our hunters made daily excursions in the mountains, by which we were half surrounded, and always returned with the flesh of several black tail deer; an animal almost as numerous as the pines and cedars among which they were found. They frequently killed seven or eight individually, in the course of a day; and consequently our encampment, or at least the trees within it, were soon decorated with several thousand pounds of venison. We passed the time by visiting, feasting, and chatting with each other, or by hunting occasionally, for exercise and amusement. Our camp presented eight leathern lodges, and two constructed of poles covered with cane grass, which grows in dense patches to the height of eight or ten feet, along the river. They were all completely sheltered from the wind by the surrounding trees. Within, the bottoms were covered with reeds, upon which our blankets and robes were spread, leaving a small place in the centre for the fire. Our baggage was placed around at the bottom of the lodge, on the inside, to exclude the cold from beneath it, and each one of the inmates had his own particular place assigned him. One who has never lived in a lodge, would scarcely think it possible for seven or eight persons to pass a long winter agreeably, in a circular room, ten feet in diameter, having a considerable portion of it occupied by the fire in the centre; but could they see us seated around the fire, cross legged like Turks, upon our beds, each one employed in cleaning guns, repairing moccasins, smoking, and lolling at ease on our elbows, without interfering with each other, they would exclaim, In-

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

deed they are as comfortable as they could wish to be! which is the case in reality. I moved from a lodge into a comfortable log house, but again returned to the lodge, which I found much more pleasant than the other. These convenient and portable dwellings, are partially transparent, and when closed at the wings above, which answer the double purpose of windows and chimneys, still admit sufficient light, to read the smallest print without inconvenience. At night a good fire of dry aspen wood, which burns clear without smoke, affording a brilliant light, obviates the necessity of using candles. Our little village numbers twenty-two men, nine women and twenty children; and a different language is spoken in every lodge, the women being of different nations, and the children invariably learn their mothers tongue before any other. There were ten distinct dialects spoken in our camp, each of which was the native idiom of one or more of us, though French was the language predominant among the men, and Flathead among the women; yet there were both males and females, who understood neither. One would imagine that where such a multiplicity of tongues are spoken, a confusion, little short of that of Babel, would naturally ensue. However, it is not the case. Men who find it difficult to convey their ideas to each other, through ignorance of their opposing dialect, readily make themselves understood by avoiding difficult or abstract expressions, and accompanying their simple speech with explanatory gestures.

## CHAPTER LVII

An attempt to pass through a frightful chasm - Battle offered to a grizzly bear - Profound cogitations of a grey wolf

On the thirtieth of March, we entered the chanion of a deep creek, and attempted to pass through one of the most frightful chasms, perhaps, in existence. On either side of the narrow space at the bottom, which was thirty paces in width, huge perpendicular walls arose, to the apparent height of a thousand feet, and were surmounted by large pines, which appeared but as twigs from the abyss beneath. We had not penetrated far beyond the entrance to this murky cave, whose gloomy vaults have probably never been explored by mortal footsteps; and whose recesses are veiled in a shroud of everlasting night, when we found it impossible to proceed further with our horses, in consequence of innumerable obstacles by which the passage was obstructed. Dismounting, I forced my way some distance over banks of snow, that entirely bridged the stream - huge fragments of immense rocks, which had been precipitated from the summit of the walls, and crumbled to pieces on the stony pavement below - lofty pines that had been torn up by descending avalanches, which accumulate on the steep side of the mountain, until even the gigantic trees can no longer sustain the superincumbent pressure of the mighty mass, that gliding down resistlessly sweeps all before it, over the eternal cliffs, and thundering thence with accelerated fury, mingles in one chaotic heap of shapeless ruins below. - Deterred from advancing further by the sublime terror of the surrounding scene, and the absolute impossibility of accomplishing my design, I stood for a few moments in mute astonishment and wonder - profusely showered by the ever-dropping spray from elevated regions of perpetual snow - beside a stream, whose foaming current has for ages dashed impetuously along its rock-bound channel - gazing in awe upon the dangers that had already stripped of branches a few lonely monarchs of the soil, that towered in solitary grandeur

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

here and there, and seemed to mourn the dismal desolation scattered around and still threatened destruction. Turning my eyes aloft, the view was menacing indeed. Overhanging trees and rocks, and banks of snow, were poising on the verge of this dire descent, and on the very point of tumbling off: perhaps Imagination or dismay made them appear to tremble, but so they did. Shivering with dread, I turned from a place, so pregnant with dangers, and hastening forward, heard, as I returned, the deafening sound of timber, stones and snow, hurled down the giddy heights from crag to crag, into the gulph below. Rejoining my companions who had heard appalled those tremendous concussions, we gladly abandoned a spot so dreary, and proceeding to the plain halted on a portion of the prairie, that was covered with dry sticks; having been the camping ground of a party of Indians, a year or two since.

\* \* \* \* \*

On the 14th April, having placed a rag at the extremity of a stick, planted in the ground near camp, to prevent the wolves from rifling it, we all set out to combat a grizzly bear that had buried the carcass of an animal, some distance up, near the margin of the river, and had put Blackface to flight last evening whilst heedlessly approaching his prey. We reached the spot after riding four miles, and opening a little mound of fresh earth, discovered and disinterred the entire carcass of a large elk, recently killed. We remained some time awaiting the appearance of the bear, but our numbers probably deterred him from leaving the thicket in which we supposed he was concealed, being but a few paces from his charge, and from which his traces led to and fro. However, we returned disappointed to camp, where every thing remained as we had left it, though a large grey wolf sat upon his haunches a short distance off, having evidently (as an Indian would express it) two hearts, for and against, helping himself to some of the fresh elk meat that lay exposed to view with perhaps for him the same attractions, that a roast pig would have had for one of us. His cogitations on the propriety or expediency of charging up to the luscious store, and committing larceny, in open defiance of the fearful banner waving over it, being interrupted by our approach, his thoughts immediately turned into a new channel, and he came at once to the sage conclusion, with wonderful alacrity and sagacity, that -

“He who coolly runs away,

May live to steal another day,”

and proceeded to put the decision into practice, without unnecessary delay.

## CHAPTER LVIII

A party of hostile Indians out-generalled, etc.

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

\* \* \* \* \*

About two hours before sunset, we observed a large party of Indians running about a mile in advance of us, evidently seeking a situation favorable to entrap us, by an ambush. They were scarcely perceptible, owing to the vapors rising from the damp plain; and as they had taken a position near which we must inevitably have passed, it was a lucky chance, or providence, that saved our lives by enabling us to anticipate their design. We halted apparently as if we had not discovered them, at a large cluster of willows, on a small stream flowing into Bear river: we turned out our horses to feed, made a rousing fire, cooked and eat a hearty supper, and scattered our baggage carelessly about, to give our camp an unconcerned appearance, though every eye was bent on some point, ravine, or hill, watching the appearance of the enemy. - As soon as it became dark, we caught our horses, packed up, and moved off, with as little noise as possible. We discovered the Indians at the distance of a mile, east of us in a deep ravine, around a small fire, busily dodging about, evidently making preparations to steal our horses and attack us. We smiled to think of their disappointment, when they should find themselves outwitted, and that their expected prey had slipped through their fingers; and congratulated ourselves on the complete success of our stratagem. We laughed in our sleeves as we passed them, and chuckled with glee, as soon as we were out of danger, at the blank countenances they would exhibit at daylight, when they would find that we were really gone. The night was dark, and we pursued our way some time after midnight, guided by the polar star, from which, and a few other dim ones, what light there was, came twinkling down. We halted a short time, but daylight found us again moving, on the morning subsequent, on the highest part of the plain between Bear and Snake rivers; from which we discovered a large smoke near the latter stream, and supposing it to proceed from the camp of Vanderburgh, we continued on until we found ourselves in a Snake village. These Indians do not often kill whites in their own camps, though they have done so, in instances where they thought they would never be exposed. A man was at this time in one of our parties, who was wounded by and escaped from them. - As they are esteemed the most treacherous, cunning and vindictive Indians in the mountains, we did not feel ourselves safe with them, and continued our progress, satisfied that the party we saw last night belonged to this village. After enquiring where Vanderburgh's camp was situated, they denied having any knowledge of whites on this stream, but persisted in asserting that a company was yet on Bear river. We contradicted their statement, and pointed to the ground where the trail of Vanderburgh's party passed along near their village. They affected surprise, and declared that they had not before perceived it; though the lying, cunning rascals always examine every part they visit, and observe the most minute appearances, wherever they go. We followed the trail to Snake river, a few miles eastward, over several ranges of hills, but the country where he had promised to remain was covered with buffalos, and we concluded that he had gone to Green river; still we continued to follow the trace, passed through the timbered bottom, and reached the margin of the river at the ford, where we halted to await the arrival of one of our men, who had been allowed to go below, and ascertain if the company had left this river.

Shortly after we halted, about twenty Indians came rushing towards us, and yelling like so many devils. We seized our guns and sprang behind the trunk of a large fallen cottonwood tree; not

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

---

doubting that the villains would attempt our lives. However the principal warrior, who was the ugliest looking man among them, dismounted, and made signs to us to come and smoke. We did so, and he enquired who were the two Indians with us; we made him understand that they were Delawares, because the Shawnees had fought and killed a party of several Snakes last summer, which they well knew; and to have acknowledged them Shawnees would have exposed them and ourselves to instant death; for they would have been butchered on the spot, and we were sworn to protect each other. We made them a small present, and they departed peaceably.

Shortly after they had left us, a hunter arrived from camp, which was situated only four or five miles below on the opposite side of the river, and we immediately packed up and forded the stream without accident, tho' the water was so deep as to come quite over the backs of our smallest horses; and went to camp, which we found situated in a fine timbered bottom, on the margin of the river. Nothing remarkable had occurred during my absence, and the trappers had all returned, except Williams and his companions.

## CHAPTER LIX

Number of Hunters in the Mountains, etc. - Decrease of game - Blighting effects of ardent spirits upon the Indians.

There are about three hundred men, who compose the roving, hunting parties in these regions, excluding those, who remain principally at the several forts or trading posts, on the east and west sides of the mountains. One half or more of this number, are employed as "camp keepers," who perform all duties required in camp, such as cooking, dressing beaver, making leather thongs, packing, unpacking, and guarding horses, etc., and remaining constantly in camp, are ever ready to defend it from the attacks of Indians.

These men are usually hired by the company, and more or less of them accompany every party of trappers, in their excursions, or "hunts," for beaver. The trappers on the contrary, are most of the time absent from camp in quest of game, or castor.

They are divided into two classes; those engaged to the companies, to hunt for stipulated salaries; and those called "Freemen," who have horses and traps of their own, who rove at pleasure, where they please, and dispose of their furs to whom they please. They are never unhappy when they have plenty to eat. They collect skins to exchange for necessaries with the traders; their wants are few, and seldom extend beyond the possession of a few horses, traps, and a rifle, and some other little "fixens;" the attainment of these simple desires, generally constituting the height of a hunter's ambition. There are however a few individuals, who yearly lay by a small sum, from the profits of their profession, for the purpose of purchasing land, and securing to themselves a home hereafter, in some of the western states, at which they may peacefully repose in their declining years. But these instances of prudent forethought are extremely rare; and the purchase of grog and tobacco, and the practice of gaming, more frequently disperse their surplus funds, with a facility far greater

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

than that in which they were obtained.

Many of these mountaineers have taken squaws for their wives, by whom they have children. These females are usually dressed in broad cloths, either green, scarlet, or blue. Their frocks are commonly of the latter color entirely, or a combination of the other two; the waist and sleeves being composed of one, and the skirt of the other; and these dresses appear very becoming. On their heads they wear nothing but handkerchiefs, and their feet are enveloped in moccasins.

The clothing of the hunters themselves, is generally made of prepared skins, though most of them wear blanket "capotes," (overcoats,) and calico shirts. Some of them however, make coats of their buffalo robes, which are very warm and comfortable in cold weather, but become rigid and useless, if they are exposed to rains, or otherwise get wet. Moccasins are worn universally by all the whites and Indians. One half of these men are Canadians, and Half-breeds, who speak French, and some both French and English; the remainder are principally Americans, from every part of the United States. There are, however, a few foreigners, from various portions of Europe; and some Mexican Spaniards, from the Rio Del Norte; but these latter are darker, and more ill-favored than any of the mountain Indians. They are declared, by the hunters, to be an amalgamation of Indian and Negro blood, an opinion that would be pronounced by any one, unacquainted with their claim to Spanish European origin in part.

Some few of the old mountaineers annually leave the country, and their places are occupied by the less experienced "new comers," consequently the number of whites in the mountains, remains about the same.

Beaver and other kinds of game become every year more rare; and both the hunters and Indians will ultimately be compelled to herd cattle, or cultivate the earth for a livelihood; or in default of these starve. Indeed the latter deserve the ruin that threatens their offspring, for their inexcusable conduct, in sacrificing the millions of buffalo which they kill in sport, or for their skins only. The robes they obtain in the latter case, are most frequently exchanged for WHISKEY, with the traders at their establishments on the Missouri, Arkansas, and Platte rivers. - The curse of liquor has not yet visited the Indians in the mountains; but has found its way to almost all those who inhabit the plains; whose faculties are benumbed, whose energies are paralyzed, and who are rapidly sinking into insignificance and oblivion, by the living death, which their unhappy predilection for "strong water," has entailed upon them. They were gay and light hearted, but they are now moody and melancholy; they were candid and confiding, they are now jealous and sullen; they were athletic and active, they are now impotent and inert; they were just though implacable, they are now malignant and vindictive; they were honorable and dignified, they are now mean and abased; integrity and fidelity were their characteristics, now they are both dishonest and unfaithful; they were brave and courteous, they now are cowardly and abusive. They are melting away before the curse of the white man's friendship, and will soon only be known as, "The nations" that have been.

It is a prevailing opinion among the most observing and intelligent hunters, that ten years from this period, a herd of buffalo will be a rare sight, even in the vast plain between the Rocky Moun-

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

tains, and the Mississippi. Though yet numerous, they have greatly decreased within the last few years. The fact is alarming and has not escaped the notice of some shrewd Indians, who however believe the evil to be unavoidable.

## CHAPTER LX

Return home - Conclusion.

On the ninth of October we reached Belle Vue, a few miles above the mouth of the Platte river, on our return home. Here we remained eight days, in consequence of heavy rains; and in the meantime the company, consisting of about eighty men, dissolved; and each person sought such a conveyance as best suited him, to the state of Missouri. Some shipped on the Mackinaw trading boats from the upper Missouri; some made or purchased canoes, in which they embarked down the river; and others set out on foot to the completion of their journey. A small party, including myself, proceeded on horseback; leaving Belle Vue on the seventeenth. We had a cold, wet journey over a rich rolling prairie country, intersected by small streams bordered with timber, to cantonment Leavensworth, at which we arrived on the twenty-eighth. We remained here, to rest our horses and repose ourselves, two days; and on the thirty-first, after witnessing a review of the United States Dragoons here, commanded by Col. Dodge, we continued our journey. Our route lay over the same open undulating country, variagated with timbered streams; on which we observed, that as we advanced, the wooded bottoms through which they flow, increased in breadth and luxuriance.

On the twelfth of November we reached Boonville, in the state of Missouri, having been in daily view of those splendid spectacles, burning prairies, since we left the Pawnee lousps. At this place I disposed of my horse, and took passage on a steamboat to St. Louis, which I reached on the fifteenth, after an absence of nearly six years.

Those who have done me the honor to peruse my journal have obtained a fair idea of the character of this eventful period of my life, and of the character of the lives of trappers in the Rocky Mountains in general. Roaming over those dark regions of solitude, constantly exposed to danger from wild animals and ravages; frequently obliged to endure the most severe and protracted privation and fatigue; separated by many hundred weary miles from the abodes of civilization and refinement; conscious that even the fond filaments of love and consanguinity, which wind in delicate fibres around the heart, were becoming attenuated by distance, time, and novelty; feeling that my habits and manners were gradually giving way to the innovation of savage and unsocial custom, and my very speech and person were yielding slowly, but not less surely, before the uncouth barbarisms of language, and the exposures and severity of an ever-changing climate - it will not seem strange that I sometimes repined at my long absence from the scenes of my nativity, and reviewed with regret the inducements that forced me from friends and home. But these, however, were not always my feelings; - resolute, cheerful, contented, I usually was. And when the weather was warm and pleasant; the demands of nature satisfied, a reliance on the good qualities of my

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

arms and ammunition, not misplaced; the confidence of bestriding and governing a truly noble steed, in the spirit of stirring excitement of the chase, gloriously bounding over the plains, in the panoply of speed and power, before which the swiftest and mightiest denizens of the forest and prairie must yield themselves victims; then - then I was really, rationally happy. Many times have I experienced the sensations, generated by either condition; but these scenes have now passed away, their delights and perils no longer thrill nor alarm, and I bid them farewell forever.

## CHAPTER LXI

The Rocky Mountain Indians are generally of the middle stature, straight, well proportioned, have fine limbs, black hair flowing loosely over their shoulders, in some instances so long as to reach the ground when they stand erect, and lively keen black eyes. Their features are seldom ugly, often agreeable, and in smiling they exhibit beautiful, white even, set teeth; except those who subsist principally upon fish. Their clothing consists of a long shirt, reaching down to the knees, open on each side from the armpits to the bottom; a pair of legging a breech-cloth and moccasins, over all of which a light buffalo robe or blanket is thrown, resting on the shoulders. - The shirt and leggins are usually made of the skins of Rocky Mountain sheep, dressed for that purpose with peculiar care; and are ornamented with small blue and white beads, colored porcupine quills, and leather fringe over the seams, or instead of the latter, human hair dyed of various hues, which is obtained from the scalps of their enemies. They paint their faces with vermilion, white earth, ochre, powder, etc., and fasten beads, shells, buttons, and other trinkets, with feathers in their hair.

The garments of the women, are a long gown, also made of the smooth even skin of the Big-horns, decorated about the neck and shoulders with all the beads they can procure, short leggins, moccasins, and a light robe thrown loosely, yet gracefully, over their shoulders. Their dresses are sometimes loaded with some eight or ten pounds of large cut glass beads of various colors; their leggins and the tops of their moccasins are also ornamented with porcupine quills, or small beads. Like the men they are very fond of decorations, vermilion, trinkets, shells, etc., but they attach them to their dresses, instead of their hair; and like them besmear their faces with the former.

Nothing can divert an Indian from his purpose, when in pursuit of game; but on his return to camp he sinks in comparative indolence. They are brave, and display both intelligence and deep artifice, in their stratagems to surprise and conquer their enemies; but mercy, the hero's noblest attribute, is to them unknown, at least unregarded. Sedate and taciturn, with folded arms, they slowly pace back and forth before their lodges, to all appearance, wrapt in intense thought; approach a warrior thus intellectually engaged, and inquire the subject of his meditations, he will answer with undiminished gravity, "nothing." In their lodges and domestic circles, they are loquacious as the whites, with the difference of good-breeding, that the person speaking is never interrupted; and in turn each speaks, and is listened to with profound attention. Their conversa-

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

tions most frequently are on themes of war, and each individual chaunts his own exploits. Universally superstitious, they put good or ill constructions on their dreams, and account for all the phenomena of nature, by attributing all effects, to the kind or unfavorable temper of the Deity. With a commendable devotion they believe unhesitatingly all the Great-Spirit thinks proper to communicate to them, through their "Medicine men," (i.e. priests,) who, taking advantage of their religious credulity, impose upon them the most ridiculous stories of divine truth.

These medicine men also forewarn them of coming events, and profess to cure them of their diseases, by wearing the skin, assuming the characters, imitating the voices, and mimicking the actions of bears, and other animals; accompanying their demoniac capers by discordant yells, and deafening sounds, extracted from a kind of drum by violent thumpings, alone sufficient, one would imagine, to frighten away both the demon of distemper, and the spirit of the afflicted together. But their endeavors are probably well meant; and they may, from the habit of relating their powers, perhaps have induced themselves to believe they really possess the qualifications, that they arrogate to themselves, and which are so readily conceded them, by their less gifted comrades, - at least they may claim the merit of performing, without any fees, all the various ceremonies of their profession; their only reward being the esteem of their companions, and a more extended influence. Their diseases are however few, and when slightly ill, they usually resort to their sweat houses; which are constructed of willows, pointed and stuck in the ground, with their tops bent over and interlocked, so as to form a hemisphere of about six feet in diameter, on which skins, blankets, or robes, are spread to prevent the escape of the steam. In the centre of this hut a small hole is excavated in the earth, over which dry sticks and stones are placed in alternate layers, and fired beneath; when the wood consumes, the heated stones fall to the bottom, and the invalid, accompanied by others who do so for amusement, divested of all clothing, enter the cabin with a basin of water, which they commence pouring slowly on the stones, and soon fill it with dense scalding vapor; when it becomes no longer supportable they cease pouring, but recommence when it subsides. By this means they produce a copious perspiration from their bodies, which continues until they leave the hut, in which they sometimes remain half an hour. - When they crawl out, their bodies appear half boiled, and they immediately jump into the nearest stream, remaining immersed in the water until they become chilled in as great a degree as they were before heated. Indeed I have often seen them bathe in the winter season, through a hole cut in the ice, after issuing from a sweat house. - This practice, though it may bring present relief, must be attended in the end, with highly deleterious consequences; and indeed I have often observed that young Indians, who were in the habit of taking this hot and cold bath weekly, have foreheads wrinkled, and many other indications of premature old age. Its effects are more apparent of course, in those of mature years. Bathing is one of their favorite amusements, and when near a suitable place, if the weather be fair, some of them may at any time be seen in the water. The employments of the men are war, hunting, fishing, guarding their horses, shooting at a target, horse racing, etc.

CHAPTER LXII

---

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

The women of most tribes in the Rocky Mountains, though sometimes pretty when young, soon become decrepid and ugly, in consequence of the great hardships they are compelled to endure throughout their whole lives. They are esteemed rather as beasts of burden than companions for their tyrannical husbands; and are seldom valued as high as a favorite horse, for which they have been exchanged. They perform all the camp labors, such as drying meat, dressing skins, collecting fuel, bringing water, cooking, making clothing and moccasins, packing and driving horses from one encampment to another; and frequently accompany their husbands in the chase, to butcher and bring in the game they may happen to kill. Notwithstanding the constant drudgery to which they are subjected, they appear cheerful, sing during the performance of their duties, in rather a wild mournful air, and seem contented to wear through life, patient as an ox, submitting to all the hardships their capricious lords impose upon them without a complaint, which, however, instead of exciting sympathy or pity, would only exact blows and abuse from them.

Infants, when they first appear on life's eventful stage, are immediately immersed in a snow-bank, in a state of perfect nudity, a few moments, for the purpose of familiarizing them to the endurance of cold; if in the summer, they are instantly plunged into water, perhaps to render them as nearly as nature will permit, amphibious: if it be a female child, it is regarded by the father with contempt, and valued little more than a puppy; on the contrary, if a male, it is caressed and fostered by him, and the utmost pains taken to instil into its mind, as soon as it becomes able to comprehend, a love of glory, spirit of chivalry, and a contempt of privation, and hardship, and suffering, to which he must necessarily be exposed in leading the life of a hunter and a warrior. He is taught by example, the precepts early inculcated, and daily practised by his father, but is on no occasion punished, or deprived of any gratification. His youth is passed in hunting small animals and birds, in gymnastic exercises, such as are calculated to render him robust, active, and fearless, and in riding on horseback, with various equestrian feats, an accomplishment essential to his future character and destiny. When he becomes old enough to enter the lists of battle, he assembles, with other youthful aspirants for glory, chaunts the inspiring war song, and proudly dances in the midst of his companions, vowing vengeance against the enemies of his race; and shouting to the charge, enacts what his enthusiastic imagination prescribes his duty on the field of honor, and yells of rage and anger fill the air, as bursting from his lips in fiery wrath. The spectators applaud, and hardy veterans, kindling into zeal, join in the dance, proclaim aloud their achievements, exhibit their trophies, brandish their weapons, and with vehement eloquence encourage the high-souled youth to follow their footsteps, smite his enemies with vindictive fury, and return triumphant to his tribe and kindred, by whom he will be welcomed with shouts of rapture and applause, and win the favor of Heaven. His bosom glows with exultation, and burns with ardor to emulate the glowing deeds of his ancestors; to win for himself an honor and a name wholly, peculiarly his own, and in addition, secure to himself a happy enhance to the land of spirits, all of which he believes are to be won on the field of battle. Thus in his fervor, happiness, renown, immortality, are believed to be the reward of valor, and an impression is formed that will last with his life; he resolves to be a brave, and becomes - nay is - a warrior.

War dances are usually held in the evening, round a large fire, made for the purpose; and though the performers are entirely divested of clothing, they are attended by women and children; accus-

---

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

tomed, however, from infancy to exhibitions of this kind, they are unconscious of there being any impropriety or indecency in them. A large circle being formed by the bystanders around the fire, the ceremony commences with a general song, in which they all join in perfect harmony, beginning in the highest strain their voices are capable of, and gradually falling note after note, until the sound dies imperceptibly away; then suddenly resuming a high shrill tone, and again falling gradually as before, the song being accompanied by a regular thumping on a discordant kind of drum. In the mean time the naked youths and warriors jump into the ring, and dance with vigor, keeping time with the drum, yelling at intervals like demons, shaking aloft their gory gleanings of a field of carnage, (scalps, etc.) flourishing their weapons in their rapid evolutions, throwing their bodies into unnatural, sometimes ludicrous attitudes, and chaunting aloud their deeds of desperate daring. These dances are invariably celebrated on the return of a successful war party, and at such other times as their inclinations may direct.

When a young man wishes to marry, he selects a young woman, and makes application to her parents, who, if they think he can support a wife, will probably demand a horse, which if he promises to bestow, concludes the contract, and he is invited to come and sleep with her, at her father's lodge, without perhaps having ever had any conversation or acquaintance with her. In such cases, the wishes, however, of the young woman are always ascertained by her mother, but if averse to the proposed bride-groom, not always followed. Sometimes he sends a present of one or more horses to the favored damsel's parents, and if they are accepted, he sends a horse to her lodge the first time they move camp, which she sides; from that moment she is considered his wife, and at night encamps with him.

Polygamy, though allowed, is by no means common among them, but in accordance with the customs of their forefathers, they put away their wives and take others at pleasure. I have known an Indian to have fourteen wives, all living; but this is a solitary instance, and similar ones occur very rarely. In most cases, the husband and wife pass their lives agreeably, and sometimes happily together, and when separations take place, they proceed most commonly from the infidelity of the latter not the inconstancy of the former. The females thus banished from the lodges of their husbands, return to their parents, by whom they are received and supported until another opportunity occurs to marry.

It is the custom in some nations, on the death of a friend, to cut off a joint of a finger; and in others, to clip off their hair and continue mourning until it grows out again to its usual length; others, again, black their faces with a composition that only wears off with the skin, and cease to mourn when it disappears. But all nations give utterance to their grief in a piercing, wild, monotonous lamentation, commencing at a high key and gradually falling to the lowest notes, in continued repetition, that sounds extremely melancholy, and fills the hearer with solemnity.

They all inter their dead in the earth, with the exception of infants, who are sometimes encased in skins and deposited in trees; but are generally buried like adults in the ground.

LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

## CHAPTER LXIII

Of their vague and crude notions of the past and of futurity, each tribe in the Rocky Mountains has its own favorite traditions, most of them too ridiculous either to hear or repeat. Some believe that a beautiful woman descended from the clouds, at an era when Indians were but few, and even those extremely poor; that she supplied the country, before destitute, with game, and promised that brave men and warriors, who perished on the field of battle, should go to a pleasant country after death, where there is very little snow, good horses, and plenty of game, not very wild; she then disappeared. Another tradition speaks of a wonderful beaver that suddenly appeared in a certain river, of immense size and great sagacity, gifted with intelligence and speech, which bestowed great bounties on the people, promised them happiness in a fine country after death, where game was abundant and hunting easy; when he also vanished. A third informs us that a prairie wolf visited the sources of the Columbia, ages ago, and finding the people poor and miserable, caused the mountains to be stocked with deer, sheep, goats, elk, moose, etc., and the plains with antelopes, and the rivers with salmon; so that the people, who had before lived wretchedly upon roots and berries, were overjoyed, and loved the wolf; which afterwards married a cow, and had innumerable difficulties with a rival bull, which he finally succeeded in destroying, and lived long afterward happy and undisturbed; but at length, he promised the people happiness in a fine hunting country after death, where brave men would be loved, and have much less trouble in their excursions for game than cowards, who would always be miserable and distressed. With these words he left them, and was seen no more. These, and many other equally absurd traditions, are the grave ideas of the mountain savages on this subject. All agree, however, in the belief of a future state of existence, more happy to the brave, than the present; and in a great spirit, by whose bounty they will be permitted to inhabit that delightful region.

Such of the Indians as possess horses enough to convey themselves, their families, and their baggage, with ease, are esteemed wealthy; their animals are guarded with peculiar care, during the day in bands of twenty or more together, by boys; and in the night, they are tied to stakes, driven in the ground for that purpose, near their lodges, for greater security against robbers. Those who are not so fortunate or wealthy as to possess the number of horses requisite, are obliged to walk or put enormous loads upon such as they may chance to own. In one instance, in the year 1832, I saw a mare loaded with, first - two large bales containing meat, skins, etc., on opposite sides of the animal, attached securely to the saddle by strong cords; secondly - a lodge, with the necessary poles dragging on each side of her; thirdly - a kettle, axe, and sundry other articles of domestic economy; fourthly - a colt too young to bear the fatigue of travelling was lashed on one side; and finally - this enormous load was surmounted by a woman with a young child; making in all, sufficient to have fully loaded three horses, in the ordinary manner. Though this rather exceeds any thing of the kind I ever before saw, yet large loads, in like manner surmounted by women, children, colts and puppies, are often observed in their moving jaunts.

Some of the poorer classes, who do not possess horses, and are consequently unable to follow the buffalo in the prairies, ascend the mountains where deer and sheep are numerous, and pass their lives in single families - are never visited by the horsemen of the plains, but sometimes descend to

---

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

them, and exchange the skins of those animals for robes, and other articles of use and ornament.

Their weapons are bows, arrows, and war-clubs, and are of their own manufacture. Their bows never exceed two and a half feet in length, and are made usually of the rib bones of the buffalo, two of which, in the construction of this weapon, are neatly jointed, glued together, and wound with thongs about the joint; it is gradually tapered from the middle toward each end, is polished, and rendered more elastic by sinews glued on the back, from end to end, over which rattle snake skins are sometimes cemented for ornament. The string is always composed of sinews, twisted together into a cord. Bows are made sometimes of elk horn, and sometimes of wood, but are always strengthened by adding sinews to the back, and not, as an eminent western writer has observed, "by adding buffalo bones to the tough wood."

Their arrows (except the poisoned ones of the Sann pitches) are made of wood, slender, never above two feet in length, and are pointed with sharp transparent flints, neatly broken to a dagger-blade shape, from half to three-fourths of an inch in length, which never exceed the latter. These points are ingeniously inserted in a slit in the end of the arrow, are fastened by sinews wrapped around it, and are rendered less liable to damage by being covered with a coat of glue. They have three or four distinct feathers, six or seven inches in length, placed opposite to each other, remaining parallel, but turning gently on the arrow, in order to give it a spiral motion, which prevents its wavering, and enables it to cleave the air with less resistance.

They manufacture spears and hooks, also of bone, for fishing, but they are not to be compared to the same instruments made of metal by the whites. But they have been supplied by the traders with light guns, spears, and iron arrow points, which have in measure superseded their own weapons; still, however, bows and arrows are most frequently employed in killing buffalo.

## CHAPTER LXIV

The Indians rise at day light invariably, when all go down to the stream they may happen to be encamped on, wash their hands and face, and comb their long hair with their fingers, the nails of which are allowed to grow long.

The men are all expert horsemen, ride without saddles generally, always when they pursue game. Their saddles are made of wood, sometimes of elk horn and wood, covered with raw hide, which renders them very durable and strong; their stirrups are also composed of wood. - Instead of a bridle and bit, they make use of a long cord, (used for catching wild horses) tied to the under jaw of the animal; these cords, or more properly leashes, are made of narrow strips of raw hide, divested of the hair, and rendered soft and pliant by greasing and repeated rubbing; or of the long hair from the scalp of the bison, twisted into a firm and neat rope. The saddles of the women have both before and behind, a high pommel, reaching as high as their waists, for the greater convenience of carrying children. Some of them carry two children and drive their pack horses. They drop their little ones on the ground, dismount and arrange their packs, when necessary, remount,

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

ride along side of them, and draw them up again by the hand, and continue their march. Their children of three or four years of age, are lashed firmly on the top of their packs, and are often endangered by the horses running away with them, though I never saw one seriously injured in consequence. Yet, if the loads turn under the horses' belly, as they sometimes do, the situation of the poor child is truly frightful.

Gaming is common with all the mountain Indians. Some of them, however, are more passionately addicted to it than others. The games mentioned in my journal, and described as having been observed among the Flat-heads, are those practised by all the various tribes, without exception.

Indian sagacity has ever been a riddle to the greatest portion of the public; who have been inclined, in some degree, to consider their great skill in tracing an enemy, or detecting the vicinity of danger, as depending on a finer construction and adaptation of some of the organs of sense, and to believe that no white man could ever attain a degree of skill by any means equal to the tact so often exhibited by the aborigines of this country. But I am convinced it is entirely owing to a careful attention to, and observation of, various minute peculiarities, which would escape the notice of any one not instructed how to prosecute his examination, though ever so attentive; and in proof of this, there are in the mountains many hunters who have become so practiced in this species of discernment, as to be acknowledged by the Indians as equal to themselves; though these Indians, in this respect, are inferior to none.

Several tribes of mountain Indians, it will be observed, have names that would be supposed descriptive of some national peculiarity. Among these are the Black-feet, Flat-heads, Bored-noses, Ear-bobs, Big-belly's, etc., and yet it is a fact, that of these, the first have the whitest feet; there is not among the next a deformed head; and if the practice of compressing the skull so as to make it grow in a peculiar shape ever did exist among them, it must have been many years since, for there is not one living proof to be found of any such custom. There is not among the Nez-perces an individual having any part of the nose perforated; nor do any of the Pen-d'orulles wear ornaments in their ears; and finally, the Gros-vents are as slim as any other Indians, and corpulency among them as rare.

The funerals of the mountain Indians are similar to those described by various authors of other nations. The dead body is dressed in the neatest manner, enveloped in skins, and deposited in the earth, with the weapons, ornaments, trinkets, etc., which belonged to the deceased when living; and it is customary among some tribes, to sacrifice his favorite horse on the grave of a warrior, after the manner of the Tartars.

## CHAPTER LXV

THE CROW INDIANS call themselves "Ap-sa-ro-ke," and are tall, active, intelligent, brave, haughty and hospitable. They acknowledge no equals, and pride themselves on their superiority over other nations. They boast of greater ability in making their wishes understood by signs, to

---

By W. A. FERRIS

---

those who do not comprehend their language. - In their lodges, they consider themselves bound to protect strangers, and feast them with the best they can procure. They are well armed with guns and ammunitions, which they have purchased from the whites, or taken from their enemies; and are supplied with horses, which they steal from other nations, with whom they are constantly at war.

Their women are, without exception, unfaithful, and offer themselves to strangers unhesitatingly for a few beads or other trifles. Jealousy is hardly known among them, though the property of one proved to have had illicit connexion with another's wife, by "crowic law," is immediately transferred to the injured husband.

War parties, on foot, are frequently sent out, at all seasons of the year, for scalps and property; and every man in the village is compelled, in turn, to join these predatory excursions. They are slow to project, cautious to proceed, certain to surprise, firm to execute; and are ever victorious when they commence an affray. Extremely superstitious, with certain charms about their persons, such as the skins of birds, small animals, or other trifles, in the efficacy of which they place great reliance, they charge fearlessly upon their enemies, under the entire conviction that these their medicines ward off every danger, and completely shield them from harm.

They are good hunters and accomplished horsemen; they ride at full speed, throw their bodies entirely on one side of their animals, shoot from the same side under their horses' necks, and pick up their arrows from the ground without abating their rapidity.

They are fond, nay, proud of ornaments for their persons, particularly scarlet cloth, feathers, and vermilion, with which they attire themselves with great care for the field of battle; but they are fonder, prouder still, of a high reputation for bravery and prowess.

Among the trophies of victory, a scalp is prominent, and belongs, not to him who shot down the enemy, but to him who first rushed upon him and struck him on the head. The very pinnacle of human glory with them, is to have taken twenty scalps from their enemies, and to achieve this high honor is the constant ambition of every noble-minded brave.

They express their gradations of rank by affixing ornaments to their hair, among which the tail feathers of the golden or calumet eagle, indicate the loftiest. None but the most heroic warriors are entitled to the envied privilege of wearing this valuable plumage, (a single feather of which is more prized than a fine horse) and the person in whose hair even a single quill is conspicuous, is entitled to, and receives, the most profound respect and deference; but when a plurality of these badges are displayed by some fortunate brave, he is regarded with veneration, almost with awe.

They are entitled to precedence in the science of theft, of which they are masters; being almost certain to obtain from a stranger any article they discover about him, that they may chance to desire. When detected in pilfering, they appear extremely foolish and ashamed, because it is superlatively dishonorable - not to steal - but to have failed in an attempt, the complete achievement of

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

which would have added renown to their characters for dexterity and address.

They are now the declared enemies to trappers, several of whom they have killed; yet there is an establishment on the Big-horn river belonging to the American Fur Company, at which they trade peaceably. During the summer of 1835, they caught two of our trappers, at the point of the Wind Mountain, detained them several days, robbed them, and then allowed them to return to us. It must be regarded, however, as a freak of kindness, not as a settled principle of mercy. They rove in two villages, containing six or seven hundred souls in each. These villages seldom leave the Yellow Stone and its tributaries, but war parties infest the countries of the Eutaws, Snakes, Arrapahoes, Blackfeet, Sioux, and Chayennes, with all of whom they are at war. They have a tradition that their forefathers fought a great battle with the Snakes, in which many hundred of the latter were killed; that the battle lasted three days, during which time the Chief of the Crows caused the sun to stand still.

Several years since, one of the Crow villages, issuing from a narrow defile into a large prairie valley, through which they designed to pass, discovered a village of Blackfeet encamped on the opposite side. A council was immediately held, in which it was resolved to place a few lodges in a conspicuous situation, purposely to be observed, and conceal the greater part, together with all their war horses, in a low place where they could not be seen. This was done, and their inferior horses were permitted to stray down the plain, offering an inducement to their foes to come and take them. At the same time, the Blackfeet discovered, as they supposed, a few lodges of the Crows, and thinking themselves undiscovered, made instant preparations for combat. These young warriors were sent in a body to surround the Crows in the night, and directed to commence the attack at daybreak, at which time the old braves were to join them on horseback, and assist in exterminating the enemy. In obedience to their instructions, the young men set out that evening, but the night being dark, they mistook their way, and were prevented from reaching the field of glory at all. - Early in the morning, the old veterans, believing that the business would be half finished before they could reach the scene of action, set off at full speed, which they continued unbroken until they reached the fatal spot. The Crows allowed them to approach to the very doors of their lodges, when the war-whoop resounded in their ears, and in a moment every hill was red with mounted warriors, bearing down upon them. They saw the snare into which they had fallen, when too late, and fled; but alas! their horses, already fatigued, were unable to run. The Crows pursued them on fresh horses, overtook and killed them as they fled, until the survivors gained the mountains. - Seventy scalps were displayed on that day by the victors, who also obtained considerable booty. So much for out-manoeuvering and discomfiting their enemies.

The following anecdote exhibits their character in a different light. During a long continued storm in the winter of 1830, the Sioux Indians carried off nearly one hundred and fifty head of horses from them, and a party of eighty Crows immediately departed in pursuit. They travelled several days in the direction that they supposed the Sioux had taken; but the protracted storm prevented them from discovering the traces of their enemies, and all but twenty-three returned home. The small party still in pursuit, consisted of men who scorned to return without even a glimpse of their enemies, and continued on, far beyond the distance that horses could have

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

travelled at that season of the year, in the same length of time. Finally concluding that they had quite mistaken the course of their enemies, they resolved to retrace their steps towards their own firesides; but some days after, unfortunately, they passed, during a tedious snow storm, very near a Sioux village, and were discovered by them. A large party were soon in pursuit, and the Crows, unconscious of danger, advanced at their usual pace until night, and encamped as customary. During the night, they were entirely surrounded by the Sioux, who awaited for the next day to make an attack upon them. In the morning they made the necessary preparations for departure; breakfasted, packed their dogs, and started; but the Sioux, till this moment unobserved, rushed towards them, and drove them into a hole, which had been the bed of a spring torrent, crossed by a fallen tree. To this they suspended their robes for concealment. In the mean time, a Sioux chief, who could speak the Crow language, stepped in front of the rest, and in a loud voice addressed them, saying that he was very sorry to keep them in suspense, but that his party were nearly frozen, having passed a sleepless night in the snow without fire; that they were consequently compelled to kindle a fire and warm themselves before they could proceed; "but," continued he, "as soon as we thaw ourselves, you will cease to exist, unless you are what your name indicates, and fly away; or like the prairie dog, you can burrow in the ground." - Accordingly, they warmed themselves, attacked the devoted little band, and killed them all, with the loss of but two men killed, and several slightly wounded. Three of the Crows fought manfully, but the others, benumbed as they were by the cold, could make but little resistance. Their bodies were cut in pieces, and transported to the village on dogs, the same day.

## CHAPTER LXVI

THE SNAKE INDIANS are termed in their own dialect, Sho-sho-ne. They are brave, robust, active and shrewd, but suspicious, treacherous, jealous and malicious. Like the Crows, war-parties frequently go out to plunder, and some times kill and rob the trappers if they think it will not be discovered. They are utterly faithless even to each other.

There is one evil genius among them, called the "Bad Gocha," (*mauvais gauche* - bad left-handed one) who fell in with a party of trappers, led by a well-known mountaineer, Mr. E. Proveau, on a stream flowing into the Big Lake that now bears his name, several years since. He invited the whites to smoke the calumet of peace with him, but insisted that it was contrary to his medicine to have any metallic near while smoking. Proveau, knowing the superstitious whims of the Indians, did not hesitate to set aside his arms, and allow his men to follow his example; they then formed a circle by sitting indiscriminately in a ring, and commenced the ceremony; during which, at a preconcerted signal, the Indians fell upon them, and commenced the work of slaughter with their knives, which they had concealed under their robes and blankets. Proveau, a very athletic man, with difficulty extricated himself from them, and with three or four others, alike fortunate, succeeded in making his escape; the remainder of the party of fifteen were all massacred. - Notwithstanding this infernal act, its savage author has been several times in the camp of the whites; but his face not being recognized, he has thus far escaped the death his treacherous murder so richly merits. As the whites are determined, however, to revenge their murdered comrades, the

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

first opportunity, there is little doubt that his forfeit life will, sooner or later, pay the penalty of his crimes to injured justice! During the life of that white man's friend, the Horned Chief, Gocha was seldom if ever seen with the Snake village, but was heard of frequently, with a small band of followers, prowling about the Big Lake.

The principal chief of the Snakes is called the "Iron Wristband," a deceitful fellow, who pretends to be a great friend of the whites, and promises to punish his followers for killing them or stealing their horses. The "Little Chief," a brave young warrior, is the most noble and honorable character among them.

Notwithstanding the bad qualities of these Indians, their country is rich in game, and the whites have thought proper to overlook many serious offenses, rather than expose small trapping parties to the vindictive attacks that would characterize an open war.

It is hardly necessary to say, that though not so completely adept in the art of stealing as the Crows, they are nevertheless tolerably expert. I saw one of them steal a knife without stooping from his upright position, or in the least changing countenance. He was barefooted, and contrived to get the handle of the instrument between his toes, and then draw his foot up under his robe, where a hand was ready to receive the booty.

There is one Snake who has distinguished himself in battle, called "Cut Nose," from a wound he received in the facial extremity, from the Blackfeet, who has joined the whites, lives with and dresses like them. He is an excellent hunter, and has frequently rendered them important services.

The females are generally chaste, the men extremely jealous. I have heard of but one instance of adultery among them, which was punished by the enraged husband by the death of the female and her seducer, the latter of whom was murdered, and then placed upright on a high cliff, in a valley on Horn's fork, as a warning to all, and a fearful monument of an injured husband's revenge.

Of the Snakes on the plains, there are probably about four hundred lodges, six hundred warriors, and eighteen hundred souls. They range in the plains of Green river as far as the Eut mountains; Southward from the source to the outlet of Bear river, of the Big Lake; thence to the mouth of Porto-muf, on Snake river of the Columbia; and they sometimes ascend the Snake river of the Soos-so-dee, or Green river, and visit the Arrappahoes, on the sources of the Platte and Arkansas.

They are at war with the Eutaws, Crows, and Blackfeet, but rob and steal from all their neighbors, and any body else whenever an opportunity occurs. It may be said of them that stealing is their master passion; and indeed they are so incorrigibly addicted to the practice, that they have been known in some instances to steal, in the most adroit manner imaginable, even their own horses, mistaking them, of course, for the property of others.

LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

## CHAPTER LXVII

THE EUTAWS are neither ugly nor prepossessing. They are brave, but extremely suspicious; are candid, never treacherous, and are not inhospitable, though they rarely feast a stranger who visits them, like the Crows, Arrappahoes, or Blackfeet, but in general ask for something to eat themselves of their guests. Unlike the Crows or Snakes, they never steal; but they are most accomplished beggars. With unblushing assurance, one of them one day asked me for my coat, and was of course refused. "Then give me your blanket" - denied; "your pistols, then," - no; and was going to ask for every article he saw about me, but ascertaining by a very abrupt reply, that I was not inclined to listen to him, and still less to give him any thing, he turned to one of his companions and observed, "that man's heart is very small."

The reader no doubt remembers the ingenious impudence of La Fogue in directing his children to weep, and then telling us they were crying for something to eat, with a pathetic gravity, to obtain a little food, when there were in his lodge at the time several bales of dried buffalo meat, and we had nothing else, he well knew. It is not, however, so much for the property itself that they beg with incorrigible pertinacity on every occasion, as they do invariably; but for the honor of having obtained it in that mode; for to be adroit and successful in the art is considered a demonstration incontestible of uncommon talent.

They are very jealous, though their women give them little cause for being so. They are as well clad, but are not so well supplied with lodges as some other Indians, because there are no buffalo in their country, and they are obliged in winter season to construct cabins of cedar branches, which are by no means so comfortable.

They are, by far, the most expert horsemen in the mountains, and course down their steep sides in pursuit of deer and elk at full speed, over places where a white man would dismount and lead his horse.

They are less addicted to gambling than most other Indians; probably, because they subsist principally upon small game, more difficult to obtain, and hence have less leisure for other pursuits. In places where deer are numerous, they excavate holes in the earth, in which they conceal themselves, and shoot them as they pass in the night.

They frequently visit Taos on the Del Norte, and California; consequently many speak, and nearly all understand, the Spanish language.

There are of the Eutaws, in all, about two thousand five hundred souls.

THE ARRAPPAHOES are a tribe of Indians who rove in one or two villages, as their inclinations may indicate, on the sources of the Platte and Arkansas rivers. They were for several years deadly enemies to the whites, but Capt. Ghant, whose firmness and liberality they have reason to remem-

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

ber long, has established a trading house among them on the Arkansas, four day's march from Taos, and has succeeded in gaining their confidence and inculcating among them, an opinion of the whites, that will perhaps secure their lasting friendship.

They set before their guests the best provisions they can procure, and feel bound to protect them even at the risk of their own lives. They consider hospitality a virtue second only to valor.

Polygamy is common among them, every man having as many wives as he pleases.

The flesh of dogs is esteemed with them a dainty, and by some of the neighboring nations they are detested for no other reason, than because they eat them.

They are brave, candid, and honest, for though good warriors, they neither rob nor steal. Some of Mr. Vanderburgh's men wintered with them in 1834 and '35, and speak highly of their integrity and generosity. They lost nothing by theft during their stay, but were kindly treated, and the chief told them on separating in the spring, to display a white flag on a pole near their encampment, and they would never be molested by the Arrappahoes. As their country abounds with buffalo, they have fine lodges and live comparatively easy and comfortable. - Their number is in all about two thousand souls, and they are friendly with the Snakes, Black-feet, Gros-vents, and Comanches; but at war with the Eutaws, Crows, and Sioux.

## CHAPTER LXVIII

## THE GRIZZLY BEAR

This animal, well known to be the most formidable and dangerous in North America, is found in the Rocky Mountains of every shade and color, from black to white, but most frequently of a dark grizzly hue, and is so large that those of a brown color are often mistaken by hunters who are accustomed to see them almost daily, for buffalo.

For instance - returning from the waters of the Columbia to those of the Colorado, in the spring of 1834, with four white men and several Indians, on our way over Horse Prairie, I discovered and passed within one hundred yards of a very large female, accompanied by two cubs, but was prevented from firing upon her from the fear of arousing some lurking foe in this dangerous part of the country, and permitted her to pass without molestation. At our encampment in the evening, the men, who usually discuss the occurrences of the day over their suppers, surprised me by inquiring if I had ever before seen a female bison with two calves. I replied that I had not yet met with an instance of the kind. "What?" exclaimed all of them, "did you not see a cow followed by two calves, who passed us this afternoon at \_\_\_\_\_?" describing the place - when I immediately discovered that they had mistaken the bear for a buffalo, and found them still incredulous when I asserted the fact.

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

A trapper, with whom I am acquainted, discovered, as he supposed, several years since, a herd of buffalo near Bear river, and being without provisions, resolved to approach them. Accordingly he followed the winding of a deep gully, which at length brought him among them, but imagine his disappointment and terror, when in lieu of buffalo, he found himself surrounded by thirty grizzly bears, whose aspects were any thing but amiable. Perceiving, however, that he was yet undiscovered, he retraced his steps, and fortunately escaped a horrible death, which in all probability he would have suffered had they observed him.

I have often mistaken them for buffalo, and discovered my error only when they erected themselves to ascertain what passed near them, which they always do when they hear, see, or smell any thing unusual.

They are numerous throughout the mountains, particularly when fruit is most abundant, which serves them for food in the fall; roots being their chief subsistence in the spring. Through-out the long inclement winter season, like the black bear, but unlike the white, they penetrate and lay dormant in caverns.

Most animals, from their superior speed, can escape them; hence, though extremely fond of flesh, they kill very few; yet they often rob wolves of their prey, and devour it at leisure; and sometimes, but seldom, catch a deer or elk that happens to pass near without discovering them.

When wounded they are terrible and most dangerous foes; and unlike all other animals, are so extremely sagacious and vindictive, that though their enemy is concealed from their view, they will rush to the spot whence the smoke of his gun arises in search of him, and if he has not already secured his safety, he will hardly have an opportunity.

Many of the trappers bear the most incontestible proofs of having been roughly handled by them, of which the most shocking instance, together with attendant circumstances, is told of a well known trapper by the name of Hugh Glass, which is so extraordinary, that I shall give a brief sketch of it here. The same incidents have already been related, I believe, in the Southern Literary Messenger.

Glass was an engaged trapper in the service of Major Henry, who was the leader of a party of beaver hunters several years in the mountains. In the year 1822 or '23, during an excursion to the sources of the Yellow Stone, Glass was employed in hunting for the subsistence of the company. One day, being as usual in advance of his friends, in quest of game, he reached a thicket on the margin of a stream, which he penetrated, intending to cross the river, as it intersected his course. But no sooner had he gained the center of the almost impenetrable underbrush, than a female bear, accompanied by her two cubs, fell upon him, cast him to the ground, and deliberately commenced devouring him. But the company happening to arrive at this critical moment, immediately destroyed the grizzly monsters, and rescued him from present death, though he had received several dangerous wounds, his whole body being bruised and mangled, and he lay weltering in his own blood, in the most excruciating agony. To procure surgical aid, or to remove the unfortunate

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

sufferer, were equally impossible; neither could the commander think of frustrating the object of his enterprise by remaining idle, with a large party of men, engaged at high salaries. Under these circumstances, by offering a large reward, he induced two men to remain with, and administer to the wants of poor Glass, until he should die, as no one thought his recovery possible, and proceeded on with his party to accomplish the purpose of the expedition. These men remained with Glass five days, but as he did not die perhaps as they anticipated he soon must, when the company left them, they cruelly abandoned him, taking his rifle, shot-pouch, etc., with them, believing that he would soon linger out a miserable existence. Leaving him without the means of making a fire, or procuring food, the heartless wretches followed the trail of the company, reached their companions, and circulated the report that Glass had died, and that they had buried him. No one doubted the truth of their statement until some months afterward, when to the astonishment of all, Glass appeared in health and vigor before them; but fortunately for one of the villains, he had already descended the Missouri and enlisted in the service of the United States. The other, though present when Glass arrived, being a youth, received a severe reprimand only from the justly exasperated hunter, for his unpardonable crime.

After Glass was deserted, he contrived to crawl, with inexpressible anguish, a few paces to a spring, the waters of which quenched his feverish thirst, and a few overhanging bushes loaded with buffalo berries and cherries, supplied him with food for ten days. Acquiring by degrees a little strength, he set out for Fort Kiawa, a trading establishment on the Missouri, three hundred miles distant, a journey that would have appalled a healthy and hardy hunter, destitute as he was of arms and ammunition. By crawling and hobbling along short distances, resting, and resuming his march, and sustaining life with berries and the flesh of a calf, which he captured from a pack of wolves and devoured raw during his progress, he finally reached the fort and recovered his health. After innumerable other difficulties and adventures, Glass finally fell a victim to the bloody-thirsty savages on the Missouri.

There is also a story current among the hunters of two men, whose names I have forgotten, who being one day some distance from the camp, discovered a large bear, busily engaged in tearing up the ground in search of roots. One of them, who was reputed an excellent marksman, desired his companion to ascend a tree, and after selecting one as a refuge for himself in case he should only wound and enrage the bear, deliberately elevated his piece and fired. In an instant the huge and vindictive beast rushed like a tiger toward him, seized him in the act of ascending the tree, a branch of which had caught his coat, and prevented him from accomplishing his purpose, and tore him in pieces. Having thus consummated his vengeance, the bear sank down beside his victim and expired. The other person, terrified at the bloody scene enacted beneath him, descended and ran to camp, informed his comrades of the melancholy circumstance, and returned to the spot with them. They interred the remains of the ill-fated hunter, and on examining the bear, found that he was shot directly through the heart. Hunters usually shoot them through the head, when, if the ball is well directed, they always expire instantly; yet they dare not molest them unless they have the means of escaping, either on their horses or by ascending trees. I have often heard trappers say that they would willingly, were it possible, make an agreement with them not to molest each other. I knew a bear to charge through an encampment of hunters who had fired

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

upon him, knock down two of them in his progress, bite each of them slightly, and continue his flight, with no other demonstrations of anger at the warm reception he met with.

John Gray, a herculean trapper, has fought several duels with them, in which he has thus far been victorious, though generally at the expense of a gun, which he usually manages to break in the conflict. A Shawnee Indian in the Rocky Mountains, has acquired much fame by attacking and destroying numbers of them, with an old rusty sword, which he flourishes about their ears with no little dexterity and effect.

When they are attacked in a thicket, they charge out into the prairie after their pursuers, and return back, and continue to do so when any of their assailants come near them. Hunting and chasing them on horseback is a favorite amusement of both whites and Indians, and is attended with no great danger, for a good horse will easily avoid and outstrip them; but daring hunters, by charging too close upon them, have had their horses caught and frightfully lacerated before they could extricate them, which is only effected by leaving portions of their bodies in the claws and teeth of the bear.

W.A.F.

## SUPPLEMENTARY ARTICLES

NUMBER 1 - Western Literary Messenger, July 20, 1842.

## CHANION OF THE COLORADO

Extract from an unpublished work, entitled

"LIFE IN THE ROCKY MOUNTAINS."

The Colorado a short distance below the junction of Green and Grand rivers, enters the great chanion, which is a canal in many places more than a thousand feet deep, and bounded on either side by perpendicular walls of rock, that bid defiance to horsemen, who would descend to the river; in fact, they are seldom accessible to footmen. From the summit of the walls, a succession of rocky cedar-covered hills, and sandy plains, appear losing themselves in the distance. This chanion confines the river between two and three hundred miles; and even to those, who have seen and for years been familiar with the mightiest productions of nature, presents a scene from which they recoil with terror. Reader have you ever stood on the brink of the precipice, midway between the falls of Niagara and the Whirlpool, and looked down with terror upon the rushing waters beneath you? if so, fancy yourself there at this moment; but suppose the walls to be six hundred feet higher, and in the same proportion, more distant from each other. Let the foaming torrent beneath you vanish, and imagine a beautiful meadow, perfectly level, extending from wall to wall; through this let a calm, unruffled, yet muddy streamlet wind its way; let its borders

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

be decked with a few small shrubs, and dwarf trees. Gaze upon the frowning hills, and burning sands, with which you are to suppose yourself, half surrounded; and you will certainly attempt to descend to the lovely scene beneath, and perhaps may resolve to step over the brook, and recline yourself in the shade of a cluster of willows; alas,! if you succeed, how sadly will you be disappointed. The little brook will gradually enlarge itself as you descend, until it becomes a mighty river, three hundred yards wide; the bushes will increase in size, and stature, until they become giant cotton woods; the narrow strip of meadow land between the walls, will expand into broad fields of verdure; and you will see, kind reader, in imagination, what many a half-starved trapper, has seen in reality, on the Colorado. These walls approach each other so closely, in some places, that the bottoms disappear; and the river being compressed to one fourth of its ordinary width, dashes through with inconceivable fury, like the Niagara, at the point I have chosen, and which renders its navigation impracticable. Its tributaries are likewise confined by walls, from their junctions some distance; which compels caravans, to travel the plains, far from the main river, and depend much upon chance, and rains, for water.

NUMBER 2 - Western Literary Messenger, August 17, 1842.

## CURIOUS INDIAN LETTER

Extract from an unpublished work, entitled

“LIFE IN THE ROCKY MOUNTAINS.”

Traversing the Deer-house Plains with a party of traders, and in company with a band of Flatt-head Indians, on our way to the Buffalo range, we observed one afternoon what might be called an Indian letter, and interesting from its rare novelty, and the ingenuity with which it was devised. As the mountain tribes are not less ignorant of the art of writing than other Indians, it would be difficult to conceive how it was possible for them to effect an interchange of ideas to any considerable extent without a personal interview and by other than oral communication. In this instance, however, though the information conveyed, embodied quite a number of distinct facts, with allusions to past events and present intentions, and combined with warnings, threats and boastings, it required no Solomon to read the characters, and no Daniel to interpret their meaning. This singular document with its date, signature and superscription, excited our astonishment not less from the novelty of its appearance and the skill with which it was prepared, than from the number of ideas it imparted and the unequivocal character of the information it expressed. No learned clerk with all the appliances of letter writing at command, could have couched in more intelligible phrase or told in less doubtful terms, the knowledge intended to be made known, though addressing the Royal Society itself, than had these uncultured savages communicating with another and equally unlettered tribe. But how, methinks I hear you inquire, with a smile of incredulity, could this have been effected? It was in this wise:

In the first place, a small extent of ground was smoothed and a map of the junction of three rivers

---

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

drawn. Near them were then placed several little mounds, and a small square enclosure made of pointed twigs, planted close together, in the centre of which a stick considerably longer than the others was fixed upright in the ground, having a bit of rag fastened to it at top. A great many little conical heaps of earth were arranged round the enclosure, and red earth scattered profusely among them. At the entrance to the enclosure were the figures of two persons standing, one of whom had on a hat and was represented in the act of smoking. Behind him lay a small bunch of horse-hair rolled up and placed on a piece of tobacco. At the feet of the other were four little wooden pipes, and by his side a bit of dressed skin containing a few grains of powder. Near these persons were two sticks stuck in the ground so as to cross each other at right angles, a small stick was also planted in the ground at the foot of each of the two figures making an angle with the earth of forty-five degrees, and pointing towards the other.

There were also a magnitude of little figures of men clustered around them. Eight or ten paces off were thirty little sticks painted red, lying on the ground. Bits of scarlet blankets and cloth were scattered about, and finally, seven small figures representing horsemen facing the north, were arranged at a little distance.

Such was the novel communication referred to, which would probably have puzzled all the academicians of Europe to decipher, but which the Flatt-heads were at no loss to understand, and which even we found little difficulty in comprehending. It was evidently a letter to the Flatt-heads, and had been arranged with great care for their inspection. The date, as we easily ascertained from indications not at all questionable, but impossible to describe in words, was of the day previous. The interpretation of this curious epistle may be rendered thus:

The situation, direction, etc. of the three rivers, and the mounds near them, made it at once certain that they were intended to represent the three forks of the Missouri. The little square enclosure or pen, presented a fort in miniature, the central stick and rag indicating its flag-staff and banner. The little conical mounds gave us at first sight a lively idea of an Indian village with its numerous lodges, and the red earth scattered among them, made it equally evident that the Indians composing the village were of the Blood tribe. The two figures of men, one wearing a hat, represent the Indian Chief and the white trader. The pipes are emblematic of peace and intimacy. The tobacco, horse-hair (for horses,) powder, and skin, show that such articles have been exchanged between them. This is confirmed by the two sticks forming a cross, which represents a sign understood by all the mountain tribes, made by placing the two fore fingers in such a position, and meaning "to trade." The two other sticks pointing from the feet of each to the breast of the other, indicates a sign made by pointing with the fore-finger from the breast obliquely upwards, which is the Indian mode of declaring that it is "the truth." The multitude of little figures show evidently a large number of Indians in attendance; and the numerous bits of cloth, blankets, etc. are offered as incontestible proof of the abundant supplies they have at hand. The thirty small red sticks lying some paces off, represent as many Flatt-heads who were killed last spring, and the seven horsemen are the persons who have prepared this epistle, and who, proceeding northward, have now gone to their own country.

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

The communication was clearly intended to terrify the Flatheads, and warn them against hunting on the waters of the Missouri, and had it been expressed in words would have read somewhat as follows:

“Flatt-heads, take notice, that peace, amity and commerce have at length been established in good faith, between the whites and our tribe; that for our benefit they have erected a fort at the three forks of the Missouri, supplied with every thing necessary for trade that our comfort and safety require; that we have assembled in great numbers at the fort, where a brisk trade has been opened, and that we shall henceforth remain on the head waters of the Missouri. You will please observe that we scalped thirty of you last spring, and that we intend to serve the rest of you in the same manner. If, therefore, you consult your own interests and safety, you will not venture on our hunting grounds, but keep out of our vicinity. You may depend upon the truth of what we now tell you. Done by a party of seven Blood horsemen, now on our way home to the Forks.”

The Chief of the Flatt-heads, a Brave, in the fullest, noblest sense of the word, after having deliberately examined this strange epistle, and satisfied himself of its signification, drawing his fine form up to its full manly height, and shrugging his shoulders with the air of one scorning their threats and hurling back defiance, while his eye flashed with the fire of inveterate hate and unconquerable courage, pronounced in the emphatic language of his tribe, and in a tone of voice, expressing far more than the simple words, or indeed any other form of phraseology could convey, a brief “ES WHAU!” (maybe!) and, turning upon his heel, gave his attention to the trivial affairs of encampment, as if nothing had occurred.

NUMBER 3 - Dallas Herald, January 11, 1873.

## INTERESTING INDIANS - THE FLAT HEADS

The Flat Head Indians are, by far, the most interesting tribe of Indians in the Rocky Mountains. They number but fifty or sixty lodges; are nomadic in their habits, and range on the head of “Clark’s Fork” of the Columbia. They have been from time immemorial, at war with the powerful tribe of the Black Feet, who probably outnumber them twenty fold. Being constitutionally brave, and frequently engaged in battle with their more numerous opponents, they are rapidly diminishing in numbers and will soon be compelled to abandon their wandering habits and settle down near some of the Forts, on the lower Columbia, where they can receive protection, and raise corn, beans, and stock for a livelihood. They derive their name “Galish”, or Flat Head from an ancient custom of compressing the heads of their infants between boards so as to cause them to assume a different or unnatural shape, but this crush custom has long since been abandoned, and no living example can be found amongst them. These were the interesting and inoffensive Indians, Capt. Lewis found in Horse Prairie, on the head of the Jefferson, and enticed to his camp by a display of brads, looking glasses and other gew gaws that caught the admiration of these untutored children of the mountains. I have frequently heard “Old Guigneo,” the Flat Head Chief, relate minutely, the circumstances that occurred in this, their first interview with the white man, and found that

---

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

his relation was almost word for word the same as recorded by Capt. Lewis; the only difference being this, an old Shoshony or Snake squaw who was with Capt. Lewis, observing how much he seemed to be interested in these simple and amiable people, claimed them as Shoshoneys, her own people and the greatest rascals to be found in the whole mountain range. The Flat Heads boast that they have never killed a white man, or stolen a horse from any one of them. They are honest and religious. In the two years that I was trading with them, I never had so much as an awl blade stolen. Their religious exercises consist of singing and dancing, in which they all assemble and engage on every sabbath in the open air. Their customs are almost identical with those of the ancient Jews, with the single exception of burnt offerings or sacrifices, in which blood is displayed; they do make offerings to the great Saint, but these are always articles of beauty or use, as tobacco, blankets, beads and other ornaments. These are always deposited in places where they believe the Great Spirit temporarily resides, or visits. To one who has been familiar with their manners and customs, it would seem that in ancient times, they had had a Jewish Jesuit among them, who had instructed them in all the ancient doctrines of the Pentateuch. When any article, however trifling, is lost and found by any one, it is immediately handed to the Chief, who invariably restores it to the right owner. Their females are chaste and modest, and many of them would be considered as pretty anywhere. They are fond of dress, painting, and a display of brilliant colors, which makes the individual Indian when in full dress a very fantastic creature. Their appearance, however, when assembled on a gala day or on that of some annual festival, especially when on a march, is quite animating. I will attempt imperfectly to describe such a scene. We had broke up camp in Horse Prairie, on a lonely day precisely on the spot where Capt. Lewis had formerly met these Indians, and were marching eastward over the wide and beautiful plain in quest of water, grass and convenience to the game. Old Guineo limped along at the head of the procession, his old wounds preventing him from mounting a horse. He was wrapped in a plain buffalo robe, and nowhere displayed any ornament. Behind him was led a proud war charger, which by the by, he never mounted, bearing his lance, shield, quiver, and tomahawk, and all the paraphernalia of war used in his days of vigor and prime of manhood. This horse was highly ornamented, covered with fringe and tassels of various brilliant colors, but the most prized ornament was several tailfeathers of the American Eagle, highly ornamented with porcupine quills of all colors and fastened securely to the tail of the noble animal. These indicated the number of the gallant deeds his splendid animal had enabled him to perform. His lance, too, had many of these feathers dangling at the outer ends like the small flags attached to lances by our chivalrous ancestors. These were also a record of the deeds of high emprise effected with the aid of this implement. Behind followed many gallant steeds decorated in a similar manner, and bearing the arms of their respective owners. Following these was a scattering crowd of packed horses, bearing their lodges, goods and children. These were driven by squaws, mounted on saddles having the front and rear two feet high. They all rode astride, and their saddles were as abundantly decorated with fringe, tassels, bells, etc. as the war chargers of their gallant husbands. On our left, a cavalcade of fantastic horsemen canter along, their long black hair rising and falling gracefully with the motion of their bodies. Beyond them a score of youths are trying the speed of their horses, and moving with the speed of the Arabs of the desert; beyond these still, are single horsemen at all distances in view; these are acting as spies to get a distant view of any approaching enemy, and to observe the situation, kind and numbers of game. On our right are seen half a dozen horsemen in hot pursuit

---

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

of a wounded antelope, who runs nearly as fast on three legs as the following steeds do on four. Beyond them is a scattering herd of Buffalo running in all directions with twenty or thirty Indians after them. There, down goes one, then another, and still another, in a few minutes twenty are dead on the field; yonder is an Indian driving his Buffalo towards our line of march, he approaches nearly to Old Guineo, and down goes his Buffalo; this is done to get the assistance of his squaw to help butcher it. Yonder is another driving his Buffalo in the direction we are traveling; this is done to kill him as near camp as possible. Far beyond our line of march, is a single Indian waiving his Buffalo robe to and fro, and still beyond him are several Indians riding at half speed, a short distance back and forth, at right angles to our course; all this is to apprise us that they have discovered strangers. A strong party of Indians instantly depart at full speed to the point of observation always ready for peace or war; in a few moments a party of horsemen are seen far to the Northward galloping towards the distant mountains, but they are so far off that no attempt is made to follow them. We reach a clear and wooded stream where grass is high and plentiful; here a tripod is planted and Old Guineo's arms are suspended from it; other tripods are similarly set up and ornamented. The pack horses are quickly unloaded; in an hour the lodges are pitched and the goods transferred therein; in the meantime the braves are assembled here and there in circles, the calumet goes freely around, while in the midst of each of these assemblages, some old veteran in animated declaration is rehearsing the glorious deeds of their ancestors, and inspiring the listening youths to these illustrious examples.

These mountain Indians have an unusual language of signs by which any Indian of any tribe can make himself clearly understood by any other Indian of any other tribe, although neither of them may understand a word of their different languages or tongues. These signs are made by graceful movements of the fingers, hands and arms, and are natural and expressive. These signs embrace animate and inanimate things; thought hope, light, darkness, truth, each has its sign, which is well understood as well as all other things, animate or otherwise, that is known to them. These signs are employed to give form and emphasis in their discourses, and a chieftain who is fond of displaying his oratorical powers reminds one of Ulysses or his older confederate in their animate discourses to the ancient Grecians. But these native declaimers introduce hundreds of gestures unknown to such men as Clay, Webster and Adams, that render their discourses much more effective than they would otherwise be, and fully make up for the paucity of their language, when compared with the fullness of ours in which ideas are more numerous but not more clearly expressive than these native effusion.

## PERSONAL ADVENTURE

Leaving the rendezvous on Green River, our company was divided into several parties to make a spring hunt; each party choosing its own particular hunting ground. Our party, headed by

---

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

Fontenelle and consisting of twenty-two men, determined to try our luck in Gray's Hole, a broken valley adjoining Pierre's Hole on the south, and separated by hills of no great elevation from the plains of Snake River. This valley was remarkable from the circumstance, that every stream, however small, was confined to canyons of cut rock, varying from twenty to thirty feet high, and as it was only here and there, that ravines could be found where a horseman could ascend and descend these cliffs, and there were many hiding places for Indians, it was always regarded as a very unsafe locality to trap in, for a trapper once hemmed in between the walls, had little or no chance to escape. Beaver houses was numerous; no Indians made their appearance, and our hunt was quite successful.

In the middle of May, when our hunt was about half over, Fontenelle came to me one day and proposed that I should take one or two men and hunt up the Flat Head Indians. Our hunt, said he, is quite a success, but could we induce the Flat Heads to meet us at the coming rendezvous, we should be able to get from them a considerable increase to our present store of furs, however, he continued, the Gros Ventre's of the Prairie, who have, for the last three years, been associated with the Arrappahoes, on the head waters of the Arkansas River, and south fork of the Platte, are now returning to their old friends and old haunts; the Peagans on the head waters of the Missouri, and we are here directly in the route, it is more than probable that a collision between us will take place, and for this reason it will not do to weaken our small force by sending off a party sufficient for self defense. You must, therefore, endeavor to accomplish this purpose by night traveling and extreme caution. On the following morning, having chosen an Irroquois and a Flat Head to accompany me, and finding them willing to attempt the enterprise, we made our little necessary arrangements, and set out, after bidding adieu to our comrades who did us the honor to declare that we should be seen no more alive! Directing our course across the hills, we soon came in view of the great plains of Snake River, and at the distance of sixty or seventy miles, in the distant mountains across the plain could be seen 'Cotas defile,' to which we directed our march and which would lead us over to Salmon River. The plain of Snake River was covered with wild sage, the only vegetable to be seen, except the cactus plant which was abundant of every variety. At noon, we reached the great river, and having forced our horses to swim over, we made a raft of loose drift wood upon which we placed our clothing and arms, and half pushing half swimming we reached the opposite shore. Here finding some short curly grass that is very nutritious we halted a couple of hours to let our horses graze; ate some of a small stock of dried Buffalo meat, and again proceeded. We now entered the region of the natural fort that I have described in a former article, the wild sage and cactus were still the only vegetation. The country was arid and waterless, and frequently covered with huge black basaltic boulders similar to that, that constitutes the natural forts. The famous Buttes could be seen far to the southward and the Tetons that we had left behind us seem to increase in height as we receded from them. After a hard day's ride, we halted at dusk, made no fire, ate some of our dried meat and slept in one of the natural forts. After hobbling out our horses, we suffered some for water, which we had not seen since we left the river. Our repose was undisturbed. The next morning at day-light, we again set out proceeding as rapidly as the nature of the country would admit, in the direction of the defile. Towards evening, we began to see great numbers of Buffalo along the base of the yet distant mountains; these animals were in great commotion, running in all directions, evidently pursued by a large body of

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

Indians; we however continued our course. Late in the evening we discovered three mounted men approaching us from the defile; they came within half a mile, and two of them halted, the other approached within two hundred yards, and examined us for several minutes with great attention, then galloped off rejoining his companions. They all disappeared in the defile we were about to enter, turning our course obliquely so as to strike the small stream that flows from the defile at the nearest point. We soon reached it, and concealing ourselves in the willows that were sufficiently plentiful along its margin, we made a fire and cooked and ate some of the flesh of a Buffalo we had killed during our day's march. As soon as it was dark we took the precaution to cover one of our horses that was a white color, with dark blankets to elude observation and started up the defile. We had every reason to believe that a large body of Indians were encamped in the defile, and consequently avoided going near the stream, but held our course as near the base of the adjacent mountain as the nature of the ground would admit, yet notwithstanding our precautions we had proceeded but three or four miles before all the dogs of a large village of Indians set out after us, filling the air with their yells. We rode for several miles at a break neck gallop and outstripped the dogs, after which resuming our ordinary gait, we continued our course until after midnight; turned loose our horses and slept on the spot. With the morning star we arose, sought our horses and resumed our journey. As soon as it was light enough to see, we found the ground covered with the traces of horsemen, but these diminished as we proceeded, and when we reached the narrows where the pass for several hundred yards is confined between walls of cut rock forty or fifty feet apart the numerous traces ceased to appear, and we began to congratulate ourselves that we should at least escape the Indians we had left behind us. The pass opened into a large rolling plain which we entered and continued down for some distance. We now again began to find numerous traces of horsemen and footmen increasing in frequency as we proceeded. In a little time we found ourselves in the edge of a battle field; dead Indians killed and scalped, began to make their appearance and increased in numbers as we advanced; we counted sixteen in a few hundred yards. They were not Flat Heads or we should have recognized some of them, they appeared to have been killed only a few hours. Here it was certain that a bloody battle had been fought within a few hours past. It was also evident enough that we had passed one party of the belligerents during the preceding night, and that the other party was necessarily ahead of us, but who are they? Are they hostile or friendly? If the Flat Heads and Black Feet have had a fight, which is more than probable, which of the parties did we pass in the night, and who are we about to meet? These questions were agitated but not solved, we concluded that the chances of our meeting friends or foes were about equal, but we resolved to be extremely vigilant and the moment we should uncover Indians to seek instant concealment until that night, when we would approach them and ascertain who they were. These pleasant resolutions were all suddenly knocked in the head, for we had scarcely made them before a party of over a hundred Indians filed out of a ravine at the distance of three or four hundred yards, and at once came in full view of us. We saw at once that with our jaded horses escape was impossible, and immediately ascended a hill resolved to sell our lives as dearly as possible. The Iroquois and myself dismounted from our horses and quietly awaited the result. The Indian appeared sullen and by his tenacious grasp of his gun, and his look of firm resolve, I know that he intended to kill an advancing foe which was all he could hope to do before being killed himself. I presume my own feelings were similar to his; I had confidence in myself and gun, and believe I could accomplish as much as the Indian.

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

The Flat Head pursued a different course. He rode at half speed back and forth on top of the mound, and in a loud but monotonous tone sung his death song, in which he recounted his deeds of heroism, the scalps he had taken and his utter readiness and contempt for death; he invited the advancing Indians to come and take his worthless life, but assured them that one of their number should accompany him to the bright hunting grounds. I confess that the example of this gallant Indian inspired me with similar feelings and I could plainly see that it had the same effect upon my Irroquois friend. All at once my Flat Head friend stopped his song and gazed intently at the advancing Indians for a moment and then dashed headlong, like a madman, down to them, crying 'Galish!' 'Galish!' All was instantly explained; the Indians were the very ones we were seeking. They had just started on a Buffalo hunt but on meeting us immediately returned to camp. Our jaded horses were turned loose and we were mounted on their war chargers and went in a sweeping gallop six or seven miles to their camp.

As soon as we arrived and had been sufficiently feasted, Guigneo assembled his warriors in council to learn the nature of my embassy. I was instructed to offer them a liberal present of ammunition, blankets, and tobacco if they would meet us at the rendezvous in Pierre's Hole. My arrival proved to be auspicious; the day before they had had a severe fight with the Blackfeet Indians, that lasted all day, and when the parties withdrew from the field of battle, the Flatheads had not a single load of powder and ball left for half of their number, and had the Blackfeet known this, the Flatheads would in all probability have been exterminated. The council at once determined to comply with our wishes, but old Guigneo said he would be compelled to make short and easy marches on account of the forty-odd wounded Indians in his village. Many of his braves had been killed, and some of the severely wounded were dying daily. On the following morning we set out, returning by the same route we had already followed. The wounded Indians were conveyed on litters consisting of two lodge poles fastened on either side of a packhorse with skins stretched on cross bars so as to form a bed for each of the sufferers. These lodge poles were very elastic and passed over rough ground like the springs of a carriage, yet it was a terrible journey to the poor invalids, though perhaps no worse than the carts and ambulances in which our own wounded are usually conveyed. We were three days in reaching the point where we had passed the Indian encampment in the night. The Indians had decamped, and we ascertained that they occupied about three times as much space as the Flatheads, and judged from this that they were about three times as numerous. When we entered the plains at the mouth of the defile, the hostile party could be seen encamped about three miles north of us on a small stream, but they made no demonstration. They had evidently had fight enough and were doubtless as much or more encumbered with wounded Indians than ourselves. We saw many fresh graves about their encampment and believed that their loss had exceeded that of the Flatheads. At the mouth of the defile, all the skins and available vessels were filled with water to supply the wounded whilst crossing the great arid plain. It required three days to reach the river, but some of the young Indians went in advance and brought back water from the river, keeping a sufficient supply on hand for the wounded.

On reaching the river, a stranger not acquainted with the resources of these Indians, would have wondered how so large a force was to be transported across a wide and swiftly flowing river without boats or rafts. He would soon, however, have been undeceived. All the goods and chattels be-

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

longing to a lodge were placed in it, it was then rolled up in the shape of a ball, puckered and tied at the top, a cord was fastened to each and they were launched into the river, the squaws and children mounted on these balls, and they were towed across the river by an Indian swimming over with the rope in his mouth. In twenty minutes the river was covered with these novel vessels, and in half an hour all were safely landed half a mile below on the opposite shore. Four of these balls with a platform of lodge poles would convey six or eight wounded Indians, and in one and a half hours from the time of our reaching the river, the tents were all stretched ready for the occupants on the opposite shore. Myself and a few youngsters fastened some drift logs together upon which we placed our clothing and arms and crossed as we had done a few days before. Finding the grass tolerably good, old Guiguel resolved to rest his wounded here for several days. On the following morning I set out accompanied by a half dozen young Indians for Pierre's Hole. Here we found Fontonelle and some other parties of other trappers who had already reached the place of rendezvous. Other parties reached camp daily, and a week later, and the Rocky Mountain Fur Company reached the valley and encamped about a mile from us the same time the two St. Louis companies headed by Dripps and Gubbitt reached the valley. Old Guiguel also made in with his forces and we now altogether numbered one thousand men able to bear arms. The Gros Venues of the prairie, as we anticipated, were passing northward in companies of one hundred lodges or more. One of these lodges fell in with the Rocky Mountain Fur Company but finding the white men abundantly able to defend themselves, they adopted the peaceful policy and opened a trade for fur and skins that was advantageous to both parties. A few days later the same Indians killed seven of our young men who had started for Saint Louis. This took place in Jackson Hole. Still later a party of these Indians numbering about a hundred and fifty warriors with their women and children, entered Pierre's Hole and had proceeded nearly to the middle of the valley before they discovered the extent of their danger. They however then acted with judgment and discretion.

They immediately sought shelter in a dense grove of aspen trees of which they hurriedly built a very substantial pen large enough to contain themselves and their horses; they also dug a trench around the pen on the inside sufficiently capacious to contain the whole party below the surface of the earth. This enabled them to shoot from the bottom of the pen and gave them a great advantage over their assailants. However, in one hour a thousand guns were constantly discharging at every hole in the pen. The party within it made a gallant resistance, and for a while returned bullet for bullet, but late in the evening resistance had almost ceased, and all parties returned to their several encampments. In the morning we visited the pen which was literally full of dead Indians, squaws, children and horses. It is not probable that any escaped. Two young and rather interesting girls, fourteen or fifteen years of age who were out hunting berries when the fight commenced, concealed themselves, and were found and captured the next morning. The Indians kindly offered to save their lives and treat them kindly, but they said that their friends and relations were all killed and they wished only for death. They were importunate, and earnestly begged for death on their knees until an old warrior finding that he could do nothing with them, released them from the bond of life with his tomahawk. Had any of the white men been present their lives would have been saved unless they had committed suicide, which from their despair was highly probable. The next morning we had sixteen Indians and six white men laid out for interment in our camp. Other parties suffered to the same extent. Many were wounded - some

LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

mortally. Subbett was shot in the breast and arm, Dripps had a bullet through his hat that took a lock of hair with it. The Indians, however, being most numerous, suffered the most, and Old Gurgueo had quite a company of wounded men to add to those already in this condition. Old Gurgueo was a great favorite with all white men, and received generous presents from all the various companies. In fact he left six weeks afterwards with ammunition and tobacco enough to last his braves for several years. He was also furnished with everything that could be found in any of our camps to alleviate the sufferings of his wounded followers. The old fellow was generous and grateful, and prayed earnestly to the Great Spirit to protect us in all our pursuits.

NUMBER 5 - Dallas Herald, December 14, 1872.

## ANIMATING SCENE, AND A FORMIDABLE NIGHT COMPANION

In the early part of the fall we descended Bitter Root River, to the head of navigation. Here the Hudson Bay Company had a trading post which however, was abandoned in the winter. Here on a fine day we enjoyed quite an animating scene. A long line of Mackanaw boats loaded with furs and peltries, were proceeding down the river, the whole surface of which was covered with those light and fragile vessels, birch bark canoes, which of all known craft are, the most easily upset. One is astonished to see with what dexterity and address these topling things are managed by the squaws. We have seen an old squaw pack her canoe on her back two miles across the portage, set it in the water, pile up a wagon load of goods upon it, throw three or four children on top and getting into it, balance the whole by the motions of her body and paddle away with almost the speed of a fish. One is surprised that fear or no accidents occur. After the fleet of canoes had disappeared on their way down the river, a long line of horsemen also proceeded down the river by land intending to winter at Fort Colville, leaving behind a small part of the company assembled here in the morning. Others broke away in small parties, who sought shelter and game in nooks and ravines of adjacent mountains, there to spend a long and dreary winter. I accompanied a half dozen families thirty or forty miles up a small stream to a very small but pretty valley, where we hoped to find game abundant. During the early part of the winter, having a pretty good supply of provisions, and a young half breed Indian managed to keep a pretty good supply of venison on hand. The winter, however, was very severe; snow fell to the depth of five feet over the little surface of the valley and it was impossible to get about, except on snow shoes. Provisions began to grow scarce, and our hunting necessarily became an every day's business, I began to get about as tired of this as I had previously got of fishing. To chase, on snow shoes, half or three fourths of a day over spurs of mountains, kill a deer and pack it on your back to camp two or three miles, might do as an occasional amusement, but when necessity makes it an every day business it becomes rather tiresome. Convinced that we should not be able to supply all the camps, I volunteered to go down the stream where we knew a small party of Indians were stationed and hire one or two hunters to go up and hunt for the party left behind. With my gun, blanket, tomahawk and knife, together with a small scrip of dried venison I set out on snow shoes. My course lay down

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

the narrow valley of the stream, now crossing Rocky Point, now through skirts of pine timber, and frequently over difficult ravines. During the day I saw many deer, but was not yet so lost to humanity as to kill them through mere wantonness. I suffered during the day for water, although I was almost constantly beside a stream; fifteen or eighteen inches of ice must be penetrated before I could hope to get water. Once I attempted to reach the water with my tomahawk but soon found that after penetrating the ice the water was still beyond my reach and I gave it up in despair. I had freely been eating dry snow all day, but snow is but a sorry substitute for water. In the evening I began to look about for some place where I could spend the night. Luckily, I found a cave sufficiently large at the enhance to admit me in a stooping posture. As soon as I entered it, I found it sufficiently capacious being two or three feet wide, as high, and lost in darkness in the interior. I now struck fire, and having supplied myself with a large quantity of pine knots which were sufficiently abundant, I then made myself a comfortable bed of branches of the balsam fir; got thoroughly warmed up, ate my supper of dried venison, and should really have felt quite comfortable had it not been for my inordinate thirst. Directly I heard, or fancied that I heard, water rippling in the interior of the cave. Making a torch, and taking my gun along, I proceeded to explore the cave, and soon found, to my great joy, one of the most delightful fountains I had ever seen in my life; the water was exquisite, neither too hot or too cold, and beyond the reach of congelation. I drank until I was satisfied, having gone a little beyond the strict rules of temperance. As I sat near the spring, torch in hand, I either saw or imagined I saw a ball of fire in the interior of the cave beyond; perhaps, it was mere fancy. I saw but one and only one imperfect glance at that: Perhaps it was only the reflection of my torch on a drop of water. In any event I cared not as I knew no animal would venture to attack me with my means of keeping up a good fire. Returning to my fire I lay down, but that ball of fire recurring to my mind I took the precaution to place the muzzle of my gun in that direction, placed a knot or two on the fire and fell into a doze; whenever my fire burnt low the intense cold would awake me, some knots were placed upon the fire, and the dozing repeated. The cold was so intense, that the sap vessels of the pine trees were continually bursting with the reports as loud as fire arms. Towards day, finding that I had a much larger quantity of fuel than I should require, I built up a large fire and fell into a deeper slumber than I had yet enjoyed. I was awakened from this by a tremendous clatter and soon found that an enormous Grizzly Bear, who had probably watched me all night from the interior of the cave, most likely in trepidation, finding it impossible to resist his fears and danger had bolted for the mouth of the cave, determined to make his exit in spite of fire. The entrance to the cave was much too small to admit the passage of his body without great exertion. Being convinced that he could not return until I should have ample time to put my gun to his ear and blow his brains out, I could not resist the inclination to stick a fire brand to his long hair. In an instant he was enveloped in flames. The next moment I saw him flouncing and wallowing in the snow having the appearance of a swung rat. He arose, shook himself, and eyed me as if he had half a notion to attack me and my fire; however, if such were his intentions, he soon changed his mind and galloped off in the direction of a ledge of rocks, no doubt promising himself never again to attempt to pass a night in that infernal cavern. I saw him no more, and never had the opportunity to inquire if he caught cold on this occasion. After eating some of my small store of venison, I went with a lighted torch, to my glorious spring not knowing how many more bears might be stored away in the dark recesses of the cave. I drank freely of the water I had discovered and left it with regret. I now departed from

---

the cave and proceeded on my journey. At the end of three or four miles I began to see tracks of snow shoes, and the same evening reached an encampment of about fifteen Indians. I found all the trees in the neighborhood of the camp full of the carcasses of deer that had been dressed but frozen hard as ice. I remained with them all night. The next morning I hired two Indians to go up and hunt for the party I had left alone. I went on down the stream, and passed the residue of the winter with an Indian friend, Payette, who had a small family and a well supplied wigwam. I amused myself by excursions on snow shoes, sometimes killed deer for amusement. Payette killed several Linxes during the winter; these were always fat and I found the flesh excellent.

## THE FIRST SALMON - SALMON FISHING

After a peaceful Buffalo hunt on the plains of Snake River, old Ginquro the Hot Head Chief proposed to lead us over to Salmon River, in order to give us a little recreation in the way of fishing. The first waters of the Salmon River that we reached, was a very small stream issuing from a pond or miniature lake, four or five feet deep and sixty or eighty yards in extent, having a fine pebbly bottom; the water was so clear and pure, that a pin could be seen at its greatest depth. In this pond was one single Salmon of unusual size; we inferred that this fish had selected that place to deposit its spawn to the exclusion of all other fish which it had probably driven away. After encamping, all hands, Indians and white men, surrounded the pond all elated with the idea of capturing the first salmon. Happening to have some knowledge of the habits of this fish I stepped down to the lower edge of the pond and placed myself on the shoal opposite to the deepest part in water a little over shoe mouth deep, and stood gun in hand, watching the appearance of the fish; presently, I saw it swimming down slowly close to the bottom, evidently uneasy at the presence of so many persons. As soon as it reached a depth of one foot, I aimed at his head and fired; a great splash of water followed, enveloping me and my gun. Before I could clear the water out of my eyes my comrades had the fish out on dry land, with a bullet hole through his head; he was a noble fish of the very largest size and in the finest condition. The next day we reached the shoals of Salmon River, and I lost all the glory I had acquired the day before in killing the first Salmon, for I found boys ten years old that would kill with sticks and stones three fish to my one, notwithstanding I had the advantage of a double barrel gun. The women and children were all engaged in this sport with sticks, stones, arrows, guns and lances; of the various instruments the lance seemed to be the most efficient. One old Indian with a lance would pin a fish to the ground, whilst three or four little boys followed him with forked sticks. Whenever he caught a fish, one of the boys who was always ready to place his hook in the gills of the fish and start for shore, the lance was then relieved, and the same thing repeated. Old Guineo notwithstanding his age and infirmities, was on the shoals tomahawk in hand, and killed several fish. I here saw a trait in the Indian character that was very pleasing. Some of the young and active Indians observing how anxious Guineo was to enjoy the sport, and how difficult it was for him, to get about with alacrity, over the smooth and slippery rocks managed with great address to draw several fish within reach of his tomahawk and he seldom failed to give the death blow to such as came within his reach. So many fish were

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

---

killed that we made use of only those in high condition. The squaws split and smoke-dried large quantities. We were compelled every few days to move camp to other shoals, in consequence of the offensive epheria of stinking fish, and in truth we became as tired of fish and fishing as we had before been anxious to engage in the amusement. Some of us fancied that our camps had a fishy smell for months afterwards.

## PERSONAL ADVENTURE

While quite a youth the writer was frequently employed in raising and conveying the contents of caches (goods and furs) to the summer rendezvous or to Winter quarters. Care, caution and uniform success, elicited the praise of his employers, and induced them to give him frequent employment in expeditions of this kind. The amount of force sent was always determined by the leader of the company, but the partizans of these squads always had the privalege of selecting his own assistants. On one occasion he was ordered to take five men and ten pack horses and raise a 'cache' of furs about three hundred miles distant. The course lay directly through the country occupied by a powerful tribe of Indians, the Aarrappahoes who were at the time hostile. The value of the pack horses and fur was about fifteen thousand dollars. Having chosen two Delawares, a Shawnee, and two Canadian Frenchmen, all men who had seen death in all its forms and could look it steadily in the face if necessary, yet men of great caution and vigilance who had all shown great presence of mind on trying occasions, the preliminaries being settled, we set out, generally halting at twelve o'clock and remaining until two in order to give our horses ample time to graze. At such times someone of the party was always stationed out on some eminence where he could watch the movements of game or the approach of Indians. At two hours before sun set we again halted and remained until dark, then saddled up our horses and proceeded ten or twelve miles after night, turning loose or hobbling our horses, we slept on the spot where we halted. This course prevented any stragglng Indians who might have seen us during the day from following us to our encampments. It also gave us a great advantage of war parties, as we would necessarily see their fires when in the vicinity of our course and determine the extent of our night marches so as to avoid them, altogether. In this manner we proceeded on to the "caches," raised them and returned as far as Salt River, about half way to the main encampment. Three or four days previously, we had crossed the great lodge trail of the Appahoes, going south east into the defiles of the great chain of mountains that were nearly parallel to our course about a half a day's march to the eastward and in which are seen Long's and Pike's peaks and many other conspicuous land marks. The Arrapahoes had hunted out the country leaving little or no game behind them together with small probability of our meeting any considerable party of Indians. After passing the great trail we saw no further sign of Indians and began immediately to greatly relax our vigilance. Salt River some fifty miles west unites with Snake River forming Grand River which last unites with Green River, forming the Colorado of the West which by and by is a muddy stream like the Missouri,

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

the Columbia River being on the contrary as clear as the Ohio. We were encamped on Salt River, Snake River was about thirty miles from our encampment a distance too great for a day's march with pack horses. However, about midway between the two rivers a span of the great mountain chain projected down into the plain, reaching quite to the trail generally followed and near its termination was a famous spring having clusters of willows sufficient for fire wood along its margin. This was a noted place for encamping both by white men and Indians. In the morning it rained heavily for half an hour, cleared off and the sun came out giving promise of a beautiful day; we leasurly packed up our horses intending to proceed as far as the spring and halt there during the following night. So soon as we crossed Salt River we found Buffalo and Antelopes in great numbers that had certainly not recently been disturbed. The strong mist arising after the shower from the hot arid plain rendered distant objects very indistinct and the great refraction caused distant Buffalo to appear as tall as pine trees. We proceeded slowly and killed several fat and fine buffalo; the choice meat was fastened to our pack horses and we proceeded on our march. All at once we discovered eighty or ninety red objects we supposed to be Antelopes far as the eye could reach ahead of us. They were running from us in the direction of the spring. We immediately halted and examined them with great care. I soon ascertained that they did not retain their places as a herd of Deer or Antelopes generally do, but the hindmost would pass up the line another dropping in his place and we soon noticed that they were continually passing each other; more than this, we could see no reason why a herd of antelopes should be running from us at so great distance. The conclusion arrived at, was that they were Indians, and we instantly comprehended their designs. They were so far off that they believed themselves undiscovered. They were running to meet the point of mountain undiscovered; once there, they would be secure from discovery or observation. They knew, from our course, that we were aiming to reach the spring. From this place of concealment they could watch our every movement. After night, when we had gone to rest, they would surround our encampment, secure our horses, and crawl up around our camp, and fire upon us according to their custom at daybreak. All this we instantly comprehended. The question now with us was how should we manage to save our pack horses and furs. After some time spent in consultation, we adopted a course that we believed we could make successful, by good management. We knew too well that if we attempted to save ourselves by changing our course, the Indians would know at once that they were discovered and give chase; that in the course of two or three hours they would certainly overtake us and we should necessarily be compelled to abandon our pack horses to save ourselves. Our course was to proceed on to the spring and encamp as if we were wholly unconscious of the proximity of an enemy; to appear as carelessly as possible; to build fires, cook our supper, keep our riding horses close about camp, so as to throw our saddles upon them and make our escape in case the Indians should attempt to make a raid upon us by daylight; but above all, to place a hawk eyed Indian behind a rock on a neighboring eminence to watch the point of mountain, distant about three hundred yards, with unremitting vigilance. All this was duly accomplished, we reached the spring whilst the sun was yet above the horizon; our packs were thrown off with the greatest apparent carelessness, yet everything was so placed that it could instantly be found and used; our pack horses were permitted to stray some distance from camp yet our riding horses were herded close at hand. We built large fires, cooked and ate as heartily as we should have done had we known ourselves perfectly free of danger, and as soon as it became sufficiently dark to prevent observation from the point of mountain, we

## LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

hurriedly but securely, packed up our horses and having built our fires and placed some saddle blankets on sticks about the fires, to give them the appearance of men sitting around them. We set out giving the point of mountain a wide berth. As we passed, however, we could plainly see the Indians in a ravine by a small fire stark naked in the act of painting themselves preliminary to their contemplated attack upon us. The next morning at sunrise we were thirty miles away and had so completely out-witted the Indians that they made no attempt to follow us. In due time we reached camp without loss and received undeserved praise for our conduct; whereas we should have been censured for exposing ourselves unnecessarily, for we should with our accustomed vigilance have performed this part of our journey by night with perfect security.

## INTERESTING INDIANS - THE NABAHOES

There are really no Indians in the Rocky Mountains who deserve honorable mention, but two tribes, the Nabahoes and Flat Heads; all others are rascally, beggarly, thieves and rogues generally. The Nabahoes are found in the gulches and canons of the Gila, west of Santa Fe. They are generally at war with the Mexicans, and in most instances, have proved themselves the better soldier of the two. This may in some degree, be imputed to the great national defenses in the country where they reside, consisting of inaccessible canons and precipices to which they can retire when necessary, or from which, by secret pass and outlets, they can at any time issue and attack an enemy when, perhaps, they are wholly unexpected and by these means surprise a force that may greatly exceed their own. The Mexicans have become exceedingly chary in following these Indians to their places of concealment, and in consequence, the Indians, if too weak to make a successful resistance, retired to their hiding places until their enemies depart. These Indians have sheep and cattle; they are not migratory or nomadic, but remain permanently fixed in coves and small valleys surrounded by walls of cut rock or mountains scarcely accessible. They have attained to a high degree of perfection in the art of manufacturing blankets, similar to those made in Mexico, but we are assured that they greatly surpass the Mexicans; both in execution and design. We have seen a Nabaho blanket that was worth five hundred dollars. The texture, was fine and closely woven; colors were very brilliant and the design extremely beautiful. One who has made himself familiar with the history of design as practiced by the silk weavers of Lyons, would be surprised to learn that a tribe of Indians in the Rocky Mountains, had attained to quite as high a degree of perfection in the art, as these French weavers. And why not? Have they not the whole field of nature before them to copy, and where else can we find a higher degree of beauty and perfection than is presented by the vegetable and floral world? I am told that it required two or three years to complete one of the finest blankets. I presume that these Indians if let alone would become harmless and inoffensive. They possess within themselves all that a pastoral people require, and having no knowledge of luxuries have no use for them.

VERSE

by Warren A. Ferris

The following lines were composed on a dreary Winter day during a surveying excursion remote from habitation or other indications of civilized life whilst the author lay in camp alone and lame where great danger existed.

LAMENT

Very forlorn and weary here

Alone I rest my frame

Far far from friends and Kindred dear

I lie a cripple lame

A streamlet flows beside my lair

Sheltered by lofty cane

Sought to arrest the chilling air

And turn the wintry rain

A thousand warblers cheer the wood

With ever changing lay

But still my mind in irksome mood

Is cheerful as this day

Which line the forests aspect drear

Imparts the unwelcome truth

LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

That Autumn hastening year by year

Succeeds the way of youth

My Comrades gone and I alone

With anxious care opprest

I hear the forrests hollow moan

And start ah! fear exprest

But better reason checks the fault

A fault I blush to own

Tho' sterner spirits often halt

By sudden terror thrown

From reasons cheek when danger's near

As pallid cheeks declare

Yet this to him is short lived fear

Who seeks a warriors fare

With thoughts like these I sink to rest

Morpheus drowns my care

My soul with fleeting visions blest

I dream of fortune rare

MOUNTAIN SCENERY

Where dark blue mountains towering rise

Whose craggy summits cleave the skies

LIFE IN THE ROCKY MOUNTAINS - from February, 1830, to November, 1835

By W. A. FERRIS

---

Whose sides are decked with giant pines  
With branch and encircling vines  
There thund'ring torrents bounding far  
From rock to rock dissolve in air  
Or larger streams with lion rage  
Burst through the barriers that encage  
And sweeping onward to the plain  
Deposit ruins and again  
Proceed: but mask what force subdued  
Their whirlwind terror now not rude  
No longer they with fury hurl  
Rocks from their beds in Eddies whirl  
Tall pines, nor yet with deafening roar  
Assail the echoing mountains hoar  
But milder than the summer breeze  
Flow gently winding through the trees  
Or smoothly flow and softly glide  
Through woodless plains and valleys wide

NARRATIVE OF A VOYAGE TO NORTHWEST COAST OF AMERICA  
BY GABRIEL FRANCHERE

---

NARRATIVE OF A VOYAGE TO NORTHWEST COAST OF AMERICA IN THE YEARS 1811,  
1812, 1813, AND 1814 OF THE FIRST AMERICAN SETTLEMENT ON THE PACIFIC  
BY GABRIEL FRANCHERE

TRANSLATED AND EDITED BY J. V. HUNTINGTON

REDFIELD

110 AND 112 NASSAU STREET, NEW YORK

1854.

Entered, according to Act of Congress, in the year 1854, BY J. S. REDFIELD, in the Clerk's Office of the District Court of the United States, in and for the Southern District of New York.

PREFACE TO THE SECOND EDITION

IN 1846, when the boundary question (that of the Oregon Territory in particular) was at its height, the Hon. THOMAS H. BENTON delivered in the United States Senate a decisive speech, of which the following is an extract:—

“Now for the proof of all I have said. I happen to have in my possession the book of all others, which gives the fullest and most authentic details on all the points I have mentioned — a book written at a time, and under circumstances, when the author (himself a British subject and familiar on the Columbia) had no more idea that the British would lay claim to that river, than Mr. Harmon, the American writer whom I quoted, ever thought of our claiming New Caledonia. It is the work of Mr. FRANCHERE, a gentleman of Montreal, with whom I have the pleasure to be personally acquainted, and one of those employed by Mr. ASTOR in founding his colony. He was at the founding of ASTORIA, at its sale to the Northwest Company, saw the place seized as a British conquest, and continued there after its seizure. He wrote in French: his work has not been done into English, though it well deserves it; and I read from the French text. He gives a brief and true account of the discovery of the Columbia.”

I felt justly proud of this notice of my unpretending work, especially that the latter should have contributed, as it did, to the amicable settlement of the then pending difficulties. I have flattered myself ever since, that it belonged to the historical literature of the great country, which by adoption has become mine.

The re-perusal of “Astoria” by WASHINGTON IRVING (1836) inspired me with an additional motive for giving my book in an English dress. Without disparagement to Mr. IRVING's literary fame, I may venture to say that I found in his work inaccuracies, misstatements (unintentional of course), and a want of chronological order, which struck forcibly one so familiar with the events themselves. I thought I could show — or rather that my simple narration, of itself, plainly discovered — that some of the young men embarked in that expedition (which founded our Pacific empire), did not merit the ridicule and contempt which Captain THORN attempted to throw upon them, and which perhaps, through the genius of Mr. IRVING, might otherwise remain as a lasting stigma on their characters.

But the consideration which, before all others, prompts me to offer this narrative to the American reading public, is my desire to place before them, therein, a simple and connected account (which at this time ought to be interesting), of the early settlement of the Oregon Territory by one of our adopted citizens, the enterprising merchant JOHN JACOB ASTOR. The importance of a vast ter-

NARRATIVE OF A VOYAGE TO NORTHWEST COAST OF AMERICA  
BY GABRIEL FRANCHERE

---

ritory, which at no distant day may add two more bright stars to our national banner, is a guarantee that my humble effort will be appreciated.

Note by the Editor

It has been the editor's wish to let Mr. Franchere speak for himself. To preserve in the translation the Defoe-like simplicity of the original narrative of the young French Canadian, has been his chief care. Having read many narratives of travel and adventure in our northwestern wilderness, he may be permitted to say that he has met with none that gives a more vivid and picturesque description of it, or in which the personal adventures of the narrator, and the varying fortunes of a great enterprise, mingle more happily, and one may say, more dramatically, with the itinerary. The clerkly minuteness of the details is not without its charm either, and their fidelity speaks for itself. Take it altogether, it must be regarded as a fragment of our colonial history saved from oblivion; it fills up a vacuity which Mr. IRVING's classic work does not quite supply; it is, in fact, the only account by an eye-witness and a participator in the enterprise, of the first attempt to form a settlement on the Pacific under the stars and stripes.

The editor has thought it would be interesting to add Mr. Franchere's Preface to the original French edition, which will be found on the next page.

BALTIMORE,

February 6, 1854.

PREFACE TO THE FRENCH EDITION

WHEN I was writing my journal on the vessel which carried me to the northwest coast of North America, or in the wild regions of this continent, I was far from thinking that it would be placed one day before the public eye. I had no other end in writing, but to procure to my family and my friends a more exact and more connected detail of what I had seen or learned in the course of my travels, than it would have been possible for me to give them in a viva voce narration. Since my return to my native city, my manuscript has passed into various hands and has been read by different persons: several of my friends immediately advised me to print it; but it is only quite lately that I have allowed myself to be persuaded, that without being a learned naturalist, a skilful geographer, or a profound moralist, a traveller may yet interest by the faithful and succinct account of the situations in which he has found himself, the adventures which have happened to him, and the incidents of which he has been a witness; that if a simple ingenuous narrative, stripped of the merit of science and the graces of diction, must needs be less enjoyed by the man of letters or by the savant, it would have, in compensation, the advantage of being at the level of a greater number of readers; in fine, that the desire of affording an entertainment to his countrymen, according to his capacity, and without any mixture of the author's vanity or of pecuniary interest, would be a well-founded title to their indulgence. Whether I have done well or ill in yielding to these suggestions, which I am bound to regard as those of friendship, or of good-will, it belongs to the impartial and disinterested reader to decide.

MONTREAL,

1819.

Voyage of Mr. Hunt and his companions from St Louis to the mouth of the Columbia by a new route across the Rocky Mountains

By July 18, 1811, Misters McKenzie, Crooks, Miller, McClellan, Reed, and Hunt, in company with fifty-six men, a woman, and two children had traveled up the Missouri River from St. Louis to the village of the Aricaras. We left there with eighty-two horses packing commodities, munitions, food, and animal traps. Everyone walked except the company partners and the woman, a squaw. We took a southwesterly route and came to the banks of the Ramparre, a little river that flows into the Missouri below the Aricaras' village.

Without doubt the name Ramparre comes from the French hunters, for it means "provided with many forts." On the same day we camped near a small stream a short distance from its confluence with the Grand River. This we forded on July 21, and on the 24th we pitched camp on the banks of one of its tributaries. We had covered sixty-seven miles, keeping our course a little more to the west in the prairies, where the grass was knee-high and where the horses could graze contentedly. The countryside was bare except for a few cottonwood trees growing along the rivers.

Several members of the company were ill, and we rested here until August 5. During this interval I visited the camp of some Cheyenne Indians. I bought thirty-six horses there at a price better than that which I paid the Aricaras. Their camp was in the middle of a prairie near a small stream. These Indians burn buffalo chips to keep themselves warm. Their teepees are made of buffalo skins carefully sewn together and supported by poles joined at the top. They often hold as many as fifty people. The Cheyennes are honest and clean. They hunt buffalo, and they raise horses that each year they trade to the Aricaras for corn, kidney beans, pumpkins, and some merchandise. They had a dozen beaver skins, but they did not seem to know how to trap these animals.

We rearranged our packs so that no horse would be loaded too heavily and resumed our journey on August 6. We now had enough horses so that two men could ride alternately. I assigned six to hunters and sent them to look for buffalo. We crossed several hillocks, or isolated knolls, that were composed of red earth as hard as brick. Other signs indicated that this area had been burned over, for at the base of several knolls we saw cinders and pumice stones. This rugged terrain had very little grass.

It appeared that at one time some straggling trees had grown on these plains. We found the rotted remains of a few of them. Stumps still stood and we could see from the remnants that they were pine and oak. On the 6th we camped along a tributary of the Grand River and on the 7th near a pond in the prairie. Buffalo chips served for our fuel. We killed several buffalo; in fact, they were everywhere around us, for they were breeding. They made a frightful noise that sounded like distant thunder. The males tore up the earth with their hooves and horns.

We covered forty-two miles on the 6th and 7th. But after that we slowed our pace so that our hunters, who were behind us, could rejoin the main party. The countryside became mountainous and water scarce. The slopes were covered with crags of white sandstone, ranging from southeast

to northwest. We saw some big horn [sheep] there, and we built fires on the summits to guide our hunters. At first we used buffalo chips, but after that we could use pine wood. (40 miles southwest)

On August 11 we crossed a range of mountains like those of preceding days. The trail was tiring because of its precipitousness and the great number of rocks. On the 12th we forded two tributaries of the Grand River that flowed from the southwest, one of them appearing to be the main branch. We saw many petrifications that several of our companions collected to use as whetstones. (27 miles)

Since we supposed that our hunters were still to our right, on the 13th we traveled more to the west, crossing a tributary of the Little Missouri that was three hundred feet wide, its current swift, muddy, and swirling with eddies. To the west the mountains appeared to bar our passage. Three of our hunters returned at sunset. (12 miles)

On the 14th, we made camp beside a tributary of the Little Missouri. The evening was very cold. To the north we found pine-covered mountains that we crossed on the 15th. The terrain was extremely rugged. It became even worse on the 17th, and we could find no passage through these mountains. We killed a big horn whose meat is good, not unlike mutton. Usually we found these animals on mountains where no other animals could go. Several ran and leaped on the very edges of precipices. We also saw some black-tailed deer, larger than the red deer and with very big ears. Their flesh is not so tasty as that of the red deer. The tips of their tails are black, and they are to be found only in mountainous country. (45 miles southwest)

On the 18th we found it necessary to leave the mountains and turn back toward the broken countryside. There we met our hunters who had killed eight buffalo. When we had pitched camp to the left of the pine-covered mountains, Mr. McKenzie and I scaled the nearby slopes. Our view extended in all directions. In the west we saw far off some mountains that appeared white in several spots, and we assumed that this was the snow-covered Big Horn [Range]. Below the peaks herds of buffalo ran over the plains. (10 miles)

On the 19th, we camped in the midst of some hills near a pond of clear water. All around grew reeds, gooseberries, and prickly gooseberries with yellow and red fruit. Clusters of cherry trees showed signs of the habitual paths of the black bear, so that the slightest wind that stirred the bushes gave us some feelings of trepidation. However, we had to this point seen only three of the animals. (21 miles southwest)

We stopped on the 20th beside a branch of the Little Missouri, thought to be the largest tributary. The weather was cold and disagreeable. It froze during the night and the ice was as thick as a dollar. The countryside was high and irregular. This is the spot that separates the waters that flow east into the Missouri and west into the Yellowstone. (34 miles west)

On the 22nd we ran into what we thought to be the usual route of the Absaroka [usually called

---

the Crow] Indians coming from the Mandan villages. The little river beside which we camped and which flowed north was doubtless a tributary of the Powder River. On the 23rd we found another branch; but before we got there we passed through some mountains and some dry gullies. The great heat, the treacherous trail, and the lack of water caused much suffering. Several people were at the point of losing their courage. Mr. McKenzie's dog died from exhaustion. While trudging through these barren, arid mountains we could no longer kill buffalo, for they usually keep near water. However, on the 25th we found a few in this area. The hunters stalked them and killed five. The day before, some of the company had eaten a wolf, which they found quite good. We made camp near a third tributary of the Powder River. (58 miles southwest)

We left the river on the 30th, and camped near Mt. Big Horn [probably Cloud Peak] that had been ahead of us for so long. The day before, our hunters had seen signs of Indians. For several days we had been on the lookout for them, but they discovered us first. On the evening of the 30th, two Crow Indians came to our camp and the next morning many more appeared. They were all on horseback. Not even the children were on foot. These Indians are such excellent horsemen that they ride up and down the mountains and craggy heights as if they were galloping in a riding school. We followed their to their settlement that was beside a clear brook on the slope of a mountain.

The chief came to meet us. He received us amicably, led us to his tent, and pointed to a spot convenient for our camp. I gave him presents of tobacco, knives, and some trifles to distribute among his people. To him personally I gave a piece of scarlet cloth, some powder, bullets, and other items.

We spent the first day of September buying some robes and pelts and trading our tired, maimed horses for fresh ones. A few of our company bought some, thereby augmenting the number of our horses to about 121, most of which were well-trained and able to cross the mountains.

On the 2nd we resumed our journey along the foot of the mountains and stopped near a small river that is said to be a tributary of the Powder River. We tried for half a day on the 3rd to get away from the precipices and the bare mountain heights; but we were forced to retrace our steps and return to the banks of a small stream. We killed several very large elk. (21 miles)

We had in our company a hunter by the name of Rose, a very unpleasant, insolent man. We had been warned that he planned to desert us when we came across the Crow Indians, to persuade as many of our men as he could to abandon us, and to steal our horses. For that reason we kept close watch at night. Moreover, we were afraid that if, despite our vigilance, he succeeded in carrying out his traitorous design, he would greatly damage our expedition. Thus, with the thought in mind that his plan might be more extensive than we suspected, we resolved to frustrate it. On September 2 we had received a visit from some Crow Indians of a tribe different from the one which we had just left and which was camped on the mountainside. At that point I suggested to Rose that he remain with [the] Crow Indians; and I offered him half a year's wages, a horse, three beaver traps, and some other commodities. He accepted my conditions; and he immediately

abandoned his fellow conspirators who, without a leader, remained with our expedition.

So Rose joined the first Crow Indians whom we encountered. Their chief realized that we had followed a wrong course and on the 4th sent Rose to tell us and to put us on the right trail that crossed the mountains and that was both shorter and better. We soon met Crows who were taking the same route as we, a meeting that gave me an opportunity to admire the horsemanship of these Indians. It was truly unbelievable. There, among others, was a child tied to a two-year-old colt. He held the reins in one hand and frequently used his whip. I asked about his age and was told that he had seen two winters. He did not yet talk!

We camped at the source of the small river that we had reached the day before, resting there on the 5th. We wished to await the return of our hunters who appeared that evening. They had killed two buffalo and a gray bear. We were in the middle of the Big Horn mountains, so called because of the river by that name. The river runs along the mountain base, flowing northeast to southwest. The Big Horns are an advanced part of the Rockies. They are covered with pines, with many shrubs, and with plants that were actually in bloom. (16 miles)

On the 6th we met eight Indians and three families, some of them Flatheads and some Snakes. As we continued on our way westward across the mountains and crags, we saw some beautiful country: an abundance of springs, verdant grasslands, forests of pine, and innumerable plants in bloom. Nevertheless, it froze continually. We camped near a brook that flowed north and emptied into the Big Horn River. The ground was covered with gooseberries of two species, the best that I have ever eaten. One of our men brought me some strawberries that he had just picked. We had killed an elk and several black-tailed deer. Buffalo were quite numerous, too, so that the mountainside looked like one continuous barnyard. Farther on, however, we found only an occasional animal. We could see clearly a third, snow-covered mountain; we had avoided the first and now turned southward. (20 miles)

By the 7th we went down onto the plains, where we traveled until the 9th. We thus reached the banks of the Big Horn, here called the Wind River because the wind blows so continually that the snow never remains on the ground. We camped twice along this stream. On the morning of the 8th we paid the Indians the price of a horse that they offered us and set out for the village of the Arapaho Indians, a tribe of the Panis who live along the Platte River. One of our men left a gun at the camp, but the Indians had run off with it before he could return. That evening we were on the banks of a small river into which flows a brook that has a great quantity of beaver. At the spot where we camped, the Big Horn flows swiftly, is quite clear, and is about three hundred feet wide. We could see below us the canyon through which it escaped the mountain meadows. It is a very narrow gorge flanked on both sides by precipices. (45 miles west)

On the 10th we went along the banks of the Wind River, going upstream through a beautiful plain. Some trees grow along its banks but there are no beaver. Its torrents have covered the banks with gravel. We saw two bears that we could not get near, but we caught some fish that were much like herring. On the 11th we forded a rather large tributary of the Wind River that flows out of

the mountains rising from the south. On the plain we often used sagebrush for our fires. It grows here to a great height. I rode through a thicket of it that was as tall as I on horseback and extremely full. Two species of gooseberries are quite common. We saw many flights of robins and other small birds. By the 12th we found mountains to the north and to the south of us. They seemed to join in the west. We crossed the Wind River and found the trail hilly. (38 miles)

From the 13th to the 15th, we crossed and recrossed the Wind River as well as two of its tributaries, the larger of which flowed from the northwest. The land produces a great amount of wild flax which is much like ours in height, in the texture of its stem, and in its husk, though the husk is smaller and lighter in color. The mountains closed in and the countryside became very rugged, the footing tortuous among the high peaks. On the 15th we left the river and, trekking southwest, followed an Indian trail into the mountains. One of our hunters who had been on the banks the Columbia pointed out three immense and snow-covered peaks which, he said, bordered a tributary of the river [the Snake]. (50 miles southwest)

On the 16th we frequently encountered snow. There were large beds of it on the summit and slopes of the mountains visible to the north. We halted beside the Spanish River [Green River], a large stream on whose banks, according to some Indians, the Spanish live. It flows west and, it may be supposed, empties into the Gulf of California. We were surrounded by mountains in which we found beautiful green meadows where many herds of buffalo graze - a fact the more interesting to us because we had not seen a single one of these animals for several days. I found three different species of gooseberries: the common type with red berries, low bushes, and very spiny stems; a second with excellent yellow berries and non-spiny stems; and a third with dark red berries that taste much like our winter grapes. It is nearly as large and has very spiny stems. I also saw three kinds of currants; one has red berries, large and savory, with bushes eight or nine feet high; another with yellow berries about the size of ordinary currants, and with bushes about four or five feet high; and a third with bright red berries that are almost as sweet as strawberries but are rather insipid. Their bushes are small. (20 miles)

On the 17th we continued to follow the river to the opposite end of the mountains. Beaver and otter seemed to be everywhere. In fact, for some distance down the mountainside the area appears to be very favorable for trapping beaver. Ducks and geese are also plentiful. (15 miles southwest)

On the 18th we left the river and, as we trekked to the northwest, we went up a small stream that flows from the mountains. We stopped there to dry enough buffalo meat to last until we reached the banks of the Columbia and other rivers where we hoped to catch fish. While hunting, some of our men met Indians who seemed to be extremely frightened at the appearance of our men and who immediately took flight. I went after them with Mr. McKenzie, Mr. McClellan, and two others. We had gone about eight miles before we found them some distance away, pursuing a buffalo. When they saw us they again ran away and again we followed them. Finally we overtook two young men whose horses were not so fast as those of their comrades. At first they seemed to be greatly disturbed, but we soon put them at ease. They led us to their camp. They belonged, we found, to a tribe of Snake Indians that had come to this district to dry meat. They had a great

amount of it, all very fat. They live in skin tents and own many horses. Several among them had never before seen white men and they were very happy about our visit. They fed us and in all made us thoroughly welcome. They had no pelts other than buffalo and a dozen beaver, which we bought; and we urged them to kill more of the beaver. We told them that we would return to their camp to trade with them and they seemed pleased. We bought from them nearly two thousand pounds of dried buffalo meat which, with the more than four thousand that our men had prepared, loaded all our horses but six. (8 miles)

Afterward, when we had climbed a small mountain, we came to a good trail leading to a tributary of the Columbia where it flows into the fourth range. Several tributaries of the Columbia flow from this same range. We had snow on both sides and ahead of us on all the peaks. (15 miles west)

The little brook that we followed is fed by several others and becomes a small river. On the 25th and 26th we had to ford it often, but its current is so swift that no one could cross it without help. Our trail was quite tortuous, winding through small mountains and along the edge of precipices that surrounded us. One of our pack horses fell into the river from a height of nearly two hundred feet but was not hurt. (20 miles)

We left these mountains on the 27th and camped at the confluence of a small river and another stream that we had seen recently. Americans call it the Mad River because of its swiftness. On its banks and somewhat above this confluence rise the three peaks that we had seen on the 15th. We ought, before, to have continued to follow the Wind River and crossed one of these mountains because we would have reached its source. But our lack of provisions had forced us to head for the banks of the Spanish River. (12 miles west)

Since it was at this point from which we hoped to continue our journey by water, we began on the 28th to look for trees suitable for building canoes. With another man I climbed about twelve miles on the other side of the river and saw many signs of beaver; I also saw gray bear tracks and a herd of elk. That evening when I returned to camp I learned that no one had been any more successful than I in finding suitable wood. The trees, a variety of poplar, were too frail; their leaves are like those of the willow. There were also some spruce, but they were so full of knots that we had no hope that our axes could get through them. The other trees that we had seen were cherries, small pines, sorbs [service trees], and some cedars.

Thus, on the 29th we moved our camp farther downriver because the trees there better suited our purpose, even though, as it seemed to me, we would have to make a canoe out of two pieces. On the 30th we set to work and we felled many trees that were not useful. However, since I feared that the river would not be navigable below the point where it flowed into the mountains, Mr. Reed and two other men went ahead to explore it for the distance of four days of travel downstream.

On October 1, it rained in the valley and snowed in the mountains. Several of our men left to catch beaver. At evening two Snake Indians who had followed us since we left the Crows came

to our camp. They made us fear that we should not be able to travel on the river. On the 2nd Mr. Reed returned. At the end of two days he had been obliged to leave his horses which were of no help to him in climbing the mountains and crags. After an hour's effort to get through on foot along the river banks he had been forced to abandon his attempt. To try to get across the peaks would have been an endless labor. The river became very narrow, its twisting course obstructed by many rapids. It became necessary then to look farther downstream for wood for our canoes and the hope of navigating. So far as Mr. Reed could see, the river continued to flow through the heart of the mountains. Among other things he had found signs of beaver and had seen two bears, one black and one gray.

Rain and sleet fell all day on the 3rd. Everything was readied to cross the mountain that we believed was our last. The storm ended on the 4th, but all the slopes around us were covered with snow. We forded the Mad River with the water up to the bellies of our horses, and camped at the foot of the mountain. On the 5th we climbed it, following an easy and much-traveled trail. Snow whitened the summit and the northern slopes of the heights. The Snakes served as our guides, though two of our hunters had the year before come through this area. (18 miles)

On the 6th we camped near a little brook that washes the northwest borders of a beautiful plain. The next day we stopped by a river that flows to the northwest, crossing it on the 7th. It joins several other streams and becomes quite large. After merging with another stream of equal size, it runs west. We saw many herds of antelopes. Wild cherries are common, about the size of ordinary red cherries, but they were not yet ripe. About twelve miles northwest of our camp there is a hot spring. I went to it with Mr. McKenzie and, though it was not boiling, steam constantly spouted from it.

The 8th was cold all day. The wind from the west blew with a fury, and a little snow fell. We reached the fort of Mr. Andrew Henry. It has several small buildings that lie constructed in order to spend the past winter there. All stand along a tributary of the Columbia about 300 to 450 feet wide. We hoped to navigate it and we found some trees suitable for canoes. By the 9th we had already begun to build eight of them, all from cottonwood. The cottonwood, the aspen, and some small willows are the only trees that thrive in this area.

Mr. Miller left us on the 10th, with four hunters and four horses, to trap beaver. They took the two Snakes with them and traveled down along the mountainside, hoping to find a tribe of Indians from whom they could get information useful to their hunting. Every evening we caught some beaver and some small salmon trout. On the 14th a Snake Indian came to our camp half dead from hunger and clothed in rags.

On the 17th we were all ready to embark. We had cached our saddles in a spot that we showed the two young Snakes. They promised to take care not only of the saddles but also of our seventy-seven horses until one of us returned. The poor devil whom we had seen on the 14th came back with his son, who was even more ragged than he. We fed them. Then they gathered up the paws and entrails of the beavers we had killed and said goodbye to us. The people of this area must suffer

terribly from a lack of game. Buffalo come here in some seasons; their tracks are numerous. There are also some elk and some extremely wild antelope. During our stay in this district the wind blew constantly from the west, often quite violently. I observed that it is the prevailing wind in these mountains where it causes considerable damage, uprooting large trees over a vast area and blowing their branches for great distances.

With the cargoes loaded into our canoes, we left this place on the 19th. The force of the current hurried us along at a rapid pace, and we were not long in passing the little river that I mentioned on the 7th. Beyond its confluence with the Mad River it becomes large enough to make navigation possible for canoes of all sizes. Its water is a light green. Since it had no name, I gave it one: the Canoe River [Teton River]. Its banks are lined with small cottonwoods. Several markings made me think that within the last few days some gray bears had been here in the thickets. Beaver, ducks, and geese are very common. It was cold and it snowed all day. (30 miles south)

As we went on downstream the river became more beautiful and much larger; a space of from 1,200 to 1,800 feet separated its two banks. We made 40 miles on the 20th, but throughout the last twenty the river bed was broken by rapids, and we found two other rapids farther downstream. In going through these, two of our canoes were swamped and we had to stop at once. I sent my canoe and one other to the rescue. We saved the men, but we lost a good deal of merchandise and many supplies, as well as one of the canoes. We continued to find the mountains on our left, ranging parallel to the river. It was cold. We could still see Pilot Knob [Grand Teton] that we had seen on September 15. (40 miles southeast)

When on the 21st we had passed two rapids, we came to a portage of a mile and a quarter. We carried the supplies by land and towed the canoes. For nearly a half mile the river narrows between two sheer mountain walls to not more than sixty feet, in a few places to even less. (6 miles)

We passed over the rapids with the canoes tied to a rope, but we did not delay re-embarking on the 21st. Thereafter we came to a series of rapids, two of which forced us to portage. One of the small canoes swamped and capsized and we lost more supplies. (6 miles)

On the 23rd we lightened the loads in our canoes in order to pass through some very rough waters. After that we found several rapids which were not dangerous but in which the current was very swift. Beaver, geese, and ducks are common here. We found no other trees but the cottonwoods and willows, and on the plains some wild pears. The prairies were marked by buffalo tracks, but these were quite old. From time to time we saw flights of magpies and robins. The mountains fan out in different directions here. (75 miles south)

Toward the end of the day the river current slowed. From either side, the [larger] Canoe River is joined by a small stream. A tribe of Snakes and one Shoshone fled when we appeared. In their camp we found some tiny fish that were not more than an inch long; we found, in addition, some roots and seeds that they were drying for winter, some pots of woven grass and twigs for water, and a well-made fish net of flax or nettle. We left some small commodities and two knives in the

camp. Somewhat farther downstream we met three of these Indians on a slight raft of reeds and we stopped them. Except for a fragment of a rabbitskin robe thrown over their shoulders, they were completely naked. Their bows and arrows are artistically wrought. The bow is of pine or cedar, or of bone reinforced by animal sinews. The arrow is of reed or well-worked wood, tipped with a green stone. We made camp near a waterfall about thirty feet high. (70 miles)

On the 25th we crossed to the south bank and traveled on land so that we could avoid the waterfall and some small rapids below it. Six miles downstream a rock obstructs the river channel from one bank to the other; but because the south bank is less high, we could lower the canoes by rope. Several of them swamped while we were passing through a series of rapids and again we lost some of our merchandise. The river is winding, the countryside rugged and rocky. The mountains reach down to the very edge of the water on the south bank. (12 miles)

On the 26th the rapids were again numerous but not precarious. In some places the water was calm. We left the mountains and took a northwesterly route. When we landed to visit a camp of Indians, the poor creatures fled at our approach. By making signs of friendship, I persuaded one of them to return. He was on horseback and seemed better equipped than those whom I had seen earlier. He had some trout and some dried meat that he traded for a few knives, but his fear of us was so great that I could not get him to show me, by sign language, the route that I should take. His only concern was that I not take away his fish and meat and that I commend him to the care of the Great Spirit. (70 miles)

The skies were cloudy and it rained on the afternoon of the 27th. We had come to only two rapids in the morning. The river is nearly a half mile wide here, and beaver are plentiful. (40 miles southwest)

Our journey was less fortunate on the 28th; for after passing through several rapids, we came to the entrance of a narrow gorge. Mr. Crook's canoe capsized, one of his companions drowned, and we lost a great deal of merchandise. (18 miles)

On the 29th I went with three men to see if we could take our canoes through the north side of the gorge. For thirty-five miles I went along the banks of the river, which continues to carve a passage northwest through the mountains. Its bed is no more than sixty to ninety feet wide, it is full of rapids, and its course is broken by falls ten to forty feet high. Except at two spots where I went down to get water, the banks are precipitous everywhere. We had only some fruit from a rose tree for supper; then we slept beside our fire. On the 29th we returned to camp, tired out and famished. Those whom I had sent south had found a place where they believed that we could get through with our canoes by making a portage of about six miles.

Our situation became critical. We had enough food for about five days. On the 31st Mr. Reed and three others went downstream to try to get some horses and provisions from the Indians and to learn if, below the spot that I had reached, it was possible to navigate the river. Sixteen men, with four of our best canoes, went to attempt the passage. Then, because our lack of food prevented

any delay of our journeys we put to one side those things that were most needful to us and began to dig holes in which to cache the remainder. Rain fell so heavily that we could not finish our digging.

On November 1 we changed our plans. In trying to descend the rapids with a rope, our sixteen men lost one of the canoes and its load of merchandise; the other canoes were caught among the rocks. We saw no way to continue our journey by water and prepared to go in different directions in search of Indians. The rain still hindered our work and we could not finish it until the 2nd, when we put our baggage and merchandise into six caches. Mr. McKenzie, along with four men, set out northward toward the plains, hoping to find the Columbia. Mr. McClellan and three other men went downstream on the Canoe River. Mr. Crooks and three men went upstream toward the river source. I remained with thirty-one men, a woman, and two children. We set a net in the river but caught only one fish. I ordered our four canoes loaded and we paddled upstream. While going around a point, in the midst of some rapids we lost a canoe but we saved the cargo. Our hunters who had caught up with us on the 4th had killed eight beaver. That was scanty relief. Mr. Crooks returned. He had found the distance by land greater than he expected and concluded that he could not reach Fort Henry and get back this winter. Thus he abandoned the scheme. I stopped at my camp of October 27.

I spent the 5th making all necessary arrangements for procuring food for several days, until we had news from Mr. Reed. We caught four beaver, drying the tails and the innards. I had the dried meat inspected and aired. On the 6th, despite our efforts, we found only one fish in the net. Two of Mr. Reed's men returned. After they had explored for two days they realized that the river did not improve farther downstream. Consequently we agreed with Mr. Crooks that the best course was to divide our company into two parties, each to proceed on its own. For that reason I cached still other things, and all the essentials I put into packs of about twenty pounds each.

On the 7th I returned to our camp of October 28. We had wasted nine days in futile explorations. We had caught eight beaver; but we had eaten the dried meat, for its quality is superior to beaver meat.

I cached still more goods on the 8th, distributing to each member of our party all that remained of our food. Every person had five and a quarter pounds of meat. We had, besides, forty pounds of corn, twenty of fat, and nearly five pounds of bouillon tablets. That had to keep more than twenty people alive.

On the 9th I set out on the north bank of the river with nineteen men, a woman, and two children. Mr. Crooks, with nineteen others, traveled on the south bank. It rained in the afternoon. We camped under some rocks on the river's edge and had great difficulty getting water.

All day on the 10th we went on, unable to [reach any water to] drink, except the little we found in the hollows of rocks. Finally we came to a spot where we could reach the river. Everywhere else its banks are sheer walls two to three hundred feet high. Its bed is broken by rapids; but in the space

between these rapids the water is quiet. Today we could have navigated it for thirty miles. Some willows grow along its banks. (32 miles northwest)

On the 11th we found at the water's edge a trail worn by horses. I chose to follow it rather than again to clamber over rocks. Before long we met two Shoshone Indians who showed me a knife that they had got from some of our companions. One of them led us along a path that took us away from the river; we crossed a prairie and came to the village of his people. The women fled in such haste that they did not have time to take their children who could not walk, but simply covered them with straw.

The poor little creatures were terrified when I lifted the straw to look at them. Even the men trembled, as though I were some ferocious animal. Nevertheless, they gave us a small amount of dried fish that we found most edible, and they sold us a dog. One of these Indians accompanied us and we soon found the river again. It was lined by their tents. We camped nearby and before long about fifty men came to see us. They were very honest and very obliging. As on the day before, the river course was broken by rapids. (26 miles northwest)

On the 12th I visited some tepees where I found a great quantity of salmon. These structures are of straw and are, in form, like stacks of wheat. They are warm and snug. In front of the doorways we saw large piles of sagebrush used for fires. I bought two dogs and we ate one for breakfast.

These Indians have good buffalo-skin robes which they told me they had got in trade for their salmon. After we left them, we went on for some time along the river and forded a little brook. We saw mountains to the north. (16 miles northwest)

On the 13th we camped at a spot where a small stream flows out of the mountains. (25 miles north, northwest)

On the 14th we came across an Indian camp with three tepees. All around these structures we saw an immense number of salmon heads and skins with pieces of meat still attached, but the best part of the meat had been cached. None of these Indians ran away when we appeared. The women were poorly clothed, the children even more shabbily, though each one had a robe of buffalo skin, or of rabbit, badger, fox, wolf, or possibly some skins of ducks sewn together. All these animals, with the exception of rabbits, are rarely found on these plains. We had not seen a buffalo for a long time. (22 miles northwest)

We bought two dogs and some salmon on the 15th. Before us was a snow-covered mountain that the river seemed to penetrate. The river banks were littered with dead salmon that sent up a frightful stench. The river course, so far as I could see, had no rapids. We met some horses whose owners took great care to keep them out of our way. The Indians told us that some of our people had passed through this area. (28 miles northwest)

Early on the 16th the river reappeared, but now it was narrow, filled with rapids, and bordered by

---

sheer rocks. As we approached the mountains, we had only some parched corn and the remnants of our meat to keep ourselves alive. Fortunately, on the 17th I traded an old kettle for a horse, though the Indians showed no interest in anything else that we were carrying. I also got two dogs. The countryside was bare of woods and even the sagebrush had disappeared. We camped beside the river. (35 miles northwest)

We put our baggage on the horse. We had only a quart of grain and a small piece of fat for each person. On the 18th we continued our trail to the northwest, along the river banks. (30 miles)

On the 19th, following the advice of some Indians whom we met, we changed our course and crossed a prairie where we found no water at all. Everything seemed to suggest that we would be luckier on the next day. But what discouragement for people whose only food was dried fish! By good fortune we bought a horse. (25 miles northeast)

On the 20th the rain that had begun to fall the night before gave us a little water. This relief came in good time, for several Canadians had begun to drink their urine. (33 miles north)

The rain continued all night. On the 21st at daybreak we saw ahead of us a river that flowed to the west, its banks lined with cottonwood and willow trees. Some Indians who had pitched camp there had many horses and were far better clothed than those whom we had seen recently. They told us that farther upstream beaver were plentiful, though in the vicinity of our camp there were very few. When we arrived at the Indian village I lost my horse; an Indian told me that we had stolen it from him. However, as it was necessary to get food for our company, I bought some fish and two dogs [saying nothing further about the horse]. (12 miles)

It rained constantly and we could not make much headway on the trail. On the 22nd we met some Indians. As I gathered from the few words that I could understand, the distance from this spot to the Columbia was very considerable; but the Indians told me nothing about the route that I should take. We got some fish, seven dogs, and two horses. We continued our way westward along the river (35 miles) and on the 24th forded it a little above our Canoe River which flowed northward. The mountains ahead were all covered with snow. (18 miles northwest) On the 25th, despite the rigors of the season, our exhaustion, and our weakness we forded another river, waist high, that flowed from the east. (27 miles)

The foothills began to appear on the 26th, spreading along the snowy mountains. We crossed another little stream that flows from the east, like the others. It brought us, on the 27th, to a pass so narrow that it scarcely left enough space for us to get through. We were often forced to take the baggage from the backs of our horses and wade through the water. On the previous evening we had caught a beaver that furnished us with a meager breakfast and we made a supper of some bouillon tablets. I ordered a horse killed and my people thought the meat very good. I could eat it only with regret because I had become attached to the poor animal. (33 miles northwest)

On the 28th we arrived early at a Shoshone village. The Indians had just killed two colts for food.

---

Except for the seeds of a plant that looks like flax and that they pulverize, the horsemeat was their only food. I bought a sack of the former, as well as some pieces of horsemeat which was fat and tender. I dreaded to remain several days in these narrows and I camped near the Indians in the hope of trading some goods for a horse. But no matter what I offered, I could make no bargain. When the women saw that I was insistent, they raised cries of fright, as though I wanted to rob them. The men told me about some whites who had followed the same trail as the one we were taking and about some others who had passed on the opposite side of the river. This news relieved me greatly regarding Mr. Crooks and his companions, especially when I learned that he still had his dogs; for I could believe that he had not suffered too much from hunger. The Indians added that I would sleep three more nights in the mountains and that after six nights on the trail I would arrive at the Great Falls of the Columbia. Nevertheless, I had little confidence in this talk because it seemed to me that they were only impatient to see us leave. (10 miles north)

On the 29th the bad footing forced us to unload our horses and occasionally to leave the river banks. We climbed mountains so high that I could hardly believe our horses would get over them. On the 30th the mountains further narrowed the river channel. The heights were covered with pines and snow. We could advance only with the greatest difficulty because of the sharp rocks, and the precipices plunge to the very banks of the river that here flows northeast and then north northwest. We killed a black-tailed deer which gave us an excellent meal. (28 miles)

On December 1 it rained in the valley and snowed in the mountains. As I climbed them to look for a passageway, I found the snow knee deep. I saw many black cherries that were delicious probably because the frost had cut their tartness. Snow fell so heavily on the mountain slopes we had to cross that visibility was no more than a half mile. We were compelled to rest in camp on the 2nd. The evening before we had caught a beaver, but as we had nothing more to eat I killed another horse.

Rain and snow fell all day on the 3rd, and we traveled only nine miles. We unloaded our horses so that we could keep to our trail along the river, and we carried the baggage in our arms, trudging to the northeast. On the 4th, we had to leave the river course and again climb the mountains whose ranges extended all around us and were covered with snow. Pines and other evergreens grew on the slopes of a few of them. The snow came above our knees and it was extremely cold. We were nearly exhausted by the harshness of the weather when we had the good luck of reaching a patch of pine trees at sunset. We comforted ourselves by a good fire. Although we had struggled ahead all day we were, because of the twisting course of the river, only four miles from our camp of the day before.

The snowstorm that commenced on the 5th reduced visibility to about three hundred feet, but we succeeded in reaching the river by sliding down the mountainside. The roar of the water guided us. One horse fell several hundred feet with his load but was not hurt. The weather was much less severe in the valley than on the mountain slopes, for it rained there and the snow was only ankle deep. I slaughtered another horse. (6 miles)

We were just setting out on the 6th when to my astonishment and distress I saw Mr. Crooks and his people on the other side of the river. I returned to camp at once and built a canoe with the hide of the horse I had killed the night before. Then I launched some food in it, sending it across the river to our starving companions. Mr. Crooks and one of his men came across to us. Poor man! He was almost completely exhausted by fatigue and hunger. He told me that he had already traveled for three days downstream, that the mountains there were even higher and narrowed to not more than sixty to a hundred feet between sheer walls. It was impossible for men in their condition to get through. For six days they had had only the meat of their dogs for food. Mr. McKenzie and Mr. Reed had passed and Mr. Crooks had talked with them only a few days earlier. They told him that Mr. McClellan had left the river and crossed the mountains, hoping to find the Flathead Indians. In the place where we met, the river flowed almost exactly east. Mr. Crooks said that it continued to run in that direction.

I spent the night reflecting on our situation. I had to answer for the needs of more than twenty famished people and, moreover, to do all that I could for Mr. Crooks and his men. Despite all the discouraging reports that he had given me about the countryside below, I should have gone my way through the mountains if, as I had already learned, the depth of the snow had not made such a journey impracticable. To my great regret it was thus necessary to backtrack with the hope of finding some Indians on one of the three small rivers beyond these mountains. I counted on buying from them a large enough number of horses to feed us until we reached the Columbia, a move I flattered myself in thinking we could effect this winter. I nevertheless believed that Mr. Crooks and several of his men would not be able to follow us. What a prospect! We had to plan on having nothing to eat for several days; for on this side of the Indian village that we had left on November 29, we had found nothing but cherries, and perhaps there would be no more of them in the same places. The horsehide canoe had been lost. We made a raft so that Mr. Crooks and his companions could cross to the other side of the river with some meat, but the attempt was unsuccessful. On the 7th we were reduced to a very slow pace because Mr. Crooks was so weak that he could follow along only with great difficulty. Most of my men went on ahead. On the 8th we made another raft; but, after repeated attempts, Mr. Crooks and his men could not make the crossing because of the swift current. I had of course to wait for them, and my men complained. They said that we would all die from starvation and urged me by all means to go on. To add to my distress, Mr. Crooks was very ill during the night. I realized that this unfortunate situation could delay for two days my reaching the Indian village. I therefore left three men with Mr. Crooks and set out on the 9th with two others to rejoin my group. I had three beaver skins and I left two; my men and I made a supper of the third. The weather was extremely cold.

Early on the 10th I overtook my people. We had only one horse left and that belonged to Dorion, one of our Canadians. We suggested slaughtering it, but Dorion would not consent to the idea. We finally agreed that it would be better to let the animal live until we knew whether or not the Indian village was still in the same place. I approved this plan quite willingly because the poor horse was only skin and bones. We had not gone far on the trail before we found some tepees of the Shoshones who had come down from the mountains after our departure. I approached them cautiously so as to keep them from hiding their horses. They had twenty and sold us five, one of

which I had slaughtered at once, and I sent a man to Mr. Crooks with some of the meat. Several of my men had not eaten since the 7th, the day on which they had left me.

Then on the 11th a new misfortune struck us. One of Mr. Crook's men drowned while crossing the river in a canoe that capsized with a load of goods. I ordered another horse killed; and I left two animals with Mr. Crooks along with some of the meat of a third, hoping that with this help he could reach the Indians upstream. On the 13th we came to the village that we had seen during our descent from the mountain heights. The Indians traded a horse for an old pewter kettle and some glass beads, but they refused a gun.

On the 16th we at last left the mountains and camped on the banks of a river that we had forded on the 26th of the previous month. Thus for twenty days we had worn ourselves out futilely trying to find a passage along the lower part of this river. On the previous day rain and snow had fallen. Ice floated on the river and the weather was extremely cold. Luckily for us, in this district we found a dozen tepees of the Shoshones who had come since we had camped there. They told me that it would [not?] have been possible for us to find a passage by following the river. This news heightened my anxiety about Mr. McKenzie and his company. On the 17th I went up the little stream and camped near a Shoshone village. From these Indians I bought a horse and a dog, and on the 18th I got another horse, some dried fish, a few roots, and some pounded dried cherries. I spent most of the day getting information about our route and about the time it would take to reach the village of Sciatogas. These Indians gave us different advice; but they did agree in saying that the trail was good, that it would take us seventeen to twenty-one nights to reach our destination, and that in the mountains we would be in snow up to our waists. I offered a gun, some pistols, a horse, etc., to whoever would serve me as a guide. They all replied that we would freeze to death and pleaded with me to remain with them during the winter.

I tried again on the 19th to find a guide. I went to every tepee along the river banks, but without success. I could not get along without one, for that meant running the risk that we would all die. But to remain in this place would be still worse, after having come so far and at such great cost. I ended by telling the Indians that they spoke with forked tongues, that they were lying to me. I accused them of being women; in short, I challenged them with whatever expressions would goad them most. At last, one of them found courage enough to volunteer to be our guide as far as the village of the Sciatogas. According to the report of our Shoshones, these Indians live on the west side of the mountains and own many horses.

Thus, we once more resumed our journey. On the 21st two other Indians joined our guide who led us at once to our Canoe River. We did not find any reed canoes there for the crossing; so we killed two horses and made a canoe with the hide of one of them. In this we got across the river. On the other side I found thirteen of Mr. Crook's men who told me that since we had left they had not seen either Mr. Crooks or the two men who were with him. When we had all effected a crossing by the 23rd, my people took heart. All of Mr. Crook's men were extremely weak and exhausted, four of them even more than the others. They handed over to me a horse and some goods. When three of them expressed the wish to remain with the Snakes, I gave them a canoe and some

supplies. They crossed the river on the following day, and I hoped that they would not be long in finding Mr. Crooks and his party.

My group was now made up of thirty-two white men, a woman eight months pregnant, her two children, and three Indians. We had only five puny horses to feed us during our trip over the mountains. On the 24th I [at last] turned away from the Canoe River, remembrance of which will always cause us some moments of unhappiness. We traveled west, crossing hills by a trail that was sometimes level enough, more often irregular, but always good. A little snow fell and a little rain. On the 28th we crossed a brook that flowed northward. Mountains crowded us on each side; to the left was one that we had to climb. It extended from north to south, was heavily wooded, and was covered with snow. On the 29th we had a good trail through a level valley and we forded the river twice. ( 106 miles west)

On the 30th, after we had left the river at a spot where it thrusts into the mountains to the north, we came to another beautiful valley several miles wide and very long. A pretty stream meanders there and the beaver seem to be plentiful. Happily we found six Shoshone tepees and many horses. These Indians sold us four horses, as well as three dogs and some roots. They told me that we still had three nights to sleep before we came to the Sciatoga village and they showed me a pass in the mountains through which we had to travel. They added that not much snow was there, but they had so often given me erroneous reports that I did not take this news seriously. On every side of us snow blanketed the mountains. The pregnant woman gave birth to her child early the next morning. Her husband [Dorion] remained with her in the camp for a day, then rejoined us on the 31st. His wife rode horseback with her newly born child in her arms. Another child, two years old and wrapped in a blanket, was fastened by her side. One would have thought, from her behavior, that nothing had happened to her. (21 miles west)

My people asked me not to travel on the 1st of January without first celebrating the new year. I agreed to the idea willingly because most of them were very tired from having daily no more than a meager meal of horse meat and from carrying packs on their shoulders while crossing the mountains.

From the 2nd to the 7th of January we crossed the valley, following a small stream for several miles into the mountains and climbing many pine-covered hills. On the peaks we waded through snow half way up our legs, at times plunging into it to our waists. We lacked water. On the 4th we were at a point as high as the mountains that surrounded us, some wooded, but all covered with snow. The weather was overcast and cold. On the 6th we saw the sun for the first time since climbing into these mountains, and the snow decreased. To the west we could see what appeared to be a plain. On the 7th we came to a small stream that led us to an extremely narrow pass through mountains of immense height. Everywhere we found horse trails used by the Indians in hunting deer which must be plentiful here, for we saw many herds of black-tail. The snow disappeared entirely. The Dorion baby died. By nightfall several of our men had not arrived at camp. (68 miles west)

The little stream joins another much larger one, and near their confluence on the 8th we found a village of Sciatogas and Tushepahs made up of thirty-four tepees. They had at least two thousand horses. Their tepees are made of matting. They are clothed in good robes of buffalo or deerskin; they have deerskin shirts and leggings and in every respect their clothing is as good as any of the best-provided Indian peoples. In their homes they have kettles and copper pots, as well as other things that suggest some intercourse with the inhabitants along the seacoast. They have some axes, too, and a skillfully wrought stone hammer that they use to pound roots, cherries, and other fruits, as well as fish. Pointed pieces of elkhorn serve in lieu of wedges to split wood. Women have willow-twig hats very neatly made and decorated. Their water containers are also made of willow, and in these they cook their meat by putting red-hot stones from the fire into them. However, copper kettles are preferred, three or four of them usually hanging in their tepees. (15 miles west)

These Indians pleased me greatly when they told me that some white men had reached the Columbia, a two-day trek from this spot. It appears that grass grows here all winter long, for the mountain slopes are green.

All my men rejoined me except the Canadian CarriŠre. Someone had seen him on the previous afternoon sitting on horseback behind a Snake Indian. They were in front of a lodge that we had passed a few miles from our camp of the night before.

I cannot thank Providence enough for our having reached this point, for we were excessively tired and weak. We had only two horses left, both no more than skin and bones. That night we dined on some rather poor deer meat and some roots.

We remained six days in this place. I bought eight horses and two colts. We ate two of the horses and I gave two to our guides in payment for their services. Some of my men also bought horses. Several men were ill, some from overeating, others apparently from eating roots. Still others were lame. On our last day here, each one made moccasins for himself and prepared to continue the journey. I dispatched two men to look for CarriŠre but they did not find him. This unfortunate fellow had probably followed an Indian hunting trail and become lost. The Snakes had moved their lodges elsewhere, and my men could get no information about him. The Sciatogas also moved their tepees a day's journey downstream.

We got under way again on the 15th and reached the village of the Sciatogas on the banks of the Umatilla River. These Indians told us about a river upstream that they called the Walla Walla. According to Clark's map, I supposed it to be the little river that he places at a confluence with the Columbia, near some beds of shellfish. From what I learned, the Canoe River is Lewis's Kemounoum. (15 miles northwest)

These Indians had some venison, but they wanted to sell it at such a high price that I could not afford it. They hunt deer by chasing them on horseback and surrounding them. They use the bow and arrow with remarkable skill, and are superb horsemen.

It rained so heavily during our stay on the banks of the Umatilla that the water rose with amazing speed. We were compelled to break camp in a hurry. Three of our horses tied to stakes in the lowlands were drowned. The Indians also had to move to higher ground. I bought four horses from them. I wanted quite a number because the Indians told me that I could get a canoe in exchange for a horse. They added that in about six nights I would be at the Great Falls of the Columbia. On the 19th we continued downstream along the Umatilla. Beaver must be abundant here, for many places were filled by their dams. Several of my people traveled on horseback, as I did. On the opposite side of the river we saw the lodges of the Akaitehis Indians who live on the Columbia. One of them swam to our camp and gave us some very satisfying details about the white men who had preceded us going downriver. (15 miles northwest)

I bought still another horse from the Sciatoegas who again had moved their camp below us, and I said good-bye to them. They are the cleanest Indians that I know of and, like all the others, they are very proud. They eat neither dogs nor horses, and they will not allow anyone to bring the meat of these animals into their tents. I pleased them no end when I told them that I would return to their village with merchandise to trade for beaver. They already had some pelts and they told a very confusing tale about some white men who came to trade and who gave them tobacco and smoked with them. One of the white men, they said, had a house on the Columbia. My Canadians thought that the white man in question must be an agent of the Northwest Company. (12 miles west)

At last, on the 21st, we reached the banks of the Columbia, for such a long long time our cherished goal. We had come 1,751 miles and had lived through unbelievable hardship and privation. I expressed with difficulty our joy at the sight of this river. It was three quarters of a mile wide here; its banks were bare of trees, were filled with pebbles and in some places with steep rocks.

The area was inhabited by the Akaitchis Indians, a wretchedly poor tribe that have neither moccasins nor leggings. Their clothing consists of only a robe of buffalo, deer, rabbit, fox, or even duck skin. To this meager equipment, they sometimes add wolf-skin sleeves. Their huts are well constructed of matting with roofs like the roofs of houses. These structures are very light and warm. Holes scooped out of the ground and lined with mats are living quarters for the women, who are usually naked. Some have a fragment of robe to cover their shoulders, but all of them wear around their waists a leather belt that passes between their thighs and indicates that they aim to be modest.

These Indians are better stocked with food than the Snakes, for it seems that dried salmon is plentiful in their homes. They gave us many fresh salmon trout that they had caught at the mouth of the Umatilla River. This is excellent fish. Their canoes are made of pine trunks split in half, and consequently they are not raised at either bow or stern. Since they have no special tool, they use fire to hollow out their trees.

We crossed the river because the Akaitchis told us that the trail passed along the right, or north, bank. We left on the 23rd after purchasing some fresh fish and nine dogs. The route along the riv-

er was very good. We camped that night close to a village of Indians who had about 50 canoes. I bought nine dogs that were quite fat and made a delicious dinner. Their meat seemed most savory to us, both wholesome and strengthening; on the other hand, horsemeat, however well prepared, is not nourishing, no matter how much of it one eats. The weather was beautiful and very mild, much like the beautiful days of the month of October. (12 miles)

From the 24th to the 28th we followed the river which flows almost directly west. Its banks are generally bare. Frequently we came upon Indian lodges and the Indians sold us dogs, but they put such a high price on elk or deer meat that I could not afford it. Moreover, they caused us much trouble by stealing the ropes by which our horses were tethered. The animals ran away and we lost a great deal of time rounding them up. Sometimes the Indians stole the horses and hid them. The natives here ate acorns and told me that a short distance from the river we could find many white oaks. (57 miles west)

On the 28th the countryside again became quite mountainous. The Indians seemed to be less wretched. They told me of some white men who had built a large house at the mouth of the river, surrounding it with stakes, etc. They themselves had not gone to the river mouth, but they insisted that the white men were concerned and were waiting for a large number of their friends. They watched constantly from the banks of the Columbia, these Indians said, and when their friends arrived, those at the river's mouth would dry their tears and sing and dance.

On the 29th the mountains and rocks along the riverside became more numerous. The Indians whom we saw had many horses, and we began to set up a watch at night. (15 miles)

We camped on the 30th opposite the mouth of the Deschutes, called Tou-et-ka by the Indians. They came in great numbers to dance in honor of our arrival, but their multitude worried me. I pretended to be ill and asked that I be left alone. In a short time they complied with my wishes. (14 miles)

On the 31st we passed Celilo Falls that we had viewed in the distance the day before. I could not see the largest of them which was on the south bank. The river course is dammed by rocks over which the water rushes violently through several channels.

A village called Ouaioumpoum is situated on the north river bank at that spot where the Falls begin. The Indians give a special name to each village that has more than one lodge in it, and they love to talk about their villages to strangers.

At an early hour we reached the village of Wishram. It is at the entrance to a long gorge through which the river has carved a channel of from 200 to 240 feet wide and several miles long. This is the great fishing ground of the Columbia. It looks like one of the seaport villages on the east coast of the United States. On both sides of the river we saw large platforms made of carefully woven stakes. On these the Indians dry their fish. The ground around them is covered with bones and heads of fish. In the spring when the river waters are high, the salmon arrive in schools so large

that the Indians can catch them in purse nets attached to the ends of poles. To accomplish this they stand on the edges of those rocks that extend farthest in to the river.

The Indians in this area are the most intelligent that I have met so far. One of them who knew a few English words told me that Mr. David Stuart had gone to one of the northern tributaries of the Columbia to spend the winter; he had, in fact, seen Stuart's trading post. And he recounted for me the disaster that overtook Mr. McKay and the ship Tonquin.

Today we saw some little white oaks. The countryside became more rugged and the mountains higher. Not far below the Falls, on the south bank, we saw a snow-covered peak that I had first seen on the 20th of this month and that I guessed was Vancouver's Mt. Hood. (12 miles)

February 1. A great number of Indians gathered this evening near our camp. Since they found no opportunity to steal our horses or baggage, they planned a unique stratagem in order to get something. They told us that about forty Indians were coming from downriver to attack us and take our horses. We paid little attention to their narrative and later some chiefs of their village arrived, armed with knives, spears, etc., telling us the same story, and saying that they wanted to stay with us. I received them most coldly, though we smoked a pipe together. Then I assembled everybody in our camp and placed watches at several spots. This procedure produced the effect that I had hoped for. The Indians soon left and brought to me a man who they said, was chief of the village that had planned to attack us. They gave him credit for having dispersed the crowd. I smoked with them again, and a little before daylight they returned to their homes. These rascals thought that by frightening us I would give them two or three horses to assure the safety of the rest. As one of our horses had got loose on the evening before and was not to be found in the morning, I sold him for two packs of pounded and dried salmon I each weighing seventy pounds. We camped that night on the hills in the midst of bushes, pines, and oaks. (10 miles)

I could find only one canoe, that I could get in exchange for a horse. The Indians have large numbers of them, strongly made of pine and raised at both bow and stern, some of them capable of carrying three thousand pounds. Despite my injunctions that we keep close watch, the Indians stole an axe. Encouraged by their success, several of them followed us on the 2nd. They snatched two guns from us and, although our horses were in our camp, made off with one of them at eleven o'clock at night. On the 3rd I embarked in a canoe and sent my horses ahead.

I met my people at a village at the mouth of the Klickitat River that enters the Columbia from the north bank. I bought three canoes, each costing one a horse; but while I traded, the Indians stole a tomahawk and our last axe. They also made off with Dorion's horse that grazed near his tent. The Canadian had unwisely raised his tent some distance from our camp. (9 miles)

On the 4th the violence of the wind compelled me to remain, in spite of myself, in this den of thieves. I bought still another canoe for a horse; and on the next day when I reached another village, I traded our last three horses for two canoes. It seemed to me that the trail by land ended at this village. Hills became snow-covered mountains on which we saw pines. They bordered the

river on both sides. Cottonwoods, oaks, and ash trees grew on the waterside, oaks on the nearby hills.

The rain increased greatly and the wind held me for several days opposite an Indian village. A Clatsop Indian came to see us and spoke to me about the establishment at the mouth of the Columbia - as well as about the tragic loss of Mr. McKay. He was the third man to relate to me this grievous story. He knew a few English words and asked me for news about Mr. Lewis and Mr. Clark and some of their companions. However, he had learned of the death of Mr. Lewis. (26 miles)

The wind subsided on the 10th and we got under way early. When we arrived at the beginning of some large rapids (15 miles), I examined the portage on the north bank. The trail was only good for something over a mile. We therefore landed all our canoes at ten o'clock and within an hour we were below the rapids which are very large. In dashing against the rocks, the water produces some unusually high waves. No boat could ride through them, at least in the present condition of the river which narrows formidably between hills and rocks. From this point on downriver, oaks and ash become more common. We saw quantities of hazelnut trees, too. At these rapids we found a second salmon fishery, a village on the north bank, and three lodges on the opposite side. The Indians here have a penchant for blue glass beads. Numerous rivulets that plunge down from the mountains above add to the beauty of the countryside. (16 miles)

On the 11th rapids covering space of miles forced us again to land our canoes. Finally about eight miles from the great rapids we encountered the last of them. Below this the river spreads to its usual width, which is about three-quarters of a mile wide. The hills diminish in size and retreat from the river banks. The intervening space is covered with pine, oak, ash, cottonwood, maple, hazel, and willow trees. (12 miles)

On the 13th I passed the confluence of the Sandy River, which rushes from the south bank of the Columbia through two mouths, thereby forming a great sandbar. Twenty miles farther downstream the Columbia is joined by another river [the Willamette] that is nearly 1,800 feet wide. A large island [Sauvie Island] stands before its mouth and several small islands below it. The Columbia at this point is about a mile and a quarter wide. On both sides we found vast rush-covered areas, some small prairies, and often some ponds. Seals were numerous here. We could see more distinctly than before the mountain that I mentioned earlier and that I have no doubt is Vancouver's Mt. Hood. For two days the wind blew with great force. Rain, hail, and snow fell. (52 miles)

On the 14th the mountains once more drew close. We camped at the mouth of a small river on the north bank [the Cowlitz]. Indians spoke to us about the establishment of our compatriots, adding that we had one more night before arriving. (36 miles)

On the 15th we passed several large islands. The terrain on the north bank was covered with oak and ash trees but all were inundated. I stopped by some Indian huts where I found four of our Fort Astoria men who were trading sturgeon and fishing for some excellent little fish that are

about six inches long. The Indians call them othlecan [candlefish] and catch many of them in the spring. We made camp on two low islands near the south bank. (27 miles)

During our trip on the river we had frequently come to the lodges of Indians who sold us dogs, dried salmon, beaver pelts, wapattoo roots - which are the ouapasippin of Mississippi - finally some Othlecan.

On the 16th we departed early. It had rained during the night and the fog was so thick that we could see only the lowlands and some small islands. All were inundated. The fog dissipated in the afternoon at high tide. I realized that we were paddling through a large bay and soon afterward I saw Fort Astoria on the south bank. (30 miles)

I had the pleasure of seeing Mr. McKenzie and Mr. McClellan once again. They had arrived a month earlier after suffering unbelievable hardships. In my diary I had noted February 16. At the fort it was counted the 15th. It was a great delight for travelers overcome with weariness to rest comfortably, surrounded by friends, after such a long journey in the midst of savage people of whom it is always wise to be wary.

We had covered 2,073 miles since leaving the village of the Aricaras.

Mr. Seton's Adventures—Survivors of the Expedition in 1854 —Author's Protest against some Expressions in Mr. Irving's "Astoria"—Note by Huntington

#### INTRODUCTION

SINCE the independence of the United States of America, the merchants of that industrious and enterprising nation have carried on an extremely advantageous commerce on the northwest coast of this continent. In the course of their voyages they have made a great number of discoveries which they have not thought proper to make public; no doubt to avoid competition in a lucrative business.

In 1792, Captain Gray, commanding the ship *Columbia* of Boston, discovered in latitude 46° 19' north, the entrance of a great bay on the Pacific coast. He sailed into it, and having perceived that it was the outlet or estuary of a large river, by the fresh water which he found at a little distance from the entrance, he continued his course upwards some eighteen miles, and dropped anchor on the left bank, at the opening of a deep bay. There he made a map or rough sketch of what he had seen of this river (accompanied by a written description of the soundings, bearings, &c.); and having finished his traffic with the natives (the object of his voyage to these parts), he put out to sea, and soon after fell in with Captain Vancouver, who was cruising by order of the British government, to seek new discoveries. Mr. Gray acquainted him with the one he had just made, and even gave him a copy of the chart he had drawn up. Vancouver, who had just driven off a colony of Spaniards established on the coast, under the command of Señor Quadra (England and Spain being then at war), despatched his first-lieutenant Broughton, who ascended the river in boats some one hundred and twenty or one hundred and fifty miles, took possession of the country in the name of his Britannic majesty, giving the river the name of the *Columbia*, and to the bay where the American captain stopped, that of Gray's bay. Since that period the country had been seldom visited (till 1811), and chiefly by American ships.

Sir Alexander M'Kenzie, in his second overland voyage, tried to reach the western ocean by the *Columbia* river, and thought he had succeeded when he came out six degrees farther north, at the bottom of Puget's sound, by another river.

In 1805, the American government sent Captains Lewis and Clark, with about thirty men, including some Kentucky hunters, on an overland journey to the mouth of the *Columbia*. They ascended the *Missouri*, crossed the mountains at the source of that river, and following the course of the *Columbia*, reached the shores of the Pacific, where they were forced to winter. The report which they made of their expedition to the United States government created a lively sensation.

Mr. John Jacob Astor, a New York merchant, who conducted almost alone the trade in furs south of the great lakes *Huron* and *Superior*, and who had acquired by that commerce a prodigious fortune, thought to augment it by forming on the banks of the *Columbia* an establishment of which the principal or supply factory should be at the mouth of that river. He communicated his views to the agents of the Northwest Company; he was even desirous of forming the proposed establishment in concert with them; but after some negotiations, the inland or wintering partners of that association of fur-traders having rejected the plan, Mr. Astor determined to make the attempt alone. He needed for the success of his enterprise, men long versed in the Indian trade, and he soon found them. Mr. Alexander M'Kay (the same who had accompanied Sir Alexander M'Kenzie in his travels overland), a bold and enterprising man, left the Northwest Company to join him; and soon after, Messrs. Duncan M'Dougal and Donald M'Kenzie (also in the service of

---

the company), and Messrs. David Stuart and Robert Stuart, all of Canada, did the same. At length, in the winter of 1810, a Mr. Wilson Price Hunt of St. Louis, on the Mississippi, having also joined them, they determined that the expedition should be set on foot in the following spring.

It was in the course of that winter that one of my friends made me acquainted in confidence with the plan of these gentlemen, under the injunction of strictest secrecy. The desire of seeing strange countries, joined to that of acquiring a fortune, determined me to solicit employment of the new association; on the 20th of May I had an interview with Mr. A. M'Kay, with whom the preliminaries were arranged; and on the 24th of the same month I signed an agreement as an apprenticed clerk for the term of five years.

When the associates had engaged a sufficient number of Canadian boatmen, they equipped a bark canoe under charge of Messrs. Hunt and M'Kenzie, with a Mr. Perrault as clerk, and a crew of fourteen men. These gentlemen were to proceed to Mackinaw, and thence to St. Louis, hiring on the way as many men as they could to man the canoes, in which, from the last-mentioned port, they were to ascend the Missouri to its source, and there diverging from the route followed by Lewis and Clark, reach the mouth of the Columbia to form a junction with another party, who were to go round by way of Cape Horn. In the course of my narrative I shall have occasion to speak of the success of both these expeditions.

#### NARRATIVE OF A VOYAGE TO THE NORTHWEST COAST OF AMERICA

##### CHAPTER I

Departure from Montreal — Arrival in New York — Description of that City — Names of the Persons engaged in the Expedition.

WE remained in Montreal the rest of the spring and a part of the summer. At last, having completed our arrangements for the journey, we received orders to proceed, and on the 26th of July, accompanied by my father and brothers and a few friends, I repaired to the place of embarkation, where was prepared a birch bark canoe, manned by nine Canadians, having Mr. A. M'Kay as commander, and a Mr. A. Fisher as passenger. The sentiments which I experienced at that moment would be as difficult for me to describe as they were painful to support; for the first time in my life I quitted the place of my birth, and was separated from beloved parents and intimate friends, having for my whole consolation the faint hope of seeing them again. We embarked at about five, P. M., and arrived at La Prairie de la Madeleine (on the opposite side of the St. Lawrence), toward eight o'clock. We slept at this village, and the next morning, very early, having secured the canoe on a wagon, we got in motion again, and reached St. John's on the river Richelieu, a little before noon. Here we relaunched our canoe (after having well calked the seams), crossed or rather traversed the length of Lake Champlain, and arrived at Whitehall on the 30th. There we were overtaken by Mr. Ovid de Montigny, and a Mr. P. D. Jeremie, who were to be of the expedition.

Having again placed our canoe on a wagon, we pursued our journey, and arrived on the 1st of August at Lansingburg, a little village situated on the bank of the river Hudson. Here we got our canoe once more afloat, passed by Troy, and by Albany, everywhere hospitably received, our Canadian boatmen, having their hats decorated with parti-colored ribands and feathers, being taken by the Americans for so many wild Indians, and arrived at New York on the 3d, at eleven o'clock in the evening.

We had landed at the north end of the city, and the next day, being Sunday, we re-embarked, and

were obliged to make a course round the city, in order to arrive at our lodgings on Long Island. We sang as we rowed; which, joined to the unusual sight of a birch bark canoe impelled by nine stout Canadians, dark as Indians, and as gayly adorned, attracted a crowd upon the wharves to gaze at us as we glided along. We found on Long Island (in the village of Brooklyn) those young gentlemen engaged in the service of the new company, who had left Canada in advance of our party.

The vessel in which we were to sail not being ready, I should have found myself quite isolated and a stranger in the great city of New York, but for a letter of introduction to Mr. G—, given me on my setting out, by Madame his sister. I had formed the acquaintance of this gentleman during a stay which he had made at Montreal in 1801; but as I was then very young, he would probably have had some difficulty in recognising me without his sister's letter. He introduced me to several of his friends, and I passed in an agreeable manner the five weeks which elapsed between my arrival in New York and the departure of the ship.

I shall not undertake to describe New York; I will only say, that the elegance of the buildings, public and private, the cleanliness of the streets, the shade of the poplars which border them, the public walks, the markets always abundantly provided with all sorts of commodities, the activity of its commerce, then in a flourishing condition, the vast number of ships of all nations which crowded the quays; all, in a word, conspired to make me feel the difference between this great maritime city and my native town, of whose steeples I had never lost sight before, and which was by no means at that time what it is now.

New York was not then, and indeed is not at this time a fortified town; still there were several batteries and military works, the most considerable of which were seen on the Narrows, or channel which forms the principal mouth of the Hudson. The isles called Governor's Island, and Bedloe or Gibbet Island, were also well fortified. On the first, situated to the west of the city and about a mile from it, there were barracks sufficiently capacious for several thousand soldiers, and a Moro, or castle, with three tiers of guns, all bomb-proof. These works have been strengthened during the last war.

The market-places are eight in number; the most considerable is called Fly-Market.

The Park, the Battery, and Vauxhall Garden, are the principal promenades. There were, in 1810, thirty-two churches, two of which were devoted to the catholic worship; and the population was estimated at ninety thousand souls, of whom ten thousand were French. It is thought that this population has since been augmented (1819) by some thirty thousand souls.

During my sojourn at New York, I lodged in Brooklyn, on Long Island. This island is separated from the city by a sound, or narrow arm of the sea. There is here a pretty village, not far from which is a basin, where some gunboats were hauled up, and a few war vessels were on the stocks. Some barracks had been constructed here, and a guard was maintained.

Before leaving New York, it is well to observe that during our stay in that city, Mr. M'Kay thought it the part of prudence to have an interview with the minister plenipotentiary of his Britannic majesty, Mr. Jackson, to inform him of the object of our voyage, and get his views in regard to the line of conduct we ought to follow in case of war breaking out between the two powers; intimating to him that we were all British subjects, and were about to trade under the American flag.

After some moments of reflection Mr. Jackson told him, "that we were going on a very hazardous enterprise; that he saw our object was purely commercial, and that all he could promise us, was,

that in case of a war we should be respected as British subjects and traders.”

This reply appeared satisfactory, and Mr. M'Kay thought we had nothing to apprehend on that side.

The vessel in which we were to sail was called the *Tonquin*, of about 300 tons burden, commanded by Captain Thorn (a first-lieutenant of the American navy, on furlough for this purpose), with a crew of twenty-one men. The number of passengers was thirty-three. Here follow the names of both.

PASSENGERS

- Partners
- o Messrs. Alexander M'Kay
- o “ Duncan M'Dougall
- o “ David Stuart
- o “ Robert Stuart

all of Canada.

- Clerks
- o James Lewis of New York.
- o Russel Farnham of Massachusetts.
- o William W. Matthews of New York.
- o Alexander Ross
- o Donald M'Gillis
- o Ovide de Montigny
- o Francis B. Pillot
- o Donald M'Lennan
- o William Wallace
- o Thomas M'Kay
- o Gabriel Franchere

all from Canada

- Boatmen, Etc.
- o Oliver Roy Lapensée
- o Ignace Lapensée
- o Basile Lapensée
- o Joseph Lapierre
- o Jacques Lafantaisie
- o Benjamin Roussel
- o Michel Laframboise
- o Giles Leclerc
- o Joseph Nadeau
- o J. B'te. Belleau
- o Antoine Belleau
- o Louis Bruslé
- o P. D. Jeremie

all of Canada.

- o Johann Koaster, ship-carpenter, a Russian.

- o George Bell, cooper, New York.
- o Job Aitken, rigger and calker, from Scotland.
- o Augustus Roussil, blacksmith, Canada.
- o Guillaume Perreault, a boy.

These last were all mechanics, &c., destined for the establishment.

#### CREW

- Jonathan Thorn, captain, New York State.
- Ebenezer D. Fox, 1st mate, of Boston.
- John M. Mumford, 2d mate, of Massachusetts.
- James Thorn, brother of the captain, New York.
- John Anderson, boatswain, foreigner.
- Egbert Vanderhuff, tailor, New York.
- John Weeks, carpenter, ”
- Stephen Weeks, armorer, New York.
- Sailmakers
- o John Coles, New York,
- o John Martin, a Frenchman,
- Sailors
- o John White, New York.
- o Adam Fisher, ”
- o Peter Verbel, ”
- o Edward Aymes, ”
- o Robert Hill, Albany, New York.
- o John Adams,
- o ” Joseph Johnson, Englishman.
- o Charles Roberts, New York.
- o A colored man as cook,
- o A mulatto steward,
- o And three or four others whose names I have forgotten.

#### CHAPTER II

Departure from New York — Reflections of the Author — Navigation, falling in with other Ships, and various Incidents, till the Vessel comes in Sight of the Falkland Isles.

ALL being ready for our departure, we went on board ship, and weighed anchor on the 6th of September, in the morning. The wind soon fell off, and the first day was spent in drifting down to Staten island, where we came to anchor for the night. The next day we weighed anchor again; but there came on another dead calm, and we were forced to cast anchor near the lighthouse at Sandy Hook. On the 8th we weighed anchor for the third time, and by the help of a fresh breeze from the southwest, we succeeded in passing the bar; the pilot quitted us at about eleven o'clock, and soon after we lost sight of the coast.

One must have experienced it one's self, to be able to conceive the melancholy which takes possession of the soul of a man of sensibility, at the instant that he leaves his country and the civilized world, to go to inhabit with strangers in wild and unknown lands. I should in vain endeavor to give my readers an idea, even faintly correct, of the painful sinking of heart that I suddenly felt,

and of the sad glance which I involuntarily cast toward a future so much the more frightful to me, as it offered nothing but what was perfectly confused and uncertain. A new scene of life was unfolded before me, but how monotonous, and ill suited to diminish the dejection with which my mind was overwhelmed! For the first time in my life, I found myself under way upon the main sea, with nothing to fix my regards and arrest my attention but the frail machine which bore me between the abyss of waters and the immensity of the skies. I remained for a long time with my eyes fixed in the direction of that land which I no longer saw, and almost despaired of ever seeing again; I made serious reflections on the nature and consequences of the enterprise in which I had so rashly embarked; and I confess that if at that moment the offer had been made to release me from my engagement, I should have accepted the proposal with all my heart. It is true that the hopeless confusion and incumberment of the vessel's deck, the great number of strangers among whom I found myself, the brutal style which the captain and his subalterns used toward our young Canadians; all, in a word, conspired to make me augur a vexatious and disagreeable voyage. The sequel will show that I did not deceive myself in that.

We perceived very soon in the S. W., which was our weather side, a vessel that bore directly toward us; she made a signal that was understood by our captain; we hove to, and stood on her bow. It turned out to be the American frigate Constitution. We sent our boat on board of her, and sailed in company till toward five o'clock, when, our papers having been sent back to us, we separated.

The wind having increased, the motion of the vessel made us sea-sick, those of us, I mean, who were for the first time at sea. The weather was fine, however; the vessel, which at first sailing was lumbered in such a manner that we could hardly get in or out of our berths, and scarcely work ship, by little and little got into order, so that we soon found ourselves more at ease.

On the 14th we commenced to take flying fish. The 24th, we saw a great quantity of dolphins. We prepared lines and took two of the latter, which we cooked. The flesh of this fish appeared to me excellent.

After leaving New York, till the 4th of October, we headed southeast. On that day we struck the trade winds, and bore S. S. E.; being, according to our observations, in latitude  $17^{\circ} 43' 43''$  and longitude  $22^{\circ} 39'$ .

On the 5th, in the morning, we came in sight of the Cape Verd islands, bearing W. N. W., and distant about eight or nine miles, having the coast of Africa to the E. S. E. We should have been very glad to touch at these islands to take in water; but as our vessel was an American bottom, and had on board a number of British subjects, our captain did not think fit to expose himself to meet the English ships-of-war cruising on these coasts, who certainly would not have failed to make a strict search, and to take from us the best part of our crew; which would infallibly have proved disastrous to the object for which we had shipped them.

Speaking of water, I may mention that the rule was to serve it out in rations of a quart a day; but that we were now reduced to a pint and a half. For the rest, our fare consisted of fourteen ounces of hard bread, a pound and a quarter of salt beef or one of pork, per day, and half a pint of souchong tea, with sugar, per man. The pork and beef were served alternately: rice and beans, each once a week; corn-meal pudding with molasses, ditto; on Sundays the steerage passengers were allowed a bottle of Teneriffe wine. All except the four partners, Mr. Lewis, acting as captain's clerk, and Mr. T. M'Kay, were in the steerage; the cabin containing but six berths, besides the cap-

tain's and first-mate's state-rooms.

As long as we were near the coast of Africa, we had light and variable winds, and extremely hot weather; on the 8th, we had a dead calm, and saw several sharks round the vessel; we took one which we ate. I found the taste to resemble sturgeon. We experienced on that day an excessive heat, the mercury being at 94° of Fahrenheit. From the 8th to the with we had on board a canary bird, which we treated with the greatest care and kindness, but which nevertheless quitted us, probably for a certain death.

The nearer we approached to the equator the more we perceived the heat to increase: on the 16th, in latitude 6°, longitude 22° west from Greenwich, the mercury stood at 108°. We discovered on that day a sail bearing down upon us. The next morning she reappeared, and approached within gun-shot. She was a large brig, carrying about twenty guns: we sailed in company all day by a good breeze, all sail spread; but toward evening she dropped astern and altered her course to the S. S. E.

On the 18th, at daybreak, the watch alarmed us by announcing that the same brig which had followed us the day before, was under our lee, a cable's length off, and seemed desirous of knowing who we were, without showing her own colors. Our captain appeared to be in some alarm; and admitting that she was a better sailer than we, he called all the passengers and crew on deck, the drum beat to quarters, and we feigned to make preparations for combat.

It is well to observe that our vessel mounted ten pieces of cannon, and was pierced for twenty; the forward portholes were adorned with sham guns. Whether it was our formidable appearance or no, at about ten A. M. the stranger again changed her course, and we soon lost sight of her entirely.

Nothing further remarkable occurred to us till the 22d, when we passed the line in longitude 25° 9'. According to an ancient custom the crew baptized those of their number who had never before crossed the equator; it was a holyday for them on board. About two o'clock in the afternoon we perceived a sail in the S. S. W. We were not a little alarmed, believing that it was the same brig which we had seen some days before; for it was lying to, as if awaiting our approach. We soon drew near, and to our great joy discovered that she was a Portuguese; we hailed her, and learned that she came from some part of South America, and was bound to Pernambuco, on the coasts of Brazil. Very soon after we began to see what navigators call the Clouds of Magellan: they are three little white spots that one perceives in the sky almost as soon as one passes the equator: they were situated in the S. S. W.

The 1st November, we began to see great numbers of aquatic birds. Toward three o'clock P. M., we discovered a sail on our larboard, but did not approach sufficiently near to speak her. The 3d, we saw two more sails, making to the S. E. We passed the tropic of capricorn on the 4th, with a fine breeze, and in longitude 33° 27'. We lost the trade-winds, and as we advanced south the weather became cold and rainy. The 11th, we had a calm, although the swell was heavy. We saw several turtles, and the captain having sent out the small boat, we captured two of them. During the night of the 11th and 12th, the wind changed to the N. E., and raised a terrible tempest, in which the gale, the rain, the lightning, and thunder, seemed to have sworn our destruction; the sea appeared all a-fire, while our little vessel was the sport of winds and waves. We kept the hatches dosed, which did not prevent us from passing very uncomfortable nights while the storm lasted; for the great heats that we had experienced between the tropics, had so opened the seams of the deck that

every time the waves passed over, the water rushed down in quantities upon our hammocks. The 14th, the wind shifted to the S. S. W., which compelled us to beat to windward. During the night we were struck by a tremendous sea; the helm was seized beyond control, and the man at the wheel was thrown from one side of the ship to the other, breaking two of his ribs, which confined him to his berth for a week.

In latitude  $35^{\circ} 19'$ , longitude  $40^{\circ}$ , the sea appeared to be covered with marine plants, and the change that we observed in the color of the water, as well as the immense number of gulls and other aquatic birds that we saw, proved to us that we were not far from the mouth of the Rio de la Plata. The wind continued to blow furiously till the 21st, when it subsided a little, and the weather cleared up. On the 25th, being in the 46th degree, and 30 minutes of latitude, we saw a penguin. We began to feel sensibly the want of water: since passing the tropic of Capricorn the daily allowance had been always diminishing, till we were reduced to three gills a day, a slender modicum considering that we had only salt provisions. We had indeed a still, which we used to render the sea-water drinkable; but we distilled merely what sufficed for the daily use of the kitchen, as to do more would have required a great quantity of wood or coal. As we were not more than one hundred and fifty leagues from the Falkland isles, we determined to put in there and endeavor to replenish our casks, and the captain caused the anchors to be got ready.

We had contrary winds from the 27th of November to the 3d December. On the evening of that day, we heard one of the officers, who was at the mast head, cry "Land! Land!" Nevertheless, the night coming on, and the barren rocks which we had before us being little elevated above the ocean, we hove to.

### CHAPTER III

Arrival at the Falkland Isles — Landing — Perilous Situation of the Author and some of his Companions — Portrait of Captain Thorn — Cape Horn — Navigation to the Sandwich Islands.

ON the 4th (Dec.) in the morning, I was not the last to mount on deck, to feast my eyes with the sight of land; for it is only those who have been three or four months at sea, who know how to appreciate the pleasure which one then feels even at sight of such barren and bristling rocks as form the Falkland Isles. We drew near these rocks very soon, and entered between two of the islands, where we anchored on good ground. The first mate being sent ashore to look for water, several of our gentlemen accompanied him. They returned in the evening with the disappointing intelligence that they had not been able to find fresh water. They brought us, to compensate for this, a number of wild geese and two seals.

The weather appearing to threaten, we weighed anchor and put out to sea. The night was tempestuous, and in the morning of the 5th we had lost sight of the first islands. The wind blowing off land, it was necessary to beat up all that day; in the evening we found ourselves sufficiently near the shore, and hove to for the night. The 6th brought us a clear sky, and with a fresh breeze we succeeded in gaining a good anchorage, which we took to be Port Egmont, and where we found good water.

On the 7th, we sent ashore the water casks, as well as the cooper to superintend filling them, and the blacksmiths who were occupied in some repairs required by the ship.

For our part, having erected a tent near the springs, we passed the time while they were taking in water, in coursing over the isles: we had a boat for our accommodation, and killed every day a great many wild geese and ducks. These birds differ in plumage from those which are seen in

Canada. We also killed a great many seals. These animals ordinarily keep upon the rocks. We also saw several foxes of the species called Virginia fox: they were shy and yet fierce, barking like dogs and then flying precipitately. Penguins are also numerous on the Falkland Isles. These birds have a fine plumage, and resemble the loon: but they do not fly, having only little stumps of wings which they use to help themselves in waddling along. The rocks were covered with them. It being their sitting season we found them on their nests, from which they would not stir. They are not wild or timid: far from flying at our approach, they attack us with their bill, which is very sharp, and with their short wings. The flesh of the penguin is black and leathery, with a strong fishy taste, and one must be very hungry to make up one's mind to eat it. We got a great quantity of eggs by dislodging them from their nests.

As the French and English had both attempted to form establishments on these rocks, we endeavored to find some vestige of them; the tracks which we met everywhere made us hope to find goats also: but all our researches were vain: all that we discovered was an old fishing cabin, constructed of whalebone, and some seal-skin moccasins; for these rocks offer not a single tree to the view, and are frequented solely by the vessels which pursue the whale fishery in the southern seas. We found, however, two head-boards with inscriptions in English, marking the spot where two men had been interred: as the letters were nearly obliterated, we carved new ones on fresh pieces of board procured from the ship. This pious attention to two dead men nearly proved fatal to a greater number of the living; for all the casks having been filled and sent on board, the captain gave orders to re-embark, and without troubling himself to inquire if this order had been executed or not, caused the anchor to be weighed on the morning of the 11th, while I and some of my companions were engaged in erecting the inscriptions of which I have spoken, others were cutting grass for the hogs, and Messrs. M'Dougall and D. Stuart had gone to the south side of the isle to look for game.

The roaring of the sea against the rock-bound shore prevented them from hearing the gun, and they did not rejoin us till the vessel was already at sea. We then lost no time, but pushed off, being eight in number, with our little boat, only twenty feet keel. We rowed with all our might, but gained nothing upon the vessel. We were losing sight of the islands at last, and our case seemed desperate. While we paused, and were debating what course to pursue, as we had no compass, we observed the ship tacking and standing toward us. In fine after rowing for three hours and a half, in an excited state of feeling not easily described, we succeeded in regaining the vessel, and were taken on board at about three o'clock P. M.

Having related this trait of malice on the part of our captain, I shall be permitted to make some remarks on his character. Jonathan Thorn was brought up in the naval service of his country, and had distinguished himself in a battle fought between the Americans and the Turks at Tripoli, some years before: he held the rank of first lieutenant. He was a strict disciplinarian, of a quick and passionate temper, accustomed to exact obedience, considering nothing but duty, and giving himself no trouble about the murmurs of his crew, taking counsel of nobody, and following Mr. Astor's instructions to the letter. Such was the man who had been selected to command our ship. His haughty manners, his rough and overbearing disposition, had lost him the affection of most of the crew and of all the passengers: he knew it, and in consequence sought every opportunity to mortify us. It is true that the passengers had some reason to reproach themselves; they were not free from blame; but he had been the aggressor; and nothing could excuse the act of cruelty and

---

barbarity of which he was guilty, in intending to leave us upon those barren rocks of the Falkland isles, where we must inevitably have perished. This lot was reserved for us, but for the bold interference of Mr. R. Stuart, whose uncle was of our party, and who, seeing that the captain, far from waiting for us, coolly continued his course, threatened to blow his brains out unless he hove to and took us on board.

We pursued our course, bearing S. S. W., and on the 14th, in latitude  $54^{\circ} 1'$  longitude  $64^{\circ} 13'$ , we found bottom at sixty-five fathoms, and saw a sail to the south. On the 15th, in the morning, we discovered before us the high mountains of Terra del Fuego, which we continued to see till evening: the weather then thickened, and we lost sight of them. We encountered a furious storm which drove us to the 56th degree and  $18'$  of latitude. On the 18th, we were only fifteen leagues from Cape Horn. A dead calm followed, but the current carried us within sight of the cape, five or six leagues distant. This cape, which forms the southern extremity of the American continent, has always been an object of terror to the navigators who have to pass from one sea to the other; several of whom to avoid doubling it, have exposed themselves to the long and dangerous passage of the straits of Magellan, especially when about entering the Pacific ocean. When we saw ourselves under the stupendous rocks of the cape, we felt no other desire but to get away from them as soon as possible, so little agreeable were those rocks to the view, even in the case of people who had been some months at sea! And by the help of a land breeze we succeeded in gaining an offing. While becalmed here, we measured the velocity of the current setting east, which we found to be about three miles an hour.

The wind soon changed again to the S. S. W., and blew a gale. We had to beat. We passed in sight of the islands of Diego Ramirez, and saw a large schooner under their lee. The distance that we had run from New York, was about 9,165 miles. We had frightful weather till the 24th, when we found ourselves in  $58^{\circ} 16'$  of south latitude. Although it was the height of summer in that hemisphere, and the days as long as they are at Quebec on the 21st of June (we could read on deck at midnight without artificial light), the cold was nevertheless very great and the air very humid: the mercury for several days was but fourteen degrees above freezing point, by Fahrenheit's thermometer. If such is the temperature in these latitudes at the end of December, corresponding to our June, what must it be in the shortest days of the year, and where can the Patagonians then take refuge, and the inhabitants of the islands so improperly named the Land of Fire!

The wind, which till the 24th had been contrary, hauled round to the south, and we ran westward. The next day being Christmas, we had the satisfaction to learn by our noon-day observation that we had weathered the cape, and were, consequently, now in the Pacific ocean. Up to that date we had but one man attacked with scurvy, a malady to which those who make long voyages are subject, and which is occasioned by the constant use of salt provisions, by the humidity of the vessel, and the inaction.

From the 25th of December till the 1st of January, we were favored with a fair wind and ran eighteen degrees to the north in that short space of time. Though cold yet, the weather was nevertheless very agreeable. On the 17th, in latitude  $10^{\circ}$  S., and longitude  $110^{\circ} 50'$  W., we took several bonitas, an excellent fish. We passed the equator on the 23d, in  $128^{\circ} 14'$  of west longitude. A great many porpoises came round the vessel. On the 25th arose a tempest which lasted till the 28th. The wind then shifted to the E. S. E. and carried us two hundred and twenty-four miles on our course in twenty-four hours. Then we had several days of contrary winds; on the 8th of February

---

it hauled to the S. E., and on the 11th we saw the peak of a mountain covered with snow, which the first mate, who was familiar with these seas, told me was the summit of Mona-Roah , a high mountain on the island of Ohehy, one of those which the circumnavigator Cook named the Sandwich Isles, and where he met his death in 1779. We headed to the land all day, and although we made eight or nine knots an hour, it was not till evening that we were near enough to distinguish the huts of the islanders: which is sufficient to prove the prodigious elevation of Mona Roah above the level of the sea.

#### CHAPTER IV

Accident — View of the Coast — Attempted Visit of the Natives — Their Industry — Bay of Karaka-koua — Landing on the Island — John Young, Governor of Owahee.

WE were ranging along the coast with the aid of a fine breeze, when the boy Perrault, who had mounted the forerigging to enjoy the scenery, lost his hold, and being to windward where the shrouds were taut, rebounded from them like a ball some twenty feet from the ship's side into the ocean. We perceived his fall and threw over to him chairs, barrels, benches, hen-coops, in a word everything we could lay hands on; then the captain gave the orders to heave to; in the twinkling of an eye the lashings of one of the quarterboats were cut apart, the boat lowered and manned: by this time the boy was considerably a-stern. He would have been lost undoubtedly but for a wide pair of canvass overalls full of tar and grease, which operated like a life-preserver. His head, however, was under when he was picked up, and he was brought on board lifeless, about a quarter of an hour after he fell into the sea. We succeeded, notwithstanding, in a short time, in bringing him to, and in a few hours he was able to run upon the deck.

The coast of the island, viewed from the sea, offers the most picturesque coup d'œil, and the loveliest prospect; from the beach to the mountains the land rises amphitheatrically, all along which is a border of lower country covered with cocoa-trees and bananas, through the thick foliage whereof you perceive the huts of the islanders; the valleys which divide the hills that lie beyond appear well cultivated, and the mountains themselves, though extremely high, are covered with wood to their summits, except those few peaks which glitter with perpetual snow.

As we ran along the coast, some canoes left the beach and came alongside, with vegetables and cocoa-nuts; but as we wished to profit by the breeze to gain the anchorage, we did not think fit to stop. We coasted along during a part of the night; but a calm came on which lasted till the morrow. As we were opposite the bay of Karaka-koua, the natives came out again, in greater numbers, bringing us cabbages, yams, taro , bananas, bread-fruit, water-melons, poultry, &c., for which we traded in the way of exchange. Toward evening, by the aid of a sea breeze that rose as day declined, we got inside the harbor where we anchored on a coral bottom in fourteen fathoms water. The next day the islanders visited the vessel in great numbers all day long, bringing, as on the day before, fruits, vegetables, and some pigs, in exchange for which we gave them glass beads, iron rings, needles, cotton cloth, &c.

Some of our gentlemen went ashore and were astonished to find a native occupied in building a small sloop of about thirty tons: the tools of which he made use consisted of a half worn-out axe, an adze, about two-inch blade, made out of a paring chisel, a saw, and an iron rod which he heated red hot and made it serve the purpose of an auger. It required no little patience and dexterity to achieve anything with such instruments: he was apparently not deficient in these qualities, for his work was tolerably well advanced. Our people took him on board with them, and we supplied

him with suitable tools, for which he appeared extremely grateful.

On the 14th, in the morning, while the ship's carpenter was engaged in replacing one of the cat-heads, two composition sheaves fell into the sea; as we had no others on board, the captain proposed to the islanders, who are excellent swimmers, to dive for them, promising a reward; and immediately two offered themselves. They plunged several times, and each time brought up shells as a proof that they had been to the bottom. We had the curiosity to hold our watches while they dove, and were astonished to find that they remained four minutes under the water. That exertion appeared to me, however, to fatigue them a great deal, to such a degree that the blood streamed from their nostrils and ears. At last one of them brought up the sheaves and received the promised recompense, which consisted of four yards of cotton.

Karaka-koua bay where we lay, may be three quarters of a mile deep, and a mile and a half wide at the entrance: the latter is formed by two low points of rock which appear to have run down from the mountains in the form of lava, after a volcanic eruption. On each point is situated a village of moderate size; that is to say, a small group of the low huts of the islanders. The bottom of the bay terminates in a bold escarpment of rock, some four hundred feet high, on the top of which is seen a solitary cocoa-tree.

On the evening of the 14th, I went ashore with some other passengers, and we landed at the group of cabins on the western point, of those which I have described. The inhabitants entertained us with a dance executed by nineteen young women and one man, all singing together, and in pretty good time. An old man showed us the spot where Captain Cook was killed, on the 14th of February, 1779, with the cocoa-nut trees pierced by the balls from the boats which the unfortunate navigator commanded. This old man, whether it were feigned or real sensibility, seemed extremely affected and even shed tears, in showing us these objects. As for me, I could not help finding it a little singular to be thus, by mere chance, upon this spot, on the 14th of February, 1811; that is to say, thirty-two years after, on the anniversary of the catastrophe which has rendered it for ever celebrated. I drew no sinister augury from the coincidence, however, and returned to the ship with my companions as gay as I left it. When I say with my companions, I ought to except the boatswain, John Anderson, who, having had several altercations with the captain on the passage, now deserted the ship, preferring to live with the natives rather than obey any longer so uncourteous a superior. A sailor also deserted; but the islanders brought him back, at the request of the captain. They offered to bring back Anderson, but the captain preferred leaving him behind.

We found no good water near Karaka-koua bay: what the natives brought us in gourds was brackish. We were also in great want of fresh meat, but could not obtain it: the king of these islands having expressly forbidden his subjects to supply any to the vessels which touched there. One of the chiefs sent a canoe to Tohehigh bay, to get from the governor of the island, who resided there, permission to sell us some pigs. The messengers returned the next day, and brought us a letter, in which the governor ordered us to proceed without delay to the isle of Wahoo, where the king lives; assuring us that we should there find good water and everything else we needed.

We got under way on the 16th, and with a light wind coasted the island as far as Tohehigh bay. The wind then dropping away entirely, the captain, accompanied by Messrs. M'Kay and M'Dougall, went ashore, to pay a visit to the governor aforesaid. He was not a native, but a Scotchman named John Young, who came hither some years after the death of Captain Cook. This man had married a native woman, and had so gained the friendship and confidence of the king, as to be

raised to the rank of chief and after the conquest of Wahoo by King Tamehameha, was made governor of Owhyhee (Hawaii) the most considerable of the Sandwich Islands, both by its extent and population. His excellency explained to our gentlemen the reason why the king had interdicted the trade in hogs to the inhabitants of all the islands: this reason being that his majesty wished to reserve to himself the monopoly of that branch of commerce, for the augmentation of his royal revenue by its exclusive profits. The governor also informed them that no rain had fallen on the south part of Hawaii for three years; which explained why we found so little fresh water: he added that the north part of the island was more fertile than the south, where we were: but that there was no good anchorage: that part of the coast being defended by sunken rocks which form heavy breakers. In fine, the governor dismissed our gentlemen with a present of four fine fat hogs; and we, in return, sent him some tea, coffee, and chocolate, and a keg of Madeira wine.

The night was nearly a perfect calm, and on the 17th we found ourselves abreast of Mona-Woror-ayea a snowcapped mountain, like Mona-Roah, but which appeared to me less lofty than the latter. A number of islanders came to visit us as before, with some objects of curiosity, and some small fresh fish. The wind rising on the 18th, we soon passed the western extremity of Hawaii, and sailed by Mowhee and Tahooraha, two more islands of this group, and said to be, like the rest, thickly inhabited. The first presents a highly picturesque aspect, being composed of hills rising in the shape of a sugar loaf and completely covered with cocoa-nut and bread-fruit trees.

At last, on the 21st, we approached Wahoo, and came to anchor opposite the bay of Ohetity, outside the bar, at a distance of some two miles from the land.

#### CHAPTER V

Bay of Ohetity — Tamehameha, King of the Islands — His Visit to the Ship — His Capital — His Naval Force — His Authority — Productions of the Country — Manners and Customs — Reflections.

THERE is no good anchorage in the bay of Ohetity, inside the bar or coral reef: the holding-ground is bad: so that, in case of a storm, the safety of the ship would have been endangered. Moreover, with a contrary wind, it would have been difficult to get out of the inner harbor; for which reasons, our captain preferred to remain in the road. For the rest, the country surrounding the bay is even more lovely in aspect than that of Karaka-koua; the mountains rise to a less elevation in the back-ground, and the soil has an appearance of greater fertility.

Tamehameha, whom all the Sandwich Isles obeyed when we were there in 1811, was neither the son nor the relative of Tierroboo, who reigned in Owhyhee (Hawaii) in 1779, when Captain Cook and some of his people were massacred. He was, at that date, but a chief of moderate power; but, being skilful, intriguing, and full of ambition, he succeeded in gaining a numerous party, and finally possessed himself of the sovereignty. As soon as he saw himself master of Owhyhee, his native island, he meditated the conquest of the leeward islands, and in a few years he accomplished it. He even passed into Atouay, the most remote of all, and vanquished the ruler of it, but contented himself with imposing on him an annual tribute. He had fixed his residence at Wahoo, because of all the Sandwich Isles it was the most fertile, the most picturesque — in a word, the most worthy of the residence of the sovereign.

As soon as we arrived, we were visited by a canoe manned by three white men, Davis and Wadsworth, Americans, and Manini, a Spaniard. The last offered to be our interpreter during our stay; which was agreed to. Tamehameha presently sent to us his prime-minister, Kramoku, to whom

the Americans have given the name of Pitt, on account of his skill in the affairs of government. Our captain, accompanied by some of our gentlemen, went ashore immediately, to be presented to Tamehameha. About four o'clock, P. M., we saw them returning, accompanied by a double pirogue conveying the king and his suite. We ran up our colors, and received his majesty with a salute of four guns.

Tamehameha was above the middle height, well made, robust and inclined to corpulency, and had a majestic carriage. He appeared to me from fifty to sixty years old. He was clothed in the European style, and wore a sword. He walked a long time on the deck, asking explanations in regard to those things which he had not seen on other vessels, and which were found on ours. A thing which appeared to surprise him, was to see that we could render the water of the sea fresh, by means of the still attached to our caboose; he could not imagine how that could be done. We invited him into the cabin, and, having regaled him with some glasses of wine, began to talk of business matters: we offered him merchandise in exchange for hogs, but were not able to conclude the bargain that day. His majesty re-embarked in his double pirogue, at about six o'clock in the evening. It was manned by twenty-four men. A great chest, containing firearms, was lashed over the centre of the two canoes forming the pirogue; and it was there that Tamehameha sat, with his prime-minister at his side.

In the morning, on the 22d, we sent our water-casks ashore and filled them with excellent water. At about noon his sable majesty paid us another visit, accompanied by his three wives and his favorite minister. These females were of an extraordinary corpulence, and of unmeasured size. They were dressed in the fashion of the country, having nothing but a piece of tapa, or bark-cloth, about two yards long, passed round the hips and falling to the knees. We resumed the negotiations of the day before, and were more successful. I remarked that when the bargain was concluded, he insisted with great pertinacity that part of the payment should be in Spanish dollars. We asked the reason, and he made answer that he wished to buy a frigate of his brother, King George, meaning the king of England. The bargain concluded, we prayed his majesty and his suite to dine with us; they consented, and toward evening retired, apparently well satisfied with their visit and our reception of them.

In the meantime, the natives surrounded the ship in great numbers, with hundreds of canoes, offering us their goods, in the shape of eatables and the rude manufactures of the island, in exchange for merchandise; but, as they had also brought intoxicating liquors in gourds, some of the crew got drunk; the captain was, consequently, obliged to suspend the trade, and forbade any one to traffic with the islanders, except through the first-mate, who was intrusted with that business. I landed on the 22d, with Messrs. Pillet and M'Gillis: we passed the night ashore, spending that day and the next morning in rambling over the environs of the bay, followed by a crowd of men, women, and children.

Ohetity, where Tamehameha resides, and which, consequently, may be regarded as the capital of his kingdom, is — or at least was at that time — a moderate-sized city, or rather a large village. Besides the private houses, of which there were perhaps two hundred, constructed of poles planted in the ground and covered over with matting, there were the royal palace, which was not magnificent by any means: a public store, of two stories, one of stone and the other of wood; two morais, or idol temples, and a wharf. At the latter we found an old vessel, the *Lady Bird*, which some American navigators had given in exchange for a schooner; it was the only large vessel

which King Tamehameha possessed; and, besides, was worth nothing. As for schooners he had forty of them, of from twenty to thirty tons burthen: these vessels served to transport the tributes in kind paid by his vassals in the other islands. Before the Europeans arrived among these savages, the latter had no means of communication between one isle and another, but their canoes, and as some of the islands are not in sight of each other, these voyages must have been dangerous. Near the palace I found an Indian from Bombay, occupied in making a twelve inch cable, for the use of the ship which I have described.

Tamehameha kept constantly round his house a guard of twenty-four men. These soldiers wore, by way of uniform, a long blue coat with yellow; and each was armed with a musket. In front of the house, on an open square, were placed fourteen four-pounders, mounted on their carriages. The king was absolute, and judged in person the differences between his subjects. We had an opportunity of witnessing a proof of it, the day after our landing. A Portuguese having had a quarrel with a native, who was intoxicated, struck him: immediately the friends of the latter, who had been the aggressor after all, gathered in a crowd to beat down the poor foreigner with stones; he fled as fast as he could to the house of the king, followed by a mob of enraged natives, who nevertheless stopped at some distance from the guards, while the Portuguese, all breathless, crouched in a corner. We were on the esplanade in front of the palace royal, and curiosity to see the trial led us into the presence of his majesty, who having caused the quarrel to be explained to him, and heard the witnesses on both sides, condemned the native to work four days in the garden of the Portuguese and to give him a hog. A young Frenchman from Bordeaux, preceptor of the king's sons, whom he taught to read, and who understood the language, acted as interpreter to the Portuguese, and explained to us the sentence. I can not say whether our presence influenced the decision, or whether, under other circumstances, the Portuguese would have been less favorably treated. We were given to understand that Tamehameha was pleased to see whites establish themselves in his dominions, but that he esteemed only people with some useful trade, and despised idlers, and especially drunkards. We saw at Wahoo about thirty of these white inhabitants, for the most part, people of no character, and who had remained on the islands either from indolence, or from drunkenness and licentiousness. Some had taken wives in the country, in which case the king gave them a portion of land to cultivate for themselves. But two of the worst sort had found means to procure a small still, wherewith they manufactured rum and supplied it to the natives. The first navigators found only four sorts of quadrupeds on the Sandwich islands: — dogs, swine, lizards, and rats. Since then sheep have been carried there, goats, horned cattle, and even horses, and these animals have multiplied.

The chief vegetable productions of these isles are the sugar cane, the bread-fruit tree, the banana, the watermelon, the musk-melon, the taro, the ava, the pandanus, the mulberry, &c. The bread-fruit tree is about the size of a large apple-tree; the fruit resembles an apple and is about twelve or fourteen inches in circumference; the rind is thick and rough like a melon: when cut transversely it is found to be full of sacs, like the inside of an orange; the pulp has the consistence of water-melon, and is cooked before it is eaten. We saw orchards of bread-fruit trees and bananas, and fields of sugar-cane, back of Ohetity.

The taro grows in low situations, and demands a great deal of care. It is not unlike a white turnip, and as it constitutes the principal food of the natives, it is not to be wondered at that they bestow so much attention on its culture. Wherever a spring of pure water is found issuing out of

the side of a hill, the gardener marks out on the declivity the size of the field he intends to plant. The ground is levelled and surrounded with a mud or stone wall, not exceeding eighteen inches in height, and having a flood gate above and below. Into this enclosure the water of the spring is conducted, or is suffered to escape from it, according to the dryness of the season. When the root has acquired a sufficient size it is pulled up for immediate use. This esculent is very bad to eat raw, but boiled it is better than the yam. Cut in slices, dried, pounded and reduced to a farina, it forms with bread-fruit the principal food of the natives. Sometimes they boil it to the consistence of porridge, which they put into gourds and allow to ferment; it will then keep a long time. They also use to mix with it, fish, which they commonly eat raw with the addition of a little salt, obtained by evaporation.

The ava is a plant more injurious than useful to the inhabitants of these isles; since they only make use of it to obtain a dangerous and intoxicating drink, which they also call ava. The mode of preparing this beverage is as follows: they chew the root, and spit out the result into a basin; the juice thus expressed is exposed to the sun to undergo fermentation; after which they decant it into a gourd; it is then fit for use, and they drink it on occasions to intoxication. The too frequent use of this disgusting liquor causes loss of sight, and a sort of leprosy, which can only be cured by abstaining from it, and by bathing frequently in the water of the sea. This leprosy turns their skin white: we saw several of the lepers, who were also blind, or nearly so. The natives are also fond of smoking: the tobacco grows in the islands, but I believe it has been introduced from abroad. The bark of the mulberry furnishes the cloth worn by both sexes; of the leaves of the pandanus they make mats. They have also a kind of wax-nut, about the size of a dried plum of which they make candles by running a stick through several of them. Lighted at one end, they burn like a wax taper, and are the only light they use in their huts at night.

The men are generally well made and tall: they wear for their entire clothing what they call a maro ; it is a piece of figured or white tapa, two yards long and a foot wide, which they pass round the loins and between the legs, tying the ends in a knot over the left hip. At first sight I thought they were painted red, but soon perceived that it was the natural color of their skin. The women wear a petticoat of the same stuff as the maro , but wider and longer, without, however, reaching below the knees. They have sufficiently regular features, and but for the color, may pass, generally speaking, for handsome women. Some to heighten their charms, dye their black hair (cut short for the purpose) with quick lime, forming round the head a strip of pure white, which disfigures them monstrously. Others among the young wear a more becoming garland of flowers. For other traits, they are very lascivious, and far from observing a modest reserve, especially toward strangers. In regard to articles of mere ornament, I was told that they were not the same in all the island. I did not see them, either, clothed in their war dresses, or habits of ceremony. But I had an opportunity to see them paint or print their tapa , or bark cloth, an occupation in which they employ a great deal of care and patience. The pigments they use are derived from vegetable juices, prepared with the oil of the cocoa-nut. Their pencils are little reeds or canes of bamboo, at the extremity of which they carve out divers sorts of flowers. First they tinge the cloth they mean to print, yellow, green, or some other color which forms the ground: then they draw upon it perfectly straight lines, without any other guide but the eye; lastly they dip the ends of the bamboo sticks in paint of a different tint from the ground, and apply them between the dark or bright bars thus formed. This cloth resembles a good deal our calicoes and printed cottons; the oils with which it is im-

---

pregnated renders it impervious to water. It is said that the natives of Atoway excel all the other islanders in the art of painting the tapa.

The Sandwich-islanders live in villages of one or two hundred houses arranged without symmetry, or rather grouped together in complete defiance of it. These houses are constructed (as I have before said) of posts driven in the ground, covered with long dry grass, and walled with matting; the thatched roof gives them a sort of resemblance to our Canadian barns or granges. The length of each house varies according to the number of the family which occupies it: they are not smoky like the wigwams of our Indians, the fireplace being always outside in the open air, where all the cooking is performed. Hence their dwellings are very clean and neat inside.

Their pirogues or canoes are extremely light and neat: those which are single have an outrigger, consisting of two curved pieces of timber lashed across the bows, and touching the water at the distance of five or six feet from the side; another piece, turned up at each extremity, is tied to the end and drags in the water, on which it acts like a skating iron on the ice, and by its weight keeps the canoe in equilibrium: without that contrivance they would infallibly upset. Their paddles are long, with a very broad blade. All these canoes carry a lateen, or sprit-sail, which is made of a mat of grass or leaves, extremely well woven.

I did not remain long enough with these people to acquire very extensive and exact notions of their religion: I know that they recognise a Supreme Being, whom they call Etoway, and a number of inferior divinities. Each village has one or more morais. These morais are enclosures which served for cemeteries; in the middle is a temple, where the priests alone have a right to enter: they contain several idols of wood, rudely sculptured. At the feet of these images are deposited, and left to putrify, the offerings of the people, consisting of dogs, pigs, fowls, vegetables, &c. The respect of these savages for their priests extends almost to adoration; they regard their persons as sacred, and feel the greatest scruple in touching the objects, or going near the places, which they have declared taboo or forbidden. The taboo has often been useful to European navigators, by freeing them from the importunities of the crowd.

In our rambles we met groups playing at different games. That of draughts appeared the most common. The checkerboard is very simple, the squares being marked on the ground with a sharp stick: the men are merely shells or pebbles. The game was different from that played in civilized countries, so that we could not understand it.

Although nature has done almost everything for the inhabitants of the Sandwich islands — though they enjoy a perpetual spring, a clear sky, a salubrious climate, and scarcely any labor is required to produce the necessaries of life — they can not be regarded as generally happy: the artisans and producers, whom they call Tootoos, are nearly in the same situation as the Helots among the Lacedemonians, condemned to labor almost incessantly for their lord or Eris, without hope of bettering their condition, and even restricted in the choice of their daily food. How has it happened that among a people yet barbarous, where knowledge is nearly equally distributed, the class which is beyond comparison the most numerous has voluntarily submitted to such a humiliating and oppressive yoke? The Tartars, though infinitely less numerous than the Chinese, have subjected them, because the former were warlike and the latter were not. The same thing has happened, no doubt, at remote periods, in Poland, and other regions of Europe and Asia. If moral causes are joined to physical ones, the superiority of one caste and the inferiority of the other will be still more marked; it is known that the natives of Hispaniola, when they saw the Spaniards ar-

---

rive on their coast, in vessels of an astonishing size to their apprehensions, and heard them imitate the thunder with their cannon, took them for beings of a superior nature to their own. Supposing that this island had been extremely remote from every other country, and that the Spaniards, after conquering it, had held no further communication with any civilized land, at the end of a century or two the language and the manners would have assimilated, but there would have been two castes, one of lords, enjoying all the advantages, the other of serfs, charged with all the burdens. This theory seems to have been realized anciently in Hindostan; but if we must credit the tradition of the Sandwich-islanders, their country was originally peopled by a man and woman, who came to Owyhee in a canoe. Unless, then, they mean that this man and woman came with their slaves, and that the Eris are descended from the first, and the Tootoos from the last, they ought to attribute to each other the same origin, and consequently regard each other as equals, and even as brothers, according to the manner of thinking that prevails among savages. The cause of the slavery of women among most barbarous tribes, is more easily explained: the men have subjected them by the right of the strongest, if ignorance and superstition have not caused them to be previously regarded as beings of an inferior nature, made to be servants and not companions.

#### CHAPTER VI

Departure from Wahoo — Storm — Arrival at the Mouth of the Columbia — Reckless Order of the Captain — Difficulty of the Entrance — Perilous Situation of the Ship — Unhappy Fate of a part of the Crew and People of the Expedition.

HAVING taken on board a hundred head of live hogs, some goats, two sheep, a quantity of poultry, two boatloads of sugar-cane, to feed the hogs, as many more of yams, taro, and other vegetables, and all our water-casks being snugly stowed, we weighed anchor on the 28th of February, sixteen days after our arrival at Karaka-koua.

We left another man (Edward Aymes) at Wahoo. He belonged to a boat's crew which was sent ashore for a load of sugar-canes. By the time the boat was loaded by the natives the ebb of the tide had left her aground, and Aymes asked leave of the coxswain to take a stroll, engaging to be back for the flood. Leave was granted him, but during his absence, the tide having come in sufficiently to float the boat, James Thorn, the coxswain, did not wait for the young sailor, who was thus left behind. The captain immediately missed the man, and, on being informed that he had strolled away from the boat on leave, flew into a violent passion. Aymes soon made his appearance alongside, having hired some natives to take him on board; on perceiving him, the captain ordered him to stay in the long-boat, then lashed to the side with its load of sugar-cane. The captain then himself got into the boat, and, taking one of the canes, beat the poor fellow most unmercifully with it; after which, not satisfied with this act of brutality, he seized his victim and threw him overboard! Aymes, however, being an excellent swimmer, made for the nearest native canoe, of which there were, as usual, a great number around the ship. The islanders, more humane than our captain, took in the poor fellow, who, in spite of his entreaties to be received on board, could only succeed in getting his clothes, which were thrown into the canoe. At parting, he told Captain Thorn that he knew enough of the laws of his country, to obtain redress, should they ever meet in the territory of the American Union.

While we were getting under sail, Mr. M'Kay pointed out to the captain that there was one water-cask empty, and proposed sending it ashore to be filled, as the great number of live animals we had on board required a large quantity of fresh water. The captain, who feared that some of

the men would desert if he sent them ashore, made an observation to that effect in answer to Mr. M'Kay, who then proposed sending me on a canoe which lay alongside, to fill the cask in question: this was agreed to by the captain, and I took the cask accordingly to the nearest spring. Having filled it, not without some difficulty, the islanders seeking to detain me, and I perceiving that they had given me some gourds full of salt water, I was forced also to demand a double pirogue (for the canoe which had brought the empty cask, was found inadequate to carry a full one), the ship being already under full sail and gaining an offing. As the natives would not lend a hand to procure what I wanted, I thought it necessary to have recourse to the king, and in fact did so. For seeing the vessel so far at sea, with what I knew of the captain's disposition, I began to fear that he had formed the plan of leaving me on the island. My fears, nevertheless were ill-founded; the vessel made a tack toward the shore, to my great joy; and a double pirogue was furnished me, through the good offices of our young friend the French school-master, to return on board with my cask.

Our deck was now as much encumbered as when we left New York; for we had been obliged to place our live animals at the gangways, and to board over their pens, on which it was necessary to pass, to work ship. Our own numbers were also augmented; for we had taken a dozen islanders for the service of our intended commercial establishment. Their term of engagement was three years, during which we were to feed and clothe them, and at its expiration they were to receive a hundred dollars in merchandise. The captain had shipped another dozen as hands on the coasting voyage. These people, who make very good sailors, were eager to be taken into employment, and we might easily have carried off a much greater number.

We had contrary winds till the 2d of March, when, having doubled the western extremity of the island, we made nothing, and lost sight of these smiling and temperate countries, to enter very soon a colder region and less worthy of being inhabited. The winds were variable, and nothing extraordinary happened to us till the 16th, when, being arrived at the latitude of 35° 11' north, and in 138° 16' of west longitude, the wind shifted all of a sudden to the S. S. W., and blew with such violence, that we were forced to strike top-gallant masts and top-sails, and run before the gale with a double reef in our foresail. The rolling of the vessel was greater than in all the gales we had experienced previously. Nevertheless, as we made great headway, and were approaching the continent, the captain, by way of precaution, lay to for two nights successively. At last, on the 22d, in the morning, we saw the land. Although we had not been able to take any observations for several days, nevertheless, by the appearance of the coast, we perceived that we were near the mouth of the river Columbia, and were not more than three miles from land. The breakers formed by the bar at the entrance of that river, and which we could distinguish from the ship, left us no room to doubt that we had arrived at last at the end of our voyage.

The wind was blowing in heavy squalls, and the sea ran very high: in spite of that, the captain caused a boat to be lowered, and Mr. Fox (first mate), Basile Lapensee, Ignace Lapensee, Jos. Nadeau, and John Martin, got into her, taking some provisions and firearms, with orders to sound the channel and report themselves on board as soon as possible. The boat was not even supplied with a good sail, or a mast, but one of the partners gave Mr. Fox a pair of bed sheets to serve for the former. Messrs. M'Kay and M'Dougall could not help remonstrating with the captain on the imprudence of sending the boat ashore in such weather; but they could not move his obstinacy. The boat's crew, pulled away from the ship; alas! we were never to see her again; and we already

had a foreboding of her fate. The next day the wind seemed to moderate, and we approached very near the coast. The entrance of the river, which we plainly distinguished with the naked eye, appeared but a confused and agitated sea: the waves, impelled by a wind from the offing, broke upon the bar, and left no perceptible passage. We got no sign of the boat; and toward evening, for our own safety, we hauled off to sea, with all countenances extremely sad, not excepting the captain's, who appeared to me as much afflicted as the rest, and who had reason to be so. During the night, the wind fell, the clouds dispersed, and the sky became serene. On the morning of the 24th, we found that the current had carried us near the coast again, and we dropped anchor in fourteen fathoms water, north of Cape Disappointment. The coup d'œil is not so smiling by a great deal at this anchorage, as at the Sandwich islands, the coast offering little to the eye but a continuous range of high mountains covered with snow.

Although it was calm, the sea continued to break over the reef with violence, between Cape Disappointment and Point Adams. We sent Mr. Mumford (the second mate) to sound a passage; but having found the breakers too heavy, he returned on board about mid-day. Messrs. M'Kay and D. Stuart offered their services to go ashore, to search for the boat's crew who left on the 22d; but they could not find a place to land. They saw Indians, who made signs to them to pull round the cape, but they deemed it more prudent to return to the vessel. Soon after their return, a gentle breeze sprang up from the westward, we raised anchor, and approached the entrance of the river. Mr. Aikin was then despatched in the pinnace, accompanied by John Coles (sailmaker), Stephen Weeks (armorers), and two Sandwich-islanders; and we followed under easy sail. Another boat had been sent out before this one, but the captain judging that she bore too far south, made her a signal to return. Mr. Aikin not finding less than four fathoms, we followed him and advanced between the breakers, with a favorable wind, so that we passed the boat on our starboard, within pistol-shot. We made signs to her to return on board, but she could not accomplish it; the ebb tide carried her with such rapidity that in a few minutes we had lost sight of her amidst the tremendous breakers that surrounded us. It was near nightfall, the wind began to give way, and the water was so low with the ebb, that we struck six or seven times with violence: the breakers broke over the ship and threatened to submerge her. At last we passed from two and three quarters fathoms of water to seven, where we were obliged to drop anchor, the wind having entirely failed us. We were far, however, from being out of danger, and the darkness came to add to the horror of our situation: our vessel, though at anchor, threatened to be carried away every moment by the tide; the best bower was let go, and it kept two men at the wheel to hold her head in the right direction. However, Providence came to our succor: the flood succeeded to the ebb, and the wind rising out of the offing, we weighed both anchors, in spite of the obscurity of the night, and succeeded in gaining a little bay or cove, formed at the entrance of the river by Cape Disappointment, and called Baker's Bay, where we found a good anchorage. It was about midnight, and all retired to take a little rest: the crew, above all, had great need of it. We were fortunate to be in a place of safety, for the wind rose higher and higher during the rest of the night, and on the morning of the 25th allowed us to see that this ocean is not always pacific.

Some natives visited us this day, bringing with them beaver-skins; but the inquietude caused in our minds by the loss of two boats' crews, for whom we wished to make search, did not permit us to think of traffic. We tried to make the savages comprehend, by signs, that we had sent a boat ashore three days previous, and that we had no news of her; but they seemed not to understand

us. The captain, accompanied by some of our gentlemen, landed, and they set themselves to search for our missing people, in the woods, and along the shore N. W. of the cape. After a few hours we saw the captain return with Weeks, one of the crew of the last boat sent out. He was stark naked, and after being clothed, and receiving some nourishment, gave us an account of his almost miraculous escape from the waves on the preceding night, in nearly the following terms:—"After you had passed our boat," said he, "the breakers caused by the meeting of the wind roll and ebb-tide, became a great deal heavier than when we entered the river with the flood. The boat, for want of a rudder, became very hard to manage, and we let her drift at the mercy of the tide, till, after having escaped several surges, one struck us midship and capsized us. I lost sight of Mr. Aiken and John Coles: but the two islanders were close by me; I saw them stripping off their clothes, and I followed their example; and seeing the pinnace within my reach, keel upward, I seized it; the two natives came to my assistance; we righted her, and by sudden jerks threw out so much of the water that she would hold a man: one of the natives jumped in, and, bailing with his two hands, succeeded in a short time in emptying her. The other native found the oars, and about dark we were all three embarked. The tide having now carried us outside the breakers, I endeavored to persuade my companions in misfortune to row, but they were so benumbed with cold that they absolutely refused. I well knew that without clothing, and exposed to the rigor of the air, I must keep in constant exercise. Seeing besides that the night was advancing, and having no resource but the little strength left me, I set to work sculling, and pushed off the bar, but so as not to be carried out too far to sea. About midnight, one of my companions died: the other threw himself upon the body of his comrade, and I could not persuade him to abandon it. Daylight appeared at last; and, being near the shore, I headed in for it, and arrived, thank God, safe and sound, through the breakers, on a sandy beach. I helped the islander, who yet gave some signs of life, to get out of the boat, and we both took to the woods; but, seeing that he was not able to follow me, I left him to his bad fortune, and, pursuing a beaten path that I perceived, I found myself, to my great astonishment, in the course of a few hours, near the vessel."

The gentlemen who went ashore with the captain divided themselves into three parties, to search for the native whom Weeks had left at the entrance of the forest; but, after scouring the woods and the point of the cape all day, they came on board in the evening without having found him.

#### CHAPTER VII

Regrets of the Author at the Loss of his Companions — Obsequies of a Sandwich Islander — First steps in the Formation of the intended Establishment — New Alarm — Encampment.

THE narrative of Weeks informed us of the death of three of our companions, and we could not doubt that the five others had met a similar fate. This loss of eight of our number, in two days, before we had set foot on shore, was a bad augury, and was sensibly felt by all of us. In the course of so long a passage, the habit of seeing each other every day, the participation of the same cares and dangers, and confinement to the same narrow limits, had formed between all the passengers a connection that could not be broken, above all in a manner so sad and so unlooked for, without making us feel a void like that which is experienced in a well-regulated and loving family, when it is suddenly deprived by death, of the presence of one of its cherished members. We had left New York, for the most part strangers to one another; but arrived at the river Columbia we were all friends, and regarded each other almost as brothers. We regretted especially the two brothers Lapensée and Joseph Nadeau: these young men had been in an especial manner recommended

---

by their respectable parents in Canada to the care of Mr. M'Kay; and had acquired by their good conduct the esteem of the captain, of the crew, and of all the passengers. The brothers Lapensée were courageous and willing, never flinching in the hour of danger, and had become as good seamen as any on board. Messrs. Fox and Aikin were both highly regarded by all; the loss of Mr. Fox, above all, who was endeared to every one by his gentlemanly behavior and affability, would have been severely regretted at any time, but it was doubly so in the present conjuncture: this gentleman, who had already made a voyage to the Northwest, could have rendered important services to the captain and to the company. The preceding days had been days of apprehension and of uneasiness; this was one of sorrow and mourning.

The following day, the same gentlemen who had volunteered their services to seek for the missing islander, resumed their labors, and very soon after they left us, we perceived a great fire kindled at the verge of the woods, over against the ship. I was sent in a boat and arrived at the fire. It was our gentlemen who had kindled it, to restore animation to the poor islander, whom they had at last found under the rocks, half dead with cold and fatigue, his legs swollen and his feet bleeding. We clothed him, and brought him on board, where, by our care, we succeeded in restoring him to life. Toward evening, a number of the Sandwich-islanders, provided with the necessary utensils, and offerings consisting of biscuit, lard, and tobacco, went ashore, to pay the last duties to their compatriot, who died in Mr. Aikin's boat, on the night of the 24th. Mr. Pillet and I went with them, and witnessed the obsequies, which took place in the manner following. Arrived at the spot where the body had been hung upon a tree to preserve it from the wolves, the natives dug a grave in the sand; then taking down the body, and stretching it alongside the pit, they placed the biscuit under one of the arms, a piece of pork beneath the other, and the tobacco beneath the chin and the genital parts. Thus provided for the journey to the other world, the body was deposited in the grave and covered with sand and stones. All the countrymen of the dead man then knelt on either side of the grave, in a double row, with their faces to the east, except one of them who officiated as priest; the latter went to the margin of the sea, and having filled his hat with water, sprinkled the two rows of islanders, and recited a sort of prayer, to which the others responded, nearly as we do in the litanies. That prayer ended, they rose and returned to the vessel, looking neither to the right hand nor to the left. As every one of them appeared to me familiar with the part he performed, it is more than probable that they observed, as far as circumstances permitted, the ceremonies practised in their country on like occasions. We all returned on board about sundown.

The next day, the 27th, desirous of clearing the gangways of the live stock, we sent some men on shore to construct a pen, and soon after landed about fifty hogs, committing them to the care of one of the hands. On the 30th, the long boat was manned, armed and provisioned, and the captain, with Messrs. M'Kay and D. Stuart, and some of the clerks, embarked on it, to ascend the river and choose an eligible spot for our trading establishment. Messrs. Ross and Pillet left at the same time, to run down south, and try to obtain intelligence of Mr. Fox and his crew. In the meantime, having reached some of the goods most at hand, we commenced, with the natives who came every day to the vessel, a trade for beaver-skins, and sea-otter stones.

Messrs. Ross and Pillet returned on board on the 1st of April, without having learned anything respecting Mr. Fox and his party. They did not even perceive along the beach any vestiges of the boat. The natives who occupy Point Adams, and who are called Clatsops, received our young gentlemen very amicably and hospitably. The captain and his companions also returned on the

4th, without having decided on a position for the establishment, finding none which appeared to them eligible. It was consequently resolved to explore the south bank, and Messrs. M'Dougal and D. Stuart departed on that expedition the next day, promising to return by the 7th.

The 7th came, and these gentlemen did not return. It rained almost all day. The day after, some natives came on board, and reported that Messrs. M'Dougal and Stuart had capsized the evening before in crossing the bay. This news at first alarmed us; and, if it had been verified, would have given the finishing blow to our discouragement. Still, as the weather was excessively bad, and we did not repose entire faith in the story of the natives — whom, moreover, we might not have perfectly understood — we remained in suspense till the 10th. On the morning of that day, we were preparing to send some of the people in search of our two gentlemen, when we perceived two large canoes, full of Indians, coming toward the vessel: they were of the Chinook village, which was situated at the foot of a bluff on the north side of the river, and were bringing back Messrs. M'Dougal and Stuart. We made known to these gentlemen the report we had heard on the 8th from the natives, and they informed us that it had been in fact well founded; that on the 7th, desirous of reaching the ship agreeably to their promise, they had quitted Chinook point, in spite of the remonstrances of the chief, Comcomly, who sought to detain them by pointing out the danger to which they would expose themselves in crossing the bay in such a heavy sea as it was; that they had scarcely made more than a mile and a half before a huge wave broke over their boat and capsized it; that the Indians, aware of the danger to which they were exposed, had followed them, and that, but for their assistance, Mr. M'Dougal, who could not swim, would inevitably have been drowned; that, after the Chinooks had kindled a large fire and dried their clothes, they had been conducted by them back to their village, where the principal chief had received them with all imaginable hospitality, regaling them with every delicacy his wigwam afforded; that, in fine, if they had got back safe and sound to the vessel, it was to the timely succor and humane cares of the Indians whom we saw before us that they owed it. We liberally rewarded these generous children of the forest, and they returned home well satisfied.

This last survey was also fruitless, as Messrs. M'Dougal and Stuart did not find an advantageous site to build upon. But, as the captain wished to take advantage of the fine season to pursue his traffic with the natives along the N. W. coast, it was resolved to establish ourselves on Point George, situated on the south bank, about fourteen or fifteen miles from our present anchorage. Accordingly, we embarked on the 12th, in the long-boat, to the number of twelve, furnished with tools, and with provisions for a week. We landed at the bottom of a small bay, where we formed a sort of encampment. The spring, usually so tardy in this latitude, was already far advanced; the foliage was budding, and the earth was clothing itself with verdure; the weather was superb, and all nature smiled. We imagined ourselves in the garden of Eden; the wild forests seemed to us delightful groves, and the leaves transformed to brilliant flowers. No doubt, the pleasure of finding ourselves at the end of our voyage, and liberated from the ship, made things appear to us a great deal more beautiful than they really were. Be that as it may, we set ourselves to work with enthusiasm, and cleared, in a few days, a point of land of its under-brush, and of the huge trunks of pine-trees that covered it, which we rolled, half-burnt, down the bank. The vessel came to moor near our encampment, and the trade went on. The natives visited us constantly and in great numbers; some to trade, others to gratify their curiosity, or to purloin some little articles if they found an opportunity. We landed the frame timbers which we had brought, ready cut for the purpose,

---

in the vessel; and by the end of April, with the aid of the ship-carpenters, John Weeks and Johann Koaster, we had laid the keel of a coasting-schooner of about thirty tons.

#### CHAPTER VIII

Voyage up the River — Description of the Country — Meeting with strange Indians.

THE Indians having informed us that above certain rapids, there was an establishment of white men, we doubted not that it was a trading post of the Northwest Company; and to make sure of it, we procured a large canoe and a guide, and set out, on the 2d of May, Messrs. M'Kay, R. Stuart, Montigny, and I, with a sufficient number of hands. We first passed a lofty headland, that seemed at a distance to be detached from the main, and to which we gave the name of Tongue Point. Here the river gains a width of some nine or ten miles, and keeps it for about twelve miles up. The left bank, which we were coasting, being concealed by little low islands, we encamped for the night on one of them, at the village of Wakhaykum, to which our guide belonged.

We continued our journey on the 3d: the river narrows considerably, at about thirty miles from its mouth, and is obstructed with islands, which are thickly covered with the willow, poplar, alder, and ash. These islands are, without exception, uninhabited and uninhabitable, being nothing but swamps, and entirely overflowed in the months of June and July; as we understood from Coalpo, our guide, who appeared to be an intelligent man. In proportion as we advanced, we saw the high mountains capped with snow, which form the chief and majestic feature, though a stern one, of the banks of the Columbia for some distance from its mouth, recede, and give place to a country of moderate elevation, and rising amphitheatrically from the margin of the stream. The river narrows to a mile or thereabouts; the forest is less dense, and patches of green prairie are seen. We passed a large village on the south bank, called Kreluit, above which is a fine forest of oaks; and encamped for the night, on a low point, at the foot of an isolated rock, about one hundred and fifty feet high. This rock appeared to me remarkable on account of its situation, reposing in the midst of a low and swampy ground, as if it had been dropped from the clouds, and seeming to have no connection with the neighboring mountains. On a cornice or shelving projection about thirty feet from its base, the natives of the adjacent villages deposit their dead, in canoes; and it is the same rock to which, for this reason, Lieutenant Broughton gave the name of Mount Coffin. On the 4th, in the morning, we arrived at a large village of the same name as that which we had passed the evening before, Kreluit, and we landed to obtain information respecting a considerable stream, which here discharges into the Columbia, and respecting its resources for the hunter and trader in furs. It comes from the north, and is called Cowlitzk by the natives. Mr. M'Kay embarked with Mr. de Montigny and two Indians, in a small canoe, to examine the course of this river, a certain distance up. On entering the stream, they saw a great number of birds, which they took at first for turkeys, so much they resembled them, but which were only a kind of carrion eagles, vulgarly called turkey-buzzards. We were not a little astonished to see Mr. de Montigny return on foot and alone; he soon informed us of the reason: having ascended the Cowlitzk about a mile and a half, on rounding a bend of the stream, they suddenly came in view of about twenty canoes, full of Indians, who had made a rush upon them with the most frightful yells; the two natives and the guide who conducted their little canoe, retreated with the utmost precipitancy, but seeing that they would be overtaken, they stopped short, and begged Mr. M'Kay to fire upon the approaching savages, which he, being well acquainted with the Indian character from the time he accompanied Sir Alexander M'Kenzie, and having met with similar occurrences before, would by

---

no means do; but displayed a friendly sign to the astonished natives, and invited them to land for an amicable talk; to which they immediately assented. Mr. M'Kay had sent Mr. de Montigny to procure some tobacco and a pipe, in order to strike a peace with these barbarians. The latter then returned to Mr. M'Kay, with the necessary articles, and in the evening the party came back to our camp, which we had fixed between the villages. We were then informed that the Indians whom Mr. M'Kay had met, were at war with the Kreluits. It was impossible, consequently, to close our eyes all night; the natives passing and repassing continually from one village to the other, making fearful cries, and coming every minute to solicit us to discharge our firearms; all to frighten their enemies, and let them see that they were on their guard.

On the 5th, in the morning, we paid a visit to the hostile camp; and those savages, who had never seen white men, regarded us with curiosity and astonishment, lifting the legs of our trousers and opening our shirts, to see if the skin of our bodies resembled that of our faces and hands. We remained some time with them, to make proposals of peace; and having ascertained that this warlike demonstration originated in a trifling offence on the part of the Kreluits, we found them well disposed to arrange matters in an amicable fashion. After having given them, therefore, some looking-glasses, beads, knives, tobacco, and other trifles, we quitted them and pursued our way. Having passed a deserted village, and then several islands, we came in sight of a noble mountain on the north, about twenty miles distant, all covered with snow, contrasting remarkably with the dark foliage of the forests at its base, and probably the same which was seen by Broughton, and named by him Mount St. Helen's. We pulled against a strong current all this day, and at evening our guide made us enter a little river, on the bank of which we found a good camping place, under a grove of oaks, and in the midst of odoriferous wild flowers, where we passed a night more tranquil than that which had preceded it.

On the morning of the 6th we ascended this small stream, and soon arrived at a large village called Thlakalamah, the chief whereof, who was a young and handsome man, was called Keaseno, and was a relative of our guide. The situation of this village is the most charming that can be, being built on the little river that we had ascended, and indeed at its navigable head, being here but a torrent with numerous cascades leaping from rock to rock in their descent to the deep, limpid water, which then flows through a beautiful prairie, enamelled with odorous flowers of all colors, and studded with superb groves of oak. The freshness and beauty of this spot, which Nature seemed to have taken pleasure in adorning and enriching with her most precious gifts, contrasted, in a striking manner, with the indigence and uncleanness of its inhabitants; and I regretted that it had not fallen to the lot of civilized men. I was wrong no doubt: it is just that those should be most favored by their common mother, who are least disposed to pervert her gifts, or to give the preference to advantages which are factitious, and often very frivolous. We quitted with regret this charming spot, and soon came to another large village, which our guide informed us was called Kathlapootle, and was situated at the confluence of a small stream, that seemed to flow down from the mountain covered with snow, which we had seen the day before: this river is called Cowilkt. We coasted a pretty island, well timbered, and high enough above the level of the Columbia to escape inundation in the freshets, and arrived at two villages called Maltnabah. We then passed the confluence of the river Wallamat, or Willamet, above which the tide ceases to be felt in the Columbia. Our guide informed us that ascending this river about a day's journey, there was a considerable fall, beyond which the country abounded in deer, elk, bear, beaver, and otter. But

---

here, at the spot where we were, the oaks and poplar which line both banks of the river, the green and flowery prairies discerned through the trees, and the mountains discovered in the distance, offer to the eye of the observer who loves the beauties of simple nature, a prospect the most lovely and enchanting. We encamped for the night on the edge of one of these fine prairies.

On the 7th we passed several low islands, and soon discovered Mount Hood, a high mountain, capped with snow, so named by Lieutenant Broughton; and Mount Washington, another snowy summit, so called by Lewis and Clarke. The prospect which the former had before his eyes at this place, appeared to him so charming, that landing upon a point, to take possession of the country in the name of King George, he named it Pointe Belle Vue. At two o'clock we passed Point Vancouver, the highest reached by Broughton. The width of the river diminishes considerably above this point, and we began very soon to encounter shoals of sand and gravel; a sure indication that we were nearing the rapids. We encamped that evening under a ledge of rocks, descending almost to the water's edge.

The next day, the 8th, we did not proceed far before we encountered a very rapid current. Soon after, we saw a hut of Indians engaged in fishing, where we stopped to breakfast. We found here an old blind man, who gave us a cordial reception. Our guide said that he was a white man, and that his name was Soto. We learned from the mouth of the old man himself, that he was the son of a Spaniard who had been wrecked at the mouth of the river; that a part of the crew on this occasion got safe ashore, but were all massacred by the Clatsops, with the exception of four, who were spared and who married native women; that these four Spaniards, of whom his father was one, disgusted with the savage life, attempted to reach a settlement of their own nation toward the south, but had never been heard of since; and that when his father, with his companions, left the country, he himself was yet quite young. These good people having regaled us with fresh salmon, we left them, and arrived very soon at a rapid, opposite an island, named Strawberry Island by Captains Lewis and Clarke, in 1806. We left our men at a large village, to take care of the canoe and baggage; and following our guide, after walking about two hours, in a beaten path, we came to the foot of the fall, where we amused ourselves for some time with shooting the seals, which were here in abundance, and in watching the Indians taking salmon below the cataract, in their scoop-nets, from stages erected for that purpose over the eddies. A chief, a young man of fine person and a good mien, came to us, followed by some twenty others, and invited us to his wigwam: we accompanied him, had roasted salmon for supper, and some mats were spread for our night's repose.

The next morning, having ascertained that there was no trading post near the Falls, and Coalpo absolutely refusing to proceed further, alleging that the natives of the villages beyond were his enemies, and would not fail to kill him if they had him in their power, we decided to return to the encampment. Having, therefore, distributed some presents to our host (I mean the young chief with whom we had supped and lodged) and to some of his followers, and procured a supply of fresh salmon for the return voyage, we re-embarked and reached the camp on the 14th, without accidents or incidents worth relating.

#### CHAPTER IX

Departure of the Tonquin — Indian Messengers — Project of an Expedition to the Interior — Arrival of Mr. Daniel Thompson — Departure of the Expedition — Designs upon us by the Natives — Rumors of the Destruction of the Tonquin — Scarcity of Provisions — Narrative of a strange

---

Indian — Duplicity and Cunning of Comcomly.

HAVING built a warehouse (62 feet by 20) to put under cover the articles we were to receive from the ship, we were busily occupied, from the 16th to the 30th, in stowing away the goods and other effects intended for the establishment.

The ship, which had been detained by circumstances, much longer than had been anticipated, left her anchorage at last, on the 1st of June, and dropped down to Baker's bay, there to wait for a favorable wind to get out of the river. As she was to coast along the north, and enter all the harbors, in order to procure as many furs as possible, and to touch at the Columbia river before she finally left these seas for the United States, it was unanimously resolved among the partners, that Mr. M'Kay should join the cruise, as well to aid the captain, as to obtain correct information in regard to the commerce with the natives on that coast. Mr. M'Kay selected Messrs. J. Lewis and O. de Montigny to accompany him; but the latter having represented that the sea made him sick, was excused; and Mr. M'Kay shipped in his place a young man named Louis Bruslé, to serve him in the capacity of domestic, being one of the young Canadian sailors. I had the good fortune not to be chosen for this disastrous voyage, thanks to my having made myself useful at the establishment. Mr. Mumford (the second mate) owed the same happiness to the incompatibility of his disposition with that of the captain; he had permission to remain, and engaged with the company in place of Mr. Aikin as coaster, and in command of the schooner.

On the 5th of June, the ship got out to sea, with a good wind. We continued in the meantime to labor without intermission at the completion of the storehouse, and in the erection of a dwelling for ourselves, and a powder magazine. These buildings were constructed of hewn logs, and, in the absence of boards, tightly covered and roofed with cedar bark. The natives, of both sexes, visited us more frequently, and formed a pretty considerable camp near the establishment.

On the 15th, some natives from up the river, brought us two strange Indians, a man and a woman. They were not attired like the savages on the river Columbia, but wore long robes of dressed deer-skin, with leggings and moccasins in the fashion of the tribes to the east of the Rocky Mountains. We put questions to them in various Indian dialects; but they did not understand us. They showed us a letter addressed to "Mr. John Stuart, Fort Estekatadene, New Caledonia." Mr. Pillet then addressing them in the Knisteneaux language, they answered, although they appeared not to understand it perfectly. Notwithstanding, we learned from them that they had been sent by a Mr. Finnan M'Donald, a clerk in the service of the Northwest Company, and who had a post on a river which they called Spokane; that having lost their way, they had followed the course of the Tacousah-Tesseh (the Indian name of the Columbia), that when they arrived at the Falls, the natives made them understand that there were white men at the mouth of the river; and not doubting that the person to whom the letter was addressed would be found there, they had come to deliver it.

We kept these messengers for some days, and having drawn from them important information respecting the country in the interior, west of the Mountains, we decided to send an expedition thither, under the command of Mr. David Stuart; and the 15th July was fixed for its departure. All was in fact ready on the appointed day, and we were about to load the canoes, when toward midday, we saw a large canoe, with a flag displayed at her stem, rounding the point which we called Tongue Point. We knew not who it could be; for we did not so soon expect our own party, who (as the reader will remember) were to cross the continent, by the route which Captains Lewis

and Clarke had followed, in 1805, and to winter for that purpose somewhere on the Missouri. We were soon relieved of our uncertainty by the arrival of the canoe, which touched shore at a little wharf that we had built to facilitate the landing of goods from the vessel. The flag she bore was the British, and her crew was composed of eight Canadian boatmen or voyageurs. A well-dressed man, who appeared to be the commander, was the first to leap ashore, and addressing us without ceremony, said that his name was David Thompson, and that he was one of the partners of the Northwest Company. We invited him to our quarters, which were at one end of the warehouse, the dwelling-house not being yet completed. After the usual civilities had been extended to our visitor, Mr. Thompson said that he had crossed the continent during the preceding season; but that the desertion of a portion of his men had compelled him to winter at the base of the Rocky mountains, at the head waters of the Columbia. In the spring he had built a canoe, the materials for which he had brought with him across the mountains, and had come down the river to our establishment. He added that the wintering partners had resolved to abandon all their trading posts west of the mountains, not to enter into competition with us, provided our company would engage not to encroach upon their commerce on the east side: and to support what he said, produced a letter to that effect, addressed by the wintering partners to the chief of their house in Canada, the Hon. William M'Gillivray.

Mr. Thompson kept a regular journal, and travelled, I thought, more like a geographer than a fur-trader. He was provided with a sextant, chronometer and barometer, and during a week's sojourn which he made at our place, had an opportunity to make several astronomical observations. He recognised the two Indians who had brought the letter addressed to Mr. J. Stuart, and told us that they were two women, one of whom had dressed herself as a man, to travel with more security. The description which he gave us of the interior of the country was not calculated to give us a very favorable idea of it, and did not perfectly accord with that of our two Indian guests. We persevered, however, in the resolution we had taken, of sending an expedition thither; and, on the 23d Mr. D. Stuart set out, accompanied by Messrs. Pillet, Ross, M'Clellan and de Montigny, with four Canadian voyageurs, and the two Indian women, and in company with Mr. Thompson and his crew. The wind being favorable, the little flotilla hoisted sail, and was soon out of our sight. The natives, who till then had surrounded us in great numbers, began to withdraw, and very soon we saw no more of them. At first we attributed their absence to the want of furs to trade with; but we soon learned that they acted in that manner from another motive. One of the secondary chiefs who had formed a friendship for Mr. R. Stuart, informed him, that seeing us reduced in number by the expedition lately sent off, they had formed the design of surprising us, to take our lives and plunder the post. We hastened, therefore, to put ourselves in the best possible state of defence. The dwelling house was raised, parallel to the warehouse; we cut a great quantity of pickets in the forest, and formed a square, with palisades in front and rear, of about 90 feet by 120; the warehouse, built on the edge of a ravine, formed one flank, the dwelling house and shops the other; with a little bastion at each angle north and south, on which were mounted four small cannon. The whole was finished in six days, and had a sufficiently formidable aspect to deter the Indians from attacking us; and for greater surety, we organized a guard for day and night. Toward the end of the month, a large assemblage of Indians from the neighborhood of the straits Juan de Fuca, and Gray's Harbor, formed a great camp on Baker's Bay, for the ostensible object of fishing for sturgeon. It was bruited among these Indians that the Tonquin had been destroyed

---

on the coast, and Mr. M'Kay (or the chief trader, as they called him) and all the crew, massacred by the natives. We did not give credence to this rumor. Some days after, other Indians from Gray's Harbor, called Tchikeylis, confirmed what the first had narrated, and even gave us, as far as we could judge by the little we knew of their language, a very circumstantial detail of the affair, so that without wholly convincing us, it did not fail to make a painful impression on our minds, and keep us in an excited state of feeling as to the truth of the report. The Indians of the Bay looked fiercer and more warlike than those of our neighborhood; so we redoubled our vigilance, and performed a regular daily drill to accustom ourselves to the use of arms.

To the necessity of securing ourselves against an attack on the part of the natives, was joined that of obtaining a stock of provisions for the winter: those which we had received from the vessel were very quickly exhausted, and from the commencement of the month of July we were forced to depend upon fish. Not having brought hunters with us, we had to rely for venison, on the precarious hunt of one of the natives who had not abandoned us when the rest of his countrymen retired. This man brought us from time to time, a Very lean and very dry doe-elk, for which we had to pay, notwithstanding, very dear. The ordinary price of a stag was a blanket, a knife, some tobacco, powder and ball, besides supplying our hunter with a musket. This dry meat, and smoke-dried fish, constituted our daily food, and that in very insufficient quantity for hardworking men. We had no bread, and vegetables, of course, were quite out of the question. In a word our fare was not sumptuous. Those who accommodated themselves best to our mode of living were the Sandwich-islanders: salmon and elk were to them exquisite viands.

On the 11th of August a number of Chinooks visited us, bringing a strange Indian, who had, they said, something interesting to communicate. This savage told us, in fact, that he had been engaged with ten more of his countrymen, by a Captain Ayres, to hunt seals on the islands in Sir Francis Drake's Bay, where these animals are very numerous, with a promise of being taken home and paid for their services; the captain had left them on the islands, to go southwardly and purchase provisions, he said, of the Spaniards of Monterey in California; but he had never returned: and they, believing that he had been wrecked, had embarked in a skiff which he had left them, and had reached the main land, from which they were not far distant; but their skiff was shattered to pieces in the surf, and they had saved themselves by swimming. Believing that they were not far from the river Columbia, they had followed the shore, living, on the way, upon shellfish and frogs; at last they arrived among strange Indians, who, far from receiving them kindly, had killed eight of them and made the rest prisoners; but the Klemooks, a neighboring tribe to the Clatsops, hearing that they were captives, had ransomed them.

These facts must have occurred in March or April, 1811. The Indian who gave us an account of them, appeared to have a great deal of intelligence and knew some words of the English language. He added that he had been at the Russian trading post at Chitka, that he had visited the coast of California, the Sandwich islands, and even China.

About this time, old Comcomly sent to Astoria for Mr. Stuart and me, to come and cure him of a swelled throat, which, he said, afflicted him sorely. As it was late in the day, we postponed till to-morrow going to cure the chief of the Chinooks; and it was well we did; for, the same evening, the wife of the Indian who had accompanied us in our voyage to the Falls, sent us word that Comcomly was perfectly well, the pretended tonsillitis being only a pretext to get us in his power. This timely advice kept us at home.

---

CHAPTER X

Occupations at Astoria — Return of a Portion of the Men of the Expedition to the Interior — New Expedition — Excursion in Search of three Deserters.

ON the 26th of September our house was finished, and we took possession of it. The mason work had at first caused us some difficulty; but at last, not being able to make lime for want of limestones, we employed blue clay as a substitute for mortar. This dwelling-house was sufficiently spacious to hold all our company, and we had distributed it in the most convenient manner that we could. It comprised a sitting, a dining room, some lodging or sleeping rooms, and an apartment for the men and artificers, all under the same roof. We also completed a shop for the blacksmith, who till that time had worked in the open air.

The schooner, the construction of which had necessarily languished for want of an adequate force at the ship-yard, was finally launched on the 2d of October, and named the *Dolly*, with the formalities usual on such occasions. I was on that day at Young's Bay, where I saw the ruins of the quarters erected by Captains Lewis and Clarke, in 1805–06: they were but piles of rough, unhewn logs, overgrown with parasite creepers.

On the evening of the 5th, Messrs. Pillet and M'Lellan arrived, from the party of Mr. David Stuart, in a canoe manned by two of his men. They brought, as passengers, Mr. Régis Bruguier, whom I had known in Canada as a respectable country merchant, and an Iroquois family. Mr. Bruguier had been a trader among the Indians on the Saskatchewan river, where he had lost his outfit: he had since turned trapper, and had come into this region to hunt beaver, being provided with traps and other needful implements. The report which these gentlemen gave of the interior was highly satisfactory: they had found the climate salubrious, and had been well received by the natives. The latter possessed a great number of horses, and Mr. Stuart had purchased several of these animals at a low price. Ascending the river they had come to a pretty stream, which the natives called Okenakan. Mr. Stuart had resolved to establish his post on the bank of this river, and having erected a log-house, he thought best to send back the above named persons, retaining with him, for the winter, only Messrs. Ross and de Montigny, and two men.

Meanwhile, the season being come when the Indians quit the seashore and the banks of the Columbia, to retire into the woods and establish their winter quarters along the small streams and rivers, we began to find ourselves short of provisions, having received no supplies from them for some time. It was therefore determined that Mr. R. Stuart should set out in the schooner with Mr. Mumford, for the threefold purpose, of obtaining all the provisions they could, cutting oaken staves for the use of the cooper, and trading with the Indians up the river. They left with this design on the 12th. At the end of five days Mr. Mumford returned in a canoe of Indians. This man having wished to assume the command, and to order (in the style of Captain Thorn) the person who had engaged him to obey, had been sent back in consequence to Astoria.

On the 10th of November we discovered that three of our people had absconded, viz., P. D. Jeremie, and the two Belleaux. They had leave to go out shooting for two days, and carried off with them firearms and ammunition, and a handsome light Indian canoe. As soon as their flight was known, having procured a large canoe of the Chinooks, we embarked, Mr. Matthews and I, with five natives, to pursue them, with orders to proceed as far as the Falls, if necessary. On the 11th, having ascended the river to a place called Oak Point, we overtook the schooner lying at anchor, while Mr. Stuart was taking in a load of staves and hoop-poles. Mr. Farnham joined our party, as

---

well as one of the hands, and thus reinforced, we pursued our way, journeying day and night, and stopping at every Indian village, to make inquiries and offer a reward for the apprehension of our runaways. Having reached the Falls without finding any trace of them, and our provisions giving out, we retraced our steps, and arrived on the 16th at Oak Point, which we found Mr. Stuart ready to quit.

Meanwhile, the natives of the vicinity informed us that they had seen the marks of shoes imprinted on the sand, at the confluence of a small stream in the neighborhood. We got three small canoes, carrying two persons each, and having ascertained that the information was correct, after searching the environs during a part of the 17th, we ascended the small stream as far as some high lands which are seen from Oak Point, and which lie about eight or nine miles south of it. The space between these high lands and the ridge crowned with oaks on the bank of the Columbia, is a low and swampy land, cut up by an infinity of little channels. Toward evening we returned on our path, to regain the schooner; but instead of taking the circuitous way of the river, by which we had come, we made for Oak Point by the most direct route, through these channels; but night coming on, we lost ourselves. Our situation became the most disagreeable that can be imagined. Being unable to find a place where we could land, on account of the morass, we were obliged to continue rowing, or rather turning round, in this species of labyrinth, constantly kneeling in our little canoes, which any unlucky movement would infallibly have caused to upset. It rained in torrents and was dark as pitch. At last, after having wandered about during a considerable part of the night, we succeeded in gaining the edge of the mainland. Leaving there our canoes, because we could not drag them (as we attempted) through the forest, we crossed the woods in the darkness, tearing ourselves with the brush, and reached the schooner, at about two in the morning, benumbed with cold and exhausted with fatigue.

The 18th was spent in getting in the remainder of the lading of the little vessel, and on the morning of the 19th we raised anchor, and dropped down abreast of the Kreluit village, where some of the Indians offering to aid us in the search after our deserters, Mr. Stuart put Mr. Farnham and me on shore to make another attempt. We passed that day in drying our clothes, and the next day embarked in a canoe, with one Kreluit man and a squaw, and ascended the river before described as entering the Columbia at this place. We soon met a canoe of natives, who informed us that our runaways had been made prisoners by the chief of a tribe which dwells upon the banks of the Willamet river, and which they called Cathlanaminim. We kept on and encamped on a beach of sand opposite Deer island. There we passed a night almost as disagreeable as that of the 17th–18th. We had lighted a fire, and contrived a shelter of mats; but there came on presently a violent gust of wind, accompanied with a heavy rain: our fire was put out, our mats were carried away, and we could neither rekindle the one nor find the others: so that we had to remain all night exposed to the fury of the storm. As soon as it was day we re-embarked, and set ourselves to paddling with all our might to warm ourselves. In the evening we arrived near the village where our deserters were, and saw one of them on the skirts of it. We proceeded to the hut of the chief, where we found all three, more inclined to follow us than to remain as slaves among these barbarians. We passed the night in the chief's lodge, not without some fear and some precaution; this chief having the reputation of being a wicked man, and capable of violating the rights of parties. He was a man of high stature and a good mien, and proud in proportion, as we discovered by the chilling and haughty manner in which he received us. Farnham and I agreed to keep watch alter-

nately, but this arrangement was superfluous, as neither of us could sleep a wink for the infernal thumping and singing made by the medicine men all night long, by a dying native. I had an opportunity of seeing the sick man make his last will and testament: having caused to be brought to him whatever he had that was most precious, his bracelets of copper, his bead necklace, his bow and arrows and quiver, his nets, his lines, his spear, his pipe, &c., he distributed the whole to his most intimate friends, with a promise on their part, to restore them, if he recovered.

On the 22d, after a great deal of talk, and infinite quibbling on the part of the chief, we agreed with him for the ransom of our men. I had visited every lodge in the village and found but few of the young men, the greater part having gone on a fishing excursion; knowing, therefore, that the chief could not be supported by his warriors, I was resolved not to be imposed upon, and as I knew where the firearms of the fugitives had been deposited, I would have them at all hazards; but we were obliged to give him all our blankets, amounting to eight, a brass kettle, a hatchet, a small pistol, much out of order, a powder-horn, and some rounds of ammunition: with these articles placed in a pile before him, we demanded the men's clothing, the three fowling-pieces, and their canoe, which he had caused to be hidden in the woods. Nothing but our firmness compelled him to accept the articles offered in exchange; but at last, with great reluctance, he closed the bargain, and suffered us to depart in the evening with the prisoners and the property.

We all five (including the three deserters) embarked in the large canoe, leaving our Kreluit and his wife to follow in the other, and proceeded as far as the Cowlitzk, where we camped. The next day, we pursued our journey homeward, only stopping at the Kreluit village to get some provisions, and soon entered the group of islands which crowd the river above Gray's bay. On one of these we stopped to amuse ourselves with shooting some ducks, and meanwhile a smart breeze springing up, we split open a double-rush mat (which had served as a bag), to make a sail, and having cut a forked sapling for a mast, shipped a few boulders to stay the foot of it, and spread our canvass to the wind. We soon arrived in sight of Gray's bay, at a distance of fourteen or fifteen miles from our establishment. We had, notwithstanding, a long passage across, the river forming in this place, as I have before observed, a sort of lake, by the recession of its shores on either hand: but the wind was fair. We undertook, then, to cross, and quitted the island, to enter the broad, lake-like expanse, just as the sun was going down, hoping to reach Astoria in a couple of hours.

We were not long before we repented of our temerity: for in a short time the sky became overcast, the wind increased till it blew with violence, and meeting with the tide, caused the waves to rise prodigiously, which broke over our wretched canoe, and filled it with water. We lightened it as much as we could, by throwing overboard the little baggage we had left, and I set the men to baling with our remaining brass kettle. At last, after having been, for three hours, the sport of the raging billows, and threatened every instant with being swallowed up, we had the unexpected happiness of landing in a cove on the north shore of the river. Our first care was to thank the Almighty for having delivered us from so imminent a danger. Then, when we had secured the canoe, and groped our way to the forest, where we made, with branches of trees, a shelter against the wind — still continuing to blow with violence, and kindled a great fire to warm us and dry our clothes. That did not prevent us from shivering the rest of the night, even in congratulating ourselves on the happiness of setting our foot on shore at the moment when we began quite to despair of saving ourselves at all.

The morning of the 24th brought with it a clear sky, but no abatement in the violence of the wind,

till toward evening, when we again embarked, and arrived with our deserters at the establishment, where they never expected to see us again. Some Indians who had followed us in a canoe, up to the moment when we undertook the passage across the evening before, had followed the southern shore, and making the portage of the isthmus of Tongue Point, had happily arrived at Astoria. These natives, not doubting that we were lost, so reported us to Mr. M'Dougal; accordingly that gentleman was equally overjoyed and astonished at beholding us safely landed, which procured, not only for us, but for the culprits, our companions, a cordial and hearty reception.

#### CHAPTER XI

Departure of Mr. R. Stuart for the Interior — Occupations at Astoria — Arrival of Messrs. Donald M'Kenzie and Robert M'Lellan — Account of their Journey — Arrival of Mr. Wilson P. Hunt.

THE natives having given us to understand that beaver was very abundant in the country watered by the Willamet Mr. R. Stuart procured a guide, and set out, on the 5th of December, accompanied by Messrs. Pillet and M'Gillis and a few of the men, to ascend that river and ascertain whether or no it would be advisable to establish a trading-post on its banks. Mr. R. Bruguier accompanied them to follow his pursuits as a trapper.

The season at which we expected the return of the Tonquin was now past, and we began to regard as too probable the report of the Indians of Gray's Harbor. We still flattered ourselves, notwithstanding, with the hope that perhaps that vessel had sailed for the East Indies, without touching at Astoria; but this was at most a conjecture.

The 25th, Christmas-day, passed very agreeably: we treated the men, on that day, with the best the establishment afforded. Although that was no great affair, they seemed well satisfied; for they had been restricted, during the last few months, to a very meagre diet, living, as one may say, on sun-dried fish. On the 27th, the schooner having returned from her second voyage up the river, we dismantled her, and laid her up for the winter at the entrance of a small creek.

The weather, which had been raining, almost without interruption, from the beginning of October, cleared up on the evening of the 31st; and the 1st January, 1812, brought us a clear and serene sky. We proclaimed the new year with a discharge of artillery. A small allowance of spirits was served to the men, and the day passed in gayety, every one amusing himself as well as he could.

The festival over, our people resumed their ordinary occupations: while some cut timber for building, and others made charcoal for the blacksmith, the carpenter constructed a barge, and the cooper made barrels for the use of the posts we proposed to establish in the interior. On the 18th, in the evening, two canoes full of white men arrived at the establishment. Mr. M'Dougal, the resident agent, being confined to his room by sickness, the duty of receiving the strangers devolved on me. My astonishment was not slight, when one of the party called me by name, as he extended his hand, and I recognised Mr. Donald M'Kenzie, the same who had quitted Montreal, with Mr. W. P. Hunt, in the month of July, 1810. He was accompanied by a Mr. Robert M'Lellan, a partner, Mr. John Reed, a clerk, and eight voyageurs, or boatmen. After having reposed themselves a little from their fatigues, these gentlemen recounted to us the history of their journey, of which the following is the substance.

Messrs. Hunt and M'Kenzie, quitting Canada, proceeded by way of Mackinac and St. Louis, and ascended the Missouri, in the autumn of 1810, to a place on that river called Nadoway, where they wintered. Here they were joined by Mr. R. M'Lellan, by a Mr. Crooks, and a Mr. Müller, traders with the Indians of the South, and all having business relations with Mr. Astor.

In the spring of 1811, having procured two large keelboats, they ascended the Missouri to the country of the Arikaras, or Rice Indians, where they disposed of their boats and a great part of their luggage, to a Spanish trader, by name Manuel Lisa. Having purchased of him, and among the Indians, 130 horses, they resumed their route, in the beginning of August, to the number of some sixty-five persons, to proceed across the mountains to the river Columbia. Wishing to avoid the Blackfeet Indians, a war-like and ferocious tribe, who put to death all the strangers that fall into their hands, they directed their course southwardly, until they arrived at the 40th degree of latitude. Thence they turned to the northwest, and arrived, by-and-by, at an old fort, or trading post, on the banks of a little river flowing west. This post, which was then deserted, had been established, as they afterward learned, by a trader named Henry. Our people, not doubting that this stream would conduct them to the Columbia, and finding it navigable, constructed some canoes to descend it. Having left some hunters (or trappers) near the old fort, with Mr. Miller, who, dissatisfied with the expedition, was resolved to return to the United States, the party embarked; but very soon finding the river obstructed with rapids and water-falls, after having upset some of the canoes, lost one man by drowning, and also a part of their baggage, perceiving that the stream was impracticable, they resolved to abandon their canoes and proceed on foot. The enterprise was one of great difficulty, considering the small stock of provisions they had left. Nevertheless, as there was no time to lose in deliberation, after depositing in *acache* the superfluous part of their baggage, they divided themselves into four companies, under the command of Messrs. M'Kenzie, Hunt, M'Lellan and Crooks, and proceeded to follow the course of the stream, which they named Mad river, on account of the insurmountable difficulties it presented. Messrs. M'Kenzie and M'Lellan took the right bank, and Messrs. Hunt and Crook the left. They counted on arriving very quickly at the Columbia; but they followed this Mad river for twenty days, finding nothing at all to eat, and suffering horribly from thirst. The rocks between which the river flows being so steep and abrupt as to prevent their descending to quench their thirst (so that even their dogs died of it), they suffered the torments of Tantalus, with this difference, that he had the water which he could not reach above his head, while our travellers had it beneath their feet. Several, not to die of this raging thirst, drank their own urine: all, to appease the cravings of hunger, ate beaver skins roasted in the evening at the camp-fire. They even were at last constrained to eat their moccasins. Those on the left, or southeast bank, suffered, however, less than the others, because they occasionally fell in with Indians, utterly wild indeed, and who fled at their approach, carrying off their horses. According to all appearances these savages had never seen white men. Our travellers, when they arrived in sight of the camp of one of these wandering hordes, approached it with as much precaution, and with the same stratagem that they would have used with a troop of wild beasts. Having thus surprised them, they would fire upon the horses, some of which would fall; but they took care to leave some trinkets on the spot, to indemnify the owners for what they had taken from them by violence. This resource prevented the party from perishing of hunger. Mr. M'Kenzie having overtaken Mr. M'Lellan, their two companies pursued the journey together. Very soon after this junction, they had an opportunity of approaching sufficiently near to Mr. Hunt, who, as I have remarked; was on the other bank, to speak to him, and inform him of their distressed state. Mr. Hunt caused a canoe to be made of a horse-hide; it was not, as one may suppose, very large; but they succeeded, nevertheless, by that means, in conveying a little horse-flesh to the people on the north bank. It was attempted, even, to pass them across, one by

one (for the skiff would not hold any more); several had actually crossed to the south side, when, unhappily, owing to the impetuosity of the current, the canoe capsized, a man was drowned, and the two parties lost all hope of being able to unite. They continued their route, therefore, each on their own side of the river. In a short time those upon the north bank came to a more considerable stream, which they followed down. They also met, very opportunely, some Indians, who sold them a number of horses. They also encountered, in these parts, a young American, who was deranged, but who sometimes recovered his reason. This young man told them, in one of his lucid intervals, that he was from Connecticut, and was named Archibald Pelton; that he had come up the Missouri with Mr. Henry; that all the people at the post established by that trader were massacred by the Blackfeet; that he alone had escaped, and had been wandering for three years since, with the Snake Indians. Our people took this young man with them. Arriving at the confluence with the Columbia, of the river whose banks they were following, they perceived that it was the same which had been called Lewis river, by the American captain of that name, in 1805. Here, then, they exchanged their remaining horses for canoes, and so arrived at the establishment, safe and sound, it is true, but in a pitiable condition to see; their clothes being nothing but fluttering rags.

The narrative of these gentlemen interested us very much. They added, that since their separation from Messrs. Hunt and Crooks, they had neither seen nor heard aught of them, and believed it impossible that they should arrive at the establishment before spring. They were mistaken, however, for Mr. Hunt arrived on the 15th February, with thirty men, one woman, and two children, having left Mr. Crooks, with five men, among the Snakes. They might have reached Astoria almost as soon as Mr. M'Kenzie, but they had passed from eight to ten days in the midst of a plain, among some friendly Indians, as well to recruit their strength, as to make search for two of the party, who had been lost in the woods. Not finding them, they had resumed their journey, and struck the banks of the Columbia a little lower down than the mouth of Lewis river, where Mr. M'Kenzie had come out.

The arrival of so great a number of persons would have embarrassed us, had it taken place a month sooner. Happily, at this time, the natives were bringing in fresh fish in abundance. Until the 30th of March, we were occupied in preparing triplicates of letters and other necessary papers, in order to send Mr. Astor the news of our arrival, and of the reunion of the two expeditions. The letters were intrusted to Mr. John Reed, who quitted Astoria for St. Louis, in company with Mr. M'Lellan—another discontented partner, who wished to disconnect himself with the association,—and Mr. R. Stuart, who was conveying two canoe-loads of goods for his uncle's post on the Okenakan. Messrs. Farnham and M'Gillis set out at the same time, with a guide, and were instructed to proceed to the cache, where the overland travellers had hidden their goods, near old Fort Henry, on the Mad river. I profited by this opportunity to write to my family in Canada. Two days after, Messrs. M'Kenzie and Matthews set out, with five or six men, as hunters, to make an excursion up the Willamet river.

#### CHAPTER XII

Arrival of the Ship Beaver—Unexpected Return of Messrs. D. Stuart, R. Stuart, M'Lellan, &c.—Cause of that Return—Ship discharging—New Expeditions—Hostile Attitude of the Natives—Departure of the Beaver—Journeys of the Author—His Occupations at the Establishment.

FROM the departure of the last outfit under Mr. M'Kenzie, nothing remarkable took place at

---

Astoria, till the 9th of May. On that day we descried, to our great surprise and great joy, a sail in the offing, opposite the mouth of the river. Forthwith, Mr. M'Dougal was despatched in a boat to the cape, to make the signals. On the morning of the 10th, the weather being fine and the sea smooth, the boat pushed out and arrived safely alongside. Soon after, the wind springing up, the vessel made sail and entered the river, where she dropped anchor, in Baker's Bay, at about 2 P. M. Toward evening the boat returned to the Fort, with the following passengers: Messrs. John Clarke of Canada (a wintering partner), Alfred Seton, George Ehnainger, a nephew of Mr. Astor (clerks), and two men. We learned from these gentlemen that the vessel was the *Beaver*, Captain Cornelius Sowles, and was consigned to us; that she left New York on the 10th of October, and had touched, in the passage, at Massa Fuego and the Sandwich Isles. Mr. Clarke handed me letters from my father and from several of my friends: I thus learned that death had deprived me of a beloved sister.

On the morning of the 11th, we were strangely surprised by the return of Messrs. D. Stuart, R. Stuart, R. M'Lelland, Crooks, Reed, and Farnham. This return, as sudden as unlooked for, was owing to an unfortunate adventure which befell the party, in ascending the river. When they reached the Falls, where the portage is very long, some natives came with their horses, to offer their aid in transporting the goods. Mr. R. Stuart, not distrusting them, confided to their care some bales of merchandise, which they packed on their horses: but, in making the transit, they darted up a narrow path among the rocks, and fled at full gallop toward the prairie, without its being possible to overtake them. Mr. Stuart had several shots fired over their heads, to frighten them, but it had no other effect than to increase their speed. Meanwhile our own people continued the transportation of the rest of the goods, and of the canoes; but as there was a great number of natives about, whom the success and impunity of those thieves had emboldened, Mr. Stuart thought it prudent to keep watch over the goods at the upper end of the portage, while Messrs. M'Lellan and Reed made the rearguard. The last named gentleman, who carried, strapped to his shoulders, a tin box containing the letters and despatches for New York with which he was charged, happened to be at some distance from the former, and the Indians thought it a favorable opportunity to attack him and carry off his box, the brightness of which no doubt had tempted their cupidity. They threw themselves upon him so suddenly that he had no time to place himself on the defensive. After a short resistance, he received a blow on the head from a war club, which felled him to the ground, and the Indians seized upon their booty. Mr. M'Lellan perceiving what was done, fired his carabine at one of the robbers and made him bite the dust; the rest took to flight, but carried off the box notwithstanding. Mr. M'Lellan immediately ran up to Mr. Reed; but finding the latter motionless and bathed in blood, he hastened to rejoin Mr. Stuart, urging him to get away from these robbers and murderers. But Mr. Stuart, being a self-possessed and fearless man, would not proceed without ascertaining if Mr. Reed were really dead, or if he were, without carrying off his body; and notwithstanding the remonstrances of Mr. M'Lellan, taking his way back to the spot where the latter had left his companion, had not gone two hundred paces, when he met him coming toward them, holding his bleeding head with both hands.

The object of Mr. Reed's journey being defeated by the loss of his papers, he repaired, with the other gentlemen, to Mr. David Stuart's trading post, at Okenakan, whence they had all set out, in the beginning of May, to return to Astoria. Coming down the river, they fell in with Mr. R. Crooks, and a man named John Day. It was observed in the preceding chapter that Mr. Crooks

---

remained with five men among some Indians who were there termed friendly : but this gentleman and his companion were the only members of that party who ever reached the establishment: and they too arrived in a most pitiable condition, the savages having stripped them of everything, leaving them but some bits of deerskin to cover their nakedness.

On the 12th, the schooner, which had been sent down the river to the Beaver's anchorage, returned with a cargo (being the stores intended for Astoria), and the following passengers: to wit, Messrs. B. Clapp, J. C. Halsey, C. A. Nichols, and R. Cox, clerks; five Canadians, seven Americans (all mechanics), and a dozen Sandwich-islanders for the service of the establishment. The captain of the Beaver sounded the channel diligently for several days; but finding it scarcely deep enough for so large a vessel, he was unwilling to bring her up to Astoria. It was necessary, in consequence, to use the schooner as a lighter in discharging the ship, and this tedious operation occupied us during the balance of this month and a part of June.

Captain Sowles and Mr. Clarke confirmed the report of the destruction of the Tonquin; they had learned it at Owhyhee, by means of a letter which a certain Captain Ebbetts, in the employ of Mr. Astor, had left there. It was nevertheless resolved that Mr. Hunt should embark upon the "Beaver," to carry out the plan of an exact commercial survey of the coast, which Mr. M'Kay had been sent to accomplish, and in particular to visit for that purpose the Russian establishments at Chitka sound.

The necessary papers having been prepared anew, and being now ready to expedite, were confided to Mr. R. Stuart, who was to cross the continent in company with Messrs. Crooks and R. M'Lellan, partners dissatisfied with the enterprise, and who had made up their minds to return to the United States. Mr. Clark, accompanied by Messrs. Pillet, Donald M'Lellan, Farnham and Cox, was fitted out at the same time, with a considerable assortment of merchandise, to form a new establishment on the Spokane or Clarke's river. Mr. M'Kenzie, with Mr. Seton, was destined for the borders of Lewis river: while Mr. David Stuart, reinforced by Messrs. Matthews and M'Gillis, was to explore the region lying north of his post at Okenakan. All these outfits being ready, with the canoes, boatmen, and hunters, the flotilla quitted Astoria on the 30th of June, in the afternoon, having on board sixty-two persons. The sequel will show the result of the several expeditions. During the whole month of July, the natives (seeing us weakened no doubt by these outfits), manifested their hostile intentions so openly that we were obliged to be constantly on our guard. We constructed covered ways inside our palisades, and raised our bastions or towers another story. The alarm became so serious toward the latter end of the month that we doubled our sentries day and night, and never allowed more than two or three Indians at a time within our gates.

The Beaver was ready to depart on her coasting voyage at the end of June, and on the 1st of July Mr. Hunt went on board: but westerly winds prevailing all that month, it was not till the 4th of August that she was able to get out of the river; being due again by the end of October to leave her surplus goods and take in our furs for market.

The months of August and September were employed in finishing a house forty-five feet by thirty, shingled and perfectly tight, as a hospital for the sick, and lodging house for the mechanics. Experience having taught us that from the beginning of October to the end of January, provisions were brought in by the natives in very small quantity, it was thought expedient that I should proceed in the schooner, accompanied by Mr. Clapp, on a trading voyage up the river to secure a cargo of dried fish. We left Astoria on the 1st of October, with a small assortment of merchandise.

---

The trip was highly successful: we found the game very abundant, killed a great quantity of swans, ducks, foxes, &c., and returned to Astoria on the 20th, with a part of our venison, wild fowl, and bear meat, besides seven hundred and fifty smoked salmon, a quantity of the Wapto root (so called by the natives), which is found a good substitute for potatoes. and four hundred and fifty skins of beaver and other animals of the furry tribe.

The encouragement derived from this excursion induced us to try a second, and I set off this time alone, that is, with a crew of five men only, and an Indian boy, son of the old chief Comcomly.

This second voyage proved anything but agreeable. We experienced continual rains, and the game was much less abundant, while the natives had mostly left the river for their wintering grounds.

I succeeded, nevertheless, in exchanging my goods for furs and dried fish, and a small supply of dried venison: and returned, on the 15th of November, to Astoria, where the want of fresh provisions began to be severely felt, so that several of the men were attacked with scurvy.

Messrs. Halsey and Wallace having been sent on the 23d, with fourteen men, to establish a trading post on the Willamet, and Mr. M'Dougal being confined to his room by sickness, Mr. Clapp and I were left with the entire charge of the post at Astoria, and were each other's only resource for society. Happily Mr. Clapp was a man of amiable character, of a gay, lively humor, and agreeable conversation. In the intervals of our daily duties, we amused ourselves with music and reading; having some instruments and a choice library. Otherwise we should have passed our time in a state of insufferable ennui, at this rainy season, in the midst of the deep mud which surrounded us, and which interdicted the pleasure of a promenade outside the buildings.

#### CHAPTER XIII

Uneasiness respecting the "Beaver" — News of the Declaration of War between Great Britain and the United States — Consequences of that Intelligence — Different Occurrences — Arrival of two Canoes of the Northwest Company — Preparations for abandoning the Country — Postponement of Departure — Arrangement with Mr. J. G. M'Tavish.

THE months of October, November, and December passed away without any news of the "Beaver," and we began to fear that there had happened to her, as to the Tonquin, some disastrous accident. It will be seen, in the following chapter, why this vessel did not return to Astoria in the autumn of 1812.

On the 15th of January, Mr. M'Kenzie arrived from the interior, having abandoned his trading establishment, after securing his stock of goods in a cache. Before his departure he had paid a visit to Mr. Clark on the Spokan, and while there had learned the news, which he came to announce to us, that hostilities had actually commenced between Great Britain and the United States. The news had been brought by some gentlemen of the Northwest Company, who handed to them a copy of the Proclamation of the President to that effect.

When we learned this news, all of us at Astoria who were British subjects and Canadians, wished ourselves in Canada; but we could not entertain even the thought of transporting ourselves thither, at least immediately: we were separated from our country by an immense space, and the difficulties of the journey at this season were insuperable: besides, Mr. Astor's interests had to be consulted first. We held, therefore, a sort of council of war, to which the clerks of the factory were invited pro formâ, as they had no voice in the deliberations. Having maturely weighed our situation; after having seriously considered that being almost to a man British subjects, we were trading, notwithstanding, under the American flag: and foreseeing the improbability or rather, to cut

the matter short, the impossibility that Mr. Astor could send us further supplies or reinforcements while the war lasted, as most of the ports of the United States would inevitably be blockaded by the British; we concluded to abandon the establishment in the ensuing spring, or at latest, in the beginning of the summer. We did not communicate these resolutions to the men, lest they should in consequence abandon their labor: but we discontinued, from that moment, our trade with the natives, except for provisions; as well because we had no longer a large stock of goods on hand, as for the reason that we had already more furs than we could carry away overland.

So long as we expected the return of the vessel, we had served out to the people a regular supply of bread: we found ourselves in consequence, very short of provisions, on the arrival of Mr. M'Kenzie and his men. This augmentation in the number of mouths to be fed compelled us to reduce the ration of each man to four ounces of flour and half a pound of dried fish per diem : and even to send a portion of the hands to pass the rest of the winter with Messrs. Wallace and Halsey on the Willamet, where game was plenty.

Meanwhile, the sturgeon having begun to enter the river, I left, on the 13th of February, to fish for them; and on the 15th sent the first boat-load to the establishment; which proved a very timely succor to the men, who for several days had broken off work from want of sufficient food. I formed a camp near Oak Point, whence I continued to despatch canoe after canoe of fine fresh fish to Astoria, and Mr. M'Dougal sent to me thither all the men who were sick of scurvy, for the re-establishment of their health.

On the 20th of March, Messrs. Reed and Seton, who had led a party of our men to the post on the Willamet, to subsist them, returned to Astoria, with a supply of dried venison. These gentlemen spoke to us in glowing terms of the country of the Willamet as charming, and abounding in beaver, elk, and deer; and informed us that Messrs. Wallace and Halsey had constructed a dwelling and trading house, on a great prairie, about one hundred and fifty miles from the confluence of that river with the Columbia. Mr. M'Kenzie and his party quitted us again on the 31st, to make known the resolutions recently adopted at Astoria, to the gentlemen who were wintering in the interior.

On the 11th of April two birch-bark canoes, bearing the British flag, arrived at the factory. They were commanded by Messrs. J. G. M'Tavish and Joseph Laroque, and manned by nineteen Canadian voyageurs. They landed on a point of land under the guns of the fort, and formed their camp. We invited these gentlemen to our quarters and learned from them the object of their visit. They had come to await the arrival of the ship Isaac Todd , despatched from Canada by the Northwest Company, in October, 1811, with furs, and from England in March, 1812, with a cargo of suitable merchandise for the Indian trade. They had orders to wait at the mouth of the Columbia till the month of July, and then to return, if the vessel did not make her appearance by that time. They also informed us that the natives near Lewis river had shown them fowling-pieces, gun-flints, lead, and powder; and that they had communicated this news to Mr. M'Kenzie, presuming that the Indians had discovered and plundered his cache ; which turned out afterward to be the case. The month of May was occupied in preparations for our departure from the Columbia. On the 25th, Messrs. Wallace and Halsey returned from their winter quarters with seventeen packs of furs, and thirty-two bales of dried venison. The last article was received with a great deal of pleasure, as it would infallibly be needed for the journey we were about to undertake. Messrs. Clarke, D. Stuart, and M'Kenzie also arrived, in the beginning of June, with one hundred and forty packs

---

of furs, the fruit of two years' trade at the post on the Okenakan, and one year on the Spokan. The wintering partners (that is to say, Messrs. Clarke and David Stuart) dissenting from the proposal to abandon the country as soon as we intended, the thing being (as they observed) impracticable, from the want of provisions for the journey and horses to transport the goods, the project was deferred, as to its execution, till the following April. So these gentlemen, having taken a new lot of merchandise, set out again for their trading posts on the 7th of July. But Mr. M'Kenzie, whose goods had been pillaged by the natives (it will be remembered), remained at Astoria, and was occupied with the care of collecting as great a quantity as possible of dried salmon from the Indians. He made seven or eight voyages up the river for that purpose, while we at the Fort were busy in baling the beaver-skins and other furs, in suitable packs for horses to carry. Mr. Reed, in the meantime, was sent on to the mountain-passes where Mr. Miller had been left with the trappers, to winter there, and to procure as many horses as he could from the natives for our use in the contemplated journey. He was furnished for this expedition with three Canadians, and a half-breed hunter named Daion, the latter accompanied by his wife and two children. This man came from the lower Missouri with Mr. Hunt in 1811–12.

Our object being to provide ourselves, before quitting the country, with the food and horses necessary for the journey; in order to avoid all opposition on the part of the Northwest Company, we entered into an arrangement with Mr. M'Tavish. This gentleman having represented to us that he was destitute of the necessary goods to procure wherewith to subsist his party on their way homeward, we supplied him from our warehouse, payment to be made us in the ensuing spring, either in furs or in bills of exchange on their house in Canada.

#### CHAPTER XIV

Arrival of the Ship "Albatross"—Reasons for the Non-Appearance of the Beaver at Astoria — Fruitless Attempt of Captain Smith on a Former Occasion — Astonishment and Regret of Mr. Hunt at the Resolution of the Partners — His Departure — Narrative of the Destruction of the Tonquin — Causes of that Disaster — Reflections.

ON the 4th of August, contrary to all expectation, we saw a sail at the mouth of the river. One of our gentlemen immediately got into the barge, to ascertain her nationality and object: but before he had fairly crossed the river, we saw her pass the bar and direct her course toward Astoria, as if she were commanded by a captain to whom the intricacies of the channel were familiar. I had stayed at the Fort with Mr. Clapp and four men. As soon as we had recognised the American flag, not doubting any longer that it was a ship destined for the factory, we saluted her with three guns. She came to anchor over against the Fort, but on the opposite side of the river, and returned our salute. In a short time after, we saw, or rather we heard, the oars of a boat (for it was already night) that came toward us. We expected her approach with impatience, to know who the stranger was, and what news she brought us. Soon we were relieved from our uncertainty by the appearance of Mr. Hunt, who informed us that the ship was called the Albatross and was commanded by Captain Smith.

It will be remembered that Mr. Hunt had sailed from Astoria on board the "Beaver," on the 4th of August of the preceding year, and should have returned with that vessel, in the month of October of the same year. We testified to him our surprise that he had not returned at the time appointed, and expressed the fears which we had entertained in regard to his fate, as well as that of the Beaver itself: and in reply he explained to us the reasons why neither he nor Captain Sowles had been

able to fulfil the promise which they had made us.

After having got clear of the river Columbia, they had scudded to the north, and had repaired to the Russian post of Chitka, where they had exchanged a part of their goods for furs. They had made with the governor of that establishment, Barnoff by name, arrangements to supply him regularly with all the goods of which he had need, and to send him every year a vessel for that purpose, as well as for the transportation of his surplus furs to the East Indies. They had then advanced still further to the north, to the coast of Kamskatka ; and being there informed that some Kodiak hunters had been left on some adjacent isles, called the islands of St. Peter and St. Paul, and that these hunters had not been visited for three years, they determined to go thither, and having reached those isles, they opened a brisk trade, and secured no less than eighty thousand skins of the South-sea seal. These operations had consumed a great deal of time; the season was already far advanced; ice was forming around them, and it was not without having incurred considerable dangers that they succeeded in making their way out of those latitudes. Having extricated themselves from the frozen seas of the north, but in a shattered condition, they deemed it more prudent to run for the Sandwich isles, where they arrived after enduring a succession of severe gales. Here Mr. Hunt disembarked, with the men who had accompanied him, and who did not form a part of the ship's crew; and the vessel, after undergoing the necessary repairs, set sail for Canton.

Mr. Hunt had then passed nearly six months at the Sandwich islands, expecting the annual ship from New York, and never imagining that war had been declared. But at last, weary of waiting so long to no purpose, he had bought a small schooner of one of the chiefs of the isle of Wahoo, and was engaged in getting her ready to sail for the mouth of the Columbia, when four sails hove in sight, and presently came to anchor in Ohetity bay. He immediately went on board of one of them, and learned that they came from the Indies, whence they had sailed precipitately, to avoid the English cruisers. He also learned from the captain of the vessel he boarded, that the Beaver had arrived in Canton some days before the news of the declaration of war. This Captain Smith, moreover, had on board some cases of nankeens and other goods shipped by Mr. Astor's agent at Canton for us. Mr. Hunt then chartered the Albatross to take him with his people and the goods to the Columbia. That gentleman had not been idle during the time that he sojourned at Wahoo: he brought us 35 barrels of salt pork or beef, nine tierces of rice, a great quantity of dried Taro , and a good supply of salt.

As I knew the channel of the river, I went on board the Albatross, and piloted her to the old anchorage of the Tonquin, under the guns of the Fort, in order to facilitate the landing of the goods. Captain Smith informed us that in 1810, a year before the founding of our establishment, he had entered the river in the same vessel, and ascended it in boats as far as Oak Point; and that he had attempted to form an establishment there; but the spot which he chose for building, and on which he had even commenced fencing for a garden, being overflowed in the summer freshet, he had been forced to abandon his project and re-embark. We had seen, in fact, at Oak Point, some traces of this projected establishment. The bold manner in which this captain had entered the river was now accounted for.

Captain Smith had chartered his vessel to a Frenchman named Demestre , who was then a passenger on board of her, to go and take a cargo of sandal wood at the Marquesas , where that gentleman had left some men to collect it, the year before. He could not, therefore, comply with the

request we made him, to remain during the summer with us, in order to transport our goods and people, as soon as they could be got together, to the Sandwich islands.

Mr. Hunt was surprised beyond measure, when we informed him of the resolution we had taken of abandoning the country: he blamed us severely for having acted with so much precipitation, pointing out that the success of the late coasting voyage, and the arrangements we had made with the Russians, promised a most advantageous trade, which it was a thousand pities to sacrifice, and lose the fruits of the hardships he had endured and the dangers he had braved, at one fell swoop, by this rash measure. Nevertheless, seeing the partners were determined to abide by their first resolution, and not being able, by himself alone, to fulfil his engagements to Governor Barnoff, he consented to embark once more, in order to seek a vessel to transport our heavy goods, and such of us as wished to return by sea. He sailed, in fact, on the Albatross, at the end of the month. My friend Clapp embarked with him: they were, in the first instance, to run down the coast of California, in the hope of meeting there some of the American vessels which frequently visit that coast to obtain provisions from the Spaniards.

Some days after the departure of Mr. Hunt, the old one-eyed chief Comcomly came to tell us that an Indian of Gray's Harbor, who had sailed on the Tonquin in 1811, and who was the only soul that had escaped the massacre of the crew of that unfortunate vessel, had returned to his tribe.

As the distance from the River Columbia to Gray's Harbor was not great, we sent for this native. At first he made considerable difficulty about following our people, but was finally persuaded. He arrived at Astoria, and related to us the circumstances of that sad catastrophe, nearly as follows: "After I had embarked on the Tonquin," said he, "that vessel sailed for Nootka. Having arrived opposite a large village called Newity, we dropped anchor. The natives having invited Mr. M'Kay to land, he did so, and was received in the most cordial manner: they even kept him several days at their village, and made him lie, every night, on a couch of sea-otter skins. Meanwhile the captain was engaged in trading with such of the natives as resorted to his ship: but having had a difficulty with one of the principal chiefs in regard to the price of certain goods, he ended by putting the latter out of the ship, and in the act of so repelling him, struck him on the face with the roll of furs which he had brought to trade. This act was regarded by that chief and his followers as the most grievous insult, and they resolved to take vengeance for it. To arrive more surely at their purpose, they dissembled their resentment, and came, as usual, on board the ship. One day, very early in the morning, a large pirogue, containing about a score of natives, came alongside: every man had in his hand a packet of furs, and held it over his head as a sign that they came to trade. The watch let them come on deck. A little after, arrived a second pirogue, carrying about as many men as the other. The sailors believed that these also came to exchange their furs, and allowed them to mount the ship's side like the first. Very soon, the pirogues thus succeeding one another, the crew saw themselves surrounded by a multitude of savages, who came upon the deck from all sides. Becoming alarmed at the appearance of things, they went to apprise the captain and Mr. M'Kay, who hastened to the poop. I was with them," said the narrator, "and fearing, from the great multitude of Indians whom I saw already on the deck, and from the movements of those on shore, who were hurrying to embark in their canoes, to approach the vessel, and from the women being left in charge of the canoes of those who had arrived, that some evil design was on foot, I communicated my suspicions to Mr. M'Kay, who himself spoke to the captain. The latter affected an air of security, and said that with the firearms on board, there was no reason to fear even a greater

---

number of Indians. Meanwhile these gentlemen had come on deck unarmed, without even their sidearms. The trade, nevertheless, did not advance; the Indians offered less than was asked, and pressing with their furs close to the captain, Mr. M'Kay, and Mr. Lewis, repeated the word Makoke! Makoke! 'Trade! Trade!' I urged the gentlemen to put to sea, and the captain, at last, seeing the number of Indians increase every moment, allowed himself to be persuaded: he ordered a part of the crew to raise the anchor, and the rest to go aloft and unfurl the sails. At the same time he warned the natives to withdraw, as the ship was going to sea. A fresh breeze was then springing up, and in a few moments more their prey would have escaped them; but immediately on receiving this notice, by a preconcerted signal, the Indians, with a terrific yell, drew forth the knives and war-bludgeons they had concealed in their bundles of furs, and rushed upon the crew of the ship. Mr. Lewis was struck, and fell over a bale of blankets. Mr. M'Kay, however, was the first victim whom they sacrificed to their fury. Two savages, whom, from the crown of the poop, where I was seated, I had seen follow this gentleman step by step, now cast themselves upon him, and having given him a blow on the head with a potumagan (a kind of sabre which is described a little below), felled him to the deck, then took him up and flung him into the sea, where the women left in charge of the canoes, quickly finished him with their paddles. Another set flung themselves upon the captain, who defended himself for a long time with his pocket-knife, but, overpowered by numbers, perished also under the blows of these murderers. I next saw (and that was the last occurrence of which I was witness before quitting the ship) the sailors who were aloft slip down by the rigging, and get below through the steerage hatchway. They were five, I think, in number, and one of them, in descending, received a knifestab in the back. I then jumped overboard, to escape a similar fate to that of the captain and Mr. M'Kay: the women in the canoes, to whom I surrendered myself as a slave, took me in, and bade me hide myself under some mats which were in the pirogues; which I did. Soon after, I heard the discharge of firearms, immediately upon which the Indians fled from the vessel, and pulled for the shore as fast as possible, nor did they venture to go alongside the ship again the whole of that day. The next day, having seen four men lower a boat, and pull away from the ship, they sent some pirogues in chase: but whether those men were overtaken and murdered, or gained the open sea and perished there, I never could learn. Nothing more was seen stirring on board the Tonquin; the natives pulled cautiously around her, and some of the more daring went on board; at last, the savages, finding themselves absolute masters of the ship, rushed on board in a crowd to pillage her. But very soon, when there were about four or five hundred either huddled together on deck, or clinging to the sides, all eager for plunder, the ship blew up with a horrible noise. I was on the shore," said the Indian, "when the explosion took place, saw the great volume of smoke burst forth in the spot where the ship had been, and high in the air above, arms, legs, heads and bodies, flying in every direction. The tribe acknowledged a loss of over two hundred of their people on that occasion. As for me I remained their prisoner, and have been their slave for two years. It is but now that I have been ransomed by my friends. I have told you the truth, and hope you will acquit me of having in any way participated in that bloody affair."

Our Indian having finished his discourse, we made him presents proportioned to the melancholy satisfaction he had given us in communicating the true history of the sad fate of our former companions, and to the trouble he had taken in coming to us; so that he returned apparently well satisfied with our liberality.

---

According to the narrative of this Indian, Captain Thorn, by his abrupt manner and passionate temper, was the primary cause of his own death and that of all on board his vessel. What appears certain at least, is, that he was guilty of unpardonable negligence and imprudence, in not causing the boarding netting to be rigged, as is the custom of all the navigators who frequent this coast, and in suffering (contrary to his instructions) too great a number of Indians to come on board at once.

Captain Smith, of the Albatross, who had seen the wreck of the Tonquin, in mentioning to us its sad fate, attributed the cause of the disaster to the rash conduct of a Captain Ayres, of Boston. That navigator had taken off, as I have mentioned already, ten or a dozen natives of Newitty, as hunters, with a promise of bringing them back to their country, which promise he inhumanly broke by leaving them on some desert islands in Sir Francis Drake's Bay. The countrymen of these unfortunates, indignant at the conduct of the American captain, had sworn to avenge themselves on the first white men who appeared among them. Chance willed it that our vessel was the first to enter that bay, and the natives but too well executed on our people their project of vengeance. Whatever may have been the first and principal cause of this misfortune (for doubtless it is necessary to suppose more than one), seventeen white men and twelve Sandwich-Islanders, were massacred: not one escaped from the butchery, to bring us the news of it, but the Indian of Gray's Harbor. The massacre of our people was avenged, it is true, by the destruction of ten times the number of their murderers; but this circumstance, which could perhaps gladden the heart of a savage, was a feeble consolation (if it was any) for civilized men. The death of Mr. Alexander M'Kay was an irreparable loss to the Company, which would probably have been dissolved by the remaining partners, but for the arrival of the energetic Mr. Hunt. Interesting as was the recital of the Indian of Gray's Harbor throughout, when he came to the unhappy end of that estimable man, marks of regret were visibly painted on the countenances of all who listened.

At the beginning of September, Mr. M'Kenzie set off, with Messrs. Wallace and Seton, to carry a supply of goods to the gentlemen wintering in the interior, as well as to inform them of the arrangements concluded with Mr. Hunt, and to enjoin them to send down all their furs, and all the Sandwich-Islanders, that the former might be shipped for America, and the latter sent back to their country.

#### NOTE BY HUNTINGTON

It will never be known how or by whom the Tonquin was blown up. Some pretend to say that it was the work of James Lewis, but that is impossible, for it appears from the narrative of the Indian that he was one of the first persons murdered. It will be recollected that five men got between decks from aloft, during the affray, and four only were seen to quit the ship afterward in the boat. The presumption was that the missing man must have done it, and in further conversation with the Gray's Harbor Indian, he inclined to that opinion, and even affirmed that the individual was the ship's armorer, Weeks. It might also have been accidental. There was a large quantity of powder in the run immediately under the cabin, and it is not impossible that while the Indians were intent on plunder, in opening some of the kegs they may have set fire to the contents. Or again, the men, before quitting the ship, may have lighted a slow train, which is the most likely supposition of all.

#### CHAPTER XV

Arrival of a Number of Canoes of the Northwest Company Sale of the Establishment at Astoria to

---

that Company — Canadian News — Arrival of the British Sloop-of-War “Raccoon” — Accident on Board that Vessel — The Captain takes Formal Possession of Astoria — Surprise and Discontent of the Officers and Crew — Departure of the “Raccoon.”

A FEW days after Mr. M'Kenzie left us, we were greatly surprised by the appearance of two canoes bearing the British flag, with a third between them, carrying the flag of the United States, all rounding Tongue Point. It was no other than Mr. M'Kenzie himself, returning with Messrs. J. G. M'Tavish and Angus Bethune, of the Northwest Company. He had met these gentlemen near the first rapids, and had determined to return with them to the establishment, in consequence of information which they gave him. Those gentlemen were in light canoes (i. e., without any lading), and formed the vanguard to a flotilla of eight, loaded with furs, under the conduct of Messrs. John Stuart and M'Millan.

Mr. M'Tavish came to our quarters at the factory, and showed Mr. M'Dougal a letter which had been addressed to the latter by Mr. Angus Shaw, his uncle, and one of the partners of the Northwest Company. Mr. Shaw informed his nephew that the ship Isaac Todd had sailed from London, with letters of marque, in the month of March, in company with the frigate Phoebe, having orders from the government to seize our establishment, which had been represented to the lords of the admiralty as an important colony founded by the American government. The eight canoes left behind, came up meanwhile, and uniting themselves to the others, they formed a camp of about seventy-five men, at the bottom of a little bay or cove, near our factory. As they were destitute of provisions, we supplied them; but Messrs. M'Dougal and M'Kenzie affecting to dread a surprise from this British force under our guns, we kept strictly on our guard; for we were inferior in point of numbers, although our position was exceedingly advantageous.

As the season advanced, and their ship did not arrive, our new neighbors found themselves in a very disagreeable situation, without food, or merchandise wherewith to procure it from the natives; viewed by the latter with a distrustful and hostile eye, as being our enemies and therefore exposed to attack and plunder on their part with impunity; supplied with good hunters, indeed, but wanting ammunition to render their skill available. Weary, at length, of applying to us incessantly for food (which we furnished them with a sparing hand), unable either to retrace their steps through the wilderness or to remain in their present position, they came to the conclusion of proposing to buy of us the whole establishment.

Placed, as we were, in the situation of expecting, day by day, the arrival of an English ship-of-war to seize upon all we possessed, we listened to their propositions. Several meetings and discussions took place; the negotiations were protracted by the hope of one party that the long-expected armed force would arrive, to render the purchase unnecessary, and were urged forward by the other in order to conclude the affair before that occurrence should intervene; at length the price of the goods and furs in the factory was agreed upon, and the bargain was signed by both parties on the 23d of October. The gentlemen of the Northwest Company took possession of Astoria, agreeing to pay the servants of the Pacific Fur Company (the name which had been chosen by Mr. Astor), the arrears of their wages, to be deducted from the price of the goods which we delivered, to supply them with provisions, and give a free passage to those who wished to return to Canada over land. The American colors were hauled down from the factory, and the British run up, to the no small chagrin and mortification of those who were American citizens.

It was thus, that after having passed the seas, and suffered all sorts of fatigues and privations, I lost

in a moment all my hopes of fortune. I could not help remarking that we had no right to expect such treatment on the part of the British government, after the assurances we had received from Mr. Jackson, his majesty's chargé d'affaires previously to our departure from New York. But as I have just intimated, the agents of the Northwest Company had exaggerated the importance of the factory in the eyes of the British ministry; for if the latter had known what it really was — a mere trading-post — and that nothing but the rivalry of the fur-traders of the Northwest Company was interested in its destruction, they would never have taken umbrage at it, or at least would never have sent a maritime expedition to destroy it. The sequel will show that I was not mistaken in this opinion.

The greater part of the servants of the Pacific Fur Company entered the service of the Company of the Northwest: the rest preferred to return to their country, and I was of the number of these last, Nevertheless, Mr. M'Tavish, after many ineffectual attempts to persuade me to remain with them, having intimated that the establishment could not dispense with my services, as I was the only person who could assist them in their trade, especially for provisions, of which they would soon be in the greatest need, I agreed with them (without however relinquishing my previous engagement with Mr. Astor's agents) for five months, that is to say, till the departure of the expedition which was to ascend the Columbia in the spring, and reach Canada by way of the Rocky Mountains and the rivers of the interior. Messrs. John Stuart and M'Kenzie set off about the end of this month, for the interior, in order that the latter might make over to the former the posts established on the Spokan and Okenakan.

On the 15th of November, Messrs. Alexander Stuart and Alexander Henry, both partners of the N. W. Company, arrived at the factory, in a couple of bark canoes manned by sixteen voyageurs. They had set out from Fort William, on Lake Superior, in the month of July. They brought us Canadian papers, by which we learned that the British arms so far had been in the ascendant. They confirmed also the news that an English frigate was coming to take possession of our quondam establishment; they were even surprised not to see the Isaac Todd lying in the road.

On the morning of the 30th, we saw a large vessel standing in under Cape Disappointment (which proved in this instance to deserve its name); and soon after that vessel came to anchor in Baker's bay. Not knowing whether it was a friendly or a hostile sail, we thought it prudent to send on board Mr. M'Dougal in a canoe, manned by such of the men as had been previously in the service of the Pacific Fur Company, with injunctions to declare themselves Americans, if the vessel was American, and Englishmen in the contrary case. While this party was on its way, Mr. M'Tavish caused all the furs which were marked with the initials of the N. W. Company to be placed on board the two barges at the Fort, and sent them up the river above Tongue Point, where they were to wait for a concerted signal, that was to inform them whether the new-comers were friends or foes. Toward midnight, Mr. Halsey, who had accompanied Mr. M'Dougal to the vessel, returned to the Fort, and announced to us that she was the British sloop-of-war *Raccoon*, of 26 guns, commanded by Captain Black, with a complement of 120 men, fore and aft. Mr. John M'Donald, a partner of the N. W. Company, was a passenger on the *Raccoon*, with five voyageurs, destined for the Company's service. He had left England in the frigate *Phoebe*, which had sailed in company with the Isaac Todd as far as Rio Janeiro; but there falling in with the British squadron, the admiral changed the destination of the frigate, despatching the sloops-of-war *Raccoon* and *Cherub* to convoy the Isaac Todd, and sent the *Phoebe* to search for the American commodore Porter, who

---

was then on the Pacific, capturing all the British whalers and other trading vessels he met with. These four vessels then sailed in company as far as Cape Horn, where they parted, after agreeing on the island of Juan Fernandez as a rendezvous. The three ships-of-war met, in fact, at that island; but after having a long time waited in vain for the Isaac Todd, Commodore Hillier (Hillyer?) who commanded this little squadron, hearing of the injury inflicted by Commodore Porter, on the British commerce, and especially on the whalers who frequent these seas, resolved to go in quest of him in order to give him combat; and retaining the Cherub to assist him, detailed the Raccoon to go and destroy the American establishment on the River Columbia, being assured by Mr. M'Donald that a single sloop-of-war would be sufficient for that service.

Mr. M'Donald had consequently embarked, with his people, on board the Raccoon. This gentleman informed us that they had experienced frightful weather in doubling the Cape, and that he entertained serious apprehensions for the safety of the Isaac Todd, but that if she was safe, we might expect her to arrive in the river in two or three weeks. The signal gun agreed upon, having been fired, for the return of the barges, Mr. M'Tavish came back to the Fort with the furs, and was overjoyed to learn the arrival of Mr. M'Donald.

On the 1st of December the Raccoon's gig came up to the fort, bringing Mr. M'Donald (surnamed Bras Croche, or crooked arm), and the first lieutenant, Mr. Sheriff. Both these gentlemen were convalescent from the effects of an accident which had happened to them in the passage between Juan Fernandez and the mouth of the Columbia. The captain wishing to clean the guns, ordered them to be scaled, that is, fired off: during this exercise one of the guns hung fire; the sparks fell into a cartridge tub, and setting fire to the combustibles, communicated also to some priming horns suspended above; an explosion followed, which reached some twenty persons; eight were killed on the spot, the rest were severely burnt; Messrs. M'Donald and Sheriff had suffered a great deal; it was with difficulty that their clothes had been removed; and when the lieutenant came ashore, he had not recovered the use of his hands. Among the killed was an American named Flatt, who was in the service of the Northwest Company and whose loss these gentlemen appeared exceedingly to regret.

As there were goods destined for the Company on board the Raccoon, the schooner Dolly was sent to Baker's bay to bring them up: but the weather was so bad, and the wind so violent, that she did not return till the 12th, bringing up, together with the goods, Captain Black, a lieutenant of marines, four soldiers and as many sailors. We entertained our guests as splendidly as it lay in our power to do. After dinner, the captain caused firearms to be given to the servants of the Company, and we all marched under arms to the square or platform, where a flag-staff had been erected. There the captain took a British Union Jack, which he had brought on shore for the occasion, and caused it to be run up to the top of the staff; then, taking a bottle of Madeira wine, he broke it on the flag-staff, declaring in a loud voice, that he took possession of the establishment and of the country in the name of his Britannic Majesty; and changed the name of Astoria to Fort George. Some few Indian chiefs had been got together to witness this ceremony, and I explained to them in their own language what it signified. Three rounds of artillery and musketry were fired, and the health of the king was drunk by the parties interested, according to the usage on like occasions. The sloop being detained by contrary winds, the captain caused an exact survey to be made of the entrance of the river, as well as of the navigable channel between Baker's bay and Fort George. The officers visited the fort, turn about, and seemed to me in general very much dissatisfied with their

fool's errand, as they called it: they had expected to find a number of American vessels loaded with rich furs, and had calculated in advance their share in the booty of Astoria. They had not met a vessel, and their astonishment was at its height when they saw that our establishment had been transferred to the Northwest Company, and was under the British flag. It will suffice to quote a single expression of Captain Black's, in order to show how much they were deceived in their expectations. The captain landed after dark; when we showed him the next morning the palisades and log bastions of the factory, he inquired if there was not another fort; on being assured that there was no other, he cried out, with an air of the greatest astonishment:— "What! is this the fort which was represented to me as so formidable! Good God! I could batter it down in two hours with a four-pounder!"

There were on board the Raccoon two young men from Canada, who had been impressed at Quebec, when that vessel was there some years before her voyage to the Columbia: one of them was named Parent, a blacksmith, and was of Quebec: the other was from Upper Canada, and was named M'Donald. These young persons signified to us that they would be glad to remain at Fort George: and as there was among our men some who would gladly have shipped, we proposed to the captain an exchange, but he would not consent to it. John Little, a boat-builder from New York, who had been on the sick list a long time, was sent on board and placed under the care of the sloop's surgeon, Mr. O'Brien; the captain engaging to land him at the Sandwich Islands. P. D. Jeremie also shipped himself as under clerk. The vessel hoisted sail, and got out of the river, on the 31st of December.

From the account given in this chapter the reader will see with what facility the establishment of the Pacific Fur Company could have escaped capture by the British force. It was only necessary to get rid of the land party of the Northwest Company — who were completely in our power — then remove our effects up the river upon some small stream, and await the result. The sloop-of-war arrived, it is true; but as, in the case I suppose, she would have found nothing, she would have left, after setting fire to our deserted houses. None of their boats would have dared follow us, even if the Indians had betrayed to them our lurking-place. Those at the head of affairs had their own fortunes to seek, and thought it more for their interest, doubtless, to act as they did, but that will not clear them in the eyes of the world, and the charge of treason to Mr. Astor's interests will always be attached to their characters.

#### CHAPTER XVI

Expeditions to the Interior — Return of Messrs. John Stuart and D. M'Kenzie — Theft committed by the Natives — War Party against the Thieves.

ON the 3d of January, 1814, two canoes laden with merchandise for the interior, were despatched under the command of Mr. Alexander Stuart and Mr. James Keith, with fifteen men under them. Two of the latter were charged with letters for the posts (of the Northwest Company) east of the mountains, containing instructions to the persons in superintendence there, to have in readiness canoes and the requisite provisions for a large party intending to go east the ensuing spring. I took this opportunity of advising my friends in Canada of my intention to return home that season. It was the third attempt I had made to send news of my existence to my relatives and friends: the first two had miscarried and this was doomed to meet the same fate.

Messrs. J. Stuart and M'Kenzie, who (as was seen in a previous chapter) had been sent to notify the gentlemen in the interior of what had taken place in Astoria, and to transfer the wintering

posts to the Northwest Company, returned to Fort George on the morning of the 6th. They stated that they had left Messrs. Clarke and D. Stuart behind, with the loaded canoes, and also that the party had been attacked by the natives above the falls.

As they were descending the river toward evening, between the first and second portages, they had espied a large number of Indians congregated at no great distance in the prairie; which gave them some uneasiness. In fact, some time after they had encamped, and when all the people ( *tout le monde* ) were asleep, except Mr. Stuart, who was on guard, these savages had stealthily approached the camp, and discharged some arrows, one of which had penetrated the coverlet of one of the men, who was lying near the baggage, and had pierced the cartilage of his ear; the pain made him utter a sharp cry, which alarmed the whole camp and threw it into an uproar. The natives perceiving it, fled to the woods, howling and yelling like so many demons. In the morning our people picked up eight arrows round the camp: they could yet hear the savages yell and whoop in the woods: but, notwithstanding, the party reached the lower end of the portage unmolested.

The audacity which these barbarians had displayed in attacking a party of from forty to forty-five persons, made us suppose that they would, much more probably, attack the party of Mr. Stuart, which was composed of but seventeen men. Consequently, I received orders to get ready forthwith a canoe and firearms, in order to proceed to their relief. The whole was ready in the short space of two hours, and I embarked immediately with a guide and eight men. Our instructions were to use all possible diligence to overtake Messrs. Stewart and Keith, and to convey them to the upper end of the last portage; or to return with the goods, if we met too much resistance on the part of the natives. We travelled, then, all that day, and all the night of the 6th, and on the 7th, till evening. Finding ourselves then at a little distance from the rapids, I came to a halt, to put the firearms in order, and let the men take some repose. About midnight I caused them to re-embark, and ordered the men to sing as they rowed, that the party whom we wished to overtake might hear us as we passed, if perchance they were encamped on some one of the islands of which the river is full in this part. In fact, we had hardly proceeded five or six miles, when we were hailed by some one apparently in the middle of the stream. We stopped rowing, and answered, and were soon joined by our people of the expedition, who were all descending the river in a canoe. They informed us that they had been attacked the evening before, and that Mr. Stuart had been wounded. We turned about, and all proceeded in company toward the fort. In the morning, when we stopped to breakfast, Mr. Keith gave me the particulars of the affair of the day preceding.

Having arrived at the foot of the rapids, they commenced the portage on the south bank of the river, which is obstructed with boulders, over which it was necessary to pass the effects. After they had hauled over the two canoes, and a part of the goods, the natives approached in great numbers, trying to carry off something unobserved. Mr. Stuart was at the upper end of the portage (the portage being about six hundred yards in length), and Mr. Keith accompanied the loaded men. An Indian seized a bag containing articles of little value, and fled: Mr. Stuart, who saw the act, pursued the thief, and after some resistance on the latter's part, succeeded in making him relinquish his booty. Immediately he saw a number of Indians armed with bows and arrows, approaching him: one of them bent his bow and took aim; Mr. Stuart, on his part, levelled his gun at the Indian, warning the latter not to shoot, and at the same instant received an arrow, which pierced his left shoulder. He then drew the trigger; but as it had rained all day, the gun missed

fire, and before he could re-prime, another arrow, better aimed than the first, struck him in the left side and penetrated between two of his ribs, in the region of the heart, and would have proved fatal, no doubt, but for a stone-pipe he had fortunately in his side-pocket, and which was broken by the arrow; at the same moment his gun was discharged, and the Indian fell dead. Several others then rushed forward to avenge the death of their compatriot; but two of the men came up with their loads and their gun (for these portages were made arms in hand), and seeing what was going forward, one of them threw his pack on the ground, fired on one of the Indians and brought him down. He got up again, however, and picked up his weapons, but the other man ran upon him, wrested from him his warclub, and despatched him by repeated blows on the head with it. The other savages, seeing the bulk of our people approaching the scene of combat, retired and crossed the river. In the meantime, Mr. Stuart extracted the arrows from his body, by the aid of one of the men: the blood flowed in abundance from the wounds, and he saw that it would be impossible for him to pursue his journey; he therefore gave orders for the canoes and goods to be carried back to the lower end of the portage. Presently they saw a great number of pirogues full of warriors coming from the opposite side of the river. Our people then considered that they could do nothing better than to get away as fast as possible; they contrived to transport over one canoe, on which they all embarked, abandoning the other and the goods, to the natives. While the barbarians were plundering these effects, more precious in their estimation than the apples of gold in the garden of the Hesperides, our party retired and got out of sight. The retreat was, notwithstanding, so precipitate, that they left behind an Indian from the Lake of the Two Mountains, who was in the service of the Company as a hunter. This Indian had persisted in concealing himself behind the rocks, meaning, he said, to kill some of those thieves, and did not return in time for the embarkation. Mr. Keith regretted this brave man's obstinacy, fearing, with good reason, that he would be discovered and murdered by the natives. We rowed all that day and night, and reached the factory on the 9th, at sunrise. Our first care, after having announced the misfortune of our people, was to dress the wounds of Mr. Stuart, which had been merely bound with a wretched piece of cotton cloth.

The goods which had been abandoned, were of consequence to the Company, inasmuch as they could not be replaced. It was dangerous, besides, to leave the natives in possession of some fifty guns and a considerable quantity of ammunition, which they might use against us. The partners, therefore, decided to fit out an expedition immediately to chastise the robbers, or at least to endeavor to recover the goods. I went, by their order, to find the principal chiefs of the neighboring tribes, to explain to them what had taken place, and invite them to join us, to which they willingly consented. Then, having got ready six canoes, we re-embarked on the 10th, to the number of sixty-two men, all armed from head to foot, and provided with a small brass field-piece.

We soon reached the lower end of the first rapid: but the essential thing was wanting to our little force; it was without provisions; our first care then was to try to procure these. Having arrived opposite a village, we perceived on the bank about thirty armed savages, who seemed to await us firmly. As it was not our policy to seem bent on hostilities, we landed on the opposite bank, and I crossed the river with five or six men, to enter into parley with them, and try to obtain provisions. I immediately became aware that the village was abandoned, the women and children having fled to the woods, taking with them all the articles of food. The young men, however, offered us dogs, of which we purchased a score. Then we passed to a second village, where they were already

---

informed of our coming. Here we bought forty-five dogs and a horse. With this stock we formed an encampment on an island called Strawberry island.

Seeing ourselves now provided with food for several days, we informed the natives touching the motives which had brought us, and announced to them that we were determined to put them all to death and burn their villages, if they did not bring back in two days the effects stolen on the 7th. A party was detached to the rapids, where the attack on Mr. Stuart had taken place. We found the villages all deserted. Crossing to the north bank, we found a few natives, of whom we made inquiries respecting the Nipissingue Indian, who had been left behind, but they assured us that they had seen nothing of him.

Not having succeeded in recovering, above the rapids, any part of the lost goods, the inhabitants all protesting that it was not they, but the villages below, which had perpetrated the robbery, we descended the river again and re-encamped on Strawberry island. As the intention of the partners was to intimidate the natives, without (if possible) shedding blood, we made a display of our numbers, and from time to time fired off our little field-piece, to let them see that we could reach them from one side of the river to the other. The Indian Coalpo and his wife, who had accompanied us, advised us to make prisoner one of the chiefs. We succeeded in this design, without incurring any danger. Having invited one of the natives to come and smoke with us, he came accordingly: a little after, came another; at last, one of the chiefs, and he one of the most considered among them, also came. Being notified secretly of his character by Coalpo, who was concealed in the tent, we seized him forthwith, tied him to a stake, and placed a guard over him with a naked sword, as if ready to cut his head off on the least attempt being made by his people for his liberation. The other Indians were then suffered to depart with the news for his tribe, that unless the goods were brought to us in twenty-four hours, their chief would be put to death. Our stratagem succeeded: soon after we heard wailing and lamentation in the village, and they presently brought us part of the guns, some brass kettles, and a variety of smaller articles, protesting that this was all their share of the plunder. Keeping our chief as a hostage, we passed to the other village, and succeeded in recovering the rest of the guns, and about a third of the other goods.

Although they had been the aggressors, yet as they had had two men killed and we had not lost any on our side, we thought it our duty to conform to the usage of the country, and abandon to them the remainder of the stolen effects, to cover, according to their expression, the bodies of their two slain compatriots. Besides, we began to find ourselves short of provisions, and it would not have been easy to get at our enemies to punish them, if they had taken refuge in the woods, according to their custom when they feel themselves the weaker party. So we released our prisoner, and gave him a flag, telling him that when he presented it unfurled, we should regard it as a sign of peace and friendship: but if, when we were passing the portage, any one of the natives should have the misfortune to come near the baggage, we would kill him on the spot. We re-embarked on the 19th, and on the 22d reached the fort, where we made a report of our martial expedition. We found Mr. Stuart very ill of his wounds, especially of the one in the side, which was so much swelled that he had every reason to think the arrow had been poisoned.

If we did not do the savages as much harm as we might have done, it was not from timidity but from humanity, and in order not to shed human blood uselessly. For after all, what good would it have done us to have slaughtered some of these barbarians, whose crime was not the effect of depravity and wickedness, but of an ardent and irresistible desire to ameliorate their condition? It

must be allowed also that the interest, well-understood, of the partners of the Northwest Company, was opposed to too strongly marked acts of hostility on their part: it behooved them exceedingly not to make irreconcilable enemies of the populations neighboring on the portages of the Columbia, which they would so often be obliged to pass and repass in future. It is also probable that the other natives on the banks, as well as of the river as of the sea, would not have seen with indifference, their countrymen too signally or too rigorously punished by strangers; and that they would have made common cause with the former to resist the latter, and perhaps even to drive them from the country.

I must not omit to state that all the firearms surrendered by the Indians on this occasion, were found loaded with ball, and primed, with a little piece of cotton laid over the priming to keep the powder dry. This shows how soon they would acquire the use of guns, and how careful traders should be in intercourse with strange Indians, not to teach them their use.

#### CHAPTER XVII

Description of Tongue Point — A Trip to the Willamet — Arrival of W. Hunt in the Brig Pedlar — Narrative of the Loss of the Ship Lark — Preparations for crossing the Continent.

THE new proprietors of our establishment, being dissatisfied with the site we had chosen, came to the determination to change it; after surveying both sides of the river, they found no better place than the head-land which we had named Tongue point. This point, or to speak more accurately, perhaps, this cape, extends about a quarter of a mile into the river, being connected with the mainland by a low, narrow neck, over which the Indians, in stormy weather, haul their canoes in passing up and down the river; and terminating in an almost perpendicular rock, of about 250 or 300 feet elevation. This bold summit was covered with a dense forest of pine trees; the ascent from the lower neck was gradual and easy; it abounded in springs of the finest water; on either side it had a cove to shelter the boats necessary for a trading establishment. This peninsula had truly the appearance of a huge tongue. Astoria had been built nearer the ocean, but the advantages offered by Tongue point more than compensated for its greater distance. Its soil, in the rainy season, could be drained with little or no trouble; it was a better position to guard against attacks on the part of the natives, and less exposed to that of civilized enemies by sea or land in time of war. All the hands who had returned from the interior, added to those who were already at the Fort, consumed, in an incredibly short space of time the small stock of provisions which had been conveyed by the Pacific Fur Company to the Company of the Northwest. It became a matter of necessity, therefore, to seek some spot where a part, at least, could be sent to subsist. With these views I left the fort on the 7th February with a number of men, belonging to the old concern, and who had refused to enter the service of the new one, to proceed to the establishment on the Willamet river, under the charge of Mr. Alexander Henry, who had with him a number of first-rate hunters. Leaving the Columbia to ascend the Willamet, I found the banks on either side of that stream well wooded, but low and swampy, until I reached the first falls; having passed which, by making a portage, I commenced ascending a dear but moderately deep channel, against a swift current. The banks on either side were bordered with forest-trees, but behind that narrow belt, diversified with prairie, the landscape was magnificent; the hills were of moderate elevation, and rising in an amphitheatre. Deer and elk are found here in great abundance; and the post in charge of Mr. Henry had been established with a view of keeping constantly there a number of hunters to prepare dried venison for the use of the factory. On our arrival at the Columbia, considering the

---

latitude, we had expected severe winter weather, such as is experienced in the same latitudes east; but we were soon undeceived; the mildness of the climate never permitted us to transport fresh provisions from the Willamet to Astoria. We had not a particle of salt; and the attempts we made to smoke or dry the venison proved abortive.

Having left the men under my charge with Mr. Henry, I took leave of that gentleman, and returned. At Oak point I found Messrs. Keith and Pillet encamped, to pass there the season of sturgeon-fishing. They informed me that I was to stay with them.

Accordingly I remained at Oak point the rest of the winter, occupied in trading with the Indians spread all along the river for some 30 or 40 miles above, in order to supply the factory with provisions. I used to take a boat with four or five men, visit every fishing station, trade for as much fish as would load the boat, and send her down to the fort. The surplus fish traded in the interval between the departure and return of the boat, was cut up, salted and barrelled for future use. The salt had been recently obtained from a quarter to be presently mentioned.

About the middle of March Messrs. Keith and Pillet both left me and returned to the fort. Being now alone, I began seriously to reflect on my position, and it was in this interval that I positively decided to return to Canada. I made inquiries of the men sent up with the boats for fish, concerning the preparations for departure, but whether they had been enjoined secrecy, or were unwilling to communicate, I could learn nothing of what was doing below.

At last I heard that on the 28th February a sail had appeared at the mouth of the river. The gentlemen of the N. W. Company at first flattered themselves that it was the vessel they had so long expected. They were soon undeceived by a letter from Mr. Hunt, which was brought to the fort by the Indians of Baker's bay. That gentleman had purchased at the Marquesas islands a brig called The Pedlar : it was on that vessel that he arrived, having for pilot Captain Northrop, formerly commander of the ship Lark. The latter vessel had been outfitted by Mr. Astor, and despatched from New York, in spite of the blockading squadron, with supplies for the ci-devant Pacific Fur Company; but unhappily she had been assailed by a furious tempest and capsized in lat. 16° N., and three or four hundred miles from the Sandwich Islands. The mate, who was sick, was drowned in the cabin, and four of the crew perished at the same time. The captain had the masts and rigging cut away, which caused the vessel to right again, though full of water. One of the hands dived down to the sail-maker's locker, and got out a small sail, which they attached to the bowsprit. He dived a second time, and brought up a box containing a dozen bottles of wine. For thirteen days they had no other sustenance but the flesh of a small shark, which they had the good fortune to take, and which they ate raw, and for drink, a gill of the wine each man per diem. At last the trade winds carried them upon the island of Tahouraka , where the vessel went to pieces on the reef. The islanders saved the crew, and seized all the goods which floated on the water. Mr. Hunt was then at Wahoo , and learned through some islanders from Morotoi , that some Americans had been wrecked on the isle of Tahouraka. He went immediately to take them off, and gave the pilot-age of his own vessel to Captain Northrop.

It may be imagined what was the surprise of Mr. Hunt when he saw Astoria under the British flag, and passed into stranger hands. But the misfortune was beyond remedy, and he was obliged to content himself with taking on board all the Americans who were at the establishment, and who had not entered the service of the Company of the Northwest. Messrs. Halsey, Seton, and Farnham were among those who embarked. I shall have occasion to inform the reader of the part each

of them played, and how they reached their homes.

When I heard that Mr. Hunt was in the river, and knowing that the overland expedition was to set out early in April, I raised camp at Oak point, and reached the fort on the 2d of that month. But the brig Pedlar had that very day got outside the river, after several fruitless attempts, in one of which she narrowly missed being lost on the bar.

I would gladly have gone in her, had I but arrived a day sooner. I found, however, all things prepared for the departure of the canoes, which was to take place on the 4th. I got ready the few articles I possessed, and in spite of the very advantageous offers of the gentlemen of the N. W. Company, and their reiterated persuasions, aided by the crafty M'Dougal, to induce me to remain, at least one year more, I persisted in my resolution to leave the country. The journey I was about to undertake was a long one: it would be accompanied with great fatigues and many privations, and even by some dangers; but I was used to privations and fatigues; I had braved dangers of more than one sort; and even had it been otherwise, the ardent desire of revisiting my country, my relatives, and my friends, the hope of finding myself, in a few months, in their midst, would have made me overlook every other consideration.

I am about, then, to quit the banks of the river Columbia, and conduct the reader through the mountain passes, over the plains, the forests, and the lakes of our continent: but I ought first to give him at least an idea of the manners and customs of the inhabitants, as well as of the principal productions of the country that I now quit, after a sojourn of three years. This is what I shall try to do in the following chapters.

#### CHAPTER XVIII

Situation of the Columbia River — Qualities of its Soil — Climate, &c. — Vegetable and Animal Productions of the Country.

THE mouth of the Columbia river is situated in  $46^{\circ} 19'$  north latitude, and  $125^{\circ}$  or  $126^{\circ}$  of longitude west of the meridian of Greenwich. The highest tides are very little over nine or ten feet, at its entrance, and are felt up stream for a distance of twenty-five or thirty leagues.

During the three years I spent there, the cold never was much below the freezing point; and I do not think the heat ever exceeded  $76^{\circ}$ . Westerly winds prevail from the early part of spring, and during a part of the summer; that wind generally springs up with the flood tide, and tempers the heat of the day. The northwest wind prevails during the latter part of summer and commencement of autumn. This last is succeeded by a southeast wind, which blows almost without intermission from the beginning of October to the end of December, or commencement of January. This interval is the rainy season, the most disagreeable of the year. Fogs (so thick that sometimes for days no object is discernible for five or six hundred yards from the beach), are also very prevalent.

The surface of the soil consists (in the valleys) of a layer of black vegetable mould, about five or six inches thick at most; under this layer is found another of gray and loose, but extremely cold earth; below which is a bed of coarse sand and gravel, and next to that pebble or hard rock. On the more elevated parts, the same black vegetable mould is found, but much thinner, and under it is the trap rock. We found along the seashore, south of Point Adams, a bank of earth white as chalk, which we used for white-washing our walls. The natives also brought us several specimens of blue, red and yellow earth or clay, which they said was to be found at a great distance south; and also a sort of shining earth, resembling lead ore. We found no limestone, although we burnt

several kilns, but never could get one ounce of lime.

We had brought with us from New York a variety of garden seeds, which were put in the ground in the month of May, 1811, on a rich piece of land laid out for the purpose on a sloping ground in front of our establishment. The garden had a fine appearance in the month of August; but although the plants were left in the ground until December, not one of them came to maturity, with the exception of the radishes, the turnips, and the potatoes. The turnips grew to a prodigious size; one of the largest we had the curiosity to weigh and measure; its circumference was thirty-three inches, its weight fifteen and a half pounds. The radishes were in full blossom in the month of December, and were left in the ground to perfect the seeds for the ensuing season, but they were all destroyed by the ground mice, who hid themselves under the stumps which we had not rooted out, and infested our garden. With all the care we could bestow on them during the passage from New York, only twelve potatoes were saved, and even these so shrivelled up, that we despaired of raising any from the few sprouts that still gave signs of life. Nevertheless we raised one hundred and ninety potatoes the first season, and after sparing a few plants for our inland traders, we planted about fifty or sixty hills, which produced five bushels the second year; about two of these were planted, and gave us a welcome crop of fifty bushels the year 1813.

It would result from these facts, that the soil on the banks of the river, as far as tide water, or for a distance of fifty or sixty miles, is very little adapted for agriculture; at all events, vegetation is very slow. It may be that the soil is not everywhere so cold as the spot we selected for our garden, and some other positions might have given a better reward for our labor: this supposition is rendered more than probable when we take into consideration the great difference in the indigenous vegetables of the country in different localities.

The forest trees most common at the mouth of the river and near our establishment, were cedar, hemlock, white and red spruce, and alder. There were a few dwarf white and gray ashes; and here and there a soft maple. The alder grows also to a very large size; I measured some of twelve to fifteen inches diameter; the wood was used by us in preference, to make charcoal for the blacksmith's forge. But the largest of all the trees that I saw in the country, was a white spruce: this tree, which had lost its top branches, and bore evident marks of having been struck by lightning, was a mere, straight trunk of about eighty to one hundred feet in height; its bark whitened by age, made it very conspicuous among the other trees with their brown bark and dark foliage, like a huge column of white marble. It stood on a slope of a hill immediately in the rear of our palisades. Seven of us placed ourselves round its trunk, and we could not embrace it by extending our arms and touching merely the tips of our fingers; we measured; it afterward in a more regular manner, and found it forty-two feet in circumference. It kept the same size, or nearly the same, to the very top. We had it in contemplation at one time to construct a circular staircase to its summit, and erect a platform thereon for an observatory, but more necessary and pressing demands on our time made us abandon the project.

A short distance above Astoria, the oak and ash are plentiful, but neither of these is of much value or beauty.

From the middle of June to the middle of October, we had abundance of wild fruit; first, strawberries, almost white, small but very sweet; then raspberries, both red and orange color. These grow on a bush sometimes twelve feet in height: they are not sweet, but of a large size.

The months of July and August furnish a small berry of an agreeable, slightly acid flavor; this

berry grows on a slender bush of some eight to nine feet high, with small round leaves; they are in size like a wild cherry: some are blue, while others are of a cherry red: the last being smaller; they have no pits, or stones in them, but seeds, such as are to be seen in currants.

I noticed in the month of August another berry growing in bunches or grapes like the currant, on a bush very similar to the currant bush: the leaves of this shrub resemble those of the laurel: they are very thick and always green. The fruit is oblong, and disposed in two rows on the stem: the extremity of the berry is open, having a little speck or tuft like that of an apple. It is not of a particularly fine flavor, but it is wholesome, and one may eat a quantity of it, without inconvenience. The natives make great use of it; they prepare it for the winter by bruising and drying it; after which it is moulded into cakes according to fancy, and laid up for use. There is also a great abundance of cranberries, which proved very useful as an antiscorbutic.

We found also the whortleberry, chokecherries, goose-berries, and black currants with wild crab-apples: these last grow in clusters, are of small size and very tart. On the upper part of the river are found blackberries, hazel-nuts, acorns, &c. The country also possesses a great variety of nutritive roots: the natives make great use of those which have the virtue of curing or preventing the scurvy. We ate freely of them with the same intention, and with the same success. One of these roots, which much resembles a small onion, serves them, in some sort, in place of cheese. Having gathered a sufficient quantity, they bake them with red-hot stones, until the steam ceases to ooze from the layer of grass and earth with which the roots are covered; then they pound them into a paste, and make the paste into loaves, of five or six pounds weight: the taste is not unlike liquorice, but not of so sickly a sweetness. When we made our first voyage up the river the natives gave us square biscuits, very well worked, and printed with different figures. These are made of a white root, pounded, reduced to paste, and dried in the sun. They call it Chapaleel: it is not very palatable, nor very nutritive.

But the principal food of the natives of the Columbia is fish. The salmon-fishery begins in July: that fish is here of an exquisite flavor, but it is extremely fat and oily; which renders it unwholesome for those who are not accustomed to it, and who eat too great a quantity: thus several of our people were attacked with diarrhoea in a few days after we began to make this fish our ordinary sustenance; but they found a remedy in the raspberries of the country which have an astringent property.

The months of August and September furnish excellent sturgeon. This fish varies exceedingly in size; I have seen some eleven feet long; and we took one that weighed, after the removal of the eggs and intestines, three hundred and ninety pounds. We took out nine gallons of roe. The sturgeon does not enter the river in so great quantities as the salmon.

In October and November we had salmon too, but of a quite different species — lean, dry and insipid. It differs from the other sort in form also; having very long teeth, and a hooked nose like the beak of a parrot. Our men termed it in derision “seven bark salmon,” because it had almost no nutritive substance.

February brings a small fish about the size of a sardine. It has an exquisite flavor, and is taken in immense quantities, by means of a scoop net, which the Indians, seated in canoes, plunge into the schools: but the season is short, not even lasting two weeks.

The principal quadrupeds of the country are the elk, the black and white tailed deer; four species of bear, distinguished chiefly by the color of the fur or poil, to wit, the black, brown, white

and grisly bear; the grisly bear is extremely ferocious; the white is found on the seashore toward the north; the wolf, the panther, the catamount, the lynx, the raccoon, the ground hog, opossum, mink, fisher, beaver, and the land and sea otter. The sea otter has the handsomest fur that is known; the skin surpasses that of the land variety in size and in the beauty of the poil; the most esteemed color is the silver gray, which is highly prized in the Indies, and commands a great price. The most remarkable birds are the eagle, the turkey-buzzard, the hawk, pelican, heron, gull, cormorant, crane, swan, and a great variety of wild ducks and geese. The pigeon, woodcock, and pheasant, are found in the forests as with us.

#### CHAPTER XIX

Manners, Custom, Occupations, &c., of the Natives on the River Columbia

THE natives inhabiting on the Columbia, from the mouth of that river to the falls, that is to say, on a space extending about 250 miles from east to west, are, generally speaking, of low stature, few of them passing five feet six inches, and many not even five feet. They pluck out the beard, in the manner of the other Indians of North America; but a few of the old men only suffer a tuft to grow upon their chins. On arriving among them we were exceedingly surprised to see that they had almost all flattened heads. This configuration is not a natural deformity, but an effect of art, caused by compression of the skull in infancy. It shocks strangers extremely, especially at first sight; nevertheless, among these barbarians it is an indispensable ornament: and when we signified to them how much this mode of flattening the forehead appeared to us to violate nature and good taste, they answered that it was only slaves who had not their heads flattened. The slaves, in fact, have the usual rounded head, and they are not permitted to flatten the foreheads of their children, destined to bear the chains of their sires. The natives of the Columbia procure these slaves from the neighboring tribes, and from the interior, in exchange for beads and furs. They treat them with humanity while their services are useful, but as soon as they become incapable of labor, neglect them and suffer them to perish of want. When dead, they throw their bodies, without ceremony, under the stump of an old decayed tree, or drag them to the woods to be devoured by the wolves and vultures.

The Indians of the Columbia are of a light copper color, active in body, and, above all, excellent swimmers. They are addicted to theft, or rather, they make no scruple of laying hands on whatever suits them in the property of strangers, whenever they can find an opportunity. The goods and effects of European manufacture are so precious in the eyes of these barbarians, that they rarely resist the temptation of stealing them.

These savages are not addicted to intemperance, unlike, in that respect the other American Indians, if we must not also except the Patagonians, who, like the Flatheads, regard intoxicating drinks as poisons, and drunkenness as disgraceful. I will relate a fact in point: one of the sons of the chief Comcomly being at the establishment one day, some of the gentlemen amused themselves with making him drink wine, and he was very soon drunk. He was sick in consequence, and remained in a state of stupor for two days. The old chief came to reproach us, saying that we had degraded his son by exposing him to the ridicule of the slaves, and besought us not to induce him to take strong liquors in future.

The men go entirely naked, not concealing any part of their bodies. Only in winter they throw over the shoulders a panther's skin, or else a sort of mantle made of the skins of wood-rats sewed together. In rainy weather I have seen them wear a mantle of rush mats, like a Roman toga, or the

vestment which a priest wears in celebrating mass; thus equipped, and furnished with a conical hat made from fibrous roots and impermeable, they may call themselves rain-proof. The women, in addition to the mantle of skins, wear a petticoat made of the cedar bark, which they attach round the girdle, and which reaches to the middle of the thigh. It is a little longer behind than before, and is fabricated in the following manner: They strip off the fine bark of the cedar, soak it as one soaks hemp, and when it is drawn out into fibres, work it into a fringe; then with a strong cord they bind the fringes together. With so poor a vestment they contrive to satisfy the requirements of modesty; when they stand it drapes them fairly enough; and when they squat down in their manner, it falls between their legs, leaving nothing exposed but the bare knees and thighs. Some of the younger women twist the fibres of bark into small cords, knotted at the ends, and so form the petticoat, disposed in a fringe, like the first, but more easily kept clean and of better appearance.

Cleanliness is not a virtue among these females, who, in that respect, resemble the other Indian women of the continent. They anoint the body and dress the hair with fish oil, which does not diffuse an agreeable perfume. Their hair (which both sexes wear long) is jet black; it is badly combed, but parted in the middle, as is the custom of the sex everywhere, and kept shining by the fish-oil before-mentioned. Sometimes, in imitation of the men, they paint the whole body with a red earth mixed with fish-oil. Their ornaments consist of bracelets of brass, which they wear indifferently on the wrists and ankles; of strings of beads of different colors (they give a preference to the blue), and displayed in great profusion around the neck, and on the arms and legs; and of white shells, called Haiqua, which are their ordinary circulating medium. These shells are found beyond the straits of Juan de Fuca, and are from one to four inches long, and about half an inch in diameter: they are a little curved and naturally perforated: the longest are most valued. The price of all commodities is reckoned in these shells; a fathom string of the largest of them is worth about ten beaver skins.

Although a little less slaves than the greater part of the Indian women elsewhere, the women on the Columbia are, nevertheless, charged with the most painful labors; they fetch water and wood, and carry the goods in their frequent changes of residence; they dean the fish and cut it up for drying; they prepare the food and cook the fruits in their season. Among their principal occupations is that of making rush mats, baskets for gathering roots, and hats very ingeniously wrought. As they want little clothing, they do not sew much, and the men have the needle in hand oftener than they.

The men are not lazy, especially during the fishing season. Not being hunters, and eating, consequently, little flesh-meat (although they are fond of it), fish makes, as I have observed, their principal diet. They profit, therefore, by the season when it is to be had, by taking as much as they can; knowing that the intervals will be periods of famine and abstinence, unless they provide sufficiently beforehand.

Their canoes are all made of cedar, and of a single trunk: we saw some which were five feet wide at midships, and thirty feet in length; these are the largest, and will carry from 25 to 30 men; the smallest will carry but two or three. The bows terminate in a very elongated point, running out four or five feet from the water line. It constitutes a separate piece, very ingeniously attached, and serves to break the surf in landing, or the wave on a rough sea. In landing they put the canoe round, so as to strike the beach stern on. Their oars or paddles are made of ash, and are about five

feet long, with a broad blade, in the shape of an inverted crescent, and a cross at the top, like the handle of a crutch. The object of the crescent shape of the blade is to be able to draw it, edge-wise, through the water without making any noise, when they hunt the sea-otter, an animal which can only be caught when it is lying asleep on the rocks, and which has the sense of hearing very acute. All their canoes are painted red, and fancifully decorated.

Their houses, constructed of cedar, are remarkable for their form and size: some of them are one hundred feet in length by thirty or forty feet in width. They are constructed as follows: An oblong square of the intended size of the building is dug out to the depth of two or three feet; a double row of cedar posts is driven into the earth about ten feet apart; between these the planks are laid, overlapping each other to the requisite height. The roof is formed by a ridge-pole laid on taller posts, notched to receive it, and is constructed with rafters and planks laid clapboard-wise, and secured by cords for want of nails. When the house is designed for several families, there is a door for each, and a separate fireplace; the smoke escapes through an aperture formed by removing one of the boards of the roof. The door is low, of an oval shape, and is provided with a ladder, cut out of a log, to descend into the lodge. The entrance is generally effected stern-foremost.

The kitchen utensils consist of plates of ashwood, bowls of fibrous roots, and a wooden kettle: with these they succeed in cooking their fish and meat in less time than we take with the help of pots and stewpans. See how they do it! Having heated a number of stones red-hot, they plunge them, one by one, in the vessel which is to contain the food to be prepared; as soon as the water boils, they put in the fish or meat, with some more heated stones on top, and cover up the whole with small rush mats, to retain the steam. In an incredibly short space of time the article is taken out and placed on a wooden platter, perfectly done and very palatable. The broth is taken out also, with a ladle of wood or horn.

It will be asked, no doubt, what instruments these savages use in the construction of their canoes and their houses. To cause their patience and industry to be admired as much as they deserve, it will be sufficient for me to mention that we did not find among them a single hatchet: their only tools consisted of an inch or half-inch chisel, usually made of an old file, and of a mallet, which was nothing but an oblong stone. With these wretched implements, and wedges made of hemlock knots, steeped in oil and hardened by the fire, they would undertake to cut down the largest cedars of the forest, to dig them out and fashion them into canoes, to split them, and get out the boards wherewith to build their houses. Such achievements with such means, are a marvel of ingenuity and patience.

#### CHAPTER XX

Manners and Customs of the Natives continued — Their Wars — Their Marriages — Medicine Men — Funeral Ceremonies — Religious Notions — Language.

THE politics of the natives of the Columbia are a simple affair: each village has its chief, but that chief does not seem to exercise a great authority over his fellow-citizens. Nevertheless, at his death, they pay him great honors: they use a kind of mourning, which consists in painting the face with black, in lieu of gay colors; they chant his funeral song or oration for a whole month. The chiefs are considered in proportion to their riches: such a chief has a great many wives, slaves, and strings of beads — he is accounted a great chief. These barbarians approach in that respect to certain civilized nations, among whom the worth of a man is estimated by the quantity of gold he possesses.

---

As all the villages form so many independent sovereignties, differences sometimes arise, whether between the chiefs or the tribes. Ordinarily, these terminate by compensations equivalent to the injury. But when the latter is of a grave character, like a murder (which is rare), or the abduction of a woman (which is very common), the parties, having made sure of a number of young braves to aid them, prepare for war. Before commencing hostilities, however, they give notice of the day when they will proceed to attack the hostile village; not following in that respect the custom of almost all other American Indians, who are wont to burst upon their enemy unawares, and to massacre or carry off men, women, and children; these people, on the contrary, embark in their canoes, which on these occasions are paddled by the women, repair to the hostile village, enter into parley, and do all they can to terminate the affair amicably: sometimes a third party becomes mediator between the first two, and of course observes an exact neutrality. If those who seek justice do not obtain it to their satisfaction, they retire to some distance, and the combat begins, and is continued for some time with fury on both sides; but as soon as one or two men are killed, the party which has lost these, owns itself beaten and the battle ceases. If it is the people of the village attacked who are worsted, the others do not retire without receiving presents. When the conflict is postponed till the next day (for they never fight but in open daylight, as if to render nature witness of their exploits), they keep up frightful cries all night long, and, when they are sufficiently near to understand each other, defy one another by menaces, railleries, and sarcasms, like the heroes of Homer and Virgil. The women and children are always removed from the village before the action.

Their combats are almost all maritime: for they fight ordinarily in their pirogues, which they take care to careen, so as to present the broadside to the enemy, and half lying down, avoid the greater part of the arrows let fly at them.

But the chief reason of the bloodlessness of their combats is the inefficiency of their offensive weapons, and the excellence of their defensive armor. Their offensive arms are merely a bow and arrow, and a kind of double edged sabre, about two and a half feet long, and six inches wide in the blade: they rarely come to sufficiently close quarters to make use of the last. For defensive armor they wear a cassock or tunic of elk-skin double, descending to the ankles, with holes for the arms. It is impenetrable by their arrows, which can not pierce two thicknesses of leather; and as their heads are also covered with a sort of helmet, the neck is almost the only part in which they can be wounded. They have another kind of corslet, made like the corsets of our ladies, of splinters of hard wood interlaced with nettle twine. The warrior who wears this cuirass does not use the tunic of elk-skin; he is consequently less protected, but a great deal more free; the said tunic being very heavy and very stiff.

It is almost useless to observe that, in their military expeditions, they have their bodies and faces daubed with different paints, often of the most extravagant designs. I remember to have seen a war-chief, with one exact half of his face painted white and the other half black.

Their marriages are conducted with a good deal of ceremony. When a young man seeks a girl in marriage his parents make the proposals to those of the intended bride, and when it has been agreed upon what presents the future bridegroom is to offer to the parents of the bride, all parties assemble at the house of the latter, whither the neighbors are invited to witness the contract. The presents, which consist of slaves, strings of beads, copper bracelets, haiqua shells, &c., are distributed by the young man, who, on his part receives as many, and sometimes more, according to the

means or the munificence of the parents of his betrothed. The latter is then led forward by the old matrons and presented to the young man, who takes her as his wife, and all retire to their quarters.

The men are not very scrupulous in their choice, and take small pains to inform themselves what conduct a young girl has observed before her nuptials; and it must be owned that few marriages would take place, if the youth would only espouse maidens without reproach on the score of chastity; for the unmarried girls are by no means scrupulous in that particular, and their parents give them, on that head, full liberty. But once the marriage is contracted, the spouses observe toward each other an inviolable fidelity; adultery is almost unknown among them, and the woman who should be guilty of it would be punished with death. At the same time, the husband may repudiate his wife, and the latter may then unite herself in marriage to another man. Polygamy is permitted, indeed is customary; there are some who have as many as four or five wives; and although it often happens that the husband loves one better than the rest, they never show any jealousy, but live together in the most perfect concord.

There are charlatans everywhere, but they are more numerous among savages than anywhere else, because among these ignorant and superstitious people the trade is at once more profitable and less dangerous. As soon as a native of the Columbia is indisposed, no matter what the malady, they send for the medicine man, who treats the patient in the absurd manner usually adopted by these impostors, and with such violence of manipulation, that often a sick man, whom a timely bleeding or purgative would have saved, is carried off by a sudden death.

They deposit their dead in canoes, on rocks sufficiently elevated not to be overflowed by the spring freshets. By the side of the dead are laid his bow, his arrows, and some of his fishing implements; if it is a woman, her beads and bracelets: the wives, the relatives and the slaves of the defunct cut their hair in sign of grief, and for several days, at the rising and setting of the sun, go to some distance from the village to chant a funeral song.

These people have not, properly speaking, a public worship. I could never perceive, during my residence among them, that they worshipped any idol. They had, nevertheless, some small sculptured figures; but they appeared to hold them in light esteem, offering to barter them for trifles. Having travelled with one of the sons of the chief of the Chinooks (Comcomly), an intelligent and communicative young man, I put to him several questions touching their religious belief, and the following is, in substance, what he told me respecting it: Men, according to their ideas, were created by a divinity whom they name Etalapass; but they were imperfect, having a mouth that was not opened, eyes that were fast dosed, hands and feet that were not moveable; in a word, they were rather statues of flesh, than living men. A second divinity, whom they call Ecannum, less powerful, but more benign than the former, having seen men in their state of imperfection, took a sharp stone and laid open their mouths and eyes; he gave agility, also, to their feet, and motion to their hands. This compassionate divinity was not content with conferring these first benefits; he taught men to make canoes, paddles, nets, and, in a word, all the tools and instruments they use. He did still more: he threw great rocks into the river, to obstruct the ascent of the salmon, in order that they might take as many as they wanted.

The natives of the Columbia further believe, that the men who have been good citizens, good fathers, good husbands, and good fishermen, who have not committed murder, &c., will be perfectly happy after their death, and will go to a country where they will find fish, fruit, &c., in abun-

dance; and that, on the contrary, those who have lived wickedly, will inhabit a country of fasting and want, where they will eat nothing but bitter roots, and have nothing to drink but salt water. If these notions in regard to the origin and future destiny of man are not exactly conformed to sound reason or to divine revelation, it will be allowed that they do not offer the absurdities with which the mythologies of many ancient nations abound. The article which makes skill in fishing a virtue worthy of being compensated in the other world, does not disfigure the salutary and consoling dogma of the immortality of the soul, and that of future rewards and punishments, so much as one is at first tempted to think; for if we reflect a little, we shall discover that the skilful fisherman, in laboring for himself, labors also for society; he is a useful citizen, who contributes, as much as lies in his power, to avert from his fellow-men the scourge of famine; he is a religious man, who honors the divinity by making use of his benefits. Surely a great deal of the theology of a future life prevalent among civilized men, does not excel this in profundity.

It is not to be expected that men perfectly ignorant, like these Indians, should be free from superstitions: one of the most ridiculous they have, regards the method of preparing and eating fish. In the month of July, 1811, the natives brought us at first a very scanty supply of the fresh salmon, from the fear that we would cut the fish crosswise instead of lengthwise; being persuaded that if we did so, the river would be obstructed, and the fishing ruined. Having reproached the chief on that account, they brought us a greater quantity, but all cooked, and which, not to displease them, it was necessary to eat before sunset. Re-assured at last by our solemn promises not to cut the fish crosswise, they supplied us abundantly during the remainder of the season.

In spite of the vices that may be laid to the charge of the natives of the Columbia, I regard them as nearer to a state of civilization than any of the tribes who dwell east of the Rocky mountains. They did not appear to me so attached to their customs that they could not easily adopt those of civilized nations: they would dress themselves willingly in the European mode, if they had the means. To encourage this taste, we lent pantaloons to the chiefs who visited us, when they wished to enter our houses, never allowing them to do it in a state of nudity. They possess, in an eminent degree, the qualities opposed to indolence, improvidence, and stupidity: the chiefs, above all, are distinguished for their good sense and intelligence. Generally speaking, they have a ready intellect and a tenacious memory. Thus old Comcomly recognised the mate of the Albatross as having visited the country sixteen years before, and recalled to the latter the name of the captain under whom he had sailed at that period.

The Chinook language is spoken by all the nations from the mouth of the Columbia to the falls. It is hard and difficult to pronounce, for strangers; being full of gutturals, like the Gaelic. The combinations thl , or tl , and lt , are as frequent in the Chinook as in the Mexican.

#### CHAPTER XXI

Departure from Astoria or Fort George — Accident — Passage of the Dalles or Narrows — Great Columbian Desert — Aspect of the Country — Wallawalla and Shaptin Rivers — Rattle-snakes — Some Details regarding the Natives of the Upper Columbia.

WE quitted Fort George (or Astoria, if you please) on Monday morning, the 4th of April, 1814, in ten canoes, five of which were of bark and five of cedar wood, carrying each seven men as crew, and two passengers, in all ninety persons, and all well armed. Messrs. J. G. M'Tavish, D. Stuart, J. Clarke, B. Pillet, W. Wallace, D. M'Gillis, D. M'Kenzie, &c., were of the party. Nothing remarkable occurred to us as far as the first falls, which we reached on the 10th. The portage was effected im-

mediately, and we encamped on an island for the night. Our numbers had caused the greater part of the natives to take to flight, and those who remained in the villages showed the most pacific dispositions. They sold us four horses and thirty dogs, which were immediately slaughtered for food.

We resumed our route on the 11th, at an early hour. The wind was favorable, but blew with violence. Toward evening, the canoe in which Mr. M'Tavish was, in doubling a point of rock, was run under by its press of sail, and sunk. Happily the river was not deep at this place; no one was drowned; and we succeeded in saving all the goods. This accident compelled us to camp at an early hour.

On the 12th, we arrived at a rapid called the Dalles : this is a channel cut by nature through the rocks, which are here almost perpendicular: the channel is from 150 to 300 feet wide, and about two miles long. The whole body of the river rushes through it, with great violence, and renders navigation impracticable. The portage occupied us till dusk. Although we had not seen a single Indian in the course of the day, we kept sentinels on duty all night: for it was here that Messrs. Stuart and Reed were attacked by the natives.

On the 13th, we made two more portages, and met Indians, of whom we purchased horses and wood. We camped early on a sandy plain, where we passed a bad night; the wind, which blew violently, raised clouds of sand, which incommoded us greatly, and spoiled every mouthful of food we took.

On the 14th and 15th, we passed what are called the great plains of the Columbia. From the top of the first rapid to this point, the aspect of the country becomes more and more triste and disagreeable; one meets at first nothing but bare hills, which scarcely offer a few isolated pines, at a great distance from each other; after that, the earth, stripped of verdure, does not afford you the sight of a single shrub; the little grass which grows in that arid soil, appears burnt by the rigor of the climate. The natives who frequent the banks of the river, for the salmon fishery, have no other wood but that which they take floating down. We passed several rapids, and a small stream called Utalah, which flows from the southeast.

On the 16th, we found the river narrowed; the banks rose on either side in elevations, without, however, offering a single tree. We reached the river Wallawalla , which empties into the Columbia on the southeast. It is narrow at its confluence, and is not navigable for any great distance. A range of mountains was visible to the S. E., about fifty or sixty miles off. Behind these mountains the country becomes again flat and sandy, and is inhabited by a tribe called the Snakes. We found on the left bank of the Wallawalla , an encampment of Indians, consisting of about twenty lodges. They sold us six dogs and eight horses, the greater part extremely lean. We killed two of the horses immediately: I mounted one of the six that remained; Mr. Ross took another; and we drove the other four before us. Toward the decline of day we passed the river Lewis , called, in the language of the country, the Sha-ap-tin. It comes from the S. E., and is the same that Lewis and Clarke descended scended in 1805. The Sha-ap-tin appeared to me to have little depth, and to be about 300 yards wide, at its confluence.

The country through which we were now passing, was a mingling of hills, steep rocks, and valleys covered with wormwood; the stems of which shrub are nearly six inches thick, and might serve for fuel. We killed six rattlesnakes on the 15th, and on the 16th saw a great many more among the rocks. These dangerous reptiles appeared to be very numerous in this part of the country.

The plains are also inhabited by a little quadruped, only about eight or nine inches in length, and approaching the dog in form. These animals have the hair, or poil, of a reddish brown, and strong fore-paws, armed with long claws which serve them to dig out their holes under the earth. They have a great deal of curiosity: as soon as they hear a noise they come out of their holes and bark. They are not vicious, but, though easily tamed, can not be domesticated.

The natives of the upper Columbia, beginning at the falls, differ essentially in language, manners, and habits, from those of whom I have spoken in the preceding chapters. They do not dwell in villages, like the latter, but are nomads, like the Tartars and the Arabs of the desert: their women are more industrious, and the young girls more reserved and chaste than those of the populations lower down. They do not go naked, but both sexes wear habits made of dressed deer-skin, which they take care to rub with chalk, to keep them clean and white. They are almost always seen on horseback, and are in general good riders; they pursue the deer and penetrate even to Missouri, to kill buffalo, the flesh of which they dry, and bring it back on their horses, to make their principal food during the winter. These expeditions are not free from danger; for they have a great deal to apprehend from the Black-feet, who are their enemies. As this last tribe is powerful and ferocious, the Snakes, the Pierced-noses or Sha-ap-tins, the Flatheads, &c., make common cause against them, when the former go to hunt east of the mountains. They set out with their families, and the cavalcade often numbers two thousand horses. When they have the good fortune not to encounter the enemy, they return with the spoils of an abundant chase; they load a part of their horses with the hides and beef, and return home to pass the winter in peace. Sometimes, on the contrary, they are so harassed by the Blackfeet, who surprise them in the night and carry off their horses, that they are forced to return light-handed, and then they have nothing to eat but roots, all the winter.

These Indians are passionately fond of horse-races: by the bets they make on these occasions they sometimes lose all that they possess. The women ride, as well as the men. For a bridle they use a cord of horse-hair, which they attach round the animal's mouth; with that he is easily checked, and by laying the hand on his neck, is made to wheel to this side or that. The saddle is a cushion of stuffed deer-skin, very suitable for the purpose to which it is destined, rarely hurting the horse, and not fatiguing the rider so much as our European saddles. The stirrups are pieces of hardwood, ingeniously wrought, and of the same shape as those which are used in civilized countries. They are covered with a piece of deer-skin, which is sewed on wet, and in drying stiffens and becomes hard and firm. The saddles for women differ in form, being furnished with the antlers of a deer, so as to resemble the high pommel saddle of the Mexican ladies.

They procure their horses from the herds of these animals which are found in a wild state in the country extending between the northern latitudes and the gulf of Mexico, and which sometimes count a thousand or fifteen hundred in a troop. These horses come from New Mexico, and are of Spanish race. We even saw some which had been marked with a hot iron by Spaniards. Some of our men, who had been at the south, told me that they had seen among the Indians, bridles, the bits of which were of silver. The form of the saddles used by the females, proves that they have taken their pattern from the Spanish ones destined for the same use. One of the partners of the N. W. Company (Mr. M'Tavish) assured us that he had seen among the Spokans, an old woman who told him that she had seen men ploughing the earth; she told him that she had also seen churches, which she made him understand by imitating the sound of a bell, and the action of pulling a bell-

rope; and further to confirm her account, made the sign of the cross. That gentleman concluded that she had been made prisoner and sold to the Spaniards on the Del Norte ; but I think it more probable it was nearer, in North California, at the mission of San Carlos or San Francisco.

As the manner of taking wild horses should not be generally known to my readers, I will relate it here in few words. The Indian who wishes to capture some horses, mounts one of his fleetest coursers, being armed with a long cord of horsehair, one end of which is attached to his saddle, and the other is a running noose. Arrived at the herd, he dashes into the midst of it, and flinging his cord, or lasso, passes it dexterously over the head of the animal he selects; then wheeling his courser, draws the cord after him; the wild horse, finding itself strangling, makes little resistance; the Indian then approaches, ties his fore and hind legs together, and leaves him till he has taken in this manner as many as he can. He then drives them home before him, and breaks them in at leisure.

#### CHAPTER XXII

Meeting with the Widow of a Hunter — Her Narrative — Reflections of the Author — Priest's Rapid — River Okenakan — Kettle Falls — Pine Moss — Scarcity of Food — Rivers, Lakes, &c. — Accident — A Rencontre — First View of the Rocky Mountains.

ON the 17th, the fatigue I had experienced the day before, on horseback, obliged me to re-embark in my canoe. About eight o'clock, we passed a little river flowing from the N. W. We perceived, soon after, three canoes, the persons in which were struggling with their paddles to overtake us. As we were still pursuing our way, we heard a child's voice cry out in French — "arrêtez donc, arrêtez donc" — (stop! stop!). We put ashore, and the canoes having joined us, we perceived in one of them the wife and children of a man named Pierre Dorion , a hunter, who had been sent on with a party of eight, under the command of Mr. J. Reed, among the Snakes , to join there the hunters left by Messrs. Hunt and Crooks, near Fort Henry, and to secure horses and provisions for our journey. This woman informed us, to our no small dismay, of the tragical fate of all those who composed that party. She told us that in the month of January, the hunters being dispersed here and there, setting their traps for the beaver, Jacob Regner, Gilles Leclerc, and Pierre Dorion, her husband, had been attacked by the natives. Leclerc, having been mortally wounded, reached her tent or hut, where he expired in a few minutes, after having announced to her that her husband had been killed. She immediately took two horses that were near the lodge, mounted her two boys upon them, and fled in all haste to the wintering house of Mr. Reed, which was about five days' march from the spot where her husband fell. Her horror and disappointment were extreme, when she found the house — a log cabin — deserted, and on drawing nearer, was soon convinced, by the traces of blood, that Mr. Reed also had been murdered. No time was to be lost in lamentations, and she had immediately fled toward the mountains south of the Wallawalla , where, being impeded by the depth of the snow, she was forced to winter, having killed both the horses to subsist herself and her children. But at last, finding herself out of provisions, and the snow beginning to melt, she had crossed the mountains with her boys, hoping to find some more humane Indians, who would let her live among them till the boats from the fort below should be ascending the river in the spring, and so reached the banks of the Columbia, by the Wallawalla. Here, indeed, the natives had received her with much hospitality, and it was the Indians of Wallawalla who brought her to us. We made them some presents to repay their care and pains, and they returned well satisfied.

---

The persons who lost their lives in this unfortunate wintering party, were Mr. John Reed, (clerk), Jacob Regner, John Hubbough, Pierre Dorion (hunters), Gilles Leclerc, François Landry, J. B. Turcotte, André la Chapelle and Pierre De Launay, ( voyageurs ). We had no doubt that this massacre was an act of vengeance, on the part of the natives, in retaliation for the death of one of their people, whom Mr. John Clark had hanged for theft the spring before. This fact, the massacre on the Tonquin, the unhappy end of Captain Cook, and many other similar examples, prove how carefully the Europeans, who have relations with a barbarous people, should abstain from acting in regard to them on the footing of too marked an inequality, and especially from punishing their offences according to usages and codes, in which there is too often an enormous disproportion between the crime and the punishment. If these pretended exemplary punishments seem to have a good effect at first sight, they almost always produce terrible consequences in the sequel.

On the 18th, we passed Priest's Rapid, so named by Mr. Stuart and his people, who saw at this spot, in 1811, as they were ascending the river, a number of savages, one of whom was performing on the rest certain aspersions and other ceremonies, which had the air of being coarse imitations of the Catholic worship. For our part, we met here some Indians of whom we bought two horses. The banks of the river at this place are tolerably high, but the country back of them is flat and uninteresting.

On the 20th, we arrived at a place where the bed of the river is extremely contracted, and where we were obliged to make a portage. Messrs. J. Stuart and Clarke left us here, to proceed on horseback to the Spokan trading house, to procure there the provisions which would be necessary for us, in order to push on to the mountains.

On the 21st, we lightened of their cargoes, three canoes, in which those who were to cross the continent embarked, to get on with greater speed. We passed several rapids, and began to see mountains covered with snow.

On the 22d, we began to see some pines on the ridge of the neighboring hills; and at evening we encamped under trees, a thing which had not happened to us since the 12th.

On the 23d, toward 9, A. M., we reached the trading post established by D. Stuart, at the mouth of the river Okenakan. The spot appeared to us charming, in comparison with the country through which we had journeyed for twelve days past: the two rivers here meeting, and the immense prairies covered with a fine verdure, strike agreeably the eye of the observer; but there is not a tree or a shrub to diversify the scene, and render it a little less naked and less monotonous. We found here Messrs. J. M'Gillivray and Ross, and Mr. O. de Montigny, who had taken service with the N. W. Company, and who charged me with a letter for his brother.

Toward midday we re-embarked, to continue our journey. After having passed several dangerous rapids without accident, always through a country broken by shelving rocks, diversified with hills and verdant prairies, we arrived, on the 29th, at the portage of the Chaudieres or Kettle falls. This is a fall where the water precipitates itself over an immense rock of white marble, veined with red and green, that traverses the bed of the river from N. W. to S. E. We effected the portage immediately, and encamped on the edge of a charming prairie.

We found at this place some Indians who had been fasting, they assured us, for several days. They appeared, in fact, reduced to the most pitiable state, having nothing left but skin and bones, and scarcely able to drag themselves along, so that not without difficulty could they even reach the margin of the river, to get a little water to wet their parched lips. It is a thing that often happens to

these poor people, when their chase has not been productive; their principal nourishment consisting, in that case, of the pine moss, which they boil till it is reduced to a sort of glue or black paste, of a sufficient consistence to take the form of biscuit. I had the curiosity to taste this bread, and I thought I had got in my mouth a bit of soap. Yet some of our people, who had been reduced to eat this glue, assured me that when fresh made it had a very good taste, seasoned with meat. We partly relieved these wretched natives from our scanty store.

On the 30th, while we were yet encamped at Kettle falls, Messrs. J. Stuart and Clarke arrived from the post at Spokane. The last was mounted on the finest-proportioned gray charger, full seventeen hands high, that I had seen in these parts: Mr. Stuart had got a fall from his, in trying to urge him, and had hurt himself severely. These gentlemen not having brought us the provisions we expected, because the hunters who had been sent for that purpose among the Flatheads, had not been able to procure any, it was resolved to divide our party, and that Messrs. M'Donald, J. Stuart, and M'Kenzie should go forward to the post situated east of the mountains, in order to send us thence horses and supplies. These gentlemen quitted us on the 1st of May. After their departure we killed two horses and dried the meat; which occupied us the rest of that day and all the next. In the evening of the 2d, Mr. A. Stuart arrived at our camp. He had recovered from his wounds (received in the conflict with the natives, before related), and was on his way to his old wintering place on Slave lake, to fetch his family to the Columbia.

We resumed our route on the morning of the 3d of May, and went to encamp that evening at the upper-end of a rapid, where we began to descry mountains covered with forests, and where the banks of the river themselves were low and thinly timbered.

On the 4th, after having passed several considerable rapids, we reached the confluence of Flathead river. This stream comes from the S. E., and falls into the Columbia in the form of a cascade: it may be one hundred and fifty yards wide at its junction.

On the morning of the 5th, we arrived at the confluence of the Coutonais river. This stream also flows from the south, and has nearly the same width as the Flathead. Shortly after passing it, we entered a lake or enlargement of the river, which we crossed to encamp at its upper extremity. This lake may be thirty or forty miles, and about four wide at its broadest part: it is surrounded by lofty hills, which for the most part have their base at the water's edge, and rise by gradual and finely-wooded terraces, offering a sufficiently pretty view.

On the 6th, after we had run through a narrow strait or channel some fifteen miles long, we entered another lake, of less extent than the former but equally picturesque. When we were nearly in the middle of it, an accident occurred which, if not very disastrous, was sufficiently singular. One of the men, who had been on the sick-list for several days, requested to be landed for an instant. Not being more than a mile from the shore, we acceded to his request, and made accordingly for a projecting head-land; but when we were about three hundred or four hundred yards from the point, the canoe struck with force against the trunk of a tree which was planted in the bottom of the lake, and the extremity of which barely reached the surface of the water. It needed no more to break a hole in so frail a vessel; the canoe was pierced through the bottom and filled in a trice; and despite all our efforts we could not get off the tree, which had penetrated two or three feet within her; perhaps that was our good fortune, for the opening was at least a yard long. One of the men, who was an expert swimmer, stripped, and was about to go ashore with an axe lashed to his back, to make a raft for us, when the other canoe, which had been proceeding up the lake, and was a

mile ahead, perceived our signals of distress, and came to our succor. They carried us to land, where it was necessary to encamp forthwith, as well to dry ourselves as to mend the canoe.

On the 7th, Mr. A. Stuart, whom we had left behind at Kettle falls, came up with us, and we pursued our route in company. Toward evening we met natives, camped on the bank of the river: they gave us a letter from which we learned that Mr. M'Donald and his party had passed there on the 4th. The women at this camp were busy spinning the coarse wool of the mountain sheep: they had blankets or mantles, woven or platted of the same material, with a heavy fringe all round: I would gladly have purchased one of these, but as we were to carry all our baggage on our backs across the mountains, was forced to relinquish the idea. Having bought of these savages some pieces of dried venison, we pursued our journey. The country began to be ascending; the stream was very rapid; and we made that day little progress.

On the 8th we began to see snow on the shoals or sandbanks of the river: the atmosphere grew very cold. The banks on either side presented only high hills covered to the top with impenetrable forests. While the canoes were working up a considerable rapid, I climbed the hills with Mr. M'Gillis, and we walked on, following the course of the river, some five or six miles. The snow was very deep in the ravines or narrow gorges which are found between the bases of the hills. The most common trees are the Norway pine and the cedar: the last is here, as on the borders of the sea, of a prodigious size.

On the 9th and 10th, as we advanced but slowly, the country presented the same aspect as on the 8th. Toward evening of the 10th, we perceived a-head of us a chain of high mountains entirely covered with snow. The bed of the river was hardly more than sixty yards wide, and was filled with dry banks composed of coarse gravel and small pebble.

#### CHAPTER XXIII

Course of the Columbia River — Canoe River — Footmarch toward the Rocky Mountains — Passage of the Mountains.

ON the 11th, that is to say, one month, day for day, after our departure from the falls, we quitted the Columbia, to enter a little stream to which Mr. Thompson had given, in 1811, the name of Canoe river, from the fact that it was on this fork that he constructed the canoes which carried him to the Pacific.

The Columbia, which in the portion above the falls (not taking into consideration some local sinuosities) comes from the N. N. E., takes a bend here so that the stream appears to flow from the S. E. Some boatmen, and partic Mr. Regis Bruguier, who had ascended that river to its source, informed me that it came out of two small lakes, not far from the chain of the Rocky Mountains, which, at that place, diverges considerably to the east. According to Arrowsmith's map, the course of the Tacoutche Tessé, from its mouth in the Pacific Ocean, to its source in the Rocky mountains, is about twelve hundred English miles, or four hundred French leagues of twenty-five to a degree; that is to say, from two hundred and forty to two hundred and eighty miles from west to east, from its mouth to the first falls: seven hundred and fifty miles nearly from S. S. W. to N. N. E., from the first rapids to the bend at the confluence of Canoe river; and one hundred and fifty or one hundred and eighty miles from that confluence to its source. We were not provided with the necessary instruments to determine the latitude, and still less the longitude, of our different stations; but it took us four or five days to go up from the factory at Astoria to the falls, and we could not have made less than sixty miles a day: and, as I have just remarked, we occupied an entire

---

month in getting from the falls to Canoe river: deducting four or five days, on which we did not travel, there remain twenty-five days march; and it is not possible that we made less than thirty miles a day, one day with another.

We ascended Canoe river to the point where it ceases to be navigable, and encamped in the same place where Mr. Thompson wintered in 1810–11. We proceeded immediately to secure our canoes, and to divide the baggage among the men, giving each fifty pounds to carry, including his provisions. A sack of pemican, or pounded meat, which we found in a cache, where it had been left for us, was a great acquisition, as our supplies were nearly exhausted.

On the 12th we began our foot march to the mountains, being twenty-four in number, rank and file. Mr. A. Stuart remained at the portage to bestow in a place of safety the effects which we could not carry, such as boxes, kegs, camp-kettles, &c. We traversed first some swamps, next a dense bit of forest, and then we found ourselves marching up the gravelly banks of the little Canoe river.

Fatigue obliged us to camp early.

On the 13th we pursued our journey, and entered into the valleys between the mountains, where there lay not less than four or five feet of snow. We were obliged to ford the river ten or a dozen times in the course of the day, sometimes with the water up to our necks. These frequent fordings were rendered necessary by abrupt and steep rocks or bluffs, which it was impossible to get over without plunging into the wood for a great distance. The stream being very swift, and rushing over a bed of stones, one of the men fell and lost a sack containing our last piece of salt pork, which we were preserving as a most precious treasure. The circumstances in which we found ourselves made us regard this as a most unfortunate accident. We encamped that night at the foot of a steep mountain, and sent on Mr. Pillet and the guide, M'Kay, to hasten a supply of provisions to meet us.

On the morning of the 14th we began to climb the mountain which we had before us. We were obliged to stop every moment, to take breath, so stiff was the ascent. Happily it had frozen hard the night before, and the crust of the snow was sufficient to bear us. After two or three hours of incredible exertions and fatigues, we arrived at the plateau or summit, and followed the foot-prints of those who had preceded us. This mountain is placed between two others a great deal more elevated, compared with which it is but a hill, and of which, indeed, it is only, as it were, the valley. Our march soon became fatiguing, on account of the depth of the snow, which, softened by the rays of the sun, could no longer bear us as in the morning. We were obliged to follow exactly the traces of those who had preceded us, and to plunge our legs up to the knees in the holes they had made, so that it was as if we had put on and taken off, at every step, a very large pair of boots. At last we arrived at a good hard bottom, and a clear space, which our guide said was a little lake frozen over, and here we stopped for the night. This lake, or rather these lakes (for there are two) are situated in the midst of the valley or cup of the mountains. On either side were immense glaciers, or ice-bound rocks, on which the rays of the setting sun reflected the most beautiful prismatic colors. One of these icy peaks was like a fortress of rock; it rose perpendicularly some fifteen or eighteen hundred feet above the level of the lakes, and had the summit covered with ice. Mr. J. Henry, who first discovered the pass, gave this extraordinary rock the name of M'Gillivray's Rock, in honor of one of the partners of the N. W. Company. The lakes themselves are not much over three or four hundred yards in circuit, and not over two hundred yards apart. Canoe river, which, as we have already seen, flows to the west, and falls into the Columbia, takes its rise in one

---

of them; while the other gives birth to one of the branches of the Athabasca, which runs first eastward, then northward, and which, after its junction with the Unjighah, north of the Lake of the Mountains, takes the name of Slave river, as far [as] the lake of that name, and afterward that of M'Kenzie river, till it empties into, or is lost in, the Frozen ocean. Having cut a large pile of wood, and having, by tedious labor for nearly an hour, got through the ice to the clear water of the lake on which we were encamped, we supped frugally on pounded maize, arranged our bivouac, and passed a pretty good night, though it was bitterly cold. The most common wood of the locality was cedar and stunted pine. The heat of our fire made the snow melt, and by morning the embers had reached the solid ice: the depth from the snow surface was about five feet.

On the 15th, we continued our route, and soon began to descend the mountain. At the end of three hours, we reached the banks of a stream — the outlet of the second lake above mentioned — here and there frozen over, and then again tumbling down over rock and pebbly bottom in a thousand fantastic gambols; and very soon we had to ford it. After a tiresome march, by an extremely difficult path in the midst of woods, we encamped in the evening under some cypresses. I had hit my right knee against the branch of a fallen tree on the first day of our march, and now began to suffer acutely with it. It was impossible, however, to flinch, as I must keep up with the party or be left to perish.

On the 16th, our path lay through thick swamps and forest; we recrossed the small stream we had forded the day before, and our guide conducted us to the banks of the Athabasca, which we also forded. As this passage was the last to be made, we dried our clothes, and pursued our journey through a more agreeable country than on the preceding days. In the evening we camped on the margin of a verdant plain, which, the guide informed us, was called Coro prairie. We had met in the course of the day several buffalo tracks, and a number of the bones of that quadruped bleached by time. Our flesh-meat having given out entirely, our supper consisted in some handfuls of corn, which we parched in a pan.

We resumed our route very early on the 17th, and after passing a forest of trembling poplar or aspen, we again came in sight of the river which we had left the day before. Arriving then at an elevated promontory or cape, our guide made us turn back in order to pass it at its most accessible point. After crossing it, not without difficulty, we soon came upon fresh horse-prints, a sure indication that there were some of those animals in our neighborhood. Emerging from the forest, each took the direction which he thought would lead soonest to an encampment. We all presently arrived at an old house which the traders of the N. W. Company had once constructed, but which had been abandoned for some four or five years. The site of this trading post is the most charming that can be imagined: suffice to say that it is built on the bank of the beautiful river Athabasca, and is surrounded by green and smiling prairies and superb woodlands. Pity there is nobody there to enjoy these rural beauties and to praise, while admiring them, the Author of Nature. We found there Mr. Pillet, and one of Mr. J. M'Donald's party, who had his leg broken by the kick of a horse. After regaling ourselves with pemican and some fresh venison, we set out again, leaving two of the party to take care of the lame man, and went on about eight or nine miles farther to encamp.

On the 18th, we had rain. I took the lead, and after having walked about ten or twelve miles, on the slope of a mountain denuded of trees, I perceived some smoke issuing from a tuft of trees in the bottom of the valley, and near the river. I descended immediately, and reached a small camp,

---

where I found two men who were coming to meet us with four horses. I made them fire off two guns as a signal to the rest of our people who were coming up in the rear, and presently we heard it repeated on the river, from which we were not far distant. We repaired thither, and found two of the men, who had been left at the last ford, and who, having constructed a bark canoe, were descending the river. I made one of them disembark, and took his place, my knee being so painful that I could walk no further. Meanwhile the whole party came up; they loaded the horses, and pursued their route. In the course of the day my companion (an Iroquois) and I, shot seven ducks. Coming, at last, to a high promontory called Millet's rock, we found some of our foot-travellers with Messrs. Stewart and Clarke, who were on horseback, all at a stand, doubting whether it would answer to wade round the base of the rock, which dipped in the water. We sounded the stream for them, and found it fordable. So they all passed round, thereby avoiding the inland path, which is excessively fatiguing by reason of the hills, which it is necessary perpetually to mount and descend. We encamped, to the number of seven, at the entrance of what at high water might be a lake, but was then but a flat of blackish sand, with a narrow channel in the centre. Here we made an excellent supper on the wild ducks, while those who were behind had nothing to eat.

## CHAPTER XXIV

Arrival at the Fort of the Mountains—Description of this Post—Some Details in Regard to the Rocky Mountains —Mountain Sheep, &c.—Continuation of the Journey —Unhappy Accident—Reflections—News from Canada—Hunter's Lodge—Pimbina and Red Deer Rivers.

ON the 19th we raised our camp and followed the shore of the little dry lake, along a smooth sandy beach, having abandoned our little bark canoe, both because it had become nearly unserviceable, and because we knew ourselves to be very near the Rocky Mountains House. In fact, we had not gone above five or six miles when we discerned a column of smoke on the opposite side of the stream. We immediately forded across, and arrived at the post, where we found Messrs. M'Donald, Stuart, and M'Kenzie, who had preceded us only two days.

The post of the Rocky Mountains, in English, Rocky Mountains House, is situated on the shore of the little lake I have mentioned, in the midst of a wood, and is surrounded, except on the water side, by steep rocks, inhabited only by the mountain sheep and goat. Here is seen in the west the chain of the Rocky Mountains, whose summits are covered with perpetual snow. On the lake side, Millet's Rock, of which I have spoken above, is in full view, of an immense height, and resembles the front of a huge church seen in perspective. The post was under the charge of a Mr. Decoigne. He does not procure many furs for the company, which has only established the house as a provision depôt, with the view of facilitating the passage of the mountains to those of its employés who are repairing to, or returning from, the Columbia.

People speak so often of the Rocky Mountains, and appear to know so little about them, that the reader will naturally desire me to say here a word on that subject. If we are to credit travellers, and the most recent maps, these mountains extend nearly in a straight line, from the 35th or 36th degree of north latitude, to the mouth of the Unjighah, or M'Kenzie's river, in the Arctic ocean, in latitude 65° or 66° N. This distance of thirty degrees of latitude, or seven hundred and fifty leagues, equivalent to two thousand two hundred and fifty English miles or thereabouts, is, however, only the mean side of a right-angled triangle, the base of which occupies twenty-six degrees of longitude, in latitude 35° or 36°, that is to say, is about sixteen hundred miles long, while the chain of mountains forms the hypotenuse; so that the real, and as it were diagonal, length of the

chain, across the continent, must be very near three thousand miles from S. E. to N. W. In such a vast extent of mountains, the perpendicular height and width of base must necessarily be very unequal. We were about eight days in crossing them; whence I conclude, from our daily rate of travel, that they may have, at this point, i. e., about latitude 54°, a base of two hundred miles. The geographer Pinkerton is assuredly mistaken, when he gives these mountains an elevation of but three thousand feet above the level of the sea; from my own observations I would not hesitate to give them six thousand; we attained, in crossing them, an elevation probably of fifteen hundred feet above the valleys, and were not, perhaps, nearer than half way of their total height, while the valleys themselves must be considerably elevated above the level of the Pacific, considering the prodigious number of rapids and falls which are met in the Columbia, from the first falls to Canoe river. Be that as it may, if these mountains yield to the Andes in elevation and extent, they very much surpass in both respects the Apalachian chain, regarded until recently as the principal mountains of North America: they give rise, accordingly, to an infinity of streams, and to the greatest rivers of the continent.

They offer a vast and unexplored field to natural history: no botanist, no mineralogist, has yet examined them. The first travellers called them the Glittering mountains, on account of the infinite number of immense rock crystals, which, they say, cover their surface, and which, when they are not covered with snow, or in the bare places, reflect to an immense distance the rays of the sun. The name of Rocky mountains was given them, probably, by later travellers, in consequence of the enormous isolated rocks which they offer here and there to the view. In fact, Millet's rock, and M'Gillivray's above all, appeared to me wonders of nature. Some think that they contain metals, and precious stones.

With the exception of the mountain sheep and goat, the animals of the Rocky mountains, if these rocky passes support any, are not better known than their vegetable and mineral productions. The mountain sheep resorts generally to steep rocks, where it is impossible for men or even for wolves to reach them: we saw several on the rocks which surround the Mountain House. This animal has great curved horns, like those of the domestic ram: its wool is long, but coarse; that on the belly is the finest and whitest. The Indians who dwell near the mountains, make blankets of it, similar to ours, which they exchange with the Indians of the Columbia for fish, and other commodities. The ibex, or mountain goat, frequents, like the sheep, the top and the declivities of the rocks: it differs from the sheep in having hair instead of wool, and straight horns projecting backward, instead of curved ones. The color is also different. The natives soften the horns of these animals by boiling, and make platters, spoons, &c., of them, in a very artistic manner.

Mr. Decoigne had not sufficient food for us, not having expected so many people to arrive at once. His hunters were then absent on Smoke river (so called by some travellers who saw in the neighborhood a volcanic mountain belching smoke), in quest of game. We were therefore compelled to kill one of the horses for food. We found no birch bark either to make canoes, and set the men to work in constructing some of wood. For want of better materials, we were obliged to use poplar. On the 22d, the three men whom we had left at the old-house, arrived in a little canoe made of two elk-skins sewed together, and stretched like a drum, on a frame of poles.

On the 24th, four canoes being ready, we fastened them together two and two, and embarked, to descend the river to an old post called Hunter's Lodge, where Mr. Decoigne, who was to return with us to Canada, informed us that we should find some bark canoes en cache, placed there for

the use of the persons who descend the river. The water was not deep, and the stream was rapid; we glided along, so to speak, for ten or a dozen leagues, and encamped, having lost sight of the mountains. In proportion as we advanced, the banks of the river grew less steep, and the country became more agreeable.

On the 25th, having only a little pemican left, which we wished to keep, we sent forward a hunter in the little elk-skin canoe, to kill some game. About ten o'clock, we found him waiting for us with two moose that he had killed. He had suspended the hearts from the branch of a tree as a signal. We landed some men to help him in cutting up and shipping the game. We continued to glide safely down. But toward two o'clock, P. M., after doubling a point, we got into a considerable rapid, where, by the maladroitness of those who managed the double pirogue in which I was, we met with a melancholy accident. I had proposed to go ashore, in order to lighten the canoes, which were loaded to the water's edge; but the steersman insisted that we could go down safe, while the bow-man was turning the head of the pirogue toward the beach; by this manoeuvre we were brought athwart the stream, which was carrying us fast toward the falls; just then our frail bark struck upon a sunken rock; the lower canoe broke amid-ships and filled instantly, and the upper one being lighted, rolled over, precipitating us all into the water. Two of our men, Olivier Roy Lapensée and André Bélanger, were drowned; and it was not without extreme difficulty that we succeeded in saving Messrs. Pillet and Wallace, as well as a man named J. Hurteau. The latter was so far gone that we were obliged to have recourse to the usual means for the resuscitation of drowned persons. The men lost all their effects; the others recovered but a part of theirs; and all our provisions went. Toward evening, in ascending the river (for I had gone about two miles below, to recover the effects floating down), we found the body of Lapensée. We interred it as decently as we could, and planted at his grave a cross, on which I inscribed with the point of my knife, his name and the manner and date of his death. Bélanger's body was not found. If anything could console the shades of the departed for a premature and unfortunate end, it would be, no doubt, that the funeral rites have been paid to their remains, and that they themselves have given their names to the places where they perished: it is thus that the shade of Palinurus rejoiced in the regions below, at learning from the mouth of the Sibyl, that the promontory near which he was drowned would henceforth be called by his name: *gaudet cognomine terra*. The rapid and the point of land where the accident I have described took place, will bear, and bears already, probably, the name of Lapensée.

On the 26th, a part of our people embarked in the three canoes which remained, and the others followed the banks of the river on foot. We saw in several places some veins of bituminous coal, on the banks between the surface of the water and that of the plain, say thirty feet below the latter; the veins had a dip of about 25°. We tried some and found it to burn well. We halted in the evening near a small stream, where we constructed some rafts, to carry all our people.

On the 27th, I went forward in the little canoe of skins, with the two hunters. We soon killed an elk, which we skinned and suspended the hide, besmeared with blood, from the branch of a tree at the extremity of a point, in order that the people behind, as they came up, might perceive and take in the fruit of our chase. After fortifying ourselves with a little food, we continued to glide down, and encamped for the night near a thick wood where our hunters, from the tracks they observed, had hopes of encountering and capturing some bears. This hope was not realized.

On the 28th, a little after quitting camp, we killed a swan. While I was busy cooking it, the hunters

having plunged into the wood, I heard a rifle-shot, which seemed to me to proceed from a direction opposite to that which they had taken. They returned very soon running, and were extremely surprised to learn that it was not I who had fired it. Nevertheless, the canoes and rafts having overtaken us, we continued to descend the river. Very soon we met a bark canoe, containing two men and a woman, who were ascending the river and bringing letters and some goods for the Rocky Mountains House. We learned from these letters addressed to Mr. Decoigne, several circumstances of the war, and among others the defeat of Captain Barclay on Lake Erie. We arrived that evening at Hunter's Lodge, where we found four new birchbark canoes. We got ready two of them, and resumed our journey down, on the 31st. Mr. Pillet set out before us with the hunters, at a very early hour. They killed an elk, which they left on a point, and which we took in. The country through which we passed that day is the most charming possible; the river is wide, handsome, and bordered with low outjutting points, covered with birch and poplar.

On the 1st of June, in the evening, we encamped at the confluence of the river Pembina. This stream comes from the south, and takes its rise in one of the spurs of the great chain of the Rocky mountains; ascending it for two days, and crossing a neck of land about seventy-five miles, one reaches Fort Augustus, a trading-post on the Saskatchewan river. Messrs. M'Donald and M'Kenzie had taken this route, and had left for us half a sack of pemican in a cache, at the mouth of the river Pembina. After landing that evening, Mr. Stuart and I amused ourselves with angling, but took only five or six small fish.

On the 2d, we passed the confluence of Little Slave Lake river. At eight o'clock in the morning, we met a band or family of Indians, of the Knisteneaux tribe. They had just killed a buffalo, which we bought of them for a small brass-kettle. We could not have had a more seasonable rencontre, for our provisions were all consumed.

On the 3d, we reached Little Red Elk river, which we began to ascend, quitting the Athabasca, or Great Red Elk. This stream was very narrow in its channel, and obstructed with boulders: we were obliged to take to the shore, while some of the men dragged along the canoes. Their method was to lash poles across, and wading themselves, lift the canoes over the rocks—a laborious and infinitely tedious operation. The march along the banks was not less disagreeable: for we had to traverse points of forest where the fire had passed, and which were filled with fallen trees.

Wallace and I having stopped to quench our thirst at a rill, the rest got in advance of us; and we lost our way in a labyrinth of buffalo tracks which we mistook for the trail, so that we wandered about for three hours before we came up with the party, who began to fear for our safety, and were firing signal-guns to direct us. As the river now grew deeper, we all embarked in the canoes, and about evening overtook our hunters, who had killed a moose and her two calves.

We continued our journey on the 4th, sometimes seated in our canoes, sometimes marching along the river on foot, and encamped in the evening, excessively fatigued.

#### CHAPTER XXV

Red Deer Lake — Antoine Déjarlais — Beaver River — N. Nadeau — Moose River — Bridge Lake — Saskatchewan River — Fort Vermilion — Mr. Hallet — Trading-Houses — Beautiful Country — Reflections.

THE 5th of June brought us to the beautiful sheet of water called Red Deer lake, irregular in shape, dotted with islands, and about forty miles in length by thirty in its greatest width. We met, about the middle of it, a small canoe conducted by two young women. They were searching for

---

gulls' and ducks' eggs on the islands, this being the season of laying for those aquatics. They told us that their father was not far distant from the place where we met them. In fact, we presently saw him appear in a canoe with his two boys, rounding a little isle. We joined him, and learned that his name was Antoine Déjarlais; that he had been a guide in the services of the Northwest Company, but had left them since 1805. On being made acquainted with our need of provisions, he offered us a great quantity of eggs, and made one of our men embark with his two daughters in their little canoe, to seek some more substantial supplies at his cabin, on the other side of the lake. He himself accompanied us as far as a portage of about twenty-five yards formed at the outlet of the lake by a Beaver dam. Having performed the portage, and passed a small pond or marsh, we encamped to await the return of our man. He arrived the next morning, with Déjarlais, bringing us about fifty pounds of dried venison and from ten to twelve pounds of tallow. We invited our host to breakfast with us: it was the least we could do after the good offices he had rendered us. This man was married to an Indian woman, and lived with his family, on the produce of his chase; he appeared quite contented with his lot. Nobody at least disputed with him the sovereignty of Red Deer lake, of which he had, as it were, taken possession. He begged me to read for him two letters which he had had in his possession for two years, and of which he did not yet know the contents. They were from one of his sisters, and dated at Verchères, in Canada. I even thought that I recognised the handwriting of Mr. L. G. Labadie, teacher of that parish. At last, having testified to this good man, in suitable terms, our gratitude for the services he had rendered us, we quitted him and prosecuted our journey.

After making two portages, we arrived on the banks of Beaver river, which was here but a rivulet. It is by this route that the canoes ordinarily pass to reach Little Slave lake and the Athabasca country, from the head of Lake Superior, via., Cumberland House, on English river. We were obliged by the shallowness of the stream, to drag along our canoes, walking on a bottom or beach of sand, where we began to feel the importunity of the mosquitoes. One of the hunters scoured the woods for game but without success. By-and-by we passed a small canoe turned bottom up and covered with a blanket. Soon after we came to a cabin or lodge, where we found an old Canadian hunter named Nadeau. He was reduced to the last stage of weakness, having had nothing to eat for two days. Nevertheless, a young man who was married to one of his daughters, came in shortly after, with the good news that he had just killed a buffalo; a circumstance which determined us to encamp there for the night. We sent some of our men to get in the meat. Nadeau gave us half of it, and told us that we should find, thirty miles lower down, at the foot of a pine tree, a cache, where he had deposited ten swan-skins, and some of martin, with a net, which he prayed us to take to the next trading-post. We quitted this good fellow the next morning, and pursued our way. Arriving at the place indicated, we found the cache, and took the net, leaving the other articles. A short distance further, we came to Moose river, which we had to ascend, in order to reach the lake of that name. The water in this river was so low that we were obliged entirely to unload the canoes, and to lash poles across them, as we had done before, that the men might carry them on their shoulders over the places where they could not be floated. Having distributed the baggage to the remainder of the hands, we pursued our way through the woods, under the guidance of Mr. Decoigne.

This gentleman, who had not passed here for nineteen years, soon lost his way, and we got separated into small parties, in the course of the afternoon, some going one way, and some another, in

search of Moose lake. But as we had outstripped the men who carried the baggage and the small stock of provision that old Nadeau had given us, Mr. Wallace and I thought it prudent to retrace our steps and keep with the rear-guard. We soon met Mr. Pillet and one of the hunters. The latter, ferreting the woods on both sides of a trail that he had discovered, soon gave a whoop, to signify that we should stop. Presently emerging from the underwood, he showed us a horsewhip which he had found, and from which and from other unmistakeable signs, he was confident the trail would lead either to the lake or a navigable part of the river. The men with the baggage then coming up, we entered the thicket single file, and were conducted by this path, in a very short time, to the river, on the banks of which were visible the traces of an old camping ground. The night was coming on; and soon after, the canoes arrived, to our great satisfaction; for we had begun to fear that they had already passed. The splashing of their paddles was a welcome sound, and we who had been wise enough to keep behind, all encamped together.

Very early on the 8th, I set out accompanied by one of the hunters, in quest of Messrs. D. Stuart, Clarke and Decoigne, who had gone on ahead, the night previous. I soon found MM. Clarke and M'Gillis encamped on the shore of the lake. The canoes presently arrived and we embarked; MM. Stuart and Decoigne rejoined us shortly after, and informed us that they had bivouacked on the shore of Lac Puant, or Stinking lake, a pond situated about twelve miles E. N. E. from the lake we were now entering. Finding ourselves thus reunited, we traversed the latter, which is about eighteen miles in circuit, and has very pretty shores. We encamped, very early, on an island, in order to use old Nadeau's fishing net. I visited it that evening and brought back three carp and two water-hens. We left it set all night, and the next morning found in it twenty white-fish. Leaving camp at an early hour, we gained the entrance of a small stream that descends between some hills of moderate elevation, and there stopped to breakfast. I found the white-fish more delicious in flavor, even than the salmon. We had again to foot it, following the bank of this little stream. It was a painful task, as we were obliged to open a path through thick underbrush, in the midst of a rain that lasted all day and kept us drenched. Two men being left in each canoe, conveyed them up the river about thirty miles, as far as Long lake — a narrow pond, on the margin of which we spent the night.

On the 10th, we got through this lakelet, and entered another small stream, which it was necessary to navigate in the same manner as the preceding, and which conducted us to Bridge lake. The latter received its name from a sort of bridge or causeway, formed at its southern extremity, and which is nothing more than a huge beaver dam. We found here a lodge, where were a young man and two women, who had charge of some horses appertaining to one of the Hudson's Bay trading houses. We borrowed of them half a dozen pack horses, and crossed the bridge with them. After surmounting a considerable hill, we reached an open, level, and dry prairie, which conducted us in about two hours to an ancient trading-post on the banks of the Saskatchewan. Knowing that we were near a factory, we made our toilets as well as we could, before arriving. Toward sundown, we reached Fort Vermilion, which is situated on the bank of a river, at the foot of a superb hill. We found at this post some ninety persons, men, women, and children; these people depend for subsistence on the chase, and fishing with hooks and lines, which is very precarious. Mr. Hallet, the clerk in charge was absent, and we were dismayed to hear that there were no provisions on the place: a very disagreeable piece of news for people famished as we were. We had been led to suppose that if we could only reach the plains of the Saskatchewan we should be in the land of

---

plenty. Mr. Hallet, however, was not long in arriving: he had two quarters of buffalo meat brought out, which had been laid in ice, and prepared us supper. Mr. Hallet was a polite sociable man, loving his ease passably well, and desirous of living in these wild countries, as people do in civilized lands. Having testified to him our surprise at seeing in one of the buildings a large cariole, like those of Canada, he informed us that having horses, he had had this carriage made in order to enjoy a sleigh-ride; but that the workmen having forgot to take the measure of the doors of the building before constructing it, it was found when finished, much too large for them, and could never be got out of the room where it was; and it was like to remain there a long time, as he was not disposed to demolish the house for the pleasure of using the cariole.

By the side of the factory of the Northwest Company, is another belonging to the Company of Hudson's Bay. In general these trading-houses are constructed thus, one close to the other, and surrounded with a common palisade, with a door of communication in the interior for mutual succor, in case of attack on the part of the Indians. The latter, in this region, particularly the Blackfeet, Gros-ventres, and those of the Yellow river, are very ferocious: they live by the chase, but bring few furs to the traders; and the latter maintain these posts principally to procure themselves provisions.

On the 11th, after breakfasting at Fort Vermilion, we resumed our journey, with six or seven pounds of tallow for our whole stock of food. This slender supply brought us through to the evening of the third day, when we had for supper two ounces of tallow each.

On the 14th, in the morning, we killed a wild goose, and toward midday, collected some flag-root and chouxgras, a wild herb, which we boiled with the small game: we did not forget to throw into the pot the little tallow we had left, and made a delicious repast. Toward the decline of day, we had the good luck to kill a buffalo.

On the 15th, MM. Clarke and Decoigne having landed during our course, to hunt, returned presently with the agreeable intelligence that they had killed three buffaloes. We immediately encamped, and sent the greater part of the men to cut up the meat and jerk it. This operation lasted till the next evening, and we set forward again in the canoes on the 17th, with about six hundred pounds of meat half cured. The same evening we perceived from our camp several herds of buffaloes, but did not give chase, thinking we had enough meat to take us to the next post.

The river Saskatchewan flows over a bed composed of sand and marl, which contributes not a little to diminish the purity and transparency of its waters, which, like those of the Missouri, are turbid and whitish. Except for that it is one of the prettiest rivers in the world. The banks are perfectly charming, and offer in many places a scene the fairest, the most smiling, and the best diversified that can be seen or imagined: hills in varied forms, crowned with superb groves; valleys agreeably embrowned, at evening and morning, by the prolonged shadow of the hills, and of the woods which adorn them; herds of light-limbed antelopes, and heavy colossal buffalo — the former bounding along the slopes of the hills, the latter trampling under their heavy feet the verdure of the plains; all these champaign beauties reflected and doubled as it were, by the waters of the river; the melodious and varied song of a thousand birds, perched on the tree-tops; the refreshing breath of the zephyrs; the serenity of the sky; the purity and salubrity of the air; all, in a word, pours contentment and joy into the soul of the enchanted spectator. It is above all in the morning, when the sun is rising, and in the evening when he is setting, that the spectacle is really ravishing. I could not detach my regards from that superb picture, till the nascent obscurity had obliterated

---

its perfection. Then, to the sweet pleasure that I had tasted, succeeded a triste, not to say, a sombre, melancholy. How comes it to pass, I said to myself, that so beautiful a country is not inhabited by human creatures? The songs, the hymns, the prayers, of the laborer and the artisan, shall they never be heard in these fine plains? Wherefore, while in Europe, and above all in England, so many thousands of men do not possess as their own an inch of ground, and cultivate the soil of their country for proprietors who scarcely leave them whereon to support existence; — wherefore — do so many millions of acres of apparently fat and fertile land, remain uncultivated and absolutely useless? Or, at least, why do they support only herds of wild animals? Will men always love better to vegetate all their lives on an ungrateful soil, than to seek afar fertile regions, in order to pass in peace and plenty, at least the last portion of their days? But I deceive myself; it is not so easy as one thinks, for the poor man to better his condition: he has not the means of transporting himself to distant countries, or he has not those of acquiring a property there; for these untilled lands, deserted, abandoned, do not appertain to whoever wishes to establish himself upon them and reduce them to culture; they have owners, and from these must be purchased the right of rendering them productive! Besides one ought not to give way to illusions: these countries, at times so delightful, do not enjoy a perpetual spring; they have their winter, and a rigorous one; a piercing cold is then spread through the atmosphere; deep snows cover the surface; the frozen rivers flow only for the fish; the trees are stripped of their leaves and hung with icicles; the verdure of the plains has disappeared; the hills and valleys offer but a uniform whiteness; Nature has lost all her beauty; and man has enough to do, to shelter himself from the injuries of the inclement season.

#### CHAPTER XXVI

Fort Montée — Cumberland House — Lake Bourbon — Great Winipeg Rapids — Lake Winipeg — Trading— House — Lake of the Woods — Rainy Lake House, &c.

ON the 18th of June (a day which its next anniversary was to render forever celebrated in the annals of the world), we re-embarked at an early hour: and the wind rising, spread sail, a thing we had not done before, since we quitted the river Columbia. In the afternoon the clouds gathered thick and black, and we had a gust, accompanied with hail, but of short duration; the weather cleared up again, and about sundown we arrived at Le Fort de la Montée, so called, on account of its being a dépôt, where the traders going south, leave their canoes and take pack-horses to reach their several posts. We found here, as at Fort Vermilion, two trading-houses joined together, to make common cause against the Indians; one belonging to the Hudson's Bay Company, the other to the company of the Northwest: the Hudson's Bay house being then under the charge of a Mr. Prudent, and the N. W. Company's under a Mr. John M'Lean. Mr. de Roche Blave, one of the partners of the last company having the superintendence of this district, where he had wintered, had gone to Lake Superior to attend the annual meeting of the partners. There were cultivated fields around the house; the barley and peas appeared to promise an abundant harvest. Mr. M'Lean received us as well as circumstances permitted; but that gentleman having no food to give us, and our buffalo meat beginning to spoil, we set off the next morning, to reach Cumberland house as quick as possible. In the course of the day, we passed two old forts, one of which had been built by the French before the conquest of Canada. According to our guide, it was the most distant western post that the French traders ever had in the northwestern wilderness. Toward evening we shot a moose. The aspect of the country changes considerably since leaving Montée; the banks of the river rise more boldly, and the country is covered with forests.

---

On the 20th, we saw some elms — a tree that I had not seen hitherto, since my departure from Canada. We reached Fort Cumberland a little before the setting of the sun. This post, called in English Cumberland House, is situated at the outlet of the Saskatchewan, where it empties into English lake, between the 53d and 54th degrees of north latitude. It is a depot for those traders who are going to Slave lake or the Athabasca, or are returning thence, as well as for those destined for the Rocky mountains. It was under the orders of Mr. J. D. Campbell, who having gone down to Fort William, however, had left it in charge of a Mr. Harrison. There are two factories, as at Vermilion and la Montée. At this place the traders who resort every year to Fort William, leave their half-breed or Indian wives and families, as they can live here at little expense, the lake abounding in fish. Messrs. Clarke and Stuart, who were behind, arrived on the 22d, and in the evening we had a dance. They gave us four sacks of pemican, and we set off again, on the 23d, at eight A. M. We crossed the lake, and entered a small river, and having made some eighty or ninety miles under sail, encamped on a low shore, where the mosquitoes tormented us horribly all night. On the 24th, we passed Muddy lake, and entered Lake Bourbon, where we fell in with a canoe from York factory, under the command of a Mr. Kennedy, clerk of the Hudson's Bay Company. We collected some dozens of gull's eggs, on the rocky islands of the lake: and stopping on one of the last at night, having a little flour left, Mr. Decoigne and I amused ourselves in making fritters for the next day's breakfast: an occupation, which despite the small amount of materials, employed us till we were surprised by the daybreak; the night being but brief at this season in that high latitude. At sunrise on the 25th, we were again afloat, passed Lake Travers, or Cross lake, which empties into Lake Winipeg by a succession of rapids; shot down these cascades without accident, and arrived, toward noon, at the great rapid Ouénipic or Winipeg, which is about four miles long. We disembarked here, and the men worked down the canoes. At the foot of this rapid, which is the inlet of Winipeg, we found an old Canadian fisherman, who called himself King of the lake. He might fairly style himself king of the fish, which are abundant and which he alone enjoyed. Having made a boil, and regaled ourselves with excellent sturgeon, we left this old man, and entered the great lake Winipeg, which appeared to me like a sea of fresh water. This lake is now too well known to need a particular description: I will content myself with saying that it visibly yields in extent only to Lake Superior and Great Slave lake: it has for tributaries several large rivers, and among others the Saskatchewan, the Winipeg, in the east; and Red river in the south; and empties into Hudson's bay by the Nelson, N. N. E., and the Severn, E. N. E. The shores which it bathes are generally very low; it appears to have little depth, and is dotted with a vast number of islands, lying pretty close to land. We reached one called Egg island, whence it was necessary to cross to the south to reach the main; but the wind was so violent that it was only at decline of day that we could perform the passage. We profited by the calm, to coast along all day and a part of the night of the 26th; but to pay for it, remained in camp on the 27th, till evening: the wind not suffering us to proceed. The wind having appeared to abate somewhat after sunset, we embarked, but were soon forced to land again. On the 28th, we passed the openings of several deep bays, and the isles of St. Martin, and camped at the bottom of a little bay, where the mosquitoes did not suffer us to close our eyes all night. We were rejoiced when dawn appeared, and were eager to embark, to free ourselves from these inconvenient guests. A calm permitted us that day to make good progress with our oars, and we camped at Buffalo Strait. We saw that day two Indian wigwams.

---

The 30th brought us to Winipeg river, which we began to ascend, and about noon reached Fort Bas de la Rivière. This trading post had more the air of a large and well-cultivated farm, than of a fur traders' factory: a neat and elegant mansion, built on a slight eminence, and surrounded with barns, stables, storehouses, &c., and by fields of barley, peas, oats, and potatoes, reminded us of the civilized countries which we had left so long ago. Messrs. Crébassa and Kennedy, who had this post in charge, received us with all possible hospitality, and supplied us with all the political news which had been learned through the arrival of canoes from Canada.

They also informed us that Messrs. M'Donald and de Rocheblave had passed, a few days before our arrival, having been obliged to go up Red river to stop the effusion of blood, which would probably have taken place but for their intervention, in the colony founded on that river by the earl of Selkirk. Mr. Miles M'Donnell, the governor of that colony, or rather of the Assiniboyne district, had issued a proclamation forbidding all persons whomsoever, to send provisions of any kind out of the district. The Hudson's Bay traders had conformed to this proclamation, but those of the Northwest Company paid no attention to it, thinking it illegal, and had sent their servants, as usual to get provisions up the river. Mr. M'Donnell having heard that several hundred sacks of pemican were laid up in a storehouse under the care of a Mr. Pritchard, sent to require their surrender. Pritchard refused to deliver them, whereupon Mr. M'Donnell had them carried off by force. The traders who winter on Little Slave lake, English river, the Athabasca country, &c., learning this, and being aware that they would not find their usual supply at Bas de la Rivière, resolved to go and recover the seized provisions by force, if they were not peaceably given up. Things were in this position when Messrs. de Rocheblave and M'Donald arrived. They found the Canadian voyageurs in arms, and ready to give battle to the colonists, who persisted in their refusal to surrender the bags of pemican. The two peacemakers visited the governor, and having explained to him the situation in which the traders of the Northwest Company would find themselves, by the want of necessary provisions to enable them to transport their peltries to Fort William, and the exasperation of their men, who saw no other alternative for them, but to get possession of those provisions or to perish of hunger, requested him to surrender the same without delay. Mr. M'Donnell, on his part, pointed out the misery to which the colonists would be reduced by a failure in the supply of food. In consequence of these mutual representations, it was agreed that one half of the pemican should be restored, and the other half remain for the use of the colonists. Thus was arranged, without bloodshed, the first difficulty which occurred between the rival companies of the Northwest, and of Hudson's Bay.

Having spent the 1st of July in repairing our canoes, we re-embarked on the 2d, and continued to ascend Winipeg river, called also White river, on account of the great number of its cascades, which being very near each other, offer to the sight an almost continuous foam. We made that day twenty-seven portages, all very short. On the 3d, and 4th, we made nine more, and arrived on the 5th, at the Lake of the Woods. This lake takes its name from the great number of woody islands with which it is dotted. Our guide pointed out to me one of these isles, telling me that a Jesuit father had said mass there, and that it was the most remote spot to which those missionaries had ever penetrated. We encamped on one of the islands. The next day the wind did not allow us to make much progress. On the 7th, we gained the entrance of Rainy Lake river. I do not remember ever to have seen elsewhere so many mosquitoes as on the banks of this river. Having landed near a little rapid to lighten the canoes, we had the misfortune, in getting through the brush, to

---

dislodge these insects from under the leaves where they had taken refuge from the rain of the night before; they attached themselves to us, followed us into the canoes, and tormented us all the remainder of the day.

On the 8th, at sunset, we reached Rainy Lake House. This fort is situated about a mile from a considerable rapid. We saw here cultivated fields and domestic animals, such as horses, oxen, cows, &c. The port is a *dépôt* for the wintering parties of the Athabasca, and others still more remote, who bring to it their peltries and return from it with their outfits of merchandise. Mr. John Dease, to whose charge the place had been confided, received us in the most friendly manner possible; and after having made an excellent supper, we danced a part of the evening.

We took leave of Mr. Dease on the 10th, well provided for the journey, and passing round Rainy Lake falls, and then traversing the lake itself, which I estimated to be forty miles long, we encamped at the entrance of a small river. On the next day we pursued our way, now thridding streams impeded with wild rice, which rendered our progress difficult, now traversing little lakes, now passing straits where we scarcely found water to float our canoes. On the 13th, we encamped near Dog Portage ( *Portage des chiens* ), where, from not having followed the advice of Mr. Dease, who had counselled us to take along a bag of pemican, we found ourselves absolutely without food.

#### CHAPTER XXVII

Arrival at Fort William — Description of the Fort — News from the River Columbia

STARVING men are early-risers. We set out on the 14th before day, and effected the portage, which is long and difficult. At the foot of the rapid we found a sort of restaurant or cabaret, kept by a man named Boucher. We treated the men to a little *eau de vie*, and breakfasted on some detestable sausages, poisoned with salt.

After this wretched repast, we set out again, and passed toward noon, the Mountain Portage. Here the river Kaministiquia flings itself over a rock of immense height, and forms a fall scarcely less curious to see than that of Niagara. Below, the succession of falls and rapids is constant, so that we made no fewer than thirty-six portages in the course of the day. Nevertheless we pursued our laborious way with good cheer, and without a murmur from our Canadian boatmen, who kept their spirits up by singing their voyageur songs. At last, at about nine o'clock in the evening, we arrived at Fort William.

Fort William is situated on Lake Superior, at the mouth of the Kaministiquia river, about forty-five miles north of old Grand Portage. It was built in 1805, when the two rival Canadian companies were united, and was named in honor of Mr. (now the Honorable) William M'Gillivray, principal agent of the Northwest Company. The proprietors, perceiving that the old fort of Grand Portage was on the territory claimed by the American government, resolved to demolish it and build another on the British territory. No site appeared more advantageous than the present for the purposes intended; the river is deep, of easy access, and offers a safe harbor for shipping. It is true they had to contend with all the difficulties consequent on a low and swampy soil; but by incredible labor and perseverance, they succeeded in draining the marshes and reducing the loose and yielding soil to solidity.

Fort William has really the appearance of a fort, with its palisade fifteen feet high, and that of a pretty village, from the number of edifices it encloses. In the middle of a spacious square rises a large building elegantly constructed, though of wood, with a long piazza or portico, raised about five feet from the ground, and surmounted by a balcony, extending along the whole front. In the

centre is a saloon or hall, sixty feet in length by thirty in width, decorated with several pieces of painting, and some portraits of the leading partners. It is in this hall that the agents, partners, clerks, interpreters, and guides, take their meals together, at different tables. At each extremity of the apartment are two rooms; two of these are destined for the two principal agents; the other two to the steward and his department. The kitchen and servants' rooms are in the basement. On either side of this edifice, is another of the same extent, but of less elevation; they are each divided by a corridor running through its length, and contain each, a dozen pretty bed-rooms. One is destined for the wintering partners, the other for the clerks. On the east of the square is another building similar to the last two, and intended for the same use, and a warehouse where the furs are inspected and repacked for shipment. In the rear of these, are the lodging-house of the guides, another fur-warehouse, and finally, a powder magazine. The last is of stone, and has a roof covered with tin. At the angle is a sort of bastion, or look-out place, commanding a view of the lake. On the west side is seen a range of buildings, some of which serve for stores, and others for workshops; there is one for the equipment of the men, another for the fitting out of the canoes, one for the retail of goods, another where they sell liquors, bread, pork, butter, &c., and where a treat is given to the travellers who arrive. This consists in a white loaf, half a pound of butter, and a gill of rum. The voyageurs give this tavern the name of Cantine salope. Behind all this is another range, where we find the counting-house, a fine square building, and well-lighted; another store-house of stone, tin-roofed; and a jail, not less necessary than the rest. The voyageurs give it the name of pot au beurre, the butter-tub. Beyond these we discover the shops of the carpenter, the cooper, the tinsmith, the blacksmith, &c.; and spacious yards and sheds for the shelter, reparation, and construction of canoes. Near the gate of the fort, which is on the south, are the quarters of the physician, and those of the chief clerk. Over the gate is a guard-house.

As the river is deep at its entrance, the company has had a wharf constructed, extending the whole length of the fort, for the discharge of the vessels which it keeps on Lake Superior, whether to transport its furs from Fort William to the Saut Ste. Marie, or merchandise and provisions from Saut Ste. Marie to Fort William. The land behind the fort and on both sides of it, is cleared and under tillage. We saw barley, peas, and oats, which had a very fine appearance. At the end of the clearing is the burying-ground. There are also, on the opposite bank of the river, a certain number of log-houses, all inhabited by old Canadian voyageurs, worn out in the service of the company, without having enriched themselves. Married to women of the country, and incumbered with large families of half-breed children, these men prefer to cultivate a little Indian corn and potatoes, and to fish, for a subsistence, rather than return to their native districts, to give their relatives and former acquaintance certain proofs of their misconduct or their imprudence.

Fort William is the grand depôt of the Northwest Company for their interior posts, and the general rendezvous of the partners. The agents from Montreal and the wintering partners assemble here every summer, to receive the returns of the respective outfits, prepare for the operations of the ensuing season, and discuss the general interests of their association. The greater part of them were assembled at the time of our arrival. The wintering hands who are to return with their employers pass also a great part of the summer here; they form a great encampment on the west side of the fort, outside the palisades. Those who engage at Montreal to go no further than Fort William or Rainy lake, and who do not winter, occupy yet another space, on the east side. The winterers, or hivernants, give to these last the name of mangeurs de lard, or pork-eaters. They

---

are also called comers-and-goers. One perceives an astonishing difference between these two camps, which are composed sometimes of three or four hundred men each; that of the pork-eaters is always dirty and disorderly, while that of the winterers is clean and neat.

To clear its land and improve its property, the company inserts a clause in the engagement of all who enter its service as canoe-men, that they shall work for a certain number of days during their stay at Fort William. It is thus that it has cleared and drained the environs of the fort, and has erected so many fine buildings. But when a hand has once worked the stipulated number of days, he is for ever after exempt, even if he remain in the service twenty or thirty years, and should come down to the fort every summer.

They received us very courteously at Fort William, and I perceived by the reception given to myself in particular, that thanks to the Chinook dialect of which I was sufficiently master, they would not have asked better than to give me employment, on advantageous terms. But I felt a great deal more eagerness to arrive in Montreal, than desire to return to the River Columbia.

A few days after we reached Fort William, Mr. Keith made his appearance there from Fort George, or Astoria, with the news of the arrival of the "Isaac Todd" in the Columbia river. This vessel, which was a dull sailer, had been kept back a long time by contrary winds in doubling Cape Horn, and had never been able to rejoin the vessels-of-war, her consorts, from which she was then separated. When she reached the rendezvous at the island of Juan Fernandez, finding that the three ships-of-war had sailed, the captain and passengers, as they were short of provisions, determined to range the coast. Entering the harbor of Monterey, on the coast of California, in order to obtain provisions, they learned that there was an English vessel-of-war in distress, in the bay of San Francisco. They repaired thither accordingly, and found, to their great surprise, that it was the sloop Raccoon. This vessel, in getting out of the River Columbia, had touched on the bar, with such violence, that a part of her false keel was carried away; and she had with difficulty made San Francisco, with seven feet of water in the hold, although her crew had been constantly at the pumps. Captain Black, finding it impossible to repair his ship, had decided to abandon her, and to cross the continent to the Gulf of Mexico, thence to reach some of the British West India islands. However, on the arrival of the Isaac Todd, means were found to careen the vessel and repair the damage. The Isaac Todd then pursued her voyage and entered the Columbia on the 17th of April, thirteen months after her departure from England.

#### CHAPTER XXVIII

Departure from Fort William—Navigation on Lake Superior—Michipicoton Bay—Meeting a Canoe—Batchawainon Bay—Arrival at Saut Ste. Marie—Occurrences there—Departure—Lake Huron—French River—Lake Nipissing—Ottawa River—Kettle Falls—Rideau River—Long-Saut—Arrival in Montreal—Conclusion.

ON the 20th of July, in the evening, Mr. D. Stuart notified me that he should start the next morning for Montreal, in a light canoe. I immediately wrote to my relatives: but the next morning Mr. Stuart told me that I was to be myself the bearer of my letters, by embarking with him. I got ready my effects, and toward evening we quitted Fort William, with fourteen stout voyageurs to man our large canoe, and were soon floating on the bosom of the largest body of fresh water on the surface of the globe. We counted six passengers, namely, Messrs. D. Stuart, D. M'Kenzie, J. M'Donald, J. Clarke, myself, and a little girl of eight or nine years, who came from Kildonan, on Red river. We passed the first night on one of the islands in Thunder bay, so named on account of

---

the frequent storms, accompanied with lightning and thunder, which burst over it at certain seasons of the year. On the 22d and 23d, we continued to range the southern coast of Lake Superior. The navigation of this superb lake would be extremely agreeable but for the thick fogs which reign during a part of the day, and do not permit a rapid progress. On the 24th, we dined at a small trading establishment called Le Pic, where we had excellent fish.

On the 26th, we crossed Michipicoton bay, which, at its entrance, may be nine miles wide, and twenty fathoms deep. As we were nearing the eastern point, we met a small canoe, having on board Captain M'Cargo, and the crew of one of the schooners owned by the company. Mr. M'Cargo informed us that he had just escaped from Saut Ste. Marie, whither the Americans had sent a detachment of one hundred and fifty men; and that having been obliged to abandon his schooner, he had set fire to her. In consequence of this news it was resolved that the canoe on which we were proceeding, should return to Fort William. I embarked with Mr. Stuart and two men, in Captain M'Cargo's canoe, while he and his crew took our places. In the haste and confusion of this exchange, which was made on the lake, they gave us a ham, a little tea and sugar, and a bag containing about twenty-five pounds of flour, but forgot entirely a kettle, knives, forks, and so on, all articles which Mr. M'Cargo had not time to take when he left Saut Ste. Marie. We subsisted miserably in consequence for two days and a half that we continued to coast the lake before reaching any post. We moistened in the bag a little flour, and having kneaded it, made cakes, which we baked on flat stones by our camp fire.

On the 29th, we reached Batchawainon, where we found some women, who prepared us food and received us well. It is a poor little post, situated at the bottom of a sandy cove, which offers nothing agreeable to the eye. Mr. Frederic Goedike, who resided here, was gone to see what had taken place at Saut Ste. Marie. He returned the next day, and told us that the Americans had come, with a force of one hundred and fifty men, under the command of Major Holmes; and that after having pillaged all that they considered worth taking, of the property of the N. W. Company and that of a Mr. Johnston, they had set fire to the houses, warehouses, &c., belonging to the company and to that gentleman, and retired, without molesting any other person. Our canoe arrived from Fort William in the evening, with that of Mr. M'Gillivray; and on the morrow we all repaired to Saut Ste. Marie, where we saw the ruins which the enemy had left. The houses, stores, and saw-mills of the company were still smoking. The schooner was at the foot of the rapids; the Americans had run her down, but she grounded on a ledge of rocks, whence they could not dislodge her, and so they had burnt her to the water's edge.

Le Saut de Ste. Marie, or as it is shortly called, Saut Ste. Marie, is a rapid at the outlet of Lake Superior, and may be five hundred or six hundred yards wide; its length may be estimated at three quarters of a mile, and the descent of the water at about twenty feet. At the lower extremity the river widens to about a mile, and here there are a certain number of houses. The north bank belongs to Great Britain; the southern to the United States. It was on the American side that Mr. Johnston lived. Before the war he was collector of the port for the American government. On the same side resided a Mr. Nolin, with his family, consisting of three half-breed boys and as many girls, one of whom was passably pretty. He was an old Indian trader, and his house and furniture showed signs of his former prosperity. On the British side we found Mr. Charles Ermatinger, who had a pretty establishment: he dwelt temporarily in a house that belonged to Nolin, but he was building another of stone, very elegant, and had just finished a grist mill. He thought

---

that the last would lead the inhabitants to sow more grain than they did. These inhabitants are principally old Canadian boatmen, married to half-breed or Indian women. The fish afford them subsistence during the greater part of the year, and provided they secure potatoes enough to carry them through the remainder, they are content. It is to be regretted that these people are not more industrious, for the land is very fertile.

On the 1st of August, an express was sent to Michilimackinac (Mackinaw) to inform the commandant thereof what had happened at Saut Ste. Marie. While expecting the return of the messenger, we put ourselves in a state of defence, in case that by chance the Americans should make another irruption. The thing was not improbable, for according to some expressions which fell from one of their number who spoke French, their object was to capture the furs of the Northwest Company, which were expected to arrive shortly from the interior. We invited some Indians, who were camped on Pine Point, at some distance from the Saut, to help us in case of need; which they promised to do. Meanwhile we had no provisions, as everything had been carried off by the American forces, and were obliged to subsist on such brook trout as we could take with hook and line, and on wild raspberries.

On the 4th, the express returned, without having been able to accomplish his mission: he had found the island of Mackinaw so completely blockaded by the enemy, that it was impossible to reach it, without running the greatest risk of being made prisoner.

On the 12th, we heard distinctly the discharges of artillery which our people were firing off at Michilimackinac, although the distance was nearly sixty miles. We thought it was an attempt of the enemy to retake that post, but we afterward learned that it was only a royal salute in honor of the birthday of the prince regent. We learned, however, during our stay at Saut Ste. Marie, that the Americans had really made a descent upon the island, but were compelled to retire with a considerable loss.

On the 19th, some of the partners arrived from Fort William, preceding the flotilla which was coming down richly laden with furs. They sent on Mr. Decoigne in a light canoe, with letters to Montreal, to order provisions to meet this brigade.

On the 21st, the canoe on which I was a passenger, was sent to the mouth of French river, to observe the motions of the enemy. The route lay between a range of low islands, and a shelvy beach, very monotonous and dreary. We remained at the entrance of the aforesaid river till the 25th, when the fleet of loaded canoes, forty-seven in number, arrived there. The value of the furs which they carried could not be estimated at less than a million of dollars: an important prize for the Americans, if they could have laid their hands upon it. We were three hundred and thirty-five men, all well armed; a large camp was formed, with a breast-work of fur-packs, and we kept watch all night. The next morning we began to ascend the French river, and were soon out of reach of the dreaded foe. French river flows from the N. E. and empties into Lake Huron, about one hundred and twenty miles from Saut Ste. Marie. We reached Lake Nipissing, of which it is the outlet, the same evening, and encamped. We crossed that lake on the 27th, made a number of portages, and encamped again, not far from Mattawan.

On the 28th we entered, at an early hour, the river Ottawa, and encamped, in the evening, at the Portage des deux Joachims. This is a grand river, but obstructed by many falls and rapids on its way to join the St. Lawrence; which caused us to make many portages, and so we arrived on the 31st at Kettle falls.

The rock which here arrests the course of the Ottawa , extends from shore to shore, and so completely cuts off the waters, that at the time we passed none was seen falling over, but sinking by subterranean channels, or fissures in the rock, it boiled up below, from seven or eight different openings, not unlike water in a huge caldron, whence the first explorers of the country gave it the name of Chaudière or Caldron falls. Mr. P. Wright resided in this place, where he had a fine establishment and a great number of men employed in cultivating the land, and getting out lumber. We left the Chaudières a little before sunset, and passed very soon the confluence of the Rideau or Curtain river. This river, which casts itself into the Ottawa over a rock twenty-five by thirty feet high, is divided in the middle of the fall by a little island, which parts the waters into two white sheets, resembling a double curtain open in the middle and spreading out below. The coup d'œil is really picturesque; the rays of the setting sun, which struck the waters obliquely as we passed, heightened exceedingly their beauty, and rendered it worthy of a pencil more skilful than mine. We voyaged till midnight, when we stopped to let our men take a little repose. This rest was only for two hours. At sunrise on the 1st September, we reached Long-Saut, where, having procured guides, we passed that dangerous rapid, and set foot on shore near the dwelling-house of a Mr. M'Donell, who sent us milk and fruits for our breakfast. Toward noon we passed the lake of the Two Mountains, where I began to see the mountain of my native isle. About two o'clock, we passed the rapids of St. Ann. Soon after we came opposite Saut St. Louis and the village of Caughnawago , passed that last rapid of so many, and landed at Montreal, a little before sunset. I hastened to the paternal roof, where the family were not less surprised than overjoyed at beholding me. Not having heard of me, since I had sailed from New York, they had believed, in accordance with the common report, that I had been murdered by the savages, with Mr. M'Kay and the crew of the Tonquin: and certainly, it was by the goodness of Providence that I found myself thus safe and sound, in the midst of my relations and friends, at the end of a voyage accompanied by so many perils, and in which so many of my companions had met with an untimely death.

#### CHAPTER XXIX

Present State of the Countries visited by the Author— Correction of Mr. Irving's Statements respecting St. Louis.

THE last chapter closes the original French narrative of my travels around and across the continent, as published thirty-three years ago. The translation follows that narrative as exactly as possible, varying from it only in the correction of a few not very important errors of fact. It speaks of places and persons as I spoke of them then. I would not willingly lose the veri-similitude of this natural and unadorned description, in order to indulge in any new turns of style or more philosophical reflections.

But since that period many changes have occurred in the scenes which I so long ago visited and described. Though they are well known, I may be pardoned for alluding to them.

The natives of the Sandwich islands, who were in a state of paganism at that time, have since adopted a form of Christianity, have made considerable progress in imitating the civilization of Europe, and even, at this moment, begin to entertain the idea of annexation to the United States. It appears, however, that the real natives are rapidly dwindling away by the effects of their vices, which an exotic and ill-assimilated civilization has rather increased than diminished, and to which religion has not succeeded in applying a remedy.

At the mouth of the Columbia, whole tribes, and among them, the Clatsops , have been swept

---

away by disease. Here again, licentious habits universally diffused, spread a fatal disorder through the whole nation, and undermining the constitutions of all, left them an easy prey to the first contagion or epidemic sickness. But missionaries of various Christian sects have labored among the Indians of the Columbia also; not to speak of the missions of the Catholic Church, so well known by the narrative of Father De Smet and others; and numbers have been taught to cultivate the soil, and thus to provide against the famines to which they were formerly exposed from their dependence on the precarious resources of the chase; while others have received, in the faith of Christ, the true principle of national permanence, and a living germ of civilization, which may afterward be developed.

Emigration has also carried to the Oregon the axe of the settler, as well as the canoe and pack of the fur-trader. The fertile valleys and prairies of the Willamet — once the resort of the deer, the elk, and the antelope, are now tilled by the industrious husbandman. Oregon City, so near old "Astoria," whose first log fort I saw and described, is now an Archiepiscopal see, and the capital of a territory, which must soon be a state of the Union.

Of the regions east of the mountains described in my itinerary, little can be said in respect to improvement: they remain in the same wild state. The interest of the Hudson's Bay Company, as an association of fur-traders, is opposed to agricultural improvements, whose operation would be to drive off and extinguish the wild animals that furnish their commerce with its object. But on Lake Superior steamboats have supplanted the birchbark canoe of the Indian and the fur-trader, and at Saut Ste. Marie, especially on the American side, there is now every sign of prosperity. How remote and wild was the region beyond, through which I passed, may be estimated by the fact that in thirty-eight years the onward-rolling wave of our population has but just reached its confines. Canada, although it has not kept pace with the United States, has yet wonderfully advanced in forty years. The valley of the Ottawa, that great artery of the St. Lawrence, where I thought it worth while to notice the residence of an enterprising farmer and lumber merchant, is now a populous district, well cultivated, and sprinkled with villages, towns, and cities.

The reader, in perusing my first chapter, found a description of the city of New York in 1810, and of the neighboring village of Brooklyn. It would be superfluous to establish a comparison at this day. At that time, it will be observed, the mere breaking out of war between America and England was thought to involve the sacrifice of an American commercial establishment on the Pacific, on the ground of its supplies being necessarily cut off (it was supposed), and of the United States government being unable to protect it from hostile attack. At present it suffices to remark that while New York, then so inconsiderable a port, is now perhaps the third city in the world, the United States also, are, undoubtedly, a first-rate power, unassailable at home, and formidable abroad, to the greatest nations.

As in my preface I alluded to Mr. Irving's "Astoria," as reflecting, in my opinion, unjustly, upon the young men engaged in the first expedition to the mouth of the Columbia, it may suffice here to observe, without entering into particulars, that my narrative, which I think answers for its own fidelity, clearly shows that some of them, at least did not want courage, activity, zeal for the interests of the company, while it existed, and patient endurance of hardship. And although it forms no part of the narrative or my voyage, yet as subsequent visits to the West and an intimate knowledge of St. Louis, enable me to correct Mr. Irving's poetical rather than accurate description of that place, I may well do it here. St. Louis now bids fair to rival ere long the "Queen of the West;" Mr.

---

Irving describes her as a small trading place, where trappers, halfbreeds, gay, frivolous Canadian boatmen, &c., &c., congregated and revelled, with that lightness and buoyancy of spirit inherited from their French forefathers; the indolent Creole of St. Louis caring for little more than the enjoyment of the present hour; a motley population, half-civilized, half-barbarous, thrown, on his canvas, into one general, confused (I allow highly picturesque ) mass, without respect of persons: but it is fair to say, with due homage to the talent of the sketcher, who has verged slightly on caricature in the use of that humor-loving pencil admired by all the world, that St. Louis even then contained its noble, industrious, and I may say, princely merchants; it could boast its Chouteaus, Soulands, Céré, Chéniers, Vallées, and La Croix , with other kindred spirits, whose descendants prove the worth of their sires by their own, and are now among the leading business men, as their fathers were the pioneers, of the flourishing St. Louis.

With these remarks, which I make simply as an act of justice in connection with the general subject of the founding of "Astoria," but in which I mean to convey no imputation on the intentional fairness of the accomplished author to whom I have alluded, I take a respectful leave of my readers.

#### APPENDIX

IN Chapter XVII, I promised the reader to give him an account of the fate of some of the persons who left Astoria before, and after its sale or transfer to the British. I will now redeem that pledge. Messrs. Ramsay Crooks, R. M'Lelland, and Robert Stuart, after enduring all sorts of fatigue, dangers and hair-breadth escapes with their lives — all which have been so graphically described by Washington Irving in his "Astoria," finally reached St. Louis and New York.

Mr. Clapp went to the Marquesas Islands, where he entered into the service of his country in the capacity of midshipman under Commodore Porter — made his escape from there in company with Lieutenant Gamble of the Marine corps, by directions of the Commodore, was captured by the British, landed at Buenos Ayres, and finally reached New York.

D. M'Dougall, as a reward for betraying the trust reposed in him by Mr. Astor, was made a Partner of the Northwest Company, crossed the mountains, and died a miserable death at Bas de la Rivière , Winipeg. Donald M'Kenzie, his coadjutor, went back to the Columbia River, where he amassed a considerable fortune, with which he retired, and lived in Chautauque County in this state, where he died a few years since unknown and neglected: — he was a very selfish man, who cared for no one but himself.

It remains only to speak of Messrs. J. C. Halsey, Russell Farnham, and Alfred Seton, who, it will be remembered, embarked with Mr. Hunt on the "Pedlar," in Feb. 1814.

Leaving the River about the 1st of April, they proceeded to the Russian establishment at Sitka, Norfolk Sound, where they fell in with two or three more American vessels, which had come to trade with the natives or to avoid the British cruisers. While there, a sail under British colors appeared, and Mr. Hunt sent Mr. Seton to ascertain who she was. She turned out to be the "Forester," Captain Pigott, a repeating signal ship and letter-of-marque, sent from England in company of a fleet intended for the South Seas. On further acquaintance with the captain, Mr. Seton (from whom I derive these particulars) learned a fact which has never before been published, and which will show the solicitude and perseverance of Mr. ASTOR. After despatching the "Lark" from New York, fearing that she might be intercepted by the British, he sent orders to his correspondent in England to purchase and fit out a British bottom, and despatch her to the Columbia to relieve the

---

establishment.

When Mr. Hunt learned this fact, he determined to leave Mr. Halsey at Sitka, and proceeding himself northward, landed Mr. Farnham on the coast of Kamskatka, to go over land with despatches for Mr. Astor. Mr. Farnham accomplished the journey, reached Hamburg, whence he sailed for the West Indies, and finally arrived at New York, having made the entire circuit of the globe.

The "Pedlar" then sailed to the southeast, and soon reached the coast of California, which she approached to get a supply of provisions. Nearing one of the harbors, they descried a vessel at anchor inside, showing American colors. Hauling their wind, they soon came close to the stranger, which, to their surprise, turned out to be the Spanish corvette "Santa Barbara," which sent boats alongside the "Pedlar," and captured her, and kept possession of the prize for some two months, during which they dropped down to San Blas. Here Mr. Hunt proposed to Mr. Seton to cross the continent and reach the United States the best way he could. Mr. Seton, accordingly, went to the Isthmus of Darien, where he was detained several months by sickness, but finally reached Cartagena, where a British fleet was lying in the roads, to take off the English merchants, who in consequence of the revolutionary movements going on, sought shelter under their own flag. Here Mr. Seton, reduced to the last stage of destitution and squalor, boldly applied to Captain Bentham, the commander of the squadron, who, finding him to be a gentleman, offered him every needful assistance, gave him a berth in his own cabin, and finally landed him safely on the Island of Jamaica, whence he, too, found his way to New York.

Of all those engaged in the expedition there are now but four survivors — Ramsay Crooks, Esq. the late President of the American Fur Company; Alfred Seton, Esq., Vice-president of the Sun Mutual Insurance Company; both of New York city; Benjamin Pillet of Canada; and the author, living also in New York. All the rest have paid the debt of nature, but their names are recorded in the foregoing pages.

Notwithstanding the illiberal remarks made by Captain Thorn on the persons who were on board the ill-fated Tonquin, and reproduced by Mr. Irving in his "Astoria" — these young men who were represented as "Bar keepers or Billiard markers, most of whom had fled from Justice, &c." — I feel it a duty to say that they were for the most part, of good parentage, liberal education and every way were qualified to discharge the duties of their respective stations. The remarks on the general character of the voyageurs employed as boat-men and Mechanics, and the attempt to cast ridicule on their "Braggart and swaggering manners" come with a bad grace from the author of "Astoria," when we consider that in that very work Mr. Irving is compelled to admit their indomitable energy, their fidelity to their employers, and their cheerfulness under the most trying circumstances in which men can be placed.

With respect to Captain Thorn, I must confess that though a stern commander and an irritable man, he paid the strictest attention to the health of his crew. His complaints of the squalid appearance of the Canadians and mechanics who were on board, can be abated of their force by giving a description of the accommodation of these people. The Tonquin was a small ship; its fore-castle was destined for the crew performing duty before the mast. The room allotted for the accommodation of the twenty men destined for the establishment, was abaft the fore-castle; a bulk-head had been let across, and a door led from the fore-castle into a dark, unventilated, unwholesome place, where they were all heaped together, without means of locomotion, and consequently deprived

of that exercise of the body so necessary to health. Add to that, we had no physician on board. In view of these facts, can the complaints of the gallant Captain be sustained? Of course Mr. Irving was ignorant of these circumstances, as well as of many others which he might have known, had some one suggested to him to ask a few questions of persons who were within his reach at the time of his publication. I have (I need scarcely say) no personal animosity against the unfortunate Captain; he always treated me, individually, as well as I could expect; and if, in the course of my narrative, I have been severe on his actions, I was impelled by a sense of justice to my friends on board, as well as by the circumstance that such explanations of his general deportment were requisite to convey the historical truth to my readers.

The idea of a conspiracy against him on board is so absurd that it really does not deserve notice. The threat, or rather the proposal made to him by Mr. M'Kay, in the following words — "if you say fight, fight it is" — originated in a case where one of the sailors had maltreated a Canadian lad, who came to complain to Mr. M'Kay. The captain would not interpose his authority, and said in my presence, "Let them fight out their own battles:" — it was upon that answer that Mr. M'Kay gave vent to the expression quoted above. I might go on with a long list of inaccuracies, more or less grave or trivial, in the beautifully written work of Mr. Irving, but it would be tedious to go through the whole of them. The few remarks to which I have given place above, will suffice to prove that the assertion made in the preface was not unwarranted. It is far from my intention to enter the lists with a man of the literary merit and reputation of Mr. Irving, but as a narrator of events of which I was an EYE-WITNESS, I felt bound to tell the truth, although that truth might impugn the historical accuracy of a work which ranks as a classic in the language. At the same time I entirely exonerate Mr. Irving from any intention of prejudicing the minds of his reader, as he doubtless had only in view to support the character of his friend: that sentiment is worthy of a generous heart, but it should not be gratified, nor would he wish to gratify it, I am sure, at the expense of the character of others.

NOTE BY THE EDITOR

Perhaps even contrary to the wish of Mr. Franchere, I have left the above almost word for word as he wrote it. It is a part of the history of the affairs related as well in Mr. Irving's *ASTORIA* as in the present volume, that the reclamations of one of the clerks on that famous and unfortunate voyage of the *Tonquin*, against the disparaging description of himself and his colleagues given in the former work, should be fairly recorded. At the same time, I can not help stating my own impression that a natural susceptibility roused by those slighting remarks from Captain Thorn's correspondence, to which Mr. Irving as an historian gives currency, has somewhat blinded my excellent friend to the tone of banter, so characteristic of the chronicler of the *Knickerbockers*, in which all these particulars are given, more as traits of the character of the stern old sea-captain, with his hearty contempt for land-lubbers and literary clerks, than as a dependable account of the persons on board his ship, some of whom might have been, and as we see by the present work, were, in fact, very meritorious characters, for whose literary turn, and faithful journalizing (which seems to have especially provoked the captain's wrath), now at the end of more than forty years, we have so much reason to be thankful. Certainly Mr. Irving himself, who has drawn frequently on Mr. Franchere's narrative, could not, from his well-known taste in such matters, be insensible to the Defoe-like simplicity thereof, nor to the picturesque descriptions, worthy of a professional pen, with which it is sprinkled.

---

— Huntington  
THE END

Voyage of Mr. Hunt and his companions from St Louis to the mouth of the Columbia by a new route across the Rocky Mountains

By July 18, 1811, Misters McKenzie, Crooks, Miller, McClellan, Reed, and Hunt, in company with fifty-six men, a woman, and two children had traveled up the Missouri River from St. Louis to the village of the Aricaras. We left there with eighty-two horses packing commodities, munitions, food, and animal traps. Everyone walked except the company partners and the woman, a squaw. We took a southwesterly route and came to the banks of the Ramparre, a little river that flows into the Missouri below the Aricaras' village.

Without doubt the name Ramparre comes from the French hunters, for it means "provided with many forts." On the same day we camped near a small stream a short distance from its confluence with the Grand River. This we forded on July 21, and on the 24th we pitched camp on the banks of one of its tributaries. We had covered sixty-seven miles, keeping our course a little more to the west in the prairies, where the grass was knee-high and where the horses could graze contentedly. The countryside was bare except for a few cottonwood trees growing along the rivers.

Several members of the company were ill, and we rested here until August 5. During this interval I visited the camp of some Cheyenne Indians. I bought thirty-six horses there at a price better than that which I paid the Aricaras. Their camp was in the middle of a prairie near a small stream. These Indians burn buffalo chips to keep themselves warm. Their teepees are made of buffalo skins carefully sewn together and supported by poles joined at the top. They often hold as many as fifty people. The Cheyennes are honest and clean. They hunt buffalo, and they raise horses that each year they trade to the Aricaras for corn, kidney beans, pumpkins, and some merchandise.

They had a dozen beaver skins, but they did not seem to know how to trap these animals. We rearranged our packs so that no horse would be loaded too heavily and resumed our journey on August 6. We now had enough horses so that two men could ride alternately. I assigned six to hunters and sent them to look for buffalo. We crossed several hillocks, or isolated knolls, that were composed of red earth as hard as brick. Other signs indicated that this area had been burned over, for at the base of several knolls we saw cinders and pumice stones. This rugged terrain had very little grass.

It appeared that at one time some straggling trees had grown on these plains. We found the rotted remains of a few of them. Stumps still stood and we could see from the remnants that they were pine and oak. On the 6th we camped along a tributary of the Grand River and on the 7th near a pond in the prairie. Buffalo chips served for our fuel. We killed several buffalo; in fact, they were everywhere around us, for they were breeding. They made a frightful noise that sounded like distant thunder. The males tore up the earth with their hooves and horns.

We covered forty-two miles on the 6th and 7th. But after that we slowed our pace so that our hunters, who were behind us, could rejoin the main party. The countryside became mountainous and water scarce. The slopes were covered with crags of white sandstone, ranging from southeast to northwest. We saw some big horn [sheep] there, and we built fires on the summits to guide our hunters. At first we used buffalo chips, but after that we could use pine wood. (40 miles south-

west)

On August 11 we crossed a range of mountains like those of preceding days. The trail was tiring because of its precipitousness and the great number of rocks. On the 12th we forded two tributaries of the Grand River that flowed from the southwest, one of them appearing to be the main branch. We saw many petrifications that several of our companions collected to use as whetstones. (27 miles)

Since we supposed that our hunters were still to our right, on the 13th we traveled more to the west, crossing a tributary of the Little Missouri that was three hundred feet wide, its current swift, muddy, and swirling with eddies. To the west the mountains appeared to bar our passage. Three of our hunters returned at sunset. (12 miles)

On the 14th, we made camp beside a tributary of the Little Missouri. The evening was very cold. To the north we found pine-covered mountains that we crossed on the 15th. The terrain was extremely rugged. It became even worse on the 17th, and we could find no passage through these mountains. We killed a big horn whose meat is good, not unlike mutton. Usually we found these animals on mountains where no other animals could go. Several ran and leaped on the very edges of precipices. We also saw some black-tailed deer, larger than the red deer and with very big ears. Their flesh is not so tasty as that of the red deer. The tips of their tails are black, and they are to be found only in mountainous country. (45 miles southwest)

On the 18th we found it necessary to leave the mountains and turn back toward the broken countryside. There we met our hunters who had killed eight buffalo. When we had pitched camp to the left of the pine-covered mountains, Mr. McKenzie and I scaled the nearby slopes. Our view extended in all directions. In the west we saw far off some mountains that appeared white in several spots, and we assumed that this was the snow-covered Big Horn [Range]. Below the peaks herds of buffalo ran over the plains. (10 miles)

On the 19th, we camped in the midst of some hills near a pond of clear water. All around grew reeds, gooseberries, and prickly gooseberries with yellow and red fruit. Clusters of cherry trees showed signs of the habitual paths of the black bear, so that the slightest wind that stirred the bushes gave us some feelings of trepidation. However, we had to this point seen only three of the animals. (21 miles southwest)

We stopped on the 20th beside a branch of the Little Missouri, thought to be the largest tributary. The weather was cold and disagreeable. It froze during the night and the ice was as thick as a dollar. The countryside was high and irregular. This is the spot that separates the waters that flow east into the Missouri and west into the Yellowstone. (34 miles west)

On the 22nd we ran into what we thought to be the usual route of the Absaroka [usually called the Crow] Indians coming from the Mandan villages. The little river beside which we camped and which flowed north was doubtless a tributary of the Powder River. On the 23rd we found another branch; but before we got there we passed through some mountains and some dry gullies. The great heat, the treacherous trail, and the lack of water caused much suffering. Several people were at the point of losing their courage. Mr. McKenzie's dog died from exhaustion. While trudging through these barren, arid mountains we could no longer kill buffalo, for they usually keep near water. However, on the 25th we found a few in this area. The hunters stalked them and killed five. The day before, some of the company had eaten a wolf, which they found quite good. We made camp near a third tributary of the Powder River. (58 miles southwest)

---

We left the river on the 30th, and camped near Mt. Big Horn [probably Cloud Peak] that had been ahead of us for so long. The day before, our hunters had seen signs of Indians. For several days we had been on the lookout for them, but they discovered us first. On the evening of the 30th, two Crow Indians came to our camp and the next morning many more appeared. They were all on horseback. Not even the children were on foot. These Indians are such excellent horsemen that they ride up and down the mountains and craggy heights as if they were galloping in a riding school. We followed their to their settlement that was beside a clear brook on the slope of a mountain.

The chief came to meet us. He received us amicably, led us to his tent, and pointed to a spot convenient for our camp. I gave him presents of tobacco, knives, and some trifles to distribute among his people. To him personally I gave a piece of scarlet cloth, some powder, bullets, and other items.

We spent the first day of September buying some robes and pelts and trading our tired, maimed horses for fresh ones. A few of our company bought some, thereby augmenting the number of our horses to about 121, most of which were well-trained and able to cross the mountains.

On the 2nd we resumed our journey along the foot of the mountains and stopped near a small river that is said to be a tributary of the Powder River. We tried for half a day on the 3rd to get away from the precipices and the bare mountain heights; but we were forced to retrace our steps and return to the banks of a small stream. We killed several very large elk. (21 miles)

We had in our company a hunter by the name of Rose, a very unpleasant, insolent man. We had been warned that he planned to desert us when we came across the Crow Indians, to persuade as many of our men as he could to abandon us, and to steal our horses. For that reason we kept close watch at night. Moreover, we were afraid that if, despite our vigilance, he succeeded in carrying out his traitorous design, he would greatly damage our expedition. Thus, with the thought in mind that his plan might be more extensive than we suspected, we resolved to frustrate it. On September 2 we had received a visit from some Crow Indians of a tribe different from the one which we had just left and which was camped on the mountainside. At that point I suggested to Rose that he remain with [the] Crow Indians; and I offered him half a year's wages, a horse, three beaver traps, and some other commodities. He accepted my conditions; and he immediately abandoned his fellow conspirators who, without a leader, remained with our expedition.

So Rose joined the first Crow Indians whom we encountered. Their chief realized that we had followed a wrong course and on the 4th sent Rose to tell us and to put us on the right trail that crossed the mountains and that was both shorter and better. We soon met Crows who were taking the same route as we, a meeting that gave me an opportunity to admire the horsemanship of these Indians. It was truly unbelievable. There, among others, was a child tied to a two-year-old colt. He held the reins in one hand and frequently used his whip. I asked about his age and was told that he had seen two winters. He did not yet talk!

We camped at the source of the small river that we had reached the day before, resting there on the 5th. We wished to await the return of our hunters who appeared that evening. They had killed two buffalo and a gray bear. We were in the middle of the Big Horn mountains, so called because of the river by that name. The river runs along the mountain base, flowing northeast to southwest. The Big Horns are an advanced part of the Rockies. They are covered with pines, with many shrubs, and with plants that were actually in bloom. (16 miles)

---

On the 6th we met eight Indians and three families, some of them Flatheads and some Snakes. As we continued on our way westward across the mountains and crags, we saw some beautiful country: an abundance of springs, verdant grasslands, forests of pine, and innumerable plants in bloom. Nevertheless, it froze continually. We camped near a brook that flowed north and emptied into the Big Horn River. The ground was covered with gooseberries of two species, the best that I have ever eaten. One of our men brought me some strawberries that he had just picked. We had killed an elk and several black-tailed deer. Buffalo were quite numerous, too, so that the mountainside looked like one continuous barnyard. Farther on, however, we found only an occasional animal. We could see clearly a third, snow-covered mountain; we had avoided the first and now turned southward. (20 miles)

By the 7th we went down onto the plains, where we traveled until the 9th. We thus reached the banks of the Big Horn, here called the Wind River because the wind blows so continually that the snow never remains on the ground. We camped twice along this stream. On the morning of the 8th we paid the Indians the price of a horse that they offered us and set out for the village of the Arapaho Indians, a tribe of the Panis who live along the Platte River. One of our men left a gun at the camp, but the Indians had run off with it before he could return. That evening we were on the banks of a small river into which flows a brook that has a great quantity of beaver. At the spot where we camped, the Big Horn flows swiftly, is quite clear, and is about three hundred feet wide. We could see below us the canyon through which it escaped the mountain meadows. It is a very narrow gorge flanked on both sides by precipices. (45 miles west)

On the 10th we went along the banks of the Wind River, going upstream through a beautiful plain. Some trees grow along its banks but there are no beaver. Its torrents have covered the banks with gravel. We saw two bears that we could not get near, but we caught some fish that were much like herring. On the 11th we forded a rather large tributary of the Wind River that flows out of the mountains rising from the south. On the plain we often used sagebrush for our fires. It grows here to a great height. I rode through a thicket of it that was as tall as I on horseback and extremely full. Two species of gooseberries are quite common. We saw many flights of robins and other small birds. By the 12th we found mountains to the north and to the south of us. They seemed to join in the west. We crossed the Wind River and found the trail hilly. (38 miles)

From the 13th to the 15th, we crossed and recrossed the Wind River as well as two of its tributaries, the larger of which flowed from the northwest. The land produces a great amount of wild flax which is much like ours in height, in the texture of its stem, and in its husk, though the husk is smaller and lighter in color. The mountains closed in and the countryside became very rugged, the footing tortuous among the high peaks. On the 15th we left the river and, trekking southwest, followed an Indian trail into the mountains. One of our hunters who had been on the banks the Columbia pointed out three immense and snow-covered peaks which, he said, bordered a tributary of the river [the Snake]. (50 miles southwest)

On the 16th we frequently encountered snow. There were large beds of it on the summit and slopes of the mountains visible to the north. We halted beside the Spanish River [Green River], a large stream on whose banks, according to some Indians, the Spanish live. It flows west and, it may be supposed, empties into the Gulf of California. We were surrounded by mountains in which we found beautiful green meadows where many herds of buffalo graze - a fact the more interesting to us because we had not seen a single one of these animals for several days. I found

three different species of gooseberries: the common type with red berries, low bushes, and very spiny stems; a second with excellent yellow berries and non-spiny stems; and a third with dark red berries that taste much like our winter grapes. It is nearly as large and has very spiny stems. I also saw three kinds of currants; one has red berries, large and savory, with bushes eight or nine feet high; another with yellow berries about the size of ordinary currants, and with bushes about four or five feet high; and a third with bright red berries that are almost as sweet as strawberries but are rather insipid. Their bushes are small. (20 miles)

On the 17th we continued to follow the river to the opposite end of the mountains. Beaver and otter seemed to be everywhere. In fact, for some distance down the mountainside the area appears to be very favorable for trapping beaver. Ducks and geese are also plentiful. (15 miles southwest)

On the 18th we left the river and, as we trekked to the northwest, we went up a small stream that flows from the mountains. We stopped there to dry enough buffalo meat to last until we reached the banks of the Columbia and other rivers where we hoped to catch fish. While hunting, some of our men met Indians who seemed to be extremely frightened at the appearance of our men and who immediately took flight. I went after them with Mr. McKenzie, Mr. McClellan, and two others. We had gone about eight miles before we found them some distance away, pursuing a buffalo. When they saw us they again ran away and again we followed them. Finally we overtook two young men whose horses were not so fast as those of their comrades. At first they seemed to be greatly disturbed, but we soon put them at ease. They led us to their camp. They belonged, we found, to a tribe of Snake Indians that had come to this district to dry meat. They had a great amount of it, all very fat. They live in skin tents and own many horses. Several among them had never before seen white men and they were very happy about our visit. They fed us and in all made us thoroughly welcome. They had no pelts other than buffalo and a dozen beaver, which we bought; and we urged them to kill more of the beaver. We told them that we would return to their camp to trade with them and they seemed pleased. We bought from them nearly two thousand pounds of dried buffalo meat which, with the more than four thousand that our men had prepared, loaded all our horses but six. (8 miles)

Afterward, when we had climbed a small mountain, we came to a good trail leading to a tributary of the Columbia where it flows into the fourth range. Several tributaries of the Columbia flow from this same range. We had snow on both sides and ahead of us on all the peaks. (15 miles west)

The little brook that we followed is fed by several others and becomes a small river. On the 25th and 26th we had to ford it often, but its current is so swift that no one could cross it without help. Our trail was quite tortuous, winding through small mountains and along the edge of precipices that surrounded us. One of our pack horses fell into the river from a height of nearly two hundred feet but was not hurt. (20 miles)

We left these mountains on the 27th and camped at the confluence of a small river and another stream that we had seen recently. Americans call it the Mad River because of its swiftness. On its banks and somewhat above this confluence rise the three peaks that we had seen on the 15th. We ought, before, to have continued to follow the Wind River and crossed one of these mountains because we would have reached its source. But our lack of provisions had forced us to head for the banks of the Spanish River. (12 miles west)

Since it was at this point from which we hoped to continue our journey by water, we began on the

28th to look for trees suitable for building canoes. With another man I climbed about twelve miles on the other side of the river and saw many signs of beaver; I also saw gray bear tracks and a herd of elk. That evening when I returned to camp I learned that no one had been any more successful than I in finding suitable wood. The trees, a variety of poplar, were too frail; their leaves are like those of the willow. There were also some spruce, but they were so full of knots that we had no hope that our axes could get through them. The other trees that we had seen were cherries, small pines, sorbs [service trees], and some cedars.

Thus, on the 29th we moved our camp farther downriver because the trees there better suited our purpose, even though, as it seemed to me, we would have to make a canoe out of two pieces. On the 30th we set to work and we felled many trees that were not useful. However, since I feared that the river would not be navigable below the point where it flowed into the mountains, Mr. Reed and two other men went ahead to explore it for the distance of four days of travel downstream. On October 1, it rained in the valley and snowed in the mountains. Several of our men left to catch beaver. At evening two Snake Indians who had followed us since we left the Crows came to our camp. They made us fear that we should not be able to travel on the river. On the 2nd Mr. Reed returned. At the end of two days he had been obliged to leave his horses which were of no help to him in climbing the mountains and crags. After an hour's effort to get through on foot along the river banks he had been forced to abandon his attempt. To try to get across the peaks would have been an endless labor. The river became very narrow, its twisting course obstructed by many rapids. It became necessary then to look farther downstream for wood for our canoes and the hope of navigating. So far as Mr. Reed could see, the river continued to flow through the heart of the mountains. Among other things he had found signs of beaver and had seen two bears, one black and one gray.

Rain and sleet fell all day on the 3rd. Everything was readied to cross the mountain that we believed was our last. The storm ended on the 4th, but all the slopes around us were covered with snow. We forded the Mad River with the water up to the bellies of our horses, and camped at the foot of the mountain. On the 5th we climbed it, following an easy and much-traveled trail. Snow whitened the summit and the northern slopes of the heights. The Snakes served as our guides, though two of our hunters had the year before come through this area. (18 miles)

On the 6th we camped near a little brook that washes the northwest borders of a beautiful plain. The next day we stopped by a river that flows to the northwest, crossing it on the 7th. It joins several other streams and becomes quite large. After merging with another stream of equal size, it runs west. We saw many herds of antelopes. Wild cherries are common, about the size of ordinary red cherries, but they were not yet ripe. About twelve miles northwest of our camp there is a hot spring. I went to it with Mr. McKenzie and, though it was not boiling, steam constantly spouted from it.

The 8th was cold all day. The wind from the west blew with a fury, and a little snow fell. We reached the fort of Mr. Andrew Henry. It has several small buildings that lie constructed in order to spend the past winter there. All stand along a tributary of the Columbia about 300 to 450 feet wide. We hoped to navigate it and we found some trees suitable for canoes. By the 9th we had already begun to build eight of them, all from cottonwood. The cottonwood, the aspen, and some small willows are the only trees that thrive in this area.

Mr. Miller left us on the 10th, with four hunters and four horses, to trap beaver. They took the two

Snakes with them and traveled down along the mountainside, hoping to find a tribe of Indians from whom they could get information useful to their hunting. Every evening we caught some beaver and some small salmon trout. On the 14th a Snake Indian came to our camp half dead from hunger and clothed in rags.

On the 17th we were all ready to embark. We had cached our saddles in a spot that we showed the two young Snakes. They promised to take care not only of the saddles but also of our seventy-seven horses until one of us returned. The poor devil whom we had seen on the 14th came back with his son, who was even more ragged than he. We fed them. Then they gathered up the paws and entrails of the beavers we had killed and said goodbye to us. The people of this area must suffer terribly from a lack of game. Buffalo come here in some seasons; their tracks are numerous. There are also some elk and some extremely wild antelope. During our stay in this district the wind blew constantly from the west, often quite violently. I observed that it is the prevailing wind in these mountains where it causes considerable damage, uprooting large trees over a vast area and blowing their branches for great distances.

With the cargoes loaded into our canoes, we left this place on the 19th. The force of the current hurried us along at a rapid pace, and we were not long in passing the little river that I mentioned on the 7th. Beyond its confluence with the Mad River it becomes large enough to make navigation possible for canoes of all sizes. Its water is a light green. Since it had no name, I gave it one: the Canoe River [Teton River]. Its banks are lined with small cottonwoods. Several markings made me think that within the last few days some gray bears had been here in the thickets. Beaver, ducks, and geese are very common. It was cold and it snowed all day. (30 miles south)

As we went on downstream the river became more beautiful and much larger; a space of from 1,200 to 1,800 feet separated its two banks. We made 40 miles on the 20th, but throughout the last twenty the river bed was broken by rapids, and we found two other rapids farther downstream. In going through these, two of our canoes were swamped and we had to stop at once. I sent my canoe and one other to the rescue. We saved the men, but we lost a good deal of merchandise and many supplies, as well as one of the canoes. We continued to find the mountains on our left, ranging parallel to the river. It was cold. We could still see Pilot Knob [Grand Teton] that we had seen on September 15. (40 miles southeast)

When on the 21st we had passed two rapids, we came to a portage of a mile and a quarter. We carried the supplies by land and towed the canoes. For nearly a half mile the river narrows between two sheer mountain walls to not more than sixty feet, in a few places to even less. (6 miles) We passed over the rapids with the canoes tied to a rope, but we did not delay re-embarking on the 21st. Thereafter we came to a series of rapids, two of which forced us to portage. One of the small canoes swamped and capsized and we lost more supplies. (6 miles)

On the 23rd we lightened the loads in our canoes in order to pass through some very rough waters. After that we found several rapids which were not dangerous but in which the current was very swift. Beaver, geese, and ducks are common here. We found no other trees but the cottonwoods and willows, and on the plains some wild pears. The prairies were marked by buffalo tracks, but these were quite old. From time to time we saw flights of magpies and robins. The mountains fan out in different directions here. (75 miles south)

Toward the end of the day the river current slowed. From either side, the [larger] Canoe River is joined by a small stream. A tribe of Snakes and one Shoshone fled when we appeared. In their

camp we found some tiny fish that were not more than an inch long; we found, in addition, some roots and seeds that they were drying for winter, some pots of woven grass and twigs for water, and a well-made fish net of flax or nettle. We left some small commodities and two knives in the camp. Somewhat farther downstream we met three of these Indians on a slight raft of reeds and we stopped them. Except for a fragment of a rabbitskin robe thrown over their shoulders, they were completely naked. Their bows and arrows are artistically wrought. The bow is of pine or cedar, or of bone reinforced by animal sinews. The arrow is of reed or well-worked wood, tipped with a green stone. We made camp near a waterfall about thirty feet high. (70 miles)

On the 25th we crossed to the south bank and traveled on land so that we could avoid the waterfall and some small rapids below it. Six miles downstream a rock obstructs the river channel from one bank to the other; but because the south bank is less high, we could lower the canoes by rope. Several of them swamped while we were passing through a series of rapids and again we lost some of our merchandise. The river is winding, the countryside rugged and rocky. The mountains reach down to the very edge of the water on the south bank. (12 miles)

On the 26th the rapids were again numerous but not precarious. In some places the water was calm. We left the mountains and took a northwesterly route. When we landed to visit a camp of Indians, the poor creatures fled at our approach. By making signs of friendship, I persuaded one of them to return. He was on horseback and seemed better equipped than those whom I had seen earlier. He had some trout and some dried meat that he traded for a few knives, but his fear of us was so great that I could not get him to show me, by sign language, the route that I should take. His only concern was that I not take away his fish and meat and that I commend him to the care of the Great Spirit. (70 miles)

The skies were cloudy and it rained on the afternoon of the 27th. We had come to only two rapids in the morning. The river is nearly a half mile wide here, and beaver are plentiful. (40 miles southwest)

Our journey was less fortunate on the 28th; for after passing through several rapids, we came to the entrance of a narrow gorge. Mr. Crook's canoe capsized, one of his companions drowned, and we lost a great deal of merchandise. (18 miles)

On the 29th I went with three men to see if we could take our canoes through the north side of the gorge. For thirty-five miles I went along the banks of the river, which continues to carve a passage northwest through the mountains. Its bed is no more than sixty to ninety feet wide, it is full of rapids, and its course is broken by falls ten to forty feet high. Except at two spots where I went down to get water, the banks are precipitous everywhere. We had only some fruit from a rose tree for supper; then we slept beside our fire. On the 29th we returned to camp, tired out and famished. Those whom I had sent south had found a place where they believed that we could get through with our canoes by making a portage of about six miles.

Our situation became critical. We had enough food for about five days. On the 31st Mr. Reed and three others went downstream to try to get some horses and provisions from the Indians and to learn if, below the spot that I had reached, it was possible to navigate the river. Sixteen men, with four of our best canoes, went to attempt the passage. Then, because our lack of food prevented any delay of our journeys we put to one side those things that were most needful to us and began to dig holes in which to cache the remainder. Rain fell so heavily that we could not finish our digging.

On November 1 we changed our plans. In trying to descend the rapids with a rope, our sixteen men lost one of the canoes and its load of merchandise; the other canoes were caught among the rocks. We saw no way to continue our journey by water and prepared to go in different directions in search of Indians. The rain still hindered our work and we could not finish it until the 2nd, when we put our baggage and merchandise into six caches. Mr. McKenzie, along with four men, set out northward toward the plains, hoping to find the Columbia. Mr. McClellan and three other men went downstream on the Canoe River. Mr. Crooks and three men went upstream toward the river source. I remained with thirty-one men, a woman, and two children. We set a net in the river but caught only one fish. I ordered our four canoes loaded and we paddled upstream. While going around a point, in the midst of some rapids we lost a canoe but we saved the cargo. Our hunters who had caught up with us on the 4th had killed eight beaver. That was scanty relief. Mr. Crooks returned. He had found the distance by land greater than he expected and concluded that he could not reach Fort Henry and get back this winter. Thus he abandoned the scheme. I stopped at my camp of October 27.

I spent the 5th making all necessary arrangements for procuring food for several days, until we had news from Mr. Reed. We caught four beaver, drying the tails and the innards. I had the dried meat inspected and aired. On the 6th, despite our efforts, we found only one fish in the net. Two of Mr. Reed's men returned. After they had explored for two days they realized that the river did not improve farther downstream. Consequently we agreed with Mr. Crooks that the best course was to divide our company into two parties, each to proceed on its own. For that reason I cached still other things, and all the essentials I put into packs of about twenty pounds each.

On the 7th I returned to our camp of October 28. We had wasted nine days in futile explorations. We had caught eight beaver; but we had eaten the dried meat, for its quality is superior to beaver meat.

I cached still more goods on the 8th, distributing to each member of our party all that remained of our food. Every person had five and a quarter pounds of meat. We had, besides, forty pounds of corn, twenty of fat, and nearly five pounds of bouillon tablets. That had to keep more than twenty people alive.

On the 9th I set out on the north bank of the river with nineteen men, a woman, and two children. Mr. Crooks, with nineteen others, traveled on the south bank. It rained in the afternoon. We camped under some rocks on the river's edge and had great difficulty getting water.

All day on the 10th we went on, unable to [reach any water to] drink, except the little we found in the hollows of rocks. Finally we came to a spot where we could reach the river. Everywhere else its banks are sheer walls two to three hundred feet high. Its bed is broken by rapids; but in the space between these rapids the water is quiet. Today we could have navigated it for thirty miles. Some willows grow along its banks. (32 miles northwest)

On the 11th we found at the water's edge a trail worn by horses. I chose to follow it rather than again to clamber over rocks. Before long we met two Shoshone Indians who showed me a knife that they had got from some of our companions. One of them led us along a path that took us away from the river; we crossed a prairie and came to the village of his people. The women fled in such haste that they did not have time to take their children who could not walk, but simply covered them with straw.

The poor little creatures were terrified when I lifted the straw to look at them. Even the men trem-

bled, as though I were some ferocious animal. Nevertheless, they gave us a small amount of dried fish that we found most edible, and they sold us a dog. One of these Indians accompanied us and we soon found the river again. It was lined by their tents. We camped nearby and before long about fifty men came to see us. They were very honest and very obliging. As on the day before, the river course was broken by rapids. (26 miles northwest)

On the 12th I visited some tepees where I found a great quantity of salmon. These structures are of straw and are, in form, like stacks of wheat. They are warm and snug. In front of the doorways we saw large piles of sagebrush used for fires. I bought two dogs and we ate one for breakfast. These Indians have good buffalo-skin robes which they told me they had got in trade for their salmon. After we left them, we went on for some time along the river and forded a little brook. We saw mountains to the north. (16 miles northwest)

On the 13th we camped at a spot where a small stream flows out of the mountains. (25 miles north, northwest)

On the 14th we came across an Indian camp with three tepees. All around these structures we saw an immense number of salmon heads and skins with pieces of meat still attached, but the best part of the meat had been cached. None of these Indians ran away when we appeared. The women were poorly clothed, the children even more shabbily, though each one had a robe of buffalo skin, or of rabbit, badger, fox, wolf, or possibly some skins of ducks sewn together. All these animals, with the exception of rabbits, are rarely found on these plains. We had not seen a buffalo for a long time. (22 miles northwest)

We bought two dogs and some salmon on the 15th. Before us was a snow-covered mountain that the river seemed to penetrate. The river banks were littered with dead salmon that sent up a frightful stench. The river course, so far as I could see, had no rapids. We met some horses whose owners took great care to keep them out of our way. The Indians told us that some of our people had passed through this area. (28 miles northwest)

Early on the 16th the river reappeared, but now it was narrow, filled with rapids, and bordered by sheer rocks. As we approached the mountains, we had only some parched corn and the remnants of our meat to keep ourselves alive. Fortunately, on the 17th I traded an old kettle for a horse, though the Indians showed no interest in anything else that we were carrying. I also got two dogs. The countryside was bare of woods and even the sagebrush had disappeared. We camped beside the river. (35 miles northwest)

We put our baggage on the horse. We had only a quart of grain and a small piece of fat for each person. On the 18th we continued our trail to the northwest, along the river banks. (30 miles)

On the 19th, following the advice of some Indians whom we met, we changed our course and crossed a prairie where we found no water at all. Everything seemed to suggest that we would be luckier on the next day. But what discouragement for people whose only food was dried fish! By good fortune we bought a horse. (25 miles northeast)

On the 20th the rain that had begun to fall the night before gave us a little water. This relief came in good time, for several Canadians had begun to drink their urine. (33 miles north)

The rain continued all night. On the 21st at daybreak we saw ahead of us a river that flowed to the west, its banks lined with cottonwood and willow trees. Some Indians who had pitched camp there had many horses and were far better clothed than those whom we had seen recently. They told us that farther upstream beaver were plentiful, though in the vicinity of our camp there were

---

very few. When we arrived at the Indian village I lost my horse; an Indian told me that we had stolen it from him. However, as it was necessary to get food for our company, I bought some fish and two dogs [saying nothing further about the horse]. (12 miles)

It rained constantly and we could not make much headway on the trail. On the 22nd we met some Indians. As I gathered from the few words that I could understand, the distance from this spot to the Columbia was very considerable; but the Indians told me nothing about the route that I should take. We got some fish, seven dogs, and two horses. We continued our way westward along the river (35 miles) and on the 24th forded it a little above our Canoe River which flowed northward. The mountains ahead were all covered with snow. (18 miles northwest) On the 25th, despite the rigors of the season, our exhaustion, and our weakness we forded another river, waist high, that flowed from the east. (27 miles)

The foothills began to appear on the 26th, spreading along the snowy mountains. We crossed another little stream that flows from the east, like the others. It brought us, on the 27th, to a pass so narrow that it scarcely left enough space for us to get through. We were often forced to take the baggage from the backs of our horses and wade through the water. On the previous evening we had caught a beaver that furnished us with a meager breakfast and we made a supper of some bouillon tablets. I ordered a horse killed and my people thought the meat very good. I could eat it only with regret because I had become attached to the poor animal. (33 miles northwest)

On the 28th we arrived early at a Shoshone village. The Indians had just killed two colts for food. Except for the seeds of a plant that looks like flax and that they pulverize, the horsemeat was their only food. I bought a sack of the former, as well as some pieces of horsemeat which was fat and tender. I dreaded to remain several days in these narrows and I camped near the Indians in the hope of trading some goods for a horse. But no matter what I offered, I could make no bargain. When the women saw that I was insistent, they raised cries of fright, as though I wanted to rob them. The men told me about some whites who had followed the same trail as the one we were taking and about some others who had passed on the opposite side of the river. This news relieved me greatly regarding Mr. Crooks and his companions, especially when I learned that he still had his dogs; for I could believe that he had not suffered too much from hunger. The Indians added that I would sleep three more nights in the mountains and that after six nights on the trail I would arrive at the Great Falls of the Columbia. Nevertheless, I had little confidence in this talk because it seemed to me that they were only impatient to see us leave. (10 miles north)

On the 29th the bad footing forced us to unload our horses and occasionally to leave the river banks. We climbed mountains so high that I could hardly believe our horses would get over them. On the 30th the mountains further narrowed the river channel. The heights were covered with pines and snow. We could advance only with the greatest difficulty because of the sharp rocks, and the precipices plunge to the very banks of the river that here flows northeast and then north northwest. We killed a black-tailed deer which gave us an excellent meal. (28 miles)

On December 1 it rained in the valley and snowed in the mountains. As I climbed them to look for a passageway, I found the snow knee deep. I saw many black cherries that were delicious probably because the frost had cut their tartness. Snow fell so heavily on the mountain slopes we had to cross that visibility was no more than a half mile. We were compelled to rest in camp on the 2nd. The evening before we had caught a beaver, but as we had nothing more to eat I killed another horse.

Rain and snow fell all day on the 3rd, and we traveled only nine miles. We unloaded our horses so that we could keep to our trail along the river, and we carried the baggage in our arms, trudging to the northeast. On the 4th, we had to leave the river course and again climb the mountains whose ranges extended all around us and were covered with snow. Pines and other evergreens grew on the slopes of a few of them. The snow came above our knees and it was extremely cold. We were nearly exhausted by the harshness of the weather when we had the good luck of reaching a patch of pine trees at sunset. We comforted ourselves by a good fire. Although we had struggled ahead all day we were, because of the twisting course of the river, only four miles from our camp of the day before.

The snowstorm that commenced on the 5th reduced visibility to about three hundred feet, but we succeeded in reaching the river by sliding down the mountainside. The roar of the water guided us. One horse fell several hundred feet with his load but was not hurt. The weather was much less severe in the valley than on the mountain slopes, for it rained there and the snow was only ankle deep. I slaughtered another horse. (6 miles)

We were just setting out on the 6th when to my astonishment and distress I saw Mr. Crooks and his people on the other side of the river. I returned to camp at once and built a canoe with the hide of the horse I had killed the night before. Then I launched some food in it, sending it across the river to our starving companions. Mr. Crooks and one of his men came across to us. Poor man! He was almost completely exhausted by fatigue and hunger. He told me that he had already traveled for three days downstream, that the mountains there were even higher and narrowed to not more than sixty to a hundred feet between sheer walls. It was impossible for men in their condition to get through. For six days they had had only the meat of their dogs for food. Mr. McKenzie and Mr. Reed had passed and Mr. Crooks had talked with them only a few days earlier. They told him that Mr. McClellan had left the river and crossed the mountains, hoping to find the Flathead Indians. In the place where we met, the river flowed almost exactly east. Mr. Crooks said that it continued to run in that direction.

I spent the night reflecting on our situation. I had to answer for the needs of more than twenty famished people and, moreover, to do all that I could for Mr. Crooks and his men. Despite all the discouraging reports that he had given me about the countryside below, I should have gone my way through the mountains if, as I had already learned, the depth of the snow had not made such a journey impracticable. To my great regret it was thus necessary to backtrack with the hope of finding some Indians on one of the three small rivers beyond these mountains. I counted on buying from them a large enough number of horses to feed us until we reached the Columbia, a move I flattered myself in thinking we could effect this winter. I nevertheless believed that Mr. Crooks and several of his men would not be able to follow us. What a prospect! We had to plan on having nothing to eat for several days; for on this side of the Indian village that we had left on November 29, we had found nothing but cherries, and perhaps there would be no more of them in the same places. The horsehide canoe had been lost. We made a raft so that Mr. Crooks and his companions could cross to the other side of the river with some meat, but the attempt was unsuccessful. On the 7th we were reduced to a very slow pace because Mr. Crooks was so weak that he could follow along only with great difficulty. Most of my men went on ahead. On the 8th we made another raft; but, after repeated attempts, Mr. Crooks and his men could not make the crossing because of the swift current. I had of course to wait for them, and my men complained. They said

---

that we would all die from starvation and urged me by all means to go on. To add to my distress, Mr. Crooks was very ill during the night. I realized that this unfortunate situation could delay for two days my reaching the Indian village. I therefore left three men with Mr. Crooks and set out on the 9th with two others to rejoin my group. I had three beaver skins and I left two; my men and I made a supper of the third. The weather was extremely cold.

Early on the 10th I overtook my people. We had only one horse left and that belonged to Dorion, one of our Canadians. We suggested slaughtering it, but Dorion would not consent to the idea. We finally agreed that it would be better to let the animal live until we knew whether or not the Indian village was still in the same place. I approved this plan quite willingly because the poor horse was only skin and bones. We had not gone far on the trail before we found some tepees of the Shoshones who had come down from the mountains after our departure. I approached them cautiously so as to keep them from hiding their horses. They had twenty and sold us five, one of which I had slaughtered at once, and I sent a man to Mr. Crooks with some of the meat. Several of my men had not eaten since the 7th, the day on which they had left me.

Then on the 11th a new misfortune struck us. One of Mr. Crook's men drowned while crossing the river in a canoe that capsized with a load of goods. I ordered another horse killed; and I left two animals with Mr. Crooks along with some of the meat of a third, hoping that with this help he could reach the Indians upstream. On the 13th we came to the village that we had seen during our descent from the mountain heights. The Indians traded a horse for an old pewter kettle and some glass beads, but they refused a gun.

On the 16th we at last left the mountains and camped on the banks of a river that we had forded on the 26th of the previous month. Thus for twenty days we had worn ourselves out futilely trying to find a passage along the lower part of this river. On the previous day rain and snow had fallen. Ice floated on the river and the weather was extremely cold. Luckily for us, in this district we found a dozen tepees of the Shoshones who had come since we had camped there. They told me that it would [not?] have been possible for us to find a passage by following the river. This news heightened my anxiety about Mr. McKenzie and his company. On the 17th I went up the little stream and camped near a Shoshone village. From these Indians I bought a horse and a dog, and on the 18th I got another horse, some dried fish, a few roots, and some pounded dried cherries. I spent most of the day getting information about our route and about the time it would take to reach the village of Sciatogas. These Indians gave us different advice; but they did agree in saying that the trail was good, that it would take us seventeen to twenty-one nights to reach our destination, and that in the mountains we would be in snow up to our waists. I offered a gun, some pistols, a horse, etc., to whoever would serve me as a guide. They all replied that we would freeze to death and pleaded with me to remain with them during the winter.

I tried again on the 19th to find a guide. I went to every tepee along the river banks, but without success. I could not get along without one, for that meant running the risk that we would all die. But to remain in this place would be still worse, after having come so far and at such great cost. I ended by telling the Indians that they spoke with forked tongues, that they were lying to me. I accused them of being women; in short, I challenged them with whatever expressions would goad them most. At last, one of them found courage enough to volunteer to be our guide as far as the village of the Sciatogas. According to the report of our Shoshones, these Indians live on the west side of the mountains and own many horses.

---

Thus, we once more resumed our journey. On the 21st two other Indians joined our guide who led us at once to our Canoe River. We did not find any reed canoes there for the crossing; so we killed two horses and made a canoe with the hide of one of them. In this we got across the river. On the other side I found thirteen of Mr. Crook's men who told me that since we had left they had not seen either Mr. Crooks or the two men who were with him. When we had all effected a crossing by the 23rd, my people took heart. All of Mr. Crook's men were extremely weak and exhausted, four of them even more than the others. They handed over to me a horse and some goods. When three of them expressed the wish to remain with the Snakes, I gave them a canoe and some supplies. They crossed the river on the following day, and I hoped that they would not be long in finding Mr. Crooks and his party.

My group was now made up of thirty-two white men, a woman eight months pregnant, her two children, and three Indians. We had only five puny horses to feed us during our trip over the mountains. On the 24th I [at last] turned away from the Canoe River, remembrance of which will always cause us some moments of unhappiness. We traveled west, crossing hills by a trail that was sometimes level enough, more often irregular, but always good. A little snow fell and a little rain. On the 28th we crossed a brook that flowed northward. Mountains crowded us on each side; to the left was one that we had to climb. It extended from north to south, was heavily wooded, and was covered with snow. On the 29th we had a good trail through a level valley and we forded the river twice. ( 106 miles west)

On the 30th, after we had left the river at a spot where it thrusts into the mountains to the north, we came to another beautiful valley several miles wide and very long. A pretty stream meanders there and the beaver seem to be plentiful. Happily we found six Shoshone tepees and many horses. These Indians sold us four horses, as well as three dogs and some roots. They told me that we still had three nights to sleep before we came to the Sciutoga village and they showed me a pass in the mountains through which we had to travel. They added that not much snow was there, but they had so often given me erroneous reports that I did not take this news seriously. On every side of us snow blanketed the mountains. The pregnant woman gave birth to her child early the next morning. Her husband [Dorion] remained with her in the camp for a day, then rejoined us on the 31st. His wife rode horseback with her newly born child in her arms. Another child, two years old and wrapped in a blanket, was fastened by her side. One would have thought, from her behavior, that nothing had happened to her. (21 miles west)

My people asked me not to travel on the 1st of January without first celebrating the new year. I agreed to the idea willingly because most of them were very tired from having daily no more than a meager meal of horse meat and from carrying packs on their shoulders while crossing the mountains.

From the 2nd to the 7th of January we crossed the valley, following a small stream for several miles into the mountains and climbing many pine-covered hills. On the peaks we waded through snow half way up our legs, at times plunging into it to our waists. We lacked water. On the 4th we were at a point as high as the mountains that surrounded us, some wooded, but all covered with snow. The weather was overcast and cold. On the 6th we saw the sun for the first time since climbing into these mountains, and the snow decreased. To the west we could see what appeared to be a plain. On the 7th we came to a small stream that led us to an extremely narrow pass through mountains of immense height. Everywhere we found horse trails used by the Indians in hunting

---

deer which must be plentiful here, for we saw many herds of black-tail. The snow disappeared entirely. The Dorion baby died. By nightfall several of our men had not arrived at camp. (68 miles west)

The little stream joins another much larger one, and near their confluence on the 8th we found a village of Sciatogas and Tushepahs made up of thirty-four tepees. They had at least two thousand horses. Their tepees are made of matting. They are clothed in good robes of buffalo or deerskin; they have deerskin shirts and leggings and in every respect their clothing is as good as any of the best-provided Indian peoples. In their homes they have kettles and copper pots, as well as other things that suggest some intercourse with the inhabitants along the seacoast. They have some axes, too, and a skillfully wrought stone hammer that they use to pound roots, cherries, and other fruits, as well as fish. Pointed pieces of elkhorn serve in lieu of wedges to split wood. Women have willow-twig hats very neatly made and decorated. Their water containers are also made of willow, and in these they cook their meat by putting red-hot stones from the fire into them. However, copper kettles are preferred, three or four of them usually hanging in their tepees. (15 miles west) These Indians pleased me greatly when they told me that some white men had reached the Columbia, a two-day trek from this spot. It appears that grass grows here all winter long, for the mountain slopes are green.

All my men rejoined me except the Canadian CarriŠre. Someone had seen him on the previous afternoon sitting on horseback behind a Snake Indian. They were in front of a lodge that we had passed a few miles from our camp of the night before.

I cannot thank Providence enough for our having reached this point, for we were excessively tired and weak. We had only two horses left, both no more than skin and bones. That night we dined on some rather poor deer meat and some roots.

We remained six days in this place. I bought eight horses and two colts. We ate two of the horses and I gave two to our guides in payment for their services. Some of my men also bought horses. Several men were ill, some from overeating, others apparently from eating roots. Still others were lame. On our last day here, each one made moccasins for himself and prepared to continue the journey. I dispatched two men to look for CarriŠre but they did not find him. This unfortunate fellow had probably followed an Indian hunting trail and become lost. The Snakes had moved their lodges elsewhere, and my men could get no information about him. The Sciatogas also moved their tepees a day's journey downstream.

We got under way again on the 15th and reached the village of the Sciatogas on the banks of the Umatilla River. These Indians told us about a river upstream that they called the Walla Walla. According to Clark's map, I supposed it to be the little river that he places at a confluence with the Columbia, near some beds of shellfish. From what I learned, the Canoe River is Lewis's Kemoe-noum. (15 miles northwest)

These Indians had some venison, but they wanted to sell it at such a high price that I could not afford it. They hunt deer by chasing them on horseback and surrounding them. They use the bow and arrow with remarkable skill, and are superb horsemen.

It rained so heavily during our stay on the banks of the Umatilla that the water rose with amazing speed. We were compelled to break camp in a hurry. Three of our horses tied to stakes in the lowlands were drowned. The Indians also had to move to higher ground. I bought four horses from them. I wanted quite a number because the Indians told me that I could get a canoe in exchange

for a horse. They added that in about six nights I would be at the Great Falls of the Columbia. On the 19th we continued downstream along the Umatilla. Beaver must be abundant here, for many places were filled by their dams. Several of my people traveled on horseback, as I did. On the opposite side of the river we saw the lodges of the Akaitehis Indians who live on the Columbia. One of them swam to our camp and gave us some very satisfying details about the white men who had preceded us going downriver. (15 miles northwest)

I bought still another horse from the Sciatogas who again had moved their camp below us, and I said good-bye to them. They are the cleanest Indians that I know of and, like all the others, they are very proud. They eat neither dogs nor horses, and they will not allow anyone to bring the meat of these animals into their tents. I pleased them no end when I told them that I would return to their village with merchandise to trade for beaver. They already had some pelts and they told a very confusing tale about some white men who came to trade and who gave them tobacco and smoked with them. One of the white men, they said, had a house on the Columbia. My Canadians thought that the white man in question must be an agent of the Northwest Company. (12 miles west)

At last, on the 21st, we reached the banks of the Columbia, for such a long long time our cherished goal. We had come 1,751 miles and had lived through unbelievable hardship and privation. I expressed with difficulty our joy at the sight of this river. It was three quarters of a mile wide here; its banks were bare of trees, were filled with pebbles and in some places with steep rocks. The area was inhabited by the Akaitchis Indians, a wretchedly poor tribe that have neither moccasins nor leggings. Their clothing consists of only a robe of buffalo, deer, rabbit, fox, or even duck skin. To this meager equipment, they sometimes add wolf-skin sleeves. Their huts are well constructed of matting with roofs like the roofs of houses. These structures are very light and warm. Holes scooped out of the ground and lined with mats are living quarters for the women, who are usually naked. Some have a fragment of robe to cover their shoulders, but all of them wear around their waists a leather belt that passes between their thighs and indicates that they aim to be modest.

These Indians are better stocked with food than the Snakes, for it seems that dried salmon is plentiful in their homes. They gave us many fresh salmon trout that they had caught at the mouth of the Umatilla River. This is excellent fish. Their canoes are made of pine trunks split in half, and consequently they are not raised at either bow or stern. Since they have no special tool, they use fire to hollow out their trees.

We crossed the river because the Akaitchis told us that the trail passed along the right, or north, bank. We left on the 23rd after purchasing some fresh fish and nine dogs. The route along the river was very good. We camped that night close to a village of Indians who had about 50 canoes. I bought nine dogs that were quite fat and made a delicious dinner. Their meat seemed most savory to us, both wholesome and strengthening; on the other hand, horsemeat, however well prepared, is not nourishing, no matter how much of it one eats. The weather was beautiful and very mild, much like the beautiful days of the month of October. (12 miles)

From the 24th to the 28th we followed the river which flows almost directly west. Its banks are generally bare. Frequently we came upon Indian lodges and the Indians sold us dogs, but they put such a high price on elk or deer meat that I could not afford it. Moreover, they caused us much trouble by stealing the ropes by which our horses were tethered. The animals ran away and we lost

a great deal of time rounding them up. Sometimes the Indians stole the horses and hid them. The natives here ate acorns and told me that a short distance from the river we could find many white oaks. (57 miles west)

On the 28th the countryside again became quite mountainous. The Indians seemed to be less wretched. They told me of some white men who had built a large house at the mouth of the river, surrounding it with stakes, etc. They themselves had not gone to the river mouth, but they insisted that the white men were concerned and were waiting for a large number of their friends. They watched constantly from the banks of the Columbia, these Indians said, and when their friends arrived, those at the river's mouth would dry their tears and sing and dance.

On the 29th the mountains and rocks along the riverside became more numerous. The Indians whom we saw had many horses, and we began to set up a watch at night. (15 miles)

We camped on the 30th opposite the mouth of the Deschutes, called Tou-et-ka by the Indians. They came in great numbers to dance in honor of our arrival, but their multitude worried me. I pretended to be ill and asked that I be left alone. In a short time they complied with my wishes. (14 miles)

On the 31st we passed Celilo Falls that we had viewed in the distance the day before. I could not see the largest of them which was on the south bank. The river course is dammed by rocks over which the water rushes violently through several channels.

A village called Ouaioumpoum is situated on the north river bank at that spot where the Falls begin. The Indians give a special name to each village that has more than one lodge in it, and they love to talk about their villages to strangers.

At an early hour we reached the village of Wishram. It is at the entrance to a long gorge through which the river has carved a channel of from 200 to 240 feet wide and several miles long. This is the great fishing ground of the Columbia. It looks like one of the seaport villages on the east coast of the United States. On both sides of the river we saw large platforms made of carefully woven stakes. On these the Indians dry their fish. The ground around them is covered with bones and heads of fish. In the spring when the river waters are high, the salmon arrive in schools so large that the Indians can catch them in purse nets attached to the ends of poles. To accomplish this they stand on the edges of those rocks that extend farthest in to the river.

The Indians in this area are the most intelligent that I have met so far. One of them who knew a few English words told me that Mr. David Stuart had gone to one of the northern tributaries of the Columbia to spend the winter; he had, in fact, seen Stuart's trading post. And he recounted for me the disaster that overtook Mr. McKay and the ship Tonquin.

Today we saw some little white oaks. The countryside became more rugged and the mountains higher. Not far below the Falls, on the south bank, we saw a snow-covered peak that I had first seen on the 20th of this month and that I guessed was Vancouver's Mt. Hood. (12 miles)

February 1. A great number of Indians gathered this evening near our camp. Since they found no opportunity to steal our horses or baggage, they planned a unique stratagem in order to get something. They told us that about forty Indians were coming from downriver to attack us and take our horses. We paid little attention to their narrative and later some chiefs of their village arrived, armed with knives, spears, etc., telling us the same story, and saying that they wanted to stay with us. I received them most coldly, though we smoked a pipe together. Then I assembled everybody in our camp and placed watches at several spots. This procedure produced the effect that I had

---

hoped for. The Indians soon left and brought to me a man who they said, was chief of the village that had planned to attack us. They gave him credit for having dispersed the crowd. I smoked with them again, and a little before daylight they returned to their homes. These rascals thought that by frightening us I would give them two or three horses to assure the safety of the rest. As one of our horses had got loose on the evening before and was not to be found in the morning, I sold him for two packs of pounded and dried salmon I each weighing seventy pounds. We camped that night on the hills in the midst of bushes, pines, and oaks. (10 miles)

I could find only one canoe, that I could get in exchange for a horse. The Indians have large numbers of them, strongly made of pine and raised at both bow and stern, some of them capable of carrying three thousand pounds. Despite my injunctions that we keep close watch, the Indians stole an axe. Encouraged by their success, several of them followed us on the 2nd. They snatched two guns from us and, although our horses were in our camp, made off with one of them at eleven o'clock at night. On the 3rd I embarked in a canoe and sent my horses ahead.

I met my people at a village at the mouth of the Klickitat River that enters the Columbia from the north bank. I bought three canoes, each costing one a horse; but while I traded, the Indians stole a tomahawk and our last axe. They also made off with Dorion's horse that grazed near his tent. The Canadian had unwisely raised his tent some distance from our camp. (9 miles)

On the 4th the violence of the wind compelled me to remain, in spite of myself, in this den of thieves. I bought still another canoe for a horse; and on the next day when I reached another village, I traded our last three horses for two canoes. It seemed to me that the trail by land ended at this village. Hills became snow-covered mountains on which we saw pines. They bordered the river on both sides. Cottonwoods, oaks, and ash trees grew on the waterside, oaks on the nearby hills.

The rain increased greatly and the wind held me for several days opposite an Indian village. A Clatsop Indian came to see us and spoke to me about the establishment at the mouth of the Columbia - as well as about the tragic loss of Mr. McKay. He was the third man to relate to me this grievous story. He knew a few English words and asked me for news about Mr. Lewis and Mr. Clark and some of their companions. However, he had learned of the death of Mr. Lewis. (26 miles)

The wind subsided on the 10th and we got under way early. When we arrived at the beginning of some large rapids (15 miles), I examined the portage on the north bank. The trail was only good for something over a mile. We therefore landed all our canoes at ten o'clock and within an hour we were below the rapids which are very large. In dashing against the rocks, the water produces some unusually high waves. No boat could ride through them, at least in the present condition of the river which narrows formidably between hills and rocks. From this point on downriver, oaks and ash become more common. We saw quantities of hazelnut trees, too. At these rapids we found a second salmon fishery, a village on the north bank, and three lodges on the opposite side. The Indians here have a penchant for blue glass beads. Numerous rivulets that plunge down from the mountains above add to the beauty of the countryside. (16 miles)

On the 11th rapids covering space of miles forced us again to land our canoes. Finally about eight miles from the great rapids we encountered the last of them. Below this the river spreads to its usual width, which is about three-quarters of a mile wide. The hills diminish in size and retreat from the river banks. The intervening space is covered with pine, oak, ash, cottonwood, maple,

hazel, and willow trees. (12 miles)

On the 13th I passed the confluence of the Sandy River, which rushes from the south bank of the Columbia through two mouths, thereby forming a great sandbar. Twenty miles farther downstream the Columbia is joined by another river [the Willamette] that is nearly 1,800 feet wide. A large island [Sauvie Island] stands before its mouth and several small islands below it. The Columbia at this point is about a mile and a quarter wide. On both sides we found vast rush-covered areas, some small prairies, and often some ponds. Seals were numerous here. We could see more distinctly than before the mountain that I mentioned earlier and that I have no doubt is Vancouver's Mt. Hood. For two days the wind blew with great force. Rain, hail, and snow fell. (52 miles)

On the 14th the mountains once more drew close. We camped at the mouth of a small river on the north bank [the Cowlitz]. Indians spoke to us about the establishment of our compatriots, adding that we had one more night before arriving. (36 miles)

On the 15th we passed several large islands. The terrain on the north bank was covered with oak and ash trees but all were inundated. I stopped by some Indian huts where I found four of our Fort Astoria men who were trading sturgeon and fishing for some excellent little fish that are about six inches long. The Indians call them othlecan [candlefish] and catch many of them in the spring. We made camp on two low islands near the south bank. (27 miles)

During our trip on the river we had frequently come to the lodges of Indians who sold us dogs, dried salmon, beaver pelts, wapattoo roots - which are the ouapasippin of Mississippi - finally some Othlecan.

On the 16th we departed early. It had rained during the night and the fog was so thick that we could see only the lowlands and some small islands. All were inundated. The fog dissipated in the afternoon at high tide. I realized that we were paddling through a large bay and soon afterward I saw Fort Astoria on the south bank. (30 miles)

I had the pleasure of seeing Mr. McKenzie and Mr. McClellan once again. They had arrived a month earlier after suffering unbelievable hardships. In my diary I had noted February 16. At the fort it was counted the 15th. It was a great delight for travelers overcome with weariness to rest comfortably, surrounded by friends, after such a long journey in the midst of savage people of whom it is always wise to be wary.

We had covered 2,073 miles since leaving the village of the Aricaras.

Washington Irving's Astoria  
CHAPTER I.

Objects of American Enterprise.--Gold Hunting and Fur Trading.-- Their Effect on Colonization.--Early French Canadian Settlers.-- Ottawa and Huron Hunters.--An Indian Trading Camp.--Coureurs Des Bois, or Rangers of the Woods.--Their Roaming Life.--Their Revels and Excesses.--Licensed Traders.--Missionaries.--Trading Posts.--Primitive French Canadian Merchant.--His Establishment and Dependents.--British Canadian Fur Merchant.--Origin of the Northwest Company.--Its Constitution.--Its Internal Trade.--A Candidate for the Company.--Privations in the Wilderness.--Northwest Clerks. --Northwest Partners.--Northwest Nabobs.--Feudal Notions in the Forests.--The Lords of the Lakes.--Fort William.--Its Parliamentary Hall and Banqueting Room.--Wassailing in the Wilderness.

TWO leading objects of commercial gain have given birth to wide and daring enterprise in the early history of the Americas; the precious metals of the South, and the rich peltries of the North. While the fiery and magnificent Spaniard, inflamed with the mania for gold, has extended his discoveries and conquests over those brilliant countries scorched by the ardent sun of the tropics, the adroit and buoyant Frenchman, and the cool and calculating Briton, have pursued the less splendid, but no less lucrative, traffic in furs amidst the hyperborean regions of the Canadas, until they have advanced even within the Arctic Circle.

These two pursuits have thus in a manner been the pioneers and precursors of civilization. Without pausing on the borders, they have penetrated at once, in defiance of difficulties and dangers, to the heart of savage countries: laying open the hidden secrets of the wilderness; leading the way to remote regions of beauty and fertility that might have remained unexplored for ages, and beckoning after them the slow and pausing steps of agriculture and civilization.

It was the fur trade, in fact, which gave early sustenance and vitality to the great Canadian provinces. Being destitute of the precious metals, at that time the leading objects of American enterprise, they were long neglected by the parent country. The French adventurers, however, who had settled on the banks of the St. Lawrence, soon found that in the rich peltries of the interior, they had sources of wealth that might almost rival the mines of Mexico and Peru. The Indians, as yet unacquainted with the artificial value given to some descriptions of furs, in civilized life, brought quantities of the most precious kinds and bartered them away for European trinkets and cheap commodities. Immense profits were thus made by the early traders, and the traffic was pursued with avidity.

As the valuable furs soon became scarce in the neighborhood of the settlements, the Indians of the vicinity were stimulated to take a wider range in their hunting expeditions; they were generally accompanied on these expeditions by some of the traders or their dependents, who shared in the toils and perils of the chase, and at the same time made themselves acquainted with the best

hunting and trapping grounds, and with the remote tribes, whom they encouraged to bring their peltries to the settlements. In this way the trade augmented, and was drawn from remote quarters to Montreal. Every now and then a large body of Ottawas, Hurons, and other tribes who hunted the countries bordering on the great lakes, would come down in a squadron of light canoes, laden with beaver skins, and other spoils of their year's hunting. The canoes would be unladen, taken on shore, and their contents disposed in order. A camp of birch bark would be pitched outside of the town, and a kind of primitive fair opened with that grave ceremonial so dear to the Indians. An audience would be demanded of the governor-general, who would hold the conference with becoming state, seated in an elbow-chair, with the Indians ranged in semicircles before him, seated on the ground, and silently smoking their pipes. Speeches would be made, presents exchanged, and the audience would break up in universal good humor.

Now would ensue a brisk traffic with the merchants, and all Montreal would be alive with naked Indians running from shop to shop, bargaining for arms, kettles, knives, axes, blankets, bright-colored cloths, and other articles of use or fancy; upon all which, says an old French writer, the merchants were sure to clear at least two hundred per cent. There was no money used in this traffic, and, after a time, all payment in spirituous liquors was prohibited, in consequence of the frantic and frightful excesses and bloody brawls which they were apt to occasion.

Their wants and caprices being supplied, they would take leave of the governor, strike their tents, launch their canoes, and ply their way up the Ottawa to the lakes.

A new and anomalous class of men gradually grew out of this trade. These were called *coureurs des bois*, rangers of the woods; originally men who had accompanied the Indians in their hunting expeditions, and made themselves acquainted with remote tracts and tribes; and who now became, as it were, peddlers of the wilderness. These men would set out from Montreal with canoes well stocked with goods, with arms and ammunition, and would make their way up the mazy and wandering rivers that interlace the vast forests of the Canadas, coasting the most remote lakes, and creating new wants and habitudes among the natives. Sometimes they sojourned for months among them, assimilating to their tastes and habits with the happy facility of Frenchmen, adopting in some degree the Indian dress, and not unfrequently taking to themselves Indian wives.

Twelve, fifteen, eighteen months would often elapse without any tidings of them, when they would come sweeping their way down the Ottawa in full glee, their canoes laden down with packs of beaver skins. Now came their turn for revelry and extravagance. "You would be amazed," says an old writer already quoted, "if you saw how lewd these peddlers are when they return; how they feast and game, and how prodigal they are, not only in their clothes, but upon their sweethearts. Such of them as are married have the wisdom to retire to their own houses; but the bachelors act just as an East Indiaman and pirates are wont to do; for they lavish, eat, drink, and play all away as long as the goods hold out; and when these are gone, they even sell their embroidery, their lace, and their clothes. This done, they are forced upon a new voyage for subsistence." (1)

Many of these *coureurs des bois* became so accustomed to the Indian mode of living, and the

---

perfect freedom of the wilderness, that they lost relish for civilization, and identified themselves with the savages among whom they dwelt, or could only be distinguished from them by superior licentiousness. Their conduct and example gradually corrupted the natives, and impeded the works of the Catholic missionaries, who were at this time prosecuting their pious labors in the wilds of Canada.

To check these abuses, and to protect the fur trade from various irregularities practiced by these loose adventurers, an order was issued by the French government prohibiting all persons, on pain of death, from trading into the interior of the country without a license.

These licenses were granted in writing by the governor-general, and at first were given only to persons of respectability; to gentlemen of broken fortunes; to old officers of the army who had families to provide for; or to their widows. Each license permitted the fitting out of two large canoes with merchandise for the lakes, and no more than twenty-five licenses were to be issued in one year. By degrees, however, private licenses were also granted, and the number rapidly increased. Those who did not choose to fit out the expeditions themselves, were permitted to sell them to the merchants; these employed the *coureurs des bois*, or rangers of the woods, to undertake the long voyages on shares, and thus the abuses of the old system were revived and continued.<sup>(2)</sup>

The pious missionaries employed by the Roman Catholic Church to convert the Indians, did everything in their power to counteract the profligacy caused and propagated by these men in the heart of the wilderness. The Catholic chapel might often be seen planted beside the trading house, and its spire surmounted by a cross, towering from the midst of an Indian village, on the banks of a river or a lake. The missions had often a beneficial effect on the simple sons of the forest, but had little power over the renegades from civilization.

At length it was found necessary to establish fortified posts at the confluence of the rivers and the lakes for the protection of the trade, and the restraint of these profligates of the wilderness. The most important of these was at Michilimackinac, situated at the strait of the same name, which connects Lakes Huron and Michigan. It became the great interior mart and place of deposit, and some of the regular merchants who prosecuted the trade in person, under their licenses, formed establishments here. This, too, was a rendezvous for the rangers of the woods, as well those who came up with goods from Montreal as those who returned with peltries from the interior. Here new expeditions were fitted out and took their departure for Lake Michigan and the Mississippi; Lake Superior and the Northwest; and here the peltries brought in return were embarked for Montreal.

The French merchant at his trading post, in these primitive days of Canada, was a kind of commercial patriarch. With the lax habits and easy familiarity of his race, he had a little world of self-indulgence and misrule around him. He had his clerks, canoe men, and retainers of all kinds, who lived with him on terms of perfect sociability, always calling him by his Christian name; he had his harem of Indian beauties, and his troop of halfbreed children; nor was there ever wanting

a louting train of Indians, hanging about the establishment, eating and drinking at his expense in the intervals of their hunting expeditions.

The Canadian traders, for a long time, had troublesome competitors in the British merchants of New York, who inveigled the Indian hunters and the *coureurs des bois* to their posts, and traded with them on more favorable terms. A still more formidable opposition was organized in the Hudson's Bay Company, chartered by Charles II., in 1670, with the exclusive privilege of establishing trading houses on the shores of that bay and its tributary rivers; a privilege which they have maintained to the present day. Between this British company and the French merchants of Canada, feuds and contests arose about alleged infringements of territorial limits, and acts of violence and bloodshed occurred between their agents.

In 1762, the French lost possession of Canada, and the trade fell principally into the hands of British subjects. For a time, however, it shrunk within narrow limits. The old *coureurs des bois* were broken up and dispersed, or, where they could be met with, were slow to accustom themselves to the habits and manners of their British employers. They missed the freedom, indulgence, and familiarity of the old French trading houses, and did not relish the sober exactness, reserve, and method of the new-comers. The British traders, too, were ignorant of the country, and distrustful of the natives. They had reason to be so. The treacherous and bloody affairs of Detroit and Michilimackinac showed them the lurking hostility cherished by the savages, who had too long been taught by the French to regard them as enemies.

It was not until the year 1766, that the trade regained its old channels; but it was then pursued with much avidity and emulation by individual merchants, and soon transcended its former bounds. Expeditions were fitted out by various persons from Montreal and Michilimackinac, and rivalships and jealousies of course ensued. The trade was injured by their artifices to outbid and undermine each other; the Indians were debauched by the sale of spirituous liquors, which had been prohibited under the French rule. Scenes of drunkenness, brutality, and brawl were the consequence, in the Indian villages and around the trading houses; while bloody feuds took place between rival trading parties when they happened to encounter each other in the lawless depths of the wilderness.

To put an end to these sordid and ruinous contentions, several of the principal merchants of Montreal entered into a partnership in the winter of 1783, which was augmented by amalgamation with a rival company in 1787. Thus was created the famous "Northwest Company," which for a time held a lordly sway over the wintry lakes and boundless forests of the Canadas, almost equal to that of the East India Company over the voluptuous climes and magnificent realms of the Orient.

The company consisted of twenty-three shareholders, or partners, but held in its employ about two thousand persons as clerks, guides, interpreters, and "voyageurs," or boatmen. These were distributed at various trading posts, established far and wide on the interior lakes and rivers, at immense distances from each other, and in the heart of trackless countries and savage tribes.

Several of the partners resided in Montreal and Quebec, to manage the main concerns of the company. These were called agents, and were personages of great weight and importance; the other partners took their stations at the interior posts, where they remained throughout the winter, to superintend the intercourse with the various tribes of Indians. They were thence called wintering partners.

The goods destined for this wide and wandering traffic were put up at the warehouses of the company in Montreal, and conveyed in batteaux, or boats and canoes, up the river Attawa, or Ottawa, which falls into the St. Lawrence near Montreal, and by other rivers and portages, to Lake Nipising, Lake Huron, Lake Superior, and thence, by several chains of great and small lakes, to Lake Winnipeg, Lake Athabasca, and the Great Slave Lake. This singular and beautiful system of internal seas, which renders an immense region of wilderness so accessible to the frail bark of the Indian or the trader, was studded by the remote posts of the company, where they carried on their traffic with the surrounding tribes.

The company, as we have shown, was at first a spontaneous association of merchants; but, after it had been regularly organized, admission into it became extremely difficult. A candidate had to enter, as it were, "before the mast," to undergo a long probation, and to rise slowly by his merits and services. He began, at an early age, as a clerk, and served an apprenticeship of seven years, for which he received one hundred pounds sterling, was maintained at the expense of the company, and furnished with suitable clothing and equipments. His probation was generally passed at the interior trading posts; removed for years from civilized society, leading a life almost as wild and precarious as the savages around him; exposed to the severities of a northern winter, often suffering from a scarcity of food, and sometimes destitute for a long time of both bread and salt. When his apprenticeship had expired, he received a salary according to his deserts, varying from eighty to one hundred and sixty pounds sterling, and was now eligible to the great object of his ambition, a partnership in the company; though years might yet elapse before he attained to that enviable station.

Most of the clerks were young men of good families, from the Highlands of Scotland, characterized by the perseverance, thrift, and fidelity of their country, and fitted by their native hardihood to encounter the rigorous climate of the North, and to endure the trials and privations of their lot; though it must not be concealed that the constitutions of many of them became impaired by the hardships of the wilderness, and their stomachs injured by occasional famishing, and especially by the want of bread and salt. Now and then, at an interval of years, they were permitted to come down on a visit to the establishment at Montreal, to recruit their health, and to have a taste of civilized life; and these were brilliant spots in their existence.

As to the principal partners, or agents, who resided in Montreal and Quebec, they formed a kind of commercial aristocracy, living in lordly and hospitable style. Their posts, and the pleasures, dangers, adventures, and mishaps which they had shared together in their wild wood life, had linked them heartily to each other, so that they formed a convivial fraternity. Few travellers that

have visited Canada some thirty years since, in the days of the M'Tavishes, the M'Gillivrays, the M'Kenzies, the Frobishers, and the other magnates of the Northwest, when the company was in all its glory, but must remember the round of feasting and revelry kept up among these hyperborean nabobs.

Sometimes one or two partners, recently from the interior posts, would make their appearance in New York, in the course of a tour of pleasure and curiosity. On these occasions there was a degree of magnificence of the purse about them, and a peculiar propensity to expenditure at the goldsmith's and jeweler's for rings, chains, brooches, necklaces, jeweled watches, and other rich trinkets, partly for their own wear, partly for presents to their female acquaintances; a gorgeous prodigality, such as was often to be noticed in former times in Southern planters and West India creoles, when flush with the profits of their plantations.

To behold the Northwest Company in all its state and grandeur, however, it was necessary to witness an annual gathering at the great interior place of conference established at Fort William, near what is called the Grand Portage, on Lake Superior. Here two or three of the leading partners from Montreal proceeded once a year to meet the partners from the various trading posts of the wilderness, to discuss the affairs of the company during the preceding year, and to arrange plans for the future.

On these occasions might be seen the change since the unceremonious times of the old French traders; now the aristocratic character of the Briton shone forth magnificently, or rather the feudal spirit of the Highlander. Every partner who had charge of an interior post, and a score of retainers at his Command, felt like the chieftain of a Highland clan, and was almost as important in the eyes of his dependents as of himself. To him a visit to the grand conference at Fort William was a most important event, and he repaired there as to a meeting of parliament.

The partners from Montreal, however, were the lords of the ascendant; coming from the midst of luxurious and ostentatious life, they quite eclipsed their compeers from the woods, whose forms and faces had been battered and hardened by hard living and hard service, and whose garments and equipments were all the worse for wear. Indeed, the partners from below considered the whole dignity of the company as represented in their persons, and conducted themselves in suitable style. They ascended the rivers in great state, like sovereigns making a progress: or rather like Highland chieftains navigating their subject lakes. They were wrapped in rich furs, their huge canoes freighted with every convenience and luxury, and manned by Canadian voyageurs, as obedient as Highland clansmen. They carried up with them cooks and bakers, together with delicacies of every kind, and abundance of choice wines for the banquets which attended this great convocation. Happy were they, too, if they could meet with some distinguished stranger; above all, some titled member of the British nobility, to accompany them on this stately occasion, and grace their high solemnities.

Fort William, the scene of this important annual meeting, was a considerable village on the banks of Lake Superior. Here, in an immense wooden building, was the great council hall, as also the

---

banqueting chamber, decorated with Indian arms and accoutrements, and the trophies of the fur trade. The house swarmed at this time with traders and voyageurs, some from Montreal, bound to the interior posts; some from the interior posts, bound to Montreal. The councils were held in great state, for every member felt as if sitting in parliament, and every retainer and dependent looked up to the assemblage with awe, as to the House of Lords. There was a vast deal of solemn deliberation, and hard Scottish reasoning, with an occasional swell of pompous declamation.

These grave and weighty councils were alternated by huge feasts and revels, like some of the old feasts described in Highland castles. The tables in the great banqueting room groaned under the weight of game of all kinds; of venison from the woods, and fish from the lakes, with hunters' delicacies, such as buffalos' tongues, and beavers' tails, and various luxuries from Montreal, all served up by experienced cooks brought for the purpose. There was no stint of generous wine, for it was a hard-drinking period, a time of loyal toasts, and bacchanalian songs, and brimming bumpers.

While the chiefs thus revelled in hall, and made the rafters resound with bursts of loyalty and old Scottish songs, chanted in voices cracked and sharpened by the northern blast, their merriment was echoed and prolonged by a mongrel legion of retainers, Canadian voyageurs, half-breeds, Indian hunters, and vagabond hangers-on who feasted sumptuously without on the crumbs that fell from their table, and made the welkin ring with old French ditties, mingled with Indian yelps and yellings.

Such was the Northwest Company in its powerful and prosperous days, when it held a kind of feudal sway over a vast domain of lake and forest. We are dwelling too long, perhaps, upon these individual pictures, endeared to us by the associations of early life, when, as yet a stripling youth, we have sat at the hospitable boards of the "mighty Northwesters," the lords of the ascendant at Montreal, and gazed with wondering and inexperienced eye at the baronial wassailing, and listened with astonished ear to their tales of hardship and adventures. It is one object of our task, however, to present scenes of the rough life of the wilderness, and we are tempted to fix these few memorials of a transient state of things fast passing into oblivion;--for the feudal state of Fort William is at an end, its council chamber is silent and deserted; its banquet hall no longer echoes to the burst of loyalty, or the "auld world" ditty; the lords of the lakes and forests have passed away; and the hospitable magnates of Montreal--where are they?

1. La Hontan, v. i. let. 4.

2. The following are the terms on which these expeditions were commonly undertaken. The merchant holding the license would fit out the two canoes with a thousand crowns' worth of goods, and put them under the conduct of six *coureuis des bois*, to whom the goods were charged at the rate of fifteen per cent above the ready money price in the colony. The *coureurs des bois*, in their turn, dealt so sharply with the savages that they generally returned, at the end of a year or so, with four canoes well laden, so as to insure a clear profit of seven hundred per cent., insomuch that the thousand crowns invested, produced eight thousand. Of this extravagant profit the merchant had the lion's share. In the first place he would set aside six hundred crowns for the cost of his license, then a thousand crowns for the cost of the original merchandise. This would leave six thousand four hundred crowns, from which he would take forty per cent., for bottomry, amounting to two

thousand five hundred and sixty crowns. The residue would be equally divided among the six wood rangers, who would thus receive little more than six hundred crowns for all their toils and perils.

CHAPTER II.

Rise of the Mackinaw Company.-- Attempt of the American Government to Counteract Foreign Influence Over the Indian Tribes.-- John Jacob Astor.-- His Birth-Place.-- His Arrival in the United States.-- What First Turned His Attention to the Fur Trade.-- His Character, Enterprises, and Success.-- His Communications With the American Government.-- Origin of the American Fur Company

THE success of the Northwest Company stimulated further enterprise in this opening and apparently boundless field of profit. The traffic of that company lay principally in the high northern latitudes, while there were immense regions to the south and west, known to abound with valuable peltries; but which, as yet, had been but little explored by the fur trader. A new association of British merchants was therefore formed, to prosecute the trade in this direction. The chief factory was established at the old emporium of Michilimackinac, from which place the association took its name, and was commonly called the Mackinaw Company.

While the Northwesters continued to push their enterprises into the hyperborean regions from their stronghold at Fort William, and to hold almost sovereign sway over the tribes of the upper lakes and rivers, the Mackinaw Company sent forth their light perogues and barks, by Green Bay, Fox River, and the Wisconsin, to that areas artery of the West, the Mississippi; and down that stream to all its tributary rivers. In this way they hoped soon to monopolize the trade with all the tribes on the southern and western waters, and of those vast tracts comprised in ancient Louisiana.

The government of the United States began to view with a wary eye the growing influence thus acquired by combinations of foreigners, over the aboriginal tribes inhabiting its territories, and endeavored to counteract it. For this purpose, as early as 1796, the government sent out agents to establish rival trading houses on the frontier, so as to supply the wants of the Indians, to link their interests and feelings with those of the people of the United States, and to divert this important branch of trade into national channels.

The expedition, however, was unsuccessful, as most commercial expedients are prone to be, where the dull patronage of government is counted upon to outvie the keen activity of private enterprise. What government failed to effect, however, with all its patronage and all its agents, was at length brought about by the enterprise and perseverance of a single merchant, one of its adopted citizens; and this brings us to speak of the individual whose enterprise is the especial subject of the following pages; a man whose name and character are worthy of being enrolled in the history of commerce, as illustrating its noblest aims and soundest maxims. A few brief anecdotes of his early

life, and of the circumstances which first determined him to the branch of commerce of which we are treating, cannot be but interesting.

John Jacob Astor, the individual in question, was born in the honest little German village of Waldorf, near Heidelberg, on the banks of the Rhine. He was brought up in the simplicity of rural life, but, while yet a mere stripling, left his home, and launched himself amid the busy scenes of London, having had, from his very boyhood, a singular presentiment that he would ultimately arrive at great fortune.

At the close of the American Revolution he was still in London, and scarce on the threshold of active life. An elder brother had been for some few years resident in the United States, and Mr. Astor determined to follow him, and to seek his fortunes in the rising country. Investing a small sum which he had amassed since leaving his native village, in merchandise suited to the American market, he embarked, in the month of November, 1783, in a ship bound to Baltimore, and arrived in Hampton Roads in the month of January. The winter was extremely severe, and the ship, with many others, was detained by the ice in and about Chesapeake Bay for nearly three months.

During this period, the passengers of the various ships used occasionally to go on shore, and mingle sociably together. In this way Mr. Astor became acquainted with a countryman of his, a furrier by trade. Having had a previous impression that this might be a lucrative trade in the New World, he made many inquiries of his new acquaintance on the subject, who cheerfully gave him all the information in his power as to the quality and value of different furs, and the mode of carrying on the traffic. He subsequently accompanied him to New York, and, by his advice, Mr. Astor was induced to invest the proceeds of his merchandise in furs. With these he sailed from New York to London in 1784, disposed of them advantageously, made himself further acquainted with the course of the trade, and returned the same year to New York, with a view to settle in the United States.

He now devoted himself to the branch of commerce with which he had thus casually been made acquainted. He began his career, of course, on the narrowest scale; but he brought to the task a persevering industry, rigid economy, and strict integrity. To these were added an aspiring spirit that always looked upwards; a genius bold, fertile, and expansive; a sagacity quick to grasp and convert every circumstance to its advantage, and a singular and never wavering confidence of signal success.(1)

As yet, trade in peltries was not organized in the United States, and could not be said to form a regular line of business. Furs and skins were casually collected by the country traders in their dealings with the Indians or the white hunters, but the main supply was derived from Canada. As Mr. Astor's means increased, he made annual visits to Montreal, where he purchased furs from the houses at that place engaged in the trade. These he shipped from Canada to London, no direct trade being allowed from that colony to any but the mother country.

In 1794 or '95, a treaty with Great Britain removed the restrictions imposed upon the trade with

---

the colonies, and opened a direct commercial intercourse between Canada and the United States. Mr. Astor was in London at the time, and immediately made a contract with the agents of the Northwest Company for furs. He was now enabled to import them from Montreal into the United States for the home supply, and to be shipped thence to different parts of Europe, as well as to China, which has ever been the best market for the richest and finest kinds of peltry.

The treaty in question provided, likewise, that the military posts occupied by the British within the territorial limits of the United States, should be surrendered. Accordingly, Oswego, Niagara, Detroit, Michilimackinac, and other posts on the American side of the lakes, were given up. An opening was thus made for the American merchant to trade on the confines of Canada, and within the territories of the United States. After an interval of some years, about 1807, Mr. Astor embarked in this trade on his own account. His capital and resources had by this time greatly augmented, and he had risen from small beginnings to take his place among the first merchants and financiers of the country. His genius had ever been in advance of his circumstances, prompting him to new and wide fields of enterprise beyond the scope of ordinary merchants. With all his enterprise and resources however, he soon found the power and influence of the Michilimackinac (or Mackinaw) Company too great for him, having engrossed most of the trade within the American borders.

A plan had to be devised to enable him to enter into successful competition. He was aware of the wish of the American government, already stated, that the fur trade within its boundaries should be in the hands of American citizens, and of the ineffectual measures it had taken to accomplish that object. He now offered, if aided and protected by government, to turn the whole of that trade into American channels. He was invited to unfold his plans to government, and they were warmly approved, though the executive could give no direct aid.

Thus countenanced, however, he obtained, in 1809, a charter from the legislature of the State of New York, incorporating a company under the name of "The American Fur Company," with a capital of one million of dollars, with the privilege of increasing it to two millions. The capital was furnished by himself -- he, in fact, constituted the company; for, though he had a board of directors, they were merely nominal; the whole business was conducted on his plans and with his resources, but he preferred to do so under the imposing and formidable aspect of a corporation, rather than in his individual name, and his policy was sagacious and effective.

As the Mackinaw Company still continued its rivalry, and as the fur trade would not advantageously admit of competition, he made a new arrangement in 1811, by which, in conjunction with certain partners of the Northwest Company, and other persons engaged in the fur trade, he bought out the Mackinaw Company, and merged that and the American Fur Company into a new association, to be called the "Southwest Company." This he likewise did with the privity and approbation of the American government.

By this arrangement Mr. Astor became proprietor of one half of the Indian establishments and goods which the Mackinaw Company had within the territory of the Indian country in the Unit-

ed States, and it was understood that the whole was to be surrendered into his hands at the expiration of five years, on condition that the American Company would not trade within the British dominions.

Unluckily, the war which broke out in 1812 between Great Britain and the United States suspended the association; and, after the war, it was entirely dissolved; Congress having passed a law prohibiting the British fur traders from prosecuting their enterprises within the territories of the United States.

1. An instance of this buoyant confidence, which no doubt aided to produce the success it anticipated, we have from the lips of Mr. A. himself. While yet almost a stranger in the city, and in very narrow circumstances, he passed by where a row of houses had just been erected in Broadway, and which, from the superior style of their architecture, were the talk and boast of the city. "I'll build, one day or other, a greater house than any of these, in this very street," said he to himself. He has accomplished his prediction.

Washington Irving's Astoria

CHAPTER III.

Fur Trade in the Pacific- American Coasting Voyages- Russian Enterprises.- Discovery of the Columbia River.- Carver's Project to Found a Settlement There.-Mackenzie's Expedition.- Lewis and Clarke's Journey Across the Rocky Mountains- Mr. Astor's Grand Commercial Scheme.-His Correspondence on the Subject With Mr. Jefferson.His Negotiations With the Northwest Company.- His Steps to Carry His Scheme Into Effect.

WHILE the various companies we have noticed were pushing their enterprises far and wide in the wilds of Canada, and along the course of the great western waters, other adventurers, intent on the same objects, were traversing the watery wastes of the Pacific and skirting the northwest coast of America. The last voyage of that renowned but unfortunate discoverer, Captain Cook, had made known the vast quantities of the sea-otter to be found along that coast, and the immense prices to be obtained for its fur in China. It was as if a new gold coast had been discovered. Individuals from various countries dashed into this lucrative traffic, so that in the year 1792, there were twenty-one vessels under different flags, plying along the coast and trading with the natives. The greater part of them were American, and owned by Boston merchants. They generally remained on the coast and about the adjacent seas, for two years, carrying on as wandering and adventurous a commerce on the water as did the traders and trappers on land. Their trade extended along the whole coast from California to the high northern latitudes. They would run in near shore, anchor, and wait for the natives to come off in their canoes with peltries. The trade exhausted at one place, they would up anchor and off to another. In this way they would consume the summer, and when autumn came on, would run down to the Sandwich Islands and winter in some friendly and plentiful harbor. In the following year they would resume their summer trade, commencing at California and proceeding north: and, having in the course of the two seasons collected a sufficient cargo of peltries, would make the best of their way to China. Here they would sell their furs, take in teas, nankeens, and other merchandise, and return to Boston, after

an absence of two or three years.

The people, however, who entered most extensively and effectively in the fur trade of the Pacific, were the Russians. Instead of making casual voyages, in transient ships, they established regular trading houses in the high latitudes, along the northwest coast of America, and upon the chain of the Aleutian Islands between Kamtschatka and the promontory of Alaska.

To promote and protect these enterprises, a company was incorporated by the Russian government with exclusive privileges, and a capital of two hundred and sixty thousand pounds sterling; and the sovereignty of that part of the American continent, along the coast of which the posts had been established, was claimed by the Russian crown, on the plea that the land had been discovered and occupied by its subjects.

As China was the grand mart for the furs collected in these quarters, the Russians had the advantage over their competitors in the trade. The latter had to take their peltries to Canton, which, however, was a mere receiving mart, from whence they had to be distributed over the interior of the empire and sent to the northern parts, where there was the chief consumption. The Russians, on the contrary, carried their furs, by a shorter voyage, directly to the northern parts of the Chinese empire; thus being able to afford them in the market without the additional cost of internal transportation.

We come now to the immediate field of operation of the great enterprise we have undertaken to illustrate.

Among the American ships which traded along the northwest coast in 1792, was the Columbia, Captain Gray, of Boston. In the course of her voyage she discovered the mouth of a large river in lat. 46 19' north. Entering it with some difficulty, on account of sand-bars and breakers, she came to anchor in a spacious bay. A boat was well manned, and sent on shore to a village on the beach, but all the inhabitants fled excepting the aged and infirm. The kind manner in which these were treated, and the presents given them, gradually lured back the others, and a friendly intercourse took place. They had never seen a ship or a white man. When they had first descried the Columbia, they had supposed it a floating island; then some monster of the deep; but when they saw the boat putting for shore with human beings on board, they considered them cannibals sent by the Great Spirit to ravage the country and devour the inhabitants. Captain Gray did not ascend the river farther than the bay in question, which continues to bear his name. After putting to sea, he fell in with the celebrated discoverer, Vancouver, and informed him of his discovery, furnished him with a chart which he had made of the river. Vancouver visited the river, and his lieutenant, Broughton, explored it by the aid of Captain Gray's chart; ascending it upwards of one hundred miles, until within view of a snowy mountain, to which he gave the name of Mt. Hood, which it still retains.

The existence of this river, however, was known long before the visits of Gray and Vancouver, but the information concerning it was vague and indefinite, being gathered from the reports of Indi-

ans. It was spoken of by travellers as the Oregon, and as the Great River of the West. A Spanish ship is said to have been wrecked at the mouth, several of the crew of which lived for some time among the natives. The Columbia, however, is believed to be the first ship that made a regular discovery and anchored within its waters, and it has since generally borne the name of that vessel. As early as 1763, shortly after the acquisition of the Canadas by Great Britain, Captain Jonathan Carver, who had been in the British provincial army, projected a journey across the continent between the forty-third and forty-sixth degrees of northern latitude to the shores of the Pacific Ocean. His objects were to ascertain the breadth of the continent at its broadest part, and to determine on some place on the shores of the Pacific, where government might establish a post to facilitate the discovery of a northwest passage, or a communication between Hudson's Bay and the Pacific Ocean. This place he presumed would be somewhere about the Straits of Annian, at which point he supposed the Oregon disembogued itself. It was his opinion, also, that a settlement on this extremity of America would disclose new sources of trade, promote many useful discoveries, and open a more direct communication with China and the English settlements in the East Indies, than that by the Cape of Good Hope or the Straits of Magellan. \* This enterprising and intrepid traveller was twice baffled in individual efforts to accomplish this great journey. In 1774, he was joined in the scheme by Richard Whitworth, a member of Parliament, and a man of wealth. Their enterprise was projected on a broad and bold plan. They were to take with them fifty or sixty men, artificers and mariners. With these they were to make their way up one of the branches of the Missouri, explore the mountains for the source of the Oregon, or River of the West, and sail down that river to its supposed exit, near the Straits of Annian. Here they were to erect a fort, and build the vessels necessary to carry their discoveries by sea into effect. Their plan had the sanction of the British government, and grants and other requisites were nearly completed, when the breaking out of the American Revolution once more defeated the undertaking. \*\*

The expedition of Sir Alexander Mackenzie in 1793, across the continent to the Pacific Ocean, which he reached in lat. 52° 20' 48", again suggested the possibility of linking together the trade of both sides of the continent. In lat. 52° 30' he had descended a river for some distance which flowed towards the south, and was called by the natives Tacoutche Tesse, and which he erroneously supposed to be the Columbia. It was afterwards ascertained that it emptied itself in lat. 49 degrees, whereas the mouth of the Columbia is about three degrees further south.

When Mackenzie some years subsequently published an account of his expeditions, he suggested the policy of opening an intercourse between the Atlantic and Pacific oceans, and forming regular establishments through the interior and at both extremes, as well as along the coasts and islands. By this means, he observed, the entire command of the fur trade of North America might be obtained from lat. 48 north to the pole, excepting that portion held by the Russians, for as to the American adventurers who had hitherto enjoyed the traffic along the northwest coast, they would instantly disappear, he added, before a well regulated trade.

A scheme of this kind, however, was too vast and hazardous for individual enterprise; it could only be undertaken by a company under the sanction and protection of a government; and as there might be a clashing of claims between the Hudson's Bay and Northwest Company, the one

holding by right of charter, the other by right of possession, he proposed that the two companies should coalesce in this great undertaking. The long-cherished jealousies of these two companies, however, were too deep and strong to allow them to listen to such counsel.

In the meantime the attention of the American government was attracted to the subject, and the memorable expedition under Messrs. Lewis and Clarke fitted out. These gentlemen, in 1804, accomplished the enterprise which had been projected by Carver and Whitworth in 1774. They ascended the Missouri, passed through the stupendous gates of the Rocky Mountains, hitherto unknown to white men; discovered and explored the upper waters of the Columbia, and followed that river down to its mouth, where their countryman, Gray, had anchored about twelve years previously. Here they passed the winter, and returned across the mountains in the following spring. The reports published by them of their expedition demonstrated the practicability of establishing a line of communication across the continent, from the Atlantic to the Pacific Ocean.

It was then that the idea presented itself to the mind of Mr. Astor, of grasping with his individual hand this great enterprise, which for years had been dubiously yet desirously contemplated by powerful associations and maternal governments. For some time he revolved the idea in his mind, gradually extending and maturing his plans as his means of executing them augmented. The main feature of his scheme was to establish a line of trading posts along the Missouri and the Columbia, to the mouth of the latter, where was to be founded the chief trading house or mart. Inferior posts would be established in the interior, and on all the tributary streams of the Columbia, to trade with the Indians; these posts would draw their supplies from the main establishment, and bring to it the peltries they collected. Coasting craft would be built and fitted out, also at the mouth of the Columbia, to trade, at favorable seasons, all along the northwest coast, and return, with the proceeds of their voyages, to this place of deposit. Thus all the Indian trade, both of the interior and the coast, would converge to this point, and thence derive its sustenance.

A ship was to be sent annually from New York to this main establishment with reinforcements and supplies, and with merchandise suited to the trade. It would take on board the furs collected during the preceding year, carry them to Canton, invest the proceeds in the rich merchandise of China, and return thus freighted to New York.

As, in extending the American trade along the coast to the northward, it might be brought into the vicinity of the Russian Fur Company, and produce a hostile rivalry, it was part of the plan of Mr. Astor to conciliate the good-will of that company by the most amicable and beneficial arrangements. The Russian establishment was chiefly dependent for its supplies upon transient trading vessels from the United States. These vessels, however, were often of more harm than advantage. Being owned by private adventurers, or casual voyagers, who cared only for present profit, and had no interest in the permanent prosperity of the trade, they were reckless in their dealings with the natives, and made no scruple of supplying them with fire-arms. In this way several fierce tribes in the vicinity of the Russian posts, or within the range of their trading excursions, were furnished with deadly means of warfare, and rendered troublesome and dangerous neighbors.

The Russian government had made representations to that of the United States of these malpractices on the part of its citizens, and urged to have this traffic in arms prohibited; but, as it did not infringe any municipal law, our government could not interfere. Yet, still it regarded, with solicitude, a traffic which, if persisted in, might give offence to Russia, at that time almost the only friendly power to us. In this dilemma the government had applied to Mr. Astor, as one conversant in this branch of trade, for information that might point out a way to remedy the evil. This circumstance had suggested to him the idea of supplying the Russian establishment regularly by means of the annual ship that should visit the settlement at the mouth of the Columbia (or Oregon) ; by this means the casual trading vessels would be excluded from those parts of the coast where their malpractices were so injurious to the Russians.

Such is a brief outline of the enterprise projected by Mr. Astor, but which continually expanded in his mind. Indeed it is due to him to say that he was not actuated by mere motives of individual profit. He was already wealthy beyond the ordinary desires of man, but he now aspired to that honorable fame which is awarded to men of similar scope of mind, who by their great commercial enterprises have enriched nations, peopled wildernesses, and extended the bounds of empire. He considered his projected establishment at the mouth of the Columbia as the emporium to an immense commerce; as a colony that would form the germ of a wide civilization; that would, in fact, carry the American population across the Rocky Mountains and spread it along the shores of the Pacific, as it already animated the shores of the Atlantic.

As Mr. Astor, by the magnitude of his commercial and financial relations, and the vigor and scope of his self-taught mind, had elevated himself into the consideration of government and the communion and correspondence with leading statesmen, he, at an early period, communicated his schemes to President Jefferson, soliciting the countenance of government. How highly they were esteemed by that eminent man, we may judge by the following passage, written by him some time afterwards.

“I remember well having invited your proposition on this subject,\*\* and encouraged it with the assurance of every facility and protection which the government could properly afford. I considered, as a great public acquisition, the commencement of a settlement on that point of the western coast of America, and looked forward with gratification to the time when its descendants should have spread themselves through the whole length of that coast, covering it with free and independent Americans, unconnected with us but by the ties of blood and interest, and enjoying like us the rights of self-government.”

The cabinet joined with Mr. Jefferson in warm approbation of the plan, and held out assurance of every protection that could, consistently with general policy, be afforded.

Mr. Astor now prepared to carry his scheme into prompt execution. He had some competition, however, to apprehend and guard against. The Northwest Company, acting feebly and partially upon the suggestions of its former agent, Sir Alexander Mackenzie, had pushed one or two advanced trading posts across the Rocky Mountains, into a tract of country visited by that enterprising traveller, and since named New Caledonia. This tract lay about two degrees north of the Columbia, and intervened between the territories of the United States and those of Russia. Its

length was about five hundred and fifty miles, and its breadth, from the mountains to the Pacific, from three hundred to three hundred and fifty geographic miles.

Should the Northwest Company persist in extending their trade in that quarter, their competition might be of serious detriment to the plans of Mr. Astor. It is true they would contend with him to a vast disadvantage, from the checks and restrictions to which they were subjected. They were straitened on one side by the rivalry of the Hudson's Bay Company; then they had no good post on the Pacific where they could receive supplies by sea for their establishments beyond the mountains; nor, if they had one, could they ship their furs thence to China, that great mart for peltries; the Chinese trade being comprised in the monopoly of the East India Company. Their posts beyond the mountains had to be supplied in yearly expeditions, like caravans, from Montreal, and the furs conveyed back in the same way, by long, precarious, and expensive routes, across the continent. Mr. Astor, on the contrary, would be able to supply his proposed establishment at the mouth of the Columbia by sea, and to ship the furs collected there directly to China, so as to undersell the Northwest Company in the great Chinese market.

Still, the competition of two rival companies west of the Rocky Mountains could not but prove detrimental to both, and fraught with those evils, both to the trade and to the Indians, that had attended similar rivalries in the Canadas. To prevent any contest of the kind, therefore, he made known his plan to the agents of the Northwest Company, and proposed to interest them, to the extent of one third, in the trade thus to be opened. Some correspondence and negotiation ensued. The company were aware of the advantages which would be possessed by Mr. Astor should he be able to carry his scheme into effect; but they anticipated a monopoly of the trade beyond the mountains by their establishments in New Caledonia, and were loth to share it with an individual who had already proved a formidable competitor in the Atlantic trade. They hoped, too, by a timely move, to secure the mouth of the Columbia before Mr. Astor would be able to put his plans into operation; and, that key to the internal trade once in their possession, the whole country would be at their command. After some negotiation and delay, therefore, they declined the proposition that had been made to them, but subsequently despatched a party for the mouth of the Columbia, to establish a post there before any expedition sent out by Mr. Astor might arrive.

In the meantime Mr. Astor, finding his overtures rejected, proceeded fearlessly to execute his enterprise in face of the whole power of the Northwest Company. His main establishment once planted at the mouth of the Columbia, he looked with confidence to ultimate success. Being able to reinforce and supply it amply by sea, he would push his interior posts in every direction up the rivers and along the coast; supplying the natives at a lower rate, and thus gradually obliging the Northwest Company to give up the competition, relinquish New Caledonia, and retire to the other side of the mountains. He would then have possession of the trade, not merely of the Columbia and its tributaries, but of the regions farther north, quite to the Russian possessions. Such was a part of his brilliant and comprehensive plan.

He now proceeded, with all diligence, to procure proper agents and coadjutors, habituated to the Indian trade and to the life of the wilderness. Among the clerks of the Northwest Company were

several of great capacity and experience, who had served out their probationary terms, but who, either through lack of interest and influence, or a want of vacancies, had not been promoted. They were consequently much dissatisfied, and ready for any employment in which their talents and acquirements might be turned to better account.

Mr. Astor made his overtures to several of these persons, and three of them entered into his views. One of these, Mr. Alexander M'Kay, had accompanied Sir Alexander Mackenzie in both of his expeditions to the northwest coast of America in 1789 and 1793. The other two were Duncan M'Dougal and Donald M'Kenzie. To these were subsequently added Mr. Wilson Price Hunt, of New Jersey. As this gentleman was a native born citizen of the United States, a person of great probity and worth, he was selected by Mr. Astor to be his chief agent, and to represent him in the contemplated establishment.

On the 23d of June, 1810, articles of agreement were entered into between Mr. Astor and those four gentlemen, acting for themselves and for the several persons who had already agreed to become, or should thereafter become, associated under the firm of "The Pacific Fur Company."

According to these articles, Mr. Astor was to be at the head of the company, and to manage its affairs in New York. He was to furnish vessels, goods, provisions, arms, ammunition, and all other requisites for the enterprise at first cost and charges, provided that they did not, at any time, involve an advance of more than four hundred thousand dollars.

The stock of the company was to be divided into a hundred equal shares, with the profits accruing thereon. Fifty shares were to be at the disposition of Mr. Astor, and the other fifty to be divided among the partners and their associates.

Mr. Astor was to have the privilege of introducing other persons into the connection as partners, two of whom, at least, should be conversant with the Indian trade, and none of them entitled to more than three shares.

A general meeting of the company was to be held annually at Columbia River, for the investigation and regulation of its affairs; at which absent members might be represented, and might vote by proxy under certain specified conditions.

The association, if successful, was to continue for twenty years; but the parties had full power to abandon and dissolve it within the first five years, should it be found unprofitable. For this term Mr. Astor covenanted to bear all the loss that might be incurred; after which it was to be borne by all the partners, in proportion to their respective shares.

The parties of the second part were to execute faithfully such duties as might be assigned to them by a majority of the company on the northwest coast, and to repair to such place or places as the majority might direct.

An agent, appointed for the term of five years, was to reside at the principal establishment on the northwest coast, and Wilson Price Hunt was the one chosen for the first term. Should the interests of the concern at any time require his absence, a person was to be appointed, in general meeting, to take his place.

Such were the leading conditions of this association; we shall now proceed to relate the various hardy and eventful expeditions, by sea and land, to which it gave rise.

\* Carver's Travels, Introd. b. iii. Philad. 1796.

\*\* Carver's Travels, p. 360.

\*\*\* On this point Mr. Jefferson's memory was in error. The proposition alluded to was the one, already mentioned, for the establishment of an American Fur Company in the Atlantic States. The great enterprise beyond the mountains, that was to sweep the shores of the Pacific, originated in the mind of Mr. Astor, and was proposed by him to the government.

Washington Irving's Astoria

CHAPTER IV.

Two Expeditions Set on Foot.- The Tonquin and Her Crew.- Captain Thorn, His Character.- The Partners and Clerks - Canadian Voyageurs, Their Habits, Employments, Dress, Character, Songs.- Expedition of a Canadian Boat and Its Crew by Land and Water.- Arrival at New York.- Preparations for a Sea Voyage.- Northwest Braggarts. -Underhand Precautions- Letter of Instructions.

IN prosecuting his great scheme of commerce and colonization, two expeditions were devised by Mr. Astor, one by sea, the other by land. The former was to carry out the people, stores, ammunition, and merchandise, requisite for establishing a fortified trading post at the mouth of Columbia River. The latter, conducted by Mr. Hunt, was to proceed up the Missouri, and across the Rocky Mountains, to the same point; exploring a line of communication across the continent and noting the places where interior trading posts might be established. The expedition by sea is the one which comes first under consideration.

A fine ship was provided called the Tonquin, of two hundred and ninety tons burden, mounting ten guns, with a crew of twenty men. She carried an assortment of merchandise for trading with the natives of the seaboard and of the interior, together with the frame of a schooner, to be employed in the coasting trade. Seeds also were provided for the cultivation of the soil, and nothing was neglected for the necessary supply of the establishment. The command of the ship was intrusted to Jonathan Thorn, of New York, a lieutenant in the United States navy, on leave of absence. He was a man of courage and firmness, who had distinguished himself in our Tripolitan war, and, from being accustomed to naval discipline, was considered by Mr. Astor as well fitted to take charge of an expedition of the kind. Four of the partners were to embark in the ship, namely, Messrs. M'Kay, M'Dougal, David Stuart, and his nephew, Robert Stuart. Mr. M'Dougal was empowered by Mr. Astor to act as his proxy in the absence of Mr. Hunt, to vote for him and in his name, on any question that might come before any meeting of the persons interested in the voyage.

Besides the partners, there were twelve clerks to go out in the ship, several of them natives of Canada, who had some experience in the Indian trade. They were bound to the service of the company for five years, at the rate of one hundred dollars a year, payable at the expiration of the term, and an annual equipment of clothing to the amount of forty dollars. In case of ill conduct they were liable to forfeit their wages and be dismissed; but, should they acquit themselves well, the confident expectation was held out to them of promotion, and partnership. Their interests were thus, to some extent, identified with those of the company.

Several artisans were likewise to sail in the ship, for the supply of the colony; but the most peculiar and characteristic part of this motley embarkation consisted of thirteen Canadian "voyageurs," who had enlisted for five years. As this class of functionaries will continually recur in the course of the following narrations, and as they form one of those distinct and strongly marked castes or orders of people, springing up in this vast continent out of geographical circumstances, or the varied pursuits, habitudes, and origins of its population, we shall sketch a few of their characteristics for the information of the reader.

The "voyageurs" form a kind of confraternity in the Canadas, like the arrieros, or carriers of Spain, and, like them, are employed in long internal expeditions of travel and traffic: with this difference, that the arrieros travel by land, the voyageurs by water; the former with mules and horses, the latter with batteaux and canoes. The voyageurs may be said to have sprung up out of the fur trade, having originally been employed by the early French merchants in their trading expeditions through the labyrinth of rivers and lakes of the boundless interior. They were coeval with the coureurs des bois, or rangers of the woods, already noticed, and, like them, in the intervals of their long, arduous, and laborious expeditions, were prone to pass their time in idleness and revelry about the trading posts or settlements; squandering their hard earnings in heedless conviviality, and rivaling their neighbors, the Indians, in indolent indulgence and an imprudent disregard of the morrow.

When Canada passed under British domination, and the old French trading houses were broken up, the voyageurs, like the coureurs des bois, were for a time disheartened and disconsolate, and with difficulty could reconcile themselves to the service of the new-comers, so different in habits, manners, and language from their former employers. By degrees, however, they became accustomed to the change, and at length came to consider the British fur traders, and especially the members of the Northwest Company, as the legitimate lords of creation.

The dress of these people is generally half civilized, half savage. They wear a capot or surcoat, made of a blanket, a striped cotton shirt, cloth trousers, or leathern leggins, moccasins of deer-skin, and a belt of variegated worsted, from which are suspended the knife, tobacco-pouch, and other implements. Their language is of the same piebald character, being a French patois, embroidered with Indian and English words and phrases.

The lives of the voyageurs are passed in wild and extensive roving, in the service of individuals,

but more especially of the fur traders. They are generally of French descent, and inherit much of the gayety and lightness of heart of their ancestors, being full of anecdote and song, and ever ready for the dance. They inherit, too, a fund of civility and complaisance; and, instead of that hardness and grossness which men in laborious life are apt to indulge towards each other, they are mutually obliging and accommodating; interchanging kind offices, yielding each other assistance and comfort in every emergency, and using the familiar appellations of "cousin" and "brother" when there is in fact no relationship. Their natural good-will is probably heightened by a community of adventure and hardship in their precarious and wandering life.

No men are more submissive to their leaders and employers, more capable of enduring hardship, or more good-humored under privations. Never are they so happy as when on long and rough expeditions, toiling up rivers or coasting lakes; encamping at night on the borders, gossiping round their fires, and bivouacking in the open air. They are dextrous boatmen, vigorous and adroit with the oar and paddle, and will row from morning until night without a murmur. The steersman often sings an old traditional French song, with some regular burden in which they all join, keeping time with their oars; if at any time they flag in spirits or relax in exertion, it is but necessary to strike up a song of the kind to put them all in fresh spirits and activity. The Canadian waters are vocal with these little French chansons, that have been echoed from mouth to mouth and transmitted from father to son, from the earliest days of the colony; and it has a pleasing effect, in a still golden summer evening, to see a batteau gliding across the bosom of a lake and dipping its oars to the cadence of these quaint old ditties, or sweeping along in full chorus on a bright sunny morning, down the transparent current of one of the Canada rivers.

But we are talking of things that are fast fading away! The march of mechanical invention is driving everything poetical before it. The steamboats, which are fast dispelling the wildness and romance of our lakes and rivers, and aiding to subdue the world into commonplace, are proving as fatal to the race of the Canadian voyageurs as they have been to that of the boatmen of the Mississippi. Their glory is departed. They are no longer the lords of our internal seas, and the great navigators of the wilderness. Some of them may still occasionally be seen coasting the lower lakes with their frail barks, and pitching their camps and lighting their fires upon the shores; but their range is fast contracting to those remote waters and shallow and obstructed rivers unvisited by the steamboat. In the course of years they will gradually disappear; their songs will die away like the echoes they once awakened, and the Canadian voyageurs will become a forgotten race, or remembered, like their associates, the Indians, among the poetical images of past times, and as themes for local and romantic associations.

An instance of the buoyant temperament and the professional pride of these people was furnished in the gay and braggart style in which they arrived at New York to join the enterprise. They were determined to regale and astonish the people of the "States" with the sight of a Canadian boat and a Canadian crew. They accordingly fitted up a large but light bark canoe, such as is used in the fur trade; transported it in a wagon from the banks of the St. Lawrence to the shores of Lake Champlain; traversed the lake in it, from end to end; hoisted it again in a wagon and wheeled it off to Lansingburgh, and there launched it upon the waters of the Hudson. Down this river they plied

their course merrily on a fine summer's day, making its banks resound for the first time with their old French boat songs; passing by the villages with whoop and halloo, so as to make the honest Dutch farmers mistake them for a crew of savages. In this way they swept, in full song and with regular flourish of the paddle, round New York, in a still summer evening, to the wonder and admiration of its inhabitants, who had never before witnessed on their waters, a nautical apparition of the kind.

Such was the variegated band of adventurers about to embark in the Tonquin on this arduous and doubtful enterprise. While yet in port and on dry land, in the bustle of preparation and the excitement of novelty, all was sunshine and promise. The Canadians, especially, who, with their constitutional vivacity, have a considerable dash of the gascon, were buoyant and boastful, and great brag arts as to the future; while all those who had been in the service of the Northwest Company, and engaged in the Indian trade, plumed themselves upon their hardihood and their capacity to endure privations. If Mr. Astor ventured to hint at the difficulties they might have to encounter, they treated them with scorn. They were "northwesters;" men seasoned to hardships, who cared for neither wind nor weather. They could live hard, lie hard, sleep hard, eat dogs! - in a word they were ready to do and suffer anything for the good of the enterprise. With all this profession of zeal and devotion, Mr. Astor was not overconfident of the stability and firm faith of these mercurial beings. He had received information, also, that an armed brig from Halifax, probably at the instigation of the Northwest Company, was hovering on the coast, watching for the Tonquin, with the purpose of impressing the Canadians on board of her, as British subjects, and thus interrupting the voyage. It was a time of doubt and anxiety, when the relations between the United States and Great Britain were daily assuming a more precarious aspect and verging towards that war which shortly ensued. As a precautionary measure, therefore, he required that the voyageurs, as they were about to enter into the service of an American association, and to reside within the limits of the United States, should take the oaths of naturalization as American citizens. To this they readily agreed, and shortly afterward assured him that they had actually done so. It was not until after they had sailed that he discovered that they had entirely deceived him in the matter.

The confidence of Mr. Astor was abused in another quarter. Two of the partners, both of them Scotchmen, and recently in the service of the Northwest Company, had misgivings as to an enterprise which might clash with the interests and establishments protected by the British flag. They privately waited upon the British minister, Mr. Jackson, then in New York, laid open to him the whole scheme of Mr. Astor, though intrusted to them in confidence, and dependent, in a great measure, upon secrecy at the outset for its success, and inquired whether they, as British subjects, could lawfully engage in it. The reply satisfied their scruples, while the information they imparted excited the surprise and admiration of Mr. Jackson, that a private individual should have conceived and set on foot at his own risk and expense so great an enterprise.

This step on the part of those gentlemen was not known to Mr. Astor until some time afterwards, or it might have modified the trust and confidence reposed in them.

To guard against any interruption to the voyage by the armed brig, said to be off the harbor, Mr.

Astor applied to Commodore Rodgers, at that time commanding at New York, to give the Tonquin safe convoy off the coast. The commodore having received from a high official source assurance of the deep interest which the government took in the enterprise, sent directions to Captain Hull, at that time cruising off the harbor, in the frigate Constitution, to afford the Tonquin the required protection when she should put to sea.

Before the day of embarkation, Mr. Astor addressed a letter of instruction to the four partners who were to sail in the ship. In this he enjoined them, in the most earnest manner, to cultivate harmony and unanimity, and recommended that all differences of opinions on points connected with the objects and interests of the voyage should be discussed by the whole, and decided by a majority of votes. He, moreover, gave them especial caution as to their conduct on arriving at their destined port; exhorting them to be careful to make a favorable impression upon the wild people among whom their lot and the fortunes of the enterprise would be cast. "If you find them kind," said he, "as I hope you will, be so to them. If otherwise, act with caution and forbearance, and convince them that you come as friends."

With the same anxious forethought he wrote a letter of instructions to Captain Thorn, in which he urged the strictest attention to the health of himself and his crew, and to the promotion of good-humor and harmony on board his ship. "To prevent any misunderstanding," added he, "will require your particular good management." His letter closed with an injunction of wariness in his intercourse with the natives, a subject on which Mr. Astor was justly sensible he could not be too earnest. "I must recommend you," said he, "to be particularly careful on the coast, and not to rely too much on the friendly disposition of the natives. All accidents which have as yet happened there arose from too much confidence in the Indians."

The reader will bear these instructions in mind, as events will prove their wisdom and importance, and the disasters which ensued in consequence of the neglect of them.

Washington Irving's Astoria  
CHAPTER V.

Sailing of the Tonquin. - A Rigid Commander and a Reckless Crew. - Landsmen on Shipboard.- Fresh-Water Sailors at Sea.- Lubber Nests. - Ship Fare.- A Labrador Veteran- Literary Clerks.- Curious Travellers.- Robinson Crusoe's Island.- Quarter-Deck Quarrels.- Falkland Islands.- A Wild-Goose Chase.- Port Egmont.- Epitaph Hunting.- Old Mortality- Penguin Shooting.- Sportsmen Left in the Lurch.-A Hard Pull.- Further Altercations.- Arrival at Owyhee.

ON the eighth of September, 1810, the Tonquin put to sea, where she was soon joined by the frigate Constitution. The wind was fresh and fair from the southwest, and the ship was soon out of sight of land and free from the apprehended danger of interruption. The frigate, therefore, gave her "God speed," and left her to her course.

The harmony so earnestly enjoined by Mr. Astor on this heterogeneous crew, and which had been

---

so confidently promised in the buoyant moments of preparation, was doomed to meet with a check at the very outset.

Captain Thorn was an honest, straightforward, but somewhat dry and dictatorial commander, who, having been nurtured in the system and discipline of a ship of war, and in a sacred opinion of the supremacy of the quarter-deck, was disposed to be absolute lord and master on board of his ship. He appears, moreover, to have had no great opinion, from the first, of the persons embarked with him - He had stood by with surly contempt while they vaunted so bravely to Mr. Astor of all they could do and all they could undergo; how they could face all weathers, put up with all kinds of fare, and even eat dogs with a relish, when no better food was to be had. He had set them down as a set of landlubbers and braggadocios, and was disposed to treat them accordingly. Mr. Astor was, in his eyes, his only real employer, being the father of the enterprise, who furnished all funds and bore all losses. The others were mere agents and subordinates, who lived at his expense. He evidently had but a narrow idea of the scope and nature of the enterprise, limiting his views merely to his part of it; everything beyond the concerns of his ship was out of his sphere; and anything that interfered with the routine of his nautical duties put him in a passion.

The partners, on the other hand, had been brought up in the service of the Northwest Company, and in a profound idea of the importance, dignity, and authority of a partner. They already began to consider themselves on a par with the M'Tavishes, the M'Gillivrays, the Frobishers, and the other magnates of the Northwest, whom they had been accustomed to look up to as the great ones of the earth; and they were a little disposed, perhaps, to wear their suddenly-acquired honors with some air of pretension. Mr. Astor, too, had put them on their mettle with respect to the captain, describing him as a gunpowder fellow who would command his ship in fine style, and, if there was any fighting to do, would "blow all out of the water."

Thus prepared to regard each other with no very cordial eye, it is not to be wondered at that the parties soon came into collision. On the very first night Captain Thorn began his man-of-war discipline by ordering the lights in the cabin to be extinguished at eight o'clock.

The pride of the partners was immediately in arms. This was an invasion of their rights and dignities not to be borne. They were on board of their own ship, and entitled to consult their ease and enjoyment. M'Dougal was the champion of their cause. He was an active, irritable, fuming, vain-glorious little man, and elevated in his own opinion, by being the proxy of Mr. Astor. A violent altercation ensued, in the course of which Thorn threatened to put the partners in irons should they prove refractory; upon which M'Dougal seized a pistol and swore to be the death of the captain should he ever offer such an indignity. It was some time before the irritated parties could be pacified by the more temperate bystanders.

Such was the captain's outset with the partners. Nor did the clerks stand much higher in his good graces; indeed, he seems to have regarded all the landsmen on board his ship as a kind of live lumber, continually in the way. The poor voyageurs, too, continually irritated his spleen by their "lubberly" and unseemly habits, so abhorrent to one accustomed to the cleanliness of a man-of-

war. These poor fresh-water sailors, so vainglorious on shore, and almost amphibious when on lakes and rivers, lost all heart and stomach the moment they were at sea. For days they suffered the doleful rigors and retchings of sea-sickness, lurking below in their berths in squalid state, or emerging now and then like spectres from the hatchways, in capotes and blankets, with dirty nightcaps, grizzly beard, lantern visage and unhappy eye, shivering about the deck, and ever and anon crawling to the sides of the vessel, and offering up their tributes to the windward, to infinite annoyance of the captain.

His letters to Mr. Astor, wherein he pours forth the bitterness of his soul, and his seamanlike impatience of what he considers the "lubberly" character and conduct of those around him, are before us, and are amusingly characteristic. The honest captain is full of vexation on his own account, and solicitude on account of Mr. Astor, whose property he considers at the mercy of a most heterogeneous and wasteful crew.

As to the clerks, he pronounced them mere pretenders, not one of whom had ever been among the Indians, nor farther to the northwest than Montreal, nor of higher rank than barkeeper of a tavern or marker of a billiard-table, excepting one, who had been a school-master, and whom he emphatically sets down for "as foolish a pedant as ever lived."

Then as to the artisans and laborers who had been brought from Canada and shipped at such expense, the three most respectable, according to the captain's account, were culprits, who had fled from Canada on account of their misdeeds; the rest had figured in Montreal as draymen, barbers, waiters, and carriage drivers, and were the most helpless, worthless beings "that ever broke sea-biscuit."

It may easily be imagined what a series of misunderstandings and cross-purposes would be likely to take place between such a crew and such a commander. The captain, in his zeal for the health and cleanliness of his ship, would make sweeping visitations to the "lubber nests" of the unlucky "voyageurs" and their companions in misery, ferret them out of their berths, make them air and wash themselves and their accoutrements, and oblige them to stir about briskly and take exercise.

Nor did his disgust and vexation cease when all hands had recovered from sea-sickness, and become accustomed to the ship, for now broke out an alarming keenness of appetite that threatened havoc to the provisions. What especially irritated the captain was the daintiness of some of his cabin passengers. They were loud in their complaints of the ship's fare, though their table was served with fresh pork, hams, tongues, smoked beef, and puddings. "When thwarted in their cravings for delicacies," said he, "they would exclaim it was d-d hard they could not live as they pleased upon their own property, being on board of their own ship, freighted with their own merchandise. And these," added he, "are the fine fellows who made such boast that they could 'eat dogs.'"

In his indignation at what he termed their effeminacy, he would swear that he would never take them to sea again "without having Fly-market on the fore-castle, Covent-garden on the poop, and

a cool spring from Canada in the maintop. “

As they proceeded on their voyage and got into the smooth seas and pleasant weather of the tropics, other annoyances occurred to vex the spirit of the captain. He had been crossed by the irritable mood of one of the partners; he was now excessively annoyed by the good-humor of another. This was the elder Stuart, who was an easy soul, and of a social disposition. He had seen life in Canada, and on the coast of Labrador; had been a fur trader in the former, and a fisherman on the latter; and, in the course of his experience, had made various expeditions with voyageurs. He was accustomed, therefore, to the familiarity which prevails between that class and their superiors, and the gossipings which take place among them when seated round a fire at their encampments. Stuart was never so happy as when he could seat himself on the deck with a number of these men round him, in camping style, smoke together, passing the pipe from mouth to mouth, after the manner of the Indians, sing old Canadian boat-songs, and tell stories about their hardships and adventures, in the course of which he rivaled Sinbad in his long tales of the sea, about his fishing exploits on the coast of Labrador.

This gossiping familiarity shocked the captain's notions of rank and subordination, and nothing was so abhorrent to him as the community of pipe between master and man, and their mingling in chorus in the outlandish boat-songs.

Then there was another whimsical source of annoyance to him. Some of the young clerks, who were making their first voyage, and to whom everything was new and strange, were, very rationally, in the habit of taking notes and keeping journals. This was a sore abomination to the honest captain, who held their literary pretensions in great contempt. “The collecting of materials for long histories of their voyages and travels,” said he, in his letter to Mr. Astor, “appears to engross most of their attention.” We can conceive what must have been the crusty impatience of the worthy navigator, when, on any trifling occurrence in the course of the voyage, quite commonplace in his eyes, he saw these young landsmen running to record it in their journals; and what indignant glances he must have cast to right and left, as he worried about the deck, giving out his orders for the management of the ship, surrounded by singing, smoking, gossiping, scribbling groups, all, as he thought, intent upon the amusement of the passing hour, instead of the great purposes and interests of the voyage.

It is possible the captain was in some degree right in his notions. Though some of the passengers had much to gain by the voyage, none of them had anything positively to lose. They were mostly young men, in the heyday of life; and having got into fine latitudes, upon smooth seas, with a well-stored ship under them, and a fair wind in the shoulder of the sail, they seemed to have got into a holiday world, and were disposed to enjoy it. That craving desire, natural to untravelled men of fresh and lively minds, to see strange lands, and to visit scenes famous in history or fable, was expressed by some of the partners and clerks, with respect to some of the storied coasts and islands that lay within their route. The captain, however, who regarded every coast and island with a matter-of-fact eye, and had no more associations connected with them than those laid down in his sea-chart, considered all this curiosity as exceedingly idle and childish. “In the first part of the

voyage," says he in his letter, "they were determined to have it said they had been in Africa, and therefore insisted on stopping at the Cape de Verdes. Next they said the ship should stop on the coast of Patagonia, for they must see the large and uncommon inhabitants of that place. Then they must go to the island where Robinson Crusoe had so long lived. And lastly, they were determined to see the handsome inhabitants of Easter Island."

To all these resolves, the captain opposed his peremptory veto, as "contrary to instructions." Then would break forth an unavailing explosion of wrath on the part of certain of the partners, in the course of which they did not even spare Mr. Astor for his act of supererogation in furnishing orders for the control of the ship while they were on board, instead of leaving them to be the judges where it would be best for her to touch, and how long to remain. The choleric M'Dougal took the lead in these railings, being, as has been observed, a little puffed up with the idea of being Mr. Astor's proxy.

The captain, however, became only so much the more crusty and dogged in his adherence to his orders, and touchy and harsh in his dealings with the passengers, and frequent altercations ensued. He may in some measure have been influenced by his seamanlike impatience of the interference of landsmen, and his high notions of naval etiquette and quarter-deck authority; but he evidently had an honest, trusty concern for the interests of his employer. He pictured to himself the anxious projector of the enterprise, who had disbursed so munificently in its outfit, calculating on the zeal, fidelity, and singleness of purpose of his associates and agents; while they, on the other hand, having a good ship at their disposal and a deep pocket at home to bear them out, seemed ready to loiter on every coast, and amuse themselves in every port.

On the fourth of December they came in sight of the Falkland Islands. Having been for some time on an allowance of water, it was resolved to anchor here and obtain a supply. A boat was sent into a small bay to take soundings. Mr. M'Dougal and Mr. M'Kay took this occasion to go on shore, but with a request from the captain that they would not detain the ship. Once on shore, however, they were in no haste to obey his orders, but rambled about in search of curiosities. The anchorage proving unsafe, and water difficult to be procured, the captain stood out to sea, and made repeated signals for those on shore to rejoin the ship, but it was not until nine at night that they came on board.

The wind being adverse, the boat was again sent on shore on the following morning, and the same gentlemen again landed, but promised to come off at a moment's warning; they again forgot their promise in their eager pursuit of wild geese and seawolves. After a time the wind hauled fair, and signals were made for the boat. Half an hour elapsed but no boat put off. The captain reconnoitered the shore with his glass, and, to his infinite vexation, saw the loiterers in the full enjoyment of their "wildgoose-chase." Nettled to the quick, he immediately made sail. When those on shore saw the ship actually under way, they embarked with all speed, but had a hard pull of eight miles before they got on board, and then experienced but a grim reception, notwithstanding that they came well laden with the spoils of the chase.

Two days afterwards, on the seventh of December, they anchored at Fort Egmont, in the same island, where they remained four days taking in water and making repairs. This was a joyous time for the landsmen. They pitched a tent on shore, had a boat at their command, and passed their time merrily in rambling about the island, and coasting along the shores, shooting sealions, seals, foxes, geese, ducks, and penguins. None were keener in pursuit of this kind of game than M'Dougal and David Stuart; the latter was reminded of aquatic sports on the coast of Labrador, and his hunting exploits in the Northwest.

In the meantime the captain addressed himself steadily to the business of his ship, scorning the holiday spirit and useless pursuits of his emancipated messmates, and warning them, from time to time, not to wander away nor be out of hail. They promised, as usual, that the ship should never experience a moment's detention on their account, but, as usual, forgot their promise.

On the morning of the 11th, the repairs being all finished, and the water casks replenished, the signal was given to embark, and the ship began to weigh anchor. At this time several of the passengers were dispersed about the island, amusing themselves in various ways. Some of the young men had found two inscriptions, in English, over a place where two unfortunate mariners had been buried in this desert island. As the inscriptions were worn out by the time and weather, they were playing the part of "Old Mortality," and piously renewing them. The signal from the ship summoned them from their labors; they saw the sails unfurled, and that she was getting under way. The two sporting partners, however, Mr. M'Dougal and David Stuart, had strolled away to the south of the island in pursuit of penguins. It would never do to put off without them, as there was but one boat to convey the whole.

While this delay took place on shore, the captain was storming on board. This was the third time his orders had been treated with contempt, and the ship wantonly detained, and it should be the last; so he spread all sail and put to sea, swearing he would leave the laggards to shift for themselves. It was in vain that those on board made remonstrances and entreaties, and represented the horrors of abandoning men upon a sterile and uninhabited island; the sturdy captain was inflexible.

In the meantime the penguin hunters had joined the engravers of tombstones, but not before the ship was already out at sea. They all, to the number of eight, threw themselves into their boat, which was about twenty feet in length, and rowed with might and main. For three hours and a half did they tug anxiously and severely at the oar, swashed occasionally by the surging waves of the open sea, while the ship inexorably kept on her course, and seemed determined to leave them behind.

On board the ship was the nephew of David Stuart, a young man of spirit and resolution. Seeing, as he thought, the captain obstinately bent upon abandoning his uncle and the others, he seized a pistol, and in a paroxysm of wrath swore he would blow out the captain's brains, unless he put about or shortened sail.

Fortunately for all parties, the wind just then came ahead, and the boat was enabled to reach the ship; otherwise, disastrous circumstances might have ensued. We can hardly believe that the captain really intended to carry his threat into full effect, and rather think he meant to let the laggards off for a long pull and a hearty fright. He declared, however, in his letter to Mr. Astor, that he was serious in his threats, and there is no knowing how far such an iron man may push his notions of authority.

“Had the wind,” writes he, “(unfortunately) not hauled ahead soon after leaving the harbor’s mouth, I should positively have left them; and, indeed, I cannot but think it an unfortunate circumstance for you that it so happened, for the first loss in this instance would, in my opinion, have proved the best, as they seem to have no idea of the value of property, nor any apparent regard for your interest, although interwoven with their own.”

This, it must be confessed, was acting with a high hand, and carrying a regard to the owner’s property to a dangerous length. Various petty feuds occurred also between him and the partners in respect to the goods on board ship, some articles of which they wished to distribute for clothing among the men, or for other purposes which they deemed essential. The captain, however, kept a mastiff watch upon the cargo, and growled and snapped if they but offered to touch box or bale. “It was contrary to orders; it would forfeit his insurance; it was out of all rule.” It was in vain they insisted upon their right to do so, as part owners, and as acting for the good of the enterprise; the captain only stuck to his point the more stanchly. They consoled themselves, therefore, by declaring, that as soon as they made land, they would assert their rights, and do with ship and cargo as they pleased.

Beside these feuds between the captain and the partners, there were feuds between the partners themselves, occasioned, in some measure, by jealousy of rank. M’Dougal and M’Kay began to draw plans for the fort, and other buildings of the intended establishment. They agreed very well as to the outline and dimensions, which were on a sufficiently grand scale; but when they came to arrange the details, fierce disputes arose, and they would quarrel by the hour about the distribution of the doors and windows. Many were the hard words and hard names bandied between them on these occasions, according to the captain’s account. Each accused the other of endeavoring to assume unwarrantable power, and take the lead; upon which Mr. M’Dougal would vauntingly lay down Mr. Astor’s letter, constituting him his representative and proxy, a document not to be disputed.

These wordy contests, though violent, were brief; “and within fifteen minutes,” says the captain, “they would be caressing each other like children.”

While all this petty anarchy was agitating the little world within the Tonquin, the good ship prosperously pursued her course, doubled Cape Horn on the 25th of December, careered across the bosom of the Pacific, until, on the 11th of February, the snowy peaks of Owyhee were seen brightening above the horizon.

Washington Irving's Astoria  
CHAPTER VI.

Owyhee.- Sandwich Islanders- Their Nautical Talents.- Tamaahmaah. -His Navy.- His Negotiations.- Views of Mr. Astor With Respect to the Sandwich Islands- Karakakooa.- Royal Monopoly of Pork.- Description of the Islanders-Gayeties on Shore.- Chronicler of the Island. -Place Where Captain Cook was Killed.- John Young, a Nautical Governor.- His Story.- Waititi - A Royal Residence.- A Royal Visit - Grand Ceremonials.- Close Dealing- A Royal Pork Merchant- Grievances of a Matter-of-Fact Man.

OWYHEE, or Hawaii, as it is written by more exact orthographers, is the largest of the cluster, ten in number, of the Sandwich Islands. It is about ninety-seven miles in length, and seventy-eight in breadth, rising gradually into three pyramidal summits or cones; the highest, Mouna Roa, being eighteen thousand feet above the level of the sea, so as to domineer over the whole archipelago, and to be a landmark over a wide extent of ocean. It remains a lasting monument of the enterprising and unfortunate Captain Cook, who was murdered by the natives of this island.

The Sandwich Islanders, when first discovered, evinced a character superior to most of the savages of the Pacific isles. They were frank and open in their deportment, friendly and liberal in their dealings, with an apt ingenuity apparent in all their rude inventions.

The tragical fate of the discoverer, which, for a time, brought them under the charge of ferocity, was, in fact, the result of sudden exasperation, caused by the seizure of their chief.

At the time of the visit of the Tonquin, the islanders had profited, in many respects, by occasional intercourse with white men; and had shown a quickness to observe and cultivate those arts important to their mode of living. Originally they had no means of navigating the seas by which they were surrounded, superior to light pirogues, which were little competent to contend with the storms of the broad ocean. As the islanders are not in sight of each other, there could, therefore, be but casual intercourse between them. The traffic with white men had put them in possession of vessels of superior description; they had made themselves acquainted with their management, and had even made rude advances in the art of ship-building.

These improvements had been promoted, in a great measure, by the energy and sagacity of one man, the famous Tamaahmaah. He had originally been a petty eri, or chief; but, being of an intrepid and aspiring nature, he had risen in rank, and, availing himself of the superior advantages now afforded in navigation, had brought the whole archipelago in subjection to his arms. At the time of the arrival of the Tonquin he had about forty schooners, of from twenty to thirty tons burden, and one old American ship. With these he held undisputed sway over his insular domains, and carried on intercourse with the chiefs or governors whom he had placed in command of the several islands.

The situation of this group of islands, far in the bosom of the vast Pacific, and their abundant fer-

tility, render them important stopping-places on the highway to China, or to the northwest coast of America. Here the vessels engaged in the fur trade touched to make repairs and procure provisions; and here they often sheltered themselves during the winters that occurred in their long coasting expeditions.

The British navigators were, from the first, aware of the value of these islands to the purposes of commerce; and Tamaahmaah, not long after he had attained the sovereign sway, was persuaded by Vancouver, the celebrated discoverer, to acknowledge, on behalf of himself, and subjects, allegiance to the king of Great Britain. The reader cannot but call to mind the visit which the royal family and court of the Sandwich Islands was, in late years, induced to make to the court of St. James; and the serio-comic ceremonials and mock parade which attended that singular travesty of monarchal style.

It was a part of the wide and comprehensive plan of Mr. Astor to establish a friendly intercourse between these islands and his intended colony, which might, for a time, have occasion to draw supplies thence; and he even had a vague idea of, some time or other, getting possession of one of their islands as a rendezvous for his ships, and a link in the chain of his commercial establishments.

On the evening of the 12th of February, the Tonquin anchored in the bay of Karakakooa, in the island of Owyhee. The surrounding shores were wild and broken, with overhanging cliffs and precipices of black volcanic rock. Beyond these, however, the country was fertile and well cultivated, with inclosures of yams, plantains, sweet potatoes, sugar-canes, and other productions of warm climates and teeming soils; and the numerous habitations of the natives were pleasantly sheltered beneath clumps of cocoanut and bread-fruit trees, which afforded both food and shade. This mingled variety of garden and grove swept gradually up the sides of the mountains, until succeeded by dense forests, which in turn gave place to naked and craggy rocks, until the summits rose into the regions of perpetual snow.

The royal residence of Tamaahmaah was at this time at another island named Woahoo. The island of Owyhee was under the command of one of his eris, or chiefs, who resided at the village of To-caigh, situated on a different part of the coast from the bay of Karakakooa.

On the morning after her arrival, the ship was surrounded by canoes and pirogues, filled with the islanders of both sexes, bringing off supplies of fruits and vegetables, bananas, plantains, water-melons, yams, cabbages and taro. The captain was desirous, however, of purchasing a number of hogs, but there were none to be had - The trade in pork was a royal monopoly, and no subject of the great Tamaahmaah dared to meddle with it. Such provisions as they could furnish, however, were brought by the natives in abundance, and a lively intercourse was kept up during the day, in which the women mingled in the kindest manner.

The islanders are a comely race, of a copper complexion. The men are tall and well made, with forms indicating strength and activity; the women with regular and occasionally handsome

features, and a lascivious expression, characteristic of their temperament. Their style of dress was nearly the same as in the days of Captain Cook. The men wore the maro, a band one foot in width and several feet in length, swathed round the loins, and formed of tappa, or cloth of bark; the kihei, or mantle, about six feet square, tied in a knot over one shoulder, passed under the opposite arm, so as to leave it bare, and falling in graceful folds before and behind, to the knee, so as to bear some resemblance to a Roman toga.

The female dress consisted of the pau, a garment formed of a piece of tappa, several yards in length and one in width, wrapped round the waist, and reaching like a petticoat, to the knees. Over this kihei, or mantle, larger than that of the men, sometimes worn over both shoulders, like a shawl, sometimes over one only. These mantles were seldom worn by either sex during the heat of the day, when the exposure of their persons was at first very revolting to a civilized eye.

Towards evening several of the partners and clerks went on shore, where they were well received and hospitably entertained. A dance was performed for their amusement, in which nineteen young women and one man figured very gracefully, singing in concert, and moving to the cadence of their song.

All this, however, was nothing to the purpose in the eyes of Captain Thorn, who, being disappointed in his hope of obtaining a supply of pork, or finding good water, was anxious to be off. This it was not so easy to effect. The passengers, once on shore, were disposed, as usual, to profit by the occasion. The partners had many inquiries to make relative to the island, with a view to business; while the young clerks were delighted with the charms and graces of the dancing damsels.

To add to their gratifications, an old man offered to conduct them to the spot where Captain Cook was massacred. The proposition was eagerly accepted, and all hands set out on a pilgrimage to the place. The veteran islander performed his promise faithfully, and pointed out the very spot where the unfortunate discoverer fell. The rocks and cocoa-trees around bore record of the fact, in the marks of the balls fired from the boats upon the savages. The pilgrims gathered round the old man, and drew from him all the particulars he had to relate respecting this memorable event; while the honest captain stood by and bit his nails with impatience. To add to his vexation, they employed themselves in knocking off pieces of the rocks, and cutting off the bark of the trees marked by the balls, which they conveyed back to the ship as precious relics.

Right glad, therefore, was he to get them and their treasures fairly on board, when he made sail from this unprofitable place, and steered for the Bay of Tocaigh, the residence of the chief or governor of the island, where he hoped to be more successful in obtaining supplies. On coming to anchor the captain went on shore, accompanied by Mr. M'Dougal and Mr. M'Kay, and paid a visit to the governor. This dignitary proved to be an old sailor, by the name of John Young; who, after being tossed about the seas like another Sinbad, had, by one of the whimsical freaks of fortune, been elevated to the government of a savage island. He received his visitors with more hearty familiarity than personages in his high station are apt to indulge, but soon gave them to understand

that provisions were scanty at Tocaigh, and that there was no good water, no rain having fallen in the neighborhood in three years.

The captain was immediately for breaking up the conference and departing, but the partners were not so willing to part with the nautical governor, who seemed disposed to be extremely communicative, and from whom they might be able to procure some useful information. A long conversation accordingly ensued, in the course of which they made many inquiries about the affairs of the islands, their natural productions, and the possibility of turning them to advantage in the way of trade; nor did they fail to inquire into the individual history of John Young, and how he came to be governor. This he gave with great condescension, running through the whole course of his fortunes "even from his boyish days."

He was a native of Liverpool, in England, and had followed the sea from boyhood, until, by dint of good conduct, he had risen so far in his profession as to be boatswain of an American ship called the *Eleanor*, commanded by Captain Metcalf. In this vessel he had sailed in 1789, on one of those casual expeditions to the northwest coast, in quest of furs. In the course of the voyage, the captain left a small schooner, named the *Fair American*, at Nootka, with a crew of five men, commanded by his son, a youth of eighteen. She was to follow on in the track of the *Eleanor*.

In February, 1790, Captain Metcalf touched at the island of Mowee, one of the Sandwich group. While anchored here, a boat which was astern of the *Eleanor* was stolen, and a seaman who was in it was killed. The natives, generally, disclaimed the outrage, and brought the shattered remains of the boat and the dead body of the seaman to the ship. Supposing that they had thus appeased the anger of the captain, they thronged, as usual, in great numbers about the vessel, to trade. Captain Metcalf, however, determined on a bloody revenge. The *Eleanor* mounted ten guns. All these he ordered to be loaded with musket-balls, nails, and pieces of old iron, and then fired them, and the small arms of the ship, among the natives. The havoc was dreadful; more than a hundred, according to Young's account, were slain.

After this signal act of vengeance, Captain Metcalf sailed from Mowee, and made for the island of Owyhee, where he was well received by Tamaahmaah. The fortunes of this warlike chief were at that time on the rise. He had originally been of inferior rank, ruling over only one or two districts of Owyhee, but had gradually made himself sovereign of his native island.

The *Eleanor* remained some few days at anchor here, and an apparently friendly intercourse was kept up with the inhabitants. On the 17th March, John Young obtained permission to pass the night on shore. On the following morning a signal-gun summoned him to return on board.

He went to the shore to embark, but found all the canoes hauled up on the beach and rigorously tabooed, or interdicted. He would have launched one himself, but was informed by Tamaahmaah that if he presumed to do so he would be put to death.

Young was obliged to submit, and remained all day in great perplexity to account for this myste-

rious taboo, and fearful that some hostility was intended. In the evening he learned the cause of it, and his uneasiness was increased. It appeared that the vindictive act of Captain Metcalf had recoiled upon his own head. The schooner *Fair American*, commanded by his son, following in his track, had fallen into the hands of the natives to the southward of Tocaigh Bay, and young Metcalf and four of the crew had been massacred.

On receiving intelligence of this event, Tamaahmaah had immediately tabooed all the canoes, and interdicted all intercourse with the ship, lest the captain should learn the fate of the schooner, and take his revenge upon the island. For the same reason he prevented Young from rejoining his countrymen. The *Eleanor* continued to fire signals from time to time for two days, and then sailed; concluding, no doubt, that the boatswain had deserted.

John Young was in despair when he saw the ship make sail; and found himself abandoned among savages;—and savages, too, sanguinary in their character, and inflamed by acts of hostility. He was agreeably disappointed, however, in experiencing nothing but kind treatment from Tamaahmaah and his people. It is true, he was narrowly watched whenever a vessel came in sight, lest he should escape and relate what had passed; but at other times he was treated with entire confidence and great distinction. He became a prime favorite, cabinet counsellor, and active coadjutor of Tamaahmaah, attending him in all his excursions, whether of business or pleasure, and aiding in his warlike and ambitious enterprises. By degrees he rose to the rank of a chief, espoused one of the beauties of the island, and became habituated and reconciled to his new way of life; thinking it better, perhaps, to rule among savages than serve among white men; to be a feathered chief than a tarpaulin boatswain. His favor with Tamahmaah, never declined; and when that sagacious, intrepid, and aspiring chieftain had made himself sovereign over the whole group of islands, and removed his residence to Woahoo, he left his faithful adherent John Young in command of Owyhee.

Such is an outline of the history of Governor Young, as furnished by himself; and we regret that we are not able to give any account of the state maintained by this seafaring worthy, and the manner in which he discharged his high functions; though it is evident he had more of the hearty familiarity of the forecastle than the dignity of the gubernatorial office.

These long conferences were bitter trials to the patience of the captain, who had no respect either for the governor or his island, and was anxious to push on in quest of provisions and water. As soon as he could get his inquisitive partners once more on board, he weighed anchor, and made sail for the island of Woahoo, the royal residence of Tamaahmaah.

This is the most beautiful island of the Sandwich group. It is forty-six miles in length and twenty-three in breadth. A ridge of volcanic mountains extends through the centre, rising into lofty peaks, and skirted by undulating hills and rich plains, where the cabins of the natives peep out from beneath groves of cocoanut and other luxuriant trees.

On the 21st of February the *Tonquin* cast anchor in the beautiful bay before the village of Waititi, (pronounced Whyteetee.) the abode of Tamaahmaah. This village contained about two hundred

habitations, composed of poles set in the ground, tied together at the ends, and thatched with grass, and was situated in an open grove of cocoanuts. The royal palace of Tamaahmaah was a large house of two stories; the lower of stone, the upper of wood. Round this his body-guard kept watch, composed of twenty-four men in long blue cassocks, turned up with yellow, and each armed with a musket.

While at anchor at this place, much ceremonious visiting and long conferences took place between the potentate of the islands and the partners of the company. Tamaahmaah came on board of the ship in royal style, in his double pirogue. He was between fifty and sixty years of age, above the middle size, large and well made, though somewhat corpulent. He was dressed in an old suit of regimentals, with a sword by his side, and seemed somewhat embarrassed by his magnificent attire. Three of his wives accompanied him. They were almost as tall, and quite as corpulent as himself; but by no means to be compared with him in grandeur of habiliments, wearing no other garb than the pan. With him, also, came his great favorite and confidential counsellor, Kraimaker; who, from holding a post equivalent to that of prime minister, had been familiarly named Billy Pitt by the British visitors to the islands.

The sovereign was received with befitting ceremonial. The American flag was displayed, four guns were fired, and the partners appeared in scarlet coats, and conducted their illustrious guests to the cabin, where they were regaled with wine. In this interview the partners endeavored to impress the monarch with a sense of their importance, and of the importance of the association to which they belonged. They let him know that they were eris, or chiefs, of a great company about to be established on the northwest coast, and talked of the probability of opening a trade with his islands, and of sending ships there occasionally. All this was gratifying and interesting to him, for he was aware of the advantages of trade, and desirous of promoting frequent intercourse with white men. He encouraged Europeans and Americans to settle in his islands and intermarry with his subjects. There were between twenty and thirty white men at that time resident in the island, but many of them were mere vagabonds, who remained there in hopes of leading a lazy and an easy life. For such Tamaahmaah had a great contempt; those only had his esteem and countenance who knew some trade or mechanic art, and were sober and industrious.

On the day subsequent to the monarch's visit, the partners landed and waited upon him in return. Knowing the effect of show and dress upon men in savage life, and wishing to make a favorable impression as the eris, or chiefs, of the great American Fur Company, some of them appeared in Highland plaids and kilts to the great admiration of the natives.

While visits of ceremony and grand diplomatic conferences were going on between the partners and the king, the captain, in his plain, matter-of-fact way, was pushing what he considered a far more important negotiation; the purchase of a supply of hogs. He found that the king had profited in more ways than one by his intercourse with white men. Above all other arts he had learned the art of driving a bargain. He was a magnanimous monarch, but a shrewd pork merchant; and perhaps thought he could not do better with his future allies, the American Fur Company, than to begin by close dealing. Several interviews were requisite, and much bargaining, before he could be

brought to part with a bristle of his bacon, and then he insisted upon being paid in hard Spanish dollars; giving as a reason that he wanted money to purchase a frigate from his brother George, as he affectionately termed the king of England. \*

At length the royal bargain was concluded; the necessary supply of hogs obtained, besides several goats, two sheep, a quantity of poultry, and vegetables in abundance. The partners now urged to recruit their forces from the natives of this island. They declared they had never seen watermen equal to them, even among the voyageurs of the Northwest; and, indeed, they are remarkable for their skill in managing their light craft, and can swim and dive like waterfowl. The partners were inclined, therefore, to take thirty or forty with them to the Columbia, to be employed in the service of the company. The captain, however, objected that there was not room in his vessel for the accommodation of such a number. Twelve, only, were therefore enlisted for the company, and as many more for the service of the ship. The former engaged to serve for the term of three years, during , which they were to be fed and clothed; and at the expiration of the time were to receive one hundred dollars in merchandise.

And now, having embarked his live-stock, fruits, vegetables, and water, the captain made ready to set sail. How much the honest man had suffered in spirit by what he considered the freaks and vagaries of his passengers, and how little he had understood their humors and intentions, is amusingly shown in a letter written to Mr. Astor from Woahoo, which contains his comments on the scenes we have described.

“It would be difficult,” he writes, “to imagine the frantic gambols that are daily played off here; sometimes dressing in red coats, and otherwise very fantastically, and collecting a number of ignorant natives around them, telling them that they are the great eris of the Northwest, and making arrangements for sending three or four vessels yearly to them from the coast with spars, &c.; while those very natives cannot even furnish a hog to the ship. Then dressing in Highland plaids and kilts, and making similar arrangements, with presents of rum, wine, or anything that is at hand. Then taking a number of clerks and men on shore to the very spot on which Captain Cook was killed, and each fetching off a piece of the rock or tree that was touched by the shot. Then sitting down with some white man or some native who can be a little understood, and collecting the history of those islands, of Tamaahmaah's wars, the curiosities of the islands, &c., preparatory to the histories of their voyages; and the collection is indeed ridiculously contemptible. To enumerate the thousand instances of ignorance, filth, &c., - or to particularize all the frantic gambols that are daily practiced, would require Volumes.

Before embarking, the great eris of the American Fur Company took leave of their illustrious ally in due style, with many professions of lasting friendship and promises of future intercourse; while the matter-of-fact captain anathematized him in his heart for a grasping, trafficking savage; as shrewd and sordid in his dealings as a white man. As one of the vessels of the company will, in the course of events, have to appeal to the justice and magnanimity of this island potentate, we shall see how far the honest captain was right in his opinion.

\* It appears, from the accounts of subsequent voyagers, that Tamaahmaah afterwards succeeded in his wish of purchasing a large ship. In this he sent a cargo of sandal-wood to Canton, having discovered that the foreign merchants trading with him made large profits on this wood, shipped by them from the islands to the Chinese markets. The ship was manned by natives, but the officers were Englishmen. She accomplished her voyage, and returned in safety to the islands, with the Hawaiian flag floating gloriously in the breeze. The king hastened on board, expecting to find his sandal-wood converted into crapes and damasks, and other rich stuffs of China, but found, to his astonishment, by the legerdemain of traffic, his cargo had all disappeared, and, in place of it, remained a bill of charges amounting to three thousand dollars. It was some time before he could be made to comprehend certain of the most important items of the bill, such as pilotage, anchorage, and custom-house fees; but when he discovered that maritime states in other countries derived large revenues in this manner, to the great cost of the merchant, "Well," cried he, "then I will have harbor fees also." He established them accordingly. Pilotage a dollar a foot on the draft of each vessel. Anchorage from sixty to seventy dollars. In this way he greatly increased the royal revenue, and turned his China speculation to account.

Washington Irving's Astoria  
CHAPTER VII.

Departure From the Sandwich Islands.- Misunderstandings- Miseries of a Suspicious Man.- Arrival at the Columbia - Dangerous Service. - Gloomy Apprehensions- Bars and Breakers.- Perils of the Ship. Disasters of a Boat's Crew.-Burial of a Sandwich Islander.

IT was on the 28th of February that the Tonquin set sail from the Sandwich Islands. For two days the wind was contrary, and the vessel was detained in their neighborhood; at length a favorable breeze sprang up, and in a little while the rich groves, green hills, and snowy peaks of those happy islands one after another sank from sight, or melted into the blue distance, and the Tonquin ploughed her course towards the sterner regions of the Pacific.

The misunderstandings between the captain and his passengers still continued; or rather, increased in gravity. By his altercations and his moody humors, he had cut himself off from all community of thought, or freedom of conversation with them. He disdained to ask questions as to their proceedings, and could only guess at the meaning of their movements, and in so doing indulged in conjectures and suspicions, which produced the most whimsical self-torment.

Thus, in one of his disputes with them, relative to the goods on board, some of the packages of which they wished to open, to take out articles of clothing for the men or presents for the natives, he was so harsh and peremptory that they lost all patience, and hinted that they were the strongest party, and might reduce him to a very ridiculous dilemma, by taking from him the command.

A thought now flashed across the captain's mind that they really had a plan to depose him, and that, having picked up some information at Owyhee, possibly of war between the United States and England, they meant to alter the destination of the voyage; perhaps to seize upon ship and

cargo for their own use.

Once having conceived this suspicion, everything went to foster it. They had distributed fire-arms among some of their men, a common precaution among the fur traders when mingling with the natives. This, however, looked like preparation. Then several of the partners and clerks and some of the men, being Scotsmen, were acquainted with the Gaelic, and held long conversations together in that language. These conversations were considered by the captain of a "mysterious and unwarranted nature," and related, no doubt, to some foul conspiracy that was brewing among them. He frankly avows such suspicions, in his letter to Mr. Astor, but intimates that he stood ready to resist any treasonous outbreak; and seems to think that the evidence of preparation on his part had an effect in overawing the conspirators.

The fact is, as we have since been informed by one of the parties, it was a mischievous pleasure with some of the partners and clerks, who were young men, to play upon the suspicious temper and sullen humors of the captain. To this we may ascribe many of their whimsical pranks and absurd propositions, and, above all, their mysterious colloquies in Gaelic.

In this sore and irritable mood did the captain pursue his course, keeping a wary eye on every movement, and bristling up whenever the detested sound of the Gaelic language grated upon his ear. Nothing occurred, however, materially to disturb the residue of the voyage excepting a violent storm; and on the twenty-second of March, the Tonquin arrived at the mouth of the Oregon, or Columbia River.

The aspect of the river and the adjacent coast was wild and dangerous. The mouth of the Columbia is upwards of four miles wide with a peninsula and promontory on one side, and a long low spit of land on the other; between which a sand bar and chain of breakers almost block the entrance. The interior of the country rises into successive ranges of mountains, which, at the time of the arrival of the Tonquin, were covered with snow.

A fresh wind from the northwest sent a rough tumbling sea upon the coast, which broke upon the bar in furious surges, and extended a sheet of foam almost across the mouth of the river. Under these circumstances the captain did not think it prudent to approach within three leagues, until the bar should be sounded and the channel ascertained. Mr. Fox, the chief mate, was ordered to this service in the whaleboat, accompanied by John Martin, an old seaman, who had formerly visited the river, and by three Canadians. Fox requested to have regular sailors to man the boat, but the captain would not spare them from the service of the ship, and supposed the Canadians, being expert boatmen on lakes and rivers, were competent to the service, especially when directed and aided by Fox and Martin. Fox seems to have lost all firmness of spirit on the occasion, and to have regarded the service with a misgiving heart. He came to the partners for sympathy, knowing their differences with the captain, and the tears were in his eyes as he represented his case. "I am sent off," said he, "without seamen to man my boat, in boisterous weather, and on the most dangerous part of the northwest coast. My uncle was lost a few years ago on this same bar, and I am now going to lay my bones alongside of his." The partners sympathized in his apprehensions, and

remonstrated with the captain. The latter, however, was not to be moved. He had been displeased with Mr. Fox in the earlier part of the voyage, considering him indolent and inactive; and probably thought his present repugnance arose from a want of true nautical spirit. The interference of the partners in the business of the ship, also, was not calculated to have a favorable effect on a stickler for authority like himself, especially in his actual state of feeling towards them.

At one o'clock, P.m., therefore, Fox and his comrades set off in the whaleboat, which is represented as small in size, and crazy in condition. All eyes were strained after the little bark as it pulled for shore, rising and sinking with the huge rolling waves, until it entered, a mere speck, among the foaming breakers, and was soon lost to view. Evening set in, night succeeded and passed away, and morning returned, but without the return of the boat.

As the wind had moderated, the ship stood near to the land, so as to command a view of the river's mouth. Nothing was to be seen but a wild chaos of tumbling waves breaking upon the bar, and apparently forming a foaming barrier from shore to shore. Towards night the ship again stood out to gain sea-room, and a gloom was visible in every countenance. The captain himself shared in the general anxiety, and probably repented of his peremptory orders. Another weary and watchful night succeeded, during which the wind subsided, and the weather became serene.

On the following day, the ship having drifted near the land, anchored in fourteen fathoms water, to the northward of the long peninsula or promontory which forms the north side of the entrance, and is called Cape Disappointment. The pinnace was then manned, and two of the partners, Mr. David Stuart and Mr. M'Kay, set off in the hope of learning something of the fate of the whaleboat. The surf, however, broke with such violence along the shore that they could find no landing place. Several of the natives appeared on the beach and made signs to them to row round the cape, but they thought it most prudent to return to the ship.

The wind now springing up, the Tonquin got under way, and stood in to seek the channel; but was again deterred by the frightful aspect of the breakers, from venturing within a league. Here she hove to; and Mr. Mumford, the second mate, was despatched with four hands, in the pinnace, to sound across the channel until he should find four fathoms depth. The pinnace entered among the breakers, but was near being lost, and with difficulty got back to the ship. The captain insisted that Mr. Mumford had steered too much to the southward. He now turned to Mr. Aiken, an able mariner, destined to command the schooner intended for the coasting trade, and ordered him, together with John Coles, sail-maker, Stephen Weekes, armorer, and two Sandwich Islanders, to proceed ahead and take soundings, while the ship should follow under easy sail. In this way they proceeded until Aiken had ascertained the channel, when signal was given from the ship for him to return on board. He was then within pistol shot, but so furious was the current, and tumultuous the breakers, that the boat became unmanageable, and was hurried away, the crew crying out piteously for assistance. In a few moments she could not be seen from the ship's deck. Some of the passengers climbed to the mizzen top, and beheld her still struggling to reach the ship; but shortly after she broached broadside to the waves, and her case seemed desperate. The attention of those on board of the ship was now called to their own safety. They were in shallow water; the vessel

struck repeatedly, the waves broke over her, and there was danger of her foundering. At length she got into seven fathoms water, and the wind lulling, and the night coming on, cast anchor. With the darkness their anxieties increased. The wind whistled, the sea roared, the gloom was only broken by the ghastly glare of the foaming breakers, the minds of the seamen were full of dreary apprehensions, and some of them fancied they heard the cries of their lost comrades mingling with the uproar of the elements. For a time, too, the rapidly ebbing tide threatened to sweep them from their precarious anchorage. At length the reflux of the tide, and the springing up of the wind, enabled them to quit their dangerous situation and take shelter in a small bay within Cape Disappointment, where they rode in safety during the residue of a stormy night, and enjoyed a brief interval of refreshing sleep.

With the light of day returned their cares and anxieties. They looked out from the mast-head over a wild coast, and wilder sea, but could discover no trace of the two boats and their crews that were missing. Several of the natives came on board with peltries, but there was no disposition to trade. They were interrogated by signs after the lost boats, but could not understand the inquiries.

Parties now went on shore and scoured the neighborhood. One of these was headed by the captain. They had not proceeded far when they beheld a person at a distance in civilized garb. As he drew near he proved to be Weekes, the armorer. There was a burst of joy, for it was hoped his comrades were near at hand. His story, however, was one of disaster. He and his companions had found it impossible to govern their boat, having no rudder, and being beset by rapid and whirling currents and boisterous surges. After long struggling they had let her go at the mercy of the waves, tossing about, sometimes with her bow, sometimes with her broadside to the surges, threatened each instant with destruction, yet repeatedly escaping, until a huge sea broke over and swamped her. Weekes was overwhelmed by the broiling waves, but emerging above the surface, looked round for his companions. Aiken and Coles were not to be seen; near him were the two Sandwich Islanders, stripping themselves of their clothing that they might swim more freely. He did the same, and the boat floating near to him he seized hold of it. The two islanders joined him, and, uniting their forces, they succeeded in turning the boat upon her keel; then bearing down her stern and rocking her, they forced out so much water that she was able to bear the weight of a man without sinking. One of the islanders now got in, and in a little while bailed out the water with his hands. The other swam about and collected the oars, and they all three got once more on board.

By this time the tide had swept them beyond the breakers, and Weekes called on his companions to row for land. They were so chilled and benumbed by the cold, however, that they lost all heart, and absolutely refused. Weekes was equally chilled, but had superior sagacity and self-command. He counteracted the tendency to drowsiness and stupor which cold produces by keeping himself in constant exercise; and seeing that the vessel was advancing, and that everything depended upon himself, he set to work to scull the boat clear of the bar, and into quiet water.

Toward midnight one of the poor islanders expired; his companion threw himself on his corpse and could not be persuaded to leave him. The dismal night wore away amidst these horrors: as the

day dawned, Weekes found himself near the land. He steered directly for it, and at length, with the aid of the surf, ran his boat high upon a sandy beach.

Finding that one of the Sandwich Islanders yet gave signs of life, he aided him to leave the boat, and set out with him towards the adjacent woods. The poor fellow, however, was too feeble to follow him, and Weekes was soon obliged to abandon him to his fate and provide for his own safety. Falling upon a beaten path, he pursued it, and after a few hours came to a part of the coast, where, to his surprise and joy, he beheld the ship at anchor and was met by the captain and his party.

After Weekes had related his adventures, three parties were despatched to beat up the coast in search of the unfortunate islander. They returned at night without success, though they had used the utmost diligence. On the following day the search was resumed, and the poor fellow was at length discovered lying beneath a group of rocks, his legs swollen, his feet torn and bloody from walking through bushes and briars, and himself half-dead with cold, hunger, and fatigue. Weekes and this islander were the only survivors of the crew of the jolly-boat, and no trace was ever discovered of Fox and his party. Thus eight men were lost on the first approach to the coast; a commencement that cast a gloom over the spirits of the whole party, and was regarded by some of the superstitious as an omen that boded no good to the enterprise.

Towards night the Sandwich Islanders went on shore, to bury the body of their unfortunate countryman who had perished in the boat. On arriving at the place where it had been left, they dug a grave in the sand, in which they deposited the corpse, with a biscuit under one of the arms, some lard under the chin, and a small quantity of tobacco, as provisions for its journey in the land of spirits. Having covered the body with sand and flints, they kneeled along the grave in a double row, with their faces turned to the east, while one who officiated as a priest sprinkled them with water from a hat. In so doing he recited a kind of prayer or invocation, to which, at intervals, the others made responses. Such were the simple rites performed by these poor savages at the grave of their comrade on the shores of a strange land; and when these were done, they rose and returned in silence to the ship, without once casting a look behind.

CHAPTER VIII.

Mouth of the Columbia.- The Native Tribes.- Their Fishing.- Their Canoes.- Bold Navigators- Equestrian Indians and Piscatory Indians, Difference in Their Physical Organization.- Search for a Trading Site. - Expedition of M'Dougal and David Stuart- Comcomly, the OneEyed Chieftain.- Influence of Wealth in Savage Life.- Slavery Among the Natives.-An Aristocracy of Flatheads.- Hospitality Among the Chinooks- Comcomly's Daughter.- Her Conquest.

THE Columbia, or Oregon, for the distance of thirty or forty miles from its entrance into the sea, is, properly speaking, a mere estuary, indented by deep bays so as to vary from three to seven miles in width; and is rendered extremely intricate and dangerous by shoals reaching nearly from shore to shore, on which, at times, the winds and currents produce foaming and tumultuous

breakers. The mouth of the river proper is but about half a mile wide, formed by the contracting shores of the estuary. The entrance from the sea, as we have already observed, is bounded on the south side by a flat sandy spit of land, stretching in to the ocean. This is commonly called Point Adams. The opposite, or northern side, is Cape Disappointment; a kind of peninsula, terminating in a steep knoll or promontory crowned with a forest of pine-trees, and connected with the mainland by a low and narrow neck. Immediately within this cape is a wide, open bay, terminating at Chinook Point, so called from a neighboring tribe of Indians. This was called Baker's Bay, and here the Tonquin was anchored.

The natives inhabiting the lower part of the river, and with whom the company was likely to have the most frequent intercourse, were divided at this time into four tribes, the Chinooks, Clatsops, Wahkiacums, and Cathlamahs. They resembled each other in person, dress, language, and manner; and were probably from the same stock, but broken into tribes, or rather hordes, by those feuds and schisms frequent among Indians.

These people generally live by fishing. It is true they occasionally hunt the elk and deer, and ensnare the water-fowl of their ponds and rivers, but these are casual luxuries. Their chief subsistence is derived from the salmon and other fish which abound in the Columbia and its tributary streams, aided by roots and herbs, especially the wappatoo, which is found on the islands of the river.

As the Indians of the plains who depend upon the chase are bold and expert riders, and pride themselves upon their horses, so these piscatory tribes of the coast excel in the management of canoes, and are never more at home than when riding upon the waves. Their canoes vary in form and size. Some are upwards of fifty feet long, cut out of a single tree, either fir or white cedar, and capable of carrying thirty persons. They have thwart pieces from side to side about three inches thick, and their gunwales flare outwards, so as to cast off the surges of the waves. The bow and stern are decorated with grotesque figures of men and animals, sometimes five feet in height.

In managing their canoes they kneel two and two along the bottom, sitting on their heels, and wielding paddles from four to five feet long, while one sits on the stern and steers with a paddle of the same kind. The women are equally expert with the men in managing the canoe, and generally take the helm.

It is surprising to see with what fearless unconcern these savages venture in their light barks upon the roughest and most tempestuous seas. They seem to ride upon the waves like sea-fowl. Should a surge throw the canoe upon its side and endanger its overturn, those to windward lean over the upper gunwale, thrust their paddles deep into the wave, apparently catch the water and force it under the canoe, and by this action not merely regain an equilibrium, but give their bark a vigorous impulse forward.

The effect of different modes of life upon the human frame and human character is strikingly instanced in the contrast between the hunting Indians of the prairies, and the piscatory Indians

of the sea-coast. The former, continually on horseback scouring the plains, gaining their food by hardy exercise, and subsisting chiefly on flesh, are generally tall, sinewy, meagre, but well formed, and of bold and fierce deportment: the latter, lounging about the river banks, or squatting and curved up in their canoes, are generally low in stature, ill-shaped, with crooked legs, thick ankles, and broad flat feet. They are inferior also in muscular power and activity, and in game qualities and appearance, to their hard-riding brethren of the prairies.

Having premised these few particulars concerning the neighboring Indians, we will return to the immediate concerns of the Tonquin and her crew.

Further search was made for Mr. Fox and his party, but with no better success, and they were at length given up as lost. In the meantime, the captain and some of the partners explored the river for some distance in a large boat, to select a suitable place for the trading post. Their old jealousies and differences continued; they never could coincide in their choice, and the captain objected altogether to any site so high up the river. They all returned, therefore, to Baker's Bay in no very good humor. The partners proposed to examine the opposite shore, but the captain was impatient of any further delay. His eagerness to "get on" had increased upon him. He thought all these excursions a sheer loss of time, and was resolved to land at once, build a shelter for the reception of that part of his cargo destined for the use of the settlement, and, having cleared his ship of it and of his irksome shipmates, to depart upon the prosecution of his coasting voyage, according to orders.

On the following day, therefore, without troubling himself to consult the partners, he landed in Baker's Bay, and proceeded to erect a shed for the reception of the rigging, equipments, and stores of the schooner that was to be built for the use of the settlement.

This dogged determination on the part of the sturdy captain gave high offense to Mr. M'Dougal, who now considered himself at the head of the concern, as Mr. Astor's representative and proxy. He set off the same day, (April 5th) accompanied by David Stuart, for the southern shore, intending to be back by the seventh. Not having the captain to contend with, they soon pitched upon a spot which appeared to them favorable for the intended establishment. It was on a point of land called Point George, having a very good harbor, where vessels, not exceeding two hundred tons burden, might anchor within fifty yards of the shore.

After a day thus profitably spent, they recrossed the river, but landed on the northern shore several miles above the anchoring ground of the Tonquin, in the neighborhood of Chinooks, and visited the village of that tribe. Here they were received with great hospitality by the chief, who was named Comcomly, a shrewd old savage, with but one eye, who will occasionally figure in this narrative. Each village forms a petty sovereignty, governed by its own chief, who, however, possesses but little authority, unless he be a man of wealth and substance; that is to say, possessed of canoe, slaves, and wives. The greater the number of these, the greater is the chief. How many wives this one-eyed potentate maintained we are not told, but he certainly possessed great sway, not merely over his own tribe, but over the neighborhood.

Having mentioned slaves, we would observe that slavery exists among several of the tribes beyond the Rocky Mountains. The slaves are well treated while in good health, but occupied in all kinds of drudgery. Should they become useless, however, by sickness or old age, they are totally neglected, and left to perish; nor is any respect paid to their bodies after death.

A singular custom prevails, not merely among the Chinooks, but among most of the tribes about this part of the coast, which is the flattening of the forehead. The process by which this deformity is effected commences immediately after birth. The infant is laid in a wooden trough, by way of cradle. The end on which the head reposes is higher than the rest. A padding is placed on the forehead of the infant, with a piece of bark above it, and is pressed down by cords, which pass through holes on each side of the trough. As the tightening of the padding and the pressing of the head to the board is gradual, the process is said not to be attended with much pain. The appearance of the infant, however, while in this state of compression, is whimsically hideous, and "its little black eyes," we are told, "being forced out by the tightness of the bandages, resemble those of a mouse choked in a trap."

About a year's pressure is sufficient to produce the desired effect, at the end of which time the child emerges from its bandages a complete flathead, and continues so through life. It must be noted that this flattening of the head has something in it of aristocratical significancy, like the crippling of the feet among the Chinese ladies of quality. At any rate, it is a sign of freedom. No slave is permitted to bestow this enviable deformity upon his child; all the slaves, therefore, are roundheads.

With this worthy tribe of Chinooks the two partners passed a part of the day very agreeably. M'Dougal, who was somewhat vain of his official rank, had given it to be understood that they were two chiefs of a great trading company, about to be established here, and the quick-sighted, though one-eyed chief, who was somewhat practiced in traffic with white men, immediately perceived the policy of cultivating the friendship of two such important visitors. He regaled them, therefore, to the best of his ability, with abundance of salmon and wappatoo. The next morning, April 7th, they prepared to return to the vessel, according to promise. They had eleven miles of open bay to traverse; the wind was fresh, the waves ran high. Comcomly remonstrated with them on the hazard to which they would be exposed. They were resolute, however, and launched their boat, while the wary chieftain followed at some short distance in his canoe. Scarce had they rowed a mile, when a wave broke over their boat and upset it. They were in imminent peril of drowning, especially Mr. M'Dougal, who could not swim. Comcomly, however, came bounding over the waves in his light canoe, and snatched them from a watery grave.

They were taken on shore and a fire made, at which they dried their clothes, after which Comcomly conducted them back to his village. Here everything was done that could be devised for their entertainment during three days that they were detained by bad weather. Comcomly made his people perform antics before them; and his wives and daughters endeavored, by all the soothing and endearing arts of women, to find favor in their eyes. Some even painted their bodies

with red clay, and anointed themselves with fish oil, to give additional lustre to their charms. Mr. M'Dougal seems to have had a heart susceptible to the influence of the gentler sex. Whether or no it was first touched on this occasion we do not learn; but it will be found, in the course of this work, that one of the daughters of the hospitable Comcomly eventually made a conquest of the great eri of the American Fur Company.

When the weather had moderated and the sea became tranquil, the one-eyed chief of the Chinnooks manned his state canoe, and conducted his guests in safety to the ship, where they were welcomed with joy, for apprehensions had been felt for their safety. Comcomly and his people were then entertained on board of the Tonquin, and liberally rewarded for their hospitality and services. They returned home highly satisfied, promising to remain faithful friends and allies of the white men.

Washington Irving's Astoria

#### CHAPTER IX.

Point George- Founding of Astoria- Indian Visitors.- Their Reception.- The Captain Taboos the Ship.- Departure of the Tonquin. - Comments on the Conduct of Captain Thorn.

FROM the report made by the two exploring partners, it was determined that Point George should be the site of the trading house. These gentlemen, it is true, were not perfectly satisfied with the place, and were desirous of continuing their search; but Captain Thorn was impatient to land his cargo and continue his voyage, and protested against any more of what he termed "sporting excursions."

Accordingly, on the 12th of April the launch was freighted with all things necessary for the purpose, and sixteen persons departed in her to commence the establishment, leaving the Tonquin to follow as soon as the harbor could be sounded.

Crossing the wide mouth of the river, the party landed, and encamped at the bottom of a small bay within Point George. The situation chosen for the fortified post was on an elevation facing to the north, with the wide estuary, its sand bars and tumultuous breakers spread out before it, and the promontory of Cape Disappointment, fifteen miles distant, closing the prospect to the left. The surrounding country was in all the freshness of spring; the trees were in the young leaf, the weather was superb, and everything looked delightful to men just emancipated from a long confinement on shipboard. The Tonquin shortly afterwards made her way through the intricate channel, and came to anchor in the little bay, and was saluted from the encampment with three volleys of musketry and three cheers. She returned the salute with three cheers and three guns.

All hands now set to work cutting down trees, clearing away thickets, and marking out the place for the residence, storehouse, and powder magazine, which were to be built of logs and covered with bark. Others landed the timbers intended for the frame of the coasting vessel, and proceeded to put them together, while others prepared a garden spot, and sowed the seeds of various vegetables.

The next thought was to give a name to the embryo metropolis: the one that naturally presented itself was that of the projector and supporter of the whole enterprise. It was accordingly named ASTORIA.

The neighboring Indians now swarmed about the place. Some brought a few land-otter and sea-otter skins to barter, but in very scanty parcels; the greater number came prying about to gratify their curiosity, for they are said to be impertinently inquisitive; while not a few came with no other design than to pilfer; the laws of meum and tuum being but slightly respected among them. Some of them beset the ship in their canoes, among whom was the Chinook chief Comcomly, and his liege subjects. These were well received by Mr. M'Dougal, who was delighted with an opportunity of entering upon his functions, and acquiring importance in the eyes of his future neighbors. The confusion thus produced on board, and the derangement of the cargo caused by this petty trade, stirred the spleen of the captain, who had a sovereign contempt for the one-eyed chieftain and all his crew. He complained loudly of having his ship lumbered by a host of "Indian ragamuffins," who had not a skin to dispose of, and at length put his positive interdict upon all trafficking on board. Upon this Mr. M'Dougal was fain to land, and establish his quarters at the encampment, where he could exercise his rights and enjoy his dignities without control.

The feud, however, between these rival powers still continued, but was chiefly carried on by letter. Day after day and week after week elapsed, yet the store-house requisite for the reception of the cargo was not completed, and the ship was detained in port; while the captain was teased by frequent requisitions for various articles for the use of the establishment, or the trade with the natives. An angry correspondence took place, in which he complained bitterly of the time wasted in "smoking and sporting parties," as he termed the reconnoitering expeditions, and in clearing and preparing meadow ground and turnip patches, instead of despatching his ship. At length all these jarring matters were adjusted, if not to the satisfaction, at least to the acquiescence of all parties. The part of the cargo destined for the use of Astoria was landed, and the ship left free to proceed on her voyage.

As the Tonquin was to coast to the north, to trade for peltries at the different harbors, and to touch at Astoria on her return in the autumn, it was unanimously determined that Mr. M'Kay should go in her as supercargo, taking with him Mr. Lewis as ship's clerk. On the first of June the ship got under way, and dropped down to Baker's Bay, where she was detained for a few days by a head wind; but early in the morning of the fifth stood out to sea with a fine breeze and swelling canvas, and swept off gaily on her fatal voyage, from which she was never to return!

On reviewing the conduct of Captain Thorn, and examining his peevish and somewhat whimsical correspondence, the impression left upon our mind is, upon the whole, decidedly in his favor. While we smile at the simplicity of his heart and the narrowness of his views, which made him regard everything out of the direct path of his daily duty, and the rigid exigencies of the service, as trivial and impertinent, which inspired him with contempt for the swelling vanity of some of his coadjutors, and the literary exercises and curious researches of others, we cannot but applaud that

strict and conscientious devotion to the interests of his employer, and to what he considered the true objects of the enterprise in which he was engaged. He certainly was to blame occasionally for the asperity of his manners, and the arbitrary nature of his measures, yet much that is exceptionable in this part of his conduct may be traced to rigid notions of duty acquired in that tyrannical school, a ship of war, and to the construction given by his companions to the orders of Mr. Astor, so little in conformity with his own. His mind, too, appears to have become almost diseased by the suspicions he had formed as to the loyalty of his associates, and the nature of their ultimate designs; yet on this point there were circumstances to, in some measure, justify him. The relations between the United States and Great Britain were at that time in a critical state; in fact, the two countries were on the eve of a war. Several of the partners were British subjects, and might be ready to desert the flag under which they acted, should a war take place. Their application to the British minister at New York shows the dubious feeling with which they had embarked in the present enterprise. They had been in the employ of the Northwest Company, and might be disposed to rally again under that association, should events threaten the prosperity of this embryo establishment of Mr. Astor. Besides, we have the fact, averred to us by one of the partners, that some of them, who were young and heedless, took a mischievous and unwarrantable pleasure in playing upon the jealous temper of the captain, and affecting mysterious consultations and sinister movements.

These circumstances are cited in palliation of the doubts and surmises of Captain Thorn, which might otherwise appear strange and unreasonable. That most of the partners were perfectly upright and faithful in the discharge of the trust reposed in them we are fully satisfied; still the honest captain was not invariably wrong in his suspicions; and that he formed a pretty just opinion of the integrity of that aspiring personage, Mr. M'Dougal, will be substantially proved in the sequel.

Washington Irving's Astoria

#### CHAPTER X.

Disquieting Rumors From the Interior.- Reconnoitring Party- Preparations for a Trading Post.- An Unexpected Arrival - A Spy in the Camp.- Expedition Into the Interior- Shores of the Columbia - Mount Coffin.- Indian Sepulchre.- The Land of Spirits- Columbian Valley- Vancouver's Point.- Falls and Rapids.- A Great Fishing Mart.- The Village of Wishram. - Difference Between Fishing Indians and Hunting Indians- Effects of Habits of Trade on the Indian Character.- Post Established at the Oakinagan.

WHILE the Astorians were busily occupied in completing their factory and fort, a report was brought to them by an Indian from the upper part of the river, that a party of thirty white men had appeared on the banks of the Columbia, and were actually building houses at the second rapids. This information caused much disquiet. We have already mentioned that the Northwest Company had established posts to the west of the Rocky Mountains, in a district called by them New Caledonia, which extended from lat. 52 to 55 deg north, being within the British territories. It was now apprehended that they were advancing within the American limits, and were endeavoring to seize upon the upper part of the river and forestall the American Fur Company in the surrounding trade; in which case bloody feuds might be anticipated, such as had prevailed be-

tween the rival fur companies in former days.

A reconnoitring party was sent up the river to ascertain the truth of the report. They ascended to the foot of the first rapid, about two hundred miles, but could hear nothing of any white men being in the neighborhood.

Not long after their return, however, further accounts were received, by two wandering Indians, which established the fact that the Northwest Company had actually erected a trading house on the Spokane River, which falls into the north branch of the Columbia.

What rendered this intelligence the more disquieting was the inability of the Astorians, in their present reduced state as to numbers, and the exigencies of their new establishment, to furnish detachments to penetrate the country in different directions, and fix the posts necessary to secure the interior trade.

It was resolved, however, at any rate, to advance a countercheck to this post on the Spokan, and one of the partners, Mr. David Stuart, prepared to set out for the purpose with eight men and a small assortment of goods. He was to be guided by the two Indians, who knew the country and promised to take him to a place not far from the Spokan River, and in a neighborhood abounding with beaver. Here he was to establish himself and to remain for a time, provided he found the situation advantageous and the natives friendly.

On the 15th of July, when Mr. Stuart was nearly ready to embark, a canoe made its appearance, standing for the harbor, and manned by nine white men. Much speculation took place who these strangers could be, for it was too soon to expect their own people, under Mr. Hunt, who were to cross the continent. As the canoe drew near, the British standard was distinguished: on coming to land, one of the crew stepped on shore, and announced himself as Mr. David Thompson, astronomer, and partner of the Northwest Company. According to his account, he had set out in the preceding year with a tolerably strong party, and a supply of Indian goods, to cross the Rocky Mountains. A part of his people, however, had deserted him on the eastern side, and returned with the goods to the nearest Northwest post. He had persisted in crossing the mountains with eight men, who remained true to him. They had traversed the higher regions, and ventured near the source of the Columbia, where, in the spring, they had constructed a cedar canoe, the same in which they had reached Astoria.

This, in fact, was the party despatched by the Northwest Company to anticipate Mr. Astor in his intention of effecting a settlement at the mouth of the Columbia River. It appears, from information subsequently derived from other sources, that Mr. Thompson had pushed on his course with great haste, calling at all the Indian villages in his march, presenting them with British flags, and even planting them at the forks of the rivers, proclaiming formally that he took possession of the country in the name of the king of Great Britain for the Northwest Company. As his original plan was defeated by the desertion of his people, it is probable that he descended the river simply to reconnoitre, and ascertain whether an American settlement had been commenced.

Mr. Thompson was, no doubt, the first white man who descended the northern branch of the Columbia from so near its source. Lewis and Clarke struck the main body of the river at the forks, about four hundred miles from its mouth. They entered it from Lewis River, its southern branch, and thence descended.

Though Mr. Thompson could be considered as little better than a spy in the camp, he was received with great cordiality by Mr. M'Dougal, who had a lurking feeling of companionship and goodwill for all of the Northwest Company. He invited him to head-quarters, where he and his people were hospitably entertained. Nay, further, being somewhat in extremity, he was furnished by Mr. M'Dougal with goods and provisions for his journey back across the mountains, much against the wishes of Mr. David Stuart, who did not think the object of his visit entitled him to any favor.

On the 23rd of July, Mr. Stuart set out upon his expedition to the interior. His party consisted of four of the clerks, Messrs. Pillet, Ross, M'Lennon, and Montigny, two Canadian voyageurs, and two natives of the Sandwich Islands. They had three canoes well laden with provisions, and with goods and necessities for a trading establishment.

Mr. Thompson and his party set out in company with them, it being his intention to proceed direct to Montreal. The partners at Astoria forwarded by him a short letter to Mr. Astor, informing him of their safe arrival at the mouth of the Columbia, and that they had not yet heard of Mr. Hunt. The little squadron of canoes set sail with a favorable breeze, and soon passed Tongue Point, a long, high, and rocky promontory, covered with trees, and stretching far into the river. Opposite to this, on the northern shore, is a deep bay, where the Columbia anchored at the time of the discovery, and which is still called Gray's Bay, from the name of her commander.

From hence, the general course of the river for about seventy miles was nearly southeast; varying in breadth according to its bays and indentations, and navigable for vessels of three hundred tons. The shores were in some places high and rocky, with low marshy islands at their feet, subject to inundation, and covered with willows, poplars, and other trees that love an alluvial soil. Sometimes the mountains receded, and gave place to beautiful plains and noble forests. While the river margin was richly fringed with trees of deciduous foliage, the rough uplands were crowned by majestic pines, and firs of gigantic size, some towering to the height of between two and three hundred feet, with proportionate circumference. Out of these the Indians wrought their great canoes and pirogues.

At one part of the river, they passed, on the northern side, an isolated rock, about one hundred and fifty feet high, rising from a low marshy soil, and totally disconnected with the adjacent mountains. This was held in great reverence by the neighboring Indians, being one of their principal places of sepulture. The same provident care for the deceased that prevails among the hunting tribes of the prairies is observable among the piscatory tribes of the rivers and sea-coast. Among the former, the favorite horse of the hunter is buried with him in the same funereal mound, and his bow and arrows are laid by his side, that he may be perfectly equipped for the "happy hunting

grounds" of the land of spirits. Among the latter, the Indian is wrapped in his mantle of skins, laid in his canoe, with his paddle, his fishing spear, and other implements beside him, and placed aloft on some rock or other eminence overlooking the river, or bay, or lake, that he has frequented. He is thus fitted out to launch away upon those placid streams and sunny lakes stocked with all kinds of fish and waterfowl, which are prepared in the next world for those who have acquitted themselves as good sons, good fathers, good husbands, and, above all, good fishermen, during their mortal sojourn.

The isolated rock in question presented a spectacle of the kind, numerous dead bodies being deposited in canoes on its summit; while on poles around were trophies, or, rather, funeral offerings of trinkets, garments, baskets of roots, and other articles for the use of the deceased. A reverential feeling protects these sacred spots from robbery or insult. The friends of the deceased, especially the women, repair here at sunrise and sunset for some time after his death, singing his funeral dirge, and uttering loud wailings and lamentations.

From the number of dead bodies in canoes observed upon this rock by the first explorers of the river, it received the name of Mount Coffin, which it continues to bear.

Beyond this rock they passed the mouth of a river on the right bank of the Columbia, which appeared to take its rise in a distant mountain covered with snow. The Indian name of this river was the Cowleskee. Some miles further on they came to the great Columbian Valley, so called by Lewis and Clarke. It is sixty miles in width, and extends far to the southeast between parallel ridges of mountains, which bound it on the east and west. Through the centre of this valley flowed a large and beautiful stream, called the Wallamot, which came wandering for several miles, through a yet unexplored wilderness. The sheltered situation of this immense valley had an obvious effect upon the climate. It was a region of great beauty and luxuriance, with lakes and pools, and green meadows shaded by noble groves. Various tribes were said to reside in this valley, and along the banks of the Wallamot.

About eight miles above the mouth of the Wallamot the little squadron arrived at Vancouver's Point, so called in honor of that celebrated voyager by his lieutenant (Broughton) when he explored the river. This point is said to present one of the most beautiful scenes on the Columbia; a lovely meadow, with a silver sheet of limpid water in the center, enlivened by wild-fowl, a range of hills crowned by forests, while the prospect is closed by Mount Hood, a magnificent mountain rising into a lofty peak, and covered with snow; the ultimate landmark of the first explorers of the river.

Point Vancouver is about one hundred miles from Astoria. Here the reflux of the tide ceases to be perceptible. To this place vessels of two and three hundred tons burden may ascend. The party under the command of Mr. Stuart had been three or four days in reaching it, though we have forborne to notice their daily progress and nightly encampments.

From Point Vancouver the river turned towards the northeast, and became more contracted and

---

rapid, with occasional islands and frequent sand-banks. These islands are furnished with a number of ponds, and at certain seasons abound with swans, geese, brandts, cranes, gulls, plover, and other wild-fowl. The shores, too, are low and closely wooded, with such an undergrowth of vines and rushes as to be almost impassable.

About thirty miles above Point Vancouver the mountains again approach on both sides of the river, which is bordered by stupendous precipices, covered with the fir and the white cedar, and enlivened occasionally by beautiful cascades leaping from a great height, and sending up wreaths of vapor. One of these precipices, or cliffs, is curiously worn by time and weather so as to have the appearance of a ruined fortress, with towers and battlements, beetling high above the river, while two small cascades, one hundred and fifty feet in height, pitch down from the fissures of the rocks.

The turbulence and rapidity of the current continually augmenting as they advanced, gave the voyagers intimation that they were approaching the great obstructions of the river, and at length they arrived at Strawberry Island, so called by Lewis and Clarke, which lies at the foot of the first rapid. As this part of the Columbia will be repeatedly mentioned in the course of this work, being the scene of some of its incidents, we shall give a general description of it in this place.

The falls or rapids of the Columbia are situated about one hundred and eighty miles above the mouth of the river. The first is a perpendicular cascade of twenty feet, after which there is a swift descent for a mile, between islands of hard black rock, to another pitch of eight feet divided by two rocks. About two and a half miles below this the river expands into a wide basin, seemingly dammed up by a perpendicular ridge of black rock. A current, however, sets diagonally to the left of this rocky barrier, where there is a chasm forty-five yards in width. Through this the whole body of the river roars along, swelling and whirling and boiling for some distance in the wildest confusion. Through this tremendous channel the intrepid explorers of the river, Lewis and Clarke, passed in their boats; the danger being, not from the rocks, but from the great surges and whirlpools.

At the distance of a mile and a half from the foot of this narrow channel is a rapid, formed by two rocky islands; and two miles beyond is a second great fall, over a ledge of rocks twenty feet high, extending nearly from shore to shore. The river is again compressed into a channel from fifty to a hundred feet wide, worn through a rough bed of hard black rock, along which it boils and roars with great fury for the distance of three miles. This is called "The Long Narrows."

Here is the great fishing place of the Columbia. In the spring of the year, when the water is high, the salmon ascend the river in incredible numbers. As they pass through this narrow strait, the Indians, standing on the rocks, or on the end of wooden stages projecting from the banks, scoop them up with small nets distended on hoops and attached to long handles, and cast them on the shore.

They are then cured and packed in a peculiar manner. After having been opened and disembow-

eled, they are exposed to the sun on scaffolds erected on the river banks. When sufficiently dry, they are pounded fine between two stones, pressed into the smallest compass, and packed in baskets or bales of grass matting, about two feet long and one in diameter, lined with the cured skin of a salmon. The top is likewise covered with fish skins, secured by cords passing through holes in the edge of the basket. Packages are then made, each containing twelve of these bales, seven at bottom, five at top, pressed close to each other, with the corded side upward, wrapped in mats and corded. These are placed in dry situations, and again covered with matting. Each of these packages contains from ninety to a hundred pounds of dried fish, which in this state will keep sound for several years.\*\* (Lewis and Clarke, vol. ii. p. 32.)

We have given this process at some length, as furnished by the first explorers, because it marks a practiced ingenuity in preparing articles of traffic for a market, seldom seen among our aboriginals. For like reason we would make especial mention of the village of Wishram, at the head of the Long Narrows, as being a solitary instance of an aboriginal trading mart, or emporium. Here the salmon caught in the neighboring rapids were "warehoused," to await customers. Hither the tribes from the mouth of the Columbia repaired with the fish of the sea-coast, the roots, berries, and especially the wappatoo, gathered in the lower parts of the river, together with goods and trinkets obtained from the ships which casually visit the coast. Hither also the tribes from the Rocky Mountains brought down horses, bear-grass, quamash, and other commodities of the interior. The merchant fishermen at the falls acted as middlemen or factors, and passed the objects of traffic, as it were, cross-handed; trading away part of the wares received from the mountain tribes to those of the rivers and plains, and vice versa: their packages of pounded salmon entered largely into the system of barter, and being carried off in opposite directions, found their way to the savage hunting camps far in the interior, and to the casual white traders who touched upon the coast.

We have already noticed certain contrarieties of character between the Indian tribes, produced by their diet and mode of life; and nowhere are they more apparent than about the falls of the Columbia. The Indians of this great fishing mart are represented by the earliest explorers as sleeker and fatter, but less hardy and active, than the tribes of the mountains and prairies, who live by hunting, or of the upper parts of the river, where fish is scanty, and the inhabitants must eke out their subsistence by digging roots or chasing the deer. Indeed, whenever an Indian of the upper country is too lazy to hunt, yet is fond of good living, he repairs to the falls, to live in abundance without labor.

"By such worthless dogs as these," says an honest trader in his journal, which now lies before us, "by such worthless dogs as these are these noted fishing-places peopled, which, like our great cities, may with propriety be called the headquarters of vitiated principles."

The habits of trade and the avidity of gain have their corrupting effects even in the wilderness, as may be instanced in the members of this aboriginal emporium; for the same journalist denounces them as "saucy, impudent rascals, who will steal when they can, and pillage whenever a weak party falls in their power."

That he does not belie them will be evidenced hereafter, when we have occasion again to touch at Wishram and navigate the rapids. In the present instance the travellers effected the laborious ascent of this part of the river, with all its various portages, without molestation, and once more launched away in smooth water above the high falls.

The two parties continued together, without material impediment, for three or four hundred miles further up the Columbia; Mr. Thompson appearing to take great interest in the success of Mr. Stuart, and pointing out places favorable, as he said, to the establishment of his contemplated trading post.

Mr. Stuart, who distrusted his sincerity, at length pretended to adopt his advice, and, taking leave of him, remained as if to establish himself, while the other proceeded on his course towards the mountains. No sooner, however, had he fairly departed than Mr. Stuart again pushed forward, under guidance of the two Indians, nor did he stop until he had arrived within about one hundred and forty miles of the Spokan River, which he considered near enough to keep the rival establishment in check. The place which he pitched upon for his trading post was a point of land about three miles in length and two in breadth, formed by the junction of the Oakinagan with the Columbia. The former is a river which has its source in a considerable lake about one hundred and fifty miles west of the point of junction. The two rivers, about the place of their confluence, are bordered by immense prairies covered with herbage, but destitute of trees. The point itself was ornamented with wild flowers of every hue, in which innumerable humming-birds were "banqueting nearly the livelong day."

The situation of this point appeared to be well adapted for a trading post. The climate was salubrious, the soil fertile, the rivers well stocked with fish, the natives peaceable and friendly. There were easy communications with the interior by the upper waters of the Columbia and the lateral stream of the Oakinagan, while the downward current of the Columbia furnished a highway to Astoria.

Availing himself, therefore, of the driftwood which had collected in quantities in the neighboring bends of the river, Mr. Stuart and his men set to work to erect a house, which in a little while was sufficiently completed for their residence; and thus was established the first interior post of the company. We will now return to notice the progress of affairs at the mouth of the Columbia.

Washington Irving's Astoria  
CHAPTER XI.

Alarm at Astoria.- Rumor of Indian Hostilities.- Preparations for Defense.- Tragic Fate of the Tonquin.

THE sailing of the Tonquin, and the departure of Mr. David Stuart and his detachment, had produced a striking effect on affairs at Astoria. The natives who had swarmed about the place began immediately to drop off, until at length not an Indian was to be seen. This, at first, was attributed to the want of peltries with which to trade; but in a little while the mystery was explained in

---

a more alarming manner. A conspiracy was said to be on foot among the neighboring tribes to make a combined attack upon the white men, now that they were so reduced in number. For this purpose there had been a gathering of warriors in a neighboring bay, under pretext of fishing for sturgeon; and fleets of canoes were expected to join them from the north and South. Even Comcomly, the one-eyed chief, notwithstanding his professed friendship for Mr. M'Dougal, was strongly suspected of being concerned in this general combination.

Alarmed at rumors of this impending danger, the Astorians suspended their regular labor, and set to work, with all haste, to throw up temporary works for refuge and defense. In the course of a few days they surrounded their dwelling-house and magazines with a picket fence ninety feet square, flanked by two bastions, on which were mounted four four-pounders. Every day they exercised themselves in the use of their weapons, so as to qualify themselves for military duty, and at night ensconced themselves in their fortress and posted sentinels, to guard against surprise. In this way they hoped, even in case of attack, to be able to hold out until the arrival of the party to be conducted by Mr. Hunt across the Rocky Mountains, or until the return of the Tonquin. The latter dependence, however, was doomed soon to be destroyed. Early in August, a wandering band of savages from the Strait of Juan de Fuca made their appearance at the mouth of the Columbia, where they came to fish for sturgeon. They brought disastrous accounts of the Tonquin, which were at first treated as fables, but which were too sadly confirmed by a different tribe that arrived a few days subsequently. We shall relate the circumstances of this melancholy affair as correctly as the casual discrepancies in the statements that have reached us will permit.

We have already stated that the Tonquin set sail from the mouth of the river on the fifth of June. The whole number of persons on board amounted to twenty-three. In one of the outer bays they picked up, from a fishing canoe, an Indian named Lamazee, who had already made two voyages along the coast and knew something of the language of the various tribes. He agreed to accompany them as interpreter.

Steering to the north, Captain Thorn arrived in a few days at Vancouver's Island, and anchored in the harbor of Neweetee, very much against the advice of his Indian interpreter, who warned him against the perfidious character of the natives of this part of the coast. Numbers of canoes soon came off, bringing sea-otter skins to sell. It was too late in the day to commence a traffic, but Mr. M'Kay, accompanied by a few of the men, went on shore to a large village to visit Wicananish, the chief of the surrounding territory, six of the natives remaining on board as hostages. He was received with great professions of friendship, entertained hospitably, and a couch of sea-otter skins prepared for him in the dwelling of the chieftain, where he was prevailed upon to pass the night.

In the morning, before Mr. M'Kay had returned to the ship, great numbers of the natives came off in their canoes to trade, headed by two sons of Wicananish. As they brought abundance of sea-otter skins, and there was every appearance of a brisk trade, Captain Thorn did not wait for the return of Mr. M'Kay, but spread his wares upon the deck, making a tempting display of blankets, cloths, knives, beads, and fish-hooks, expecting a prompt and profitable sale. The Indians, however, were not so eager and simple as he had supposed, having learned the art of bargaining and the

value of merchandise from the casual traders along the coast. They were guided, too, by a shrewd old chief named Nookamis, who had grown gray in traffic with New England skippers, and prided himself upon his acuteness. His opinion seemed to regulate the market. When Captain Thorn made what he considered a liberal offer for an otter-skin, the wily old Indian treated it with scorn, and asked more than double. His comrades all took their cue from him, and not an otter-skin was to be had at a reasonable rate.

The old fellow, however, overshot his mark, and mistook the character of the man he was treating with. Thorn was a plain, straightforward sailor, who never had two minds nor two prices in his dealings, was deficient in patience and pliancy, and totally wanting in the chicanery of traffic. He had a vast deal of stern but honest pride in his nature, and, moreover, held the whole savage race in sovereign contempt. Abandoning all further attempts, therefore, to bargain with his shuffling customers, he thrust his hands into his pockets, and paced up and down the deck in sullen silence. The cunning old Indian followed him to and fro, holding out a sea-otter skin to him at every turn, and pestering him to trade. Finding other means unavailing, he suddenly changed his tone, and began to jeer and banter him upon the mean prices he offered. This was too much for the patience of the captain, who was never remarkable for relishing a joke, especially when at his own expense. Turning suddenly upon his persecutor, he snatched the proffered otter-skin from his hands, rubbed it in his face, and dismissed him over the side of the ship with no very complimentary application to accelerate his exit. He then kicked the peltries to the right and left about the deck, and broke up the market in the most ignominious manner. Old Nookamis made for shore in a furious passion, in which he was joined by Shewish, one of the sons of Wicananish, who went off breathing vengeance, and the ship was soon abandoned by the natives.

When Mr. M'Kay returned on board, the interpreter related what had passed, and begged him to prevail upon the captain to make sail, as from his knowledge of the temper and pride of the people of the place, he was sure they would resent the indignity offered to one of their chiefs. Mr. M'Kay, who himself possessed some experience of Indian character, went to the captain, who was still pacing the deck in moody humor, represented the danger to which his hasty act had exposed the vessel, and urged him to weigh anchor. The captain made light of his counsels, and pointed to his cannon and fire-arms as sufficient safeguard against naked savages. Further remonstrances only provoked taunting replies and sharp altercations. The day passed away without any signs of hostility, and at night the captain retired as usual to his cabin, taking no more than the usual precautions.

On the following morning, at daybreak, while the captain and Mr. M'Kay were yet asleep, a canoe came alongside in which were twenty Indians, commanded by young Shewish. They were unarmed, their aspect and demeanor friendly, and they held up otter-skins, and made signs indicative of a wish to trade. The caution enjoined by Mr. Astor, in respect to the admission of Indians on board of the ship, had been neglected for some time past, and the officer of the watch, perceiving those in the canoe to be without weapons, and having received no orders to the contrary, readily permitted them to mount the deck. Another canoe soon succeeded, the crew of which was likewise admitted. In a little while other canoes came off, and Indians were soon clambering into

the vessel on all sides.

The officer of the watch now felt alarmed, and called to Captain Thorn and Mr. M'Kay. By the time they came on deck, it was thronged with Indians. The interpreter noticed to Mr. M'Kay that many of the natives wore short mantles of skins, and intimated a suspicion that they were secretly armed. Mr. M'Kay urged the captain to clear the ship and get under way. He again made light of the advice; but the augmented swarm of canoes about the ship, and the numbers still putting off from shore, at length awakened his distrust, and he ordered some of the crew to weigh anchor, while some were sent aloft to make sail.

The Indians now offered to trade with the captain on his own terms, prompted, apparently, by the approaching departure of the ship. Accordingly, a hurried trade was commenced. The main articles sought by the savages in barter were knives; as fast as some were supplied they moved off, and others succeeded. By degrees they were thus distributed about the deck, and all with weapons.

The anchor was now nearly up, the sails were loose, and the captain, in a loud and peremptory tone, ordered the ship to be cleared. In an instant, a signal yell was given; it was echoed on every side, knives and war-clubs were brandished in every direction, and the savages rushed upon their marked victims.

The first that fell was Mr. Lewis, the ship's clerk. He was leaning, with folded arms, over a bale of blankets, engaged in bargaining, when he received a deadly stab in the back, and fell down the companion-way.

Mr. M'Kay, who was seated on the taffrail, sprang on his feet, but was instantly knocked down with a war-club and flung backwards into the sea, where he was despatched by the women in the canoes.

In the meantime Captain Thorn made desperate fight against fearful odds. He was a powerful as well as a resolute man, but he had come upon deck without weapons. Shewish, the young chief singled him out as his peculiar prey, and rushed upon him at the first outbreak. The captain had barely time to draw a clasp-knife with one blow of which he laid the young savage dead at his feet. Several of the stoutest followers of Shewish now set upon him. He defended himself vigorously, dealing crippling blows to right and left, and strewing the quarter-deck with the slain and wounded. His object was to fight his way to the cabin, where there were fire-arms; but he was hemmed in with foes, covered with wounds, and faint with loss of blood. For an instant he leaned upon the tiller wheel, when a blow from behind, with a war-club, felled him to the deck, where he was despatched with knives and thrown overboard.

While this was transacting upon the quarter-deck, a chance-medley fight was going on throughout the ship. The crew fought desperately with knives, handspikes, and whatever weapon they could seize upon in the moment of surprise. They were soon, however, overpowered by numbers, and mercilessly butchered.

As to the seven who had been sent aloft to make sail, they contemplated with horror the carnage that was going on below. Being destitute of weapons, they let themselves down by the running rigging, in hopes of getting between decks. One fell in the attempt, and was instantly despatched; another received a death-blow in the back as he was descending; a third, Stephen Weekes, the armorer, was mortally wounded as he was getting down the hatchway.

The remaining four made good their retreat into the cabin, where they found Mr. Lewis, still alive, though mortally wounded. Barricading the cabin door, they broke holes through the companion-way, and, with the muskets and ammunition which were at hand, opened a brisk fire that soon cleared the deck.

Thus far the Indian interpreter, from whom these particulars are derived, had been an eye-witness to the deadly conflict. He had taken no part in it, and had been spared by the natives as being of their race. In the confusion of the moment he took refuge with the rest, in the canoes. The survivors of the crew now sallied forth, and discharged some of the deck-guns, which did great execution among the canoes, and drove all the savages to shore.

For the remainder of the day no one ventured to put off to the ship, deterred by the effects of the fire-arms. The night passed away without any further attempts on the part of the natives. When the day dawned, the Tonquin still lay at anchor in the bay, her sails all loose and flapping in the wind, and no one apparently on board of her. After a time, some of the canoes ventured forth to reconnoitre, taking with them the interpreter.

They paddled about her, keeping cautiously at a distance, but growing more and more emboldened at seeing her quiet and lifeless. One man at length made his appearance on the deck, and was recognized by the interpreter as Mr. Lewis. He made friendly signs, and invited them on board. It was long before they ventured to comply. Those who mounted the deck met with no opposition; no one was to be seen on board; for Mr. Lewis, after inviting them, had disappeared. Other canoes now pressed forward to board the prize; the decks were soon crowded, and the sides covered with clambering savages, all intent on plunder. In the midst of their eagerness and exultation, the ship blew up with a tremendous explosion. Arms, legs, and mutilated bodies were blown into the air, and dreadful havoc was made in the surrounding canoes. The interpreter was in the main-chains at the time of the explosion, and was thrown unhurt into the water, where he succeeded in getting into one of the canoes. According to his statement, the bay presented an awful spectacle after the catastrophe. The ship had disappeared, but the bay was covered with fragments of the wreck, with shattered canoes, and Indians swimming for their lives, or struggling in the agonies of death; while those who had escaped the danger remained aghast and stupefied, or made with frantic panic for the shore. Upwards of a hundred savages were destroyed by the explosion, many more were shockingly mutilated, and for days afterwards the limbs and bodies of the slain were thrown upon the beach.

The inhabitants of Neweetee were overwhelmed with consternation at this astounding calamity,

---

which had burst upon them in the very moment of triumph. The warriors sat mute and mournful, while the women filled the air with loud lamentations. Their weeping and walling, however, was suddenly changed into yells of fury at the sight of four unfortunate white men, brought captive into the village. They had been driven on shore in one of the ship's boats, and taken at some distance along the coast.

The interpreter was permitted to converse with them. They proved to be the four brave fellows who had made such desperate defense from the cabin. The interpreter gathered from them some of the particulars already related. They told him further, that after they had beaten off the enemy and cleared the ship, Lewis advised that they should slip the cable and endeavor to get to sea. They declined to take his advice, alleging that the wind set too strongly into the bay and would drive them on shore. They resolved, as soon as it was dark, to put off quietly in the ship's boat, which they would be able to do unperceived, and to coast along back to Astoria. They put their resolution into effect; but Lewis refused to accompany them, being disabled by his wound, hopeless of escape, and determined on a terrible revenge. On the voyage out, he had repeatedly expressed a presentiment that he should die by his own hands; thinking it highly probable that he should be engaged in some contest with the natives, and being resolved, in case of extremity, to commit suicide rather than be made a prisoner. He now declared his intention to remain on board of the ship until daylight, to decoy as many of the savages on board as possible, then to set fire to the powder magazine, and terminate his life by a signal of vengeance. How well he succeeded has been shown. His companions bade him a melancholy adieu, and set off on their precarious expedition. They strove with might and main to get out of the bay, but found it impossible to weather a point of land, and were at length compelled to take shelter in a small cove, where they hoped to remain concealed until the wind should be more favorable. Exhausted by fatigue and watching, they fell into a sound sleep, and in that state were surprised by the savages. Better had it been for those unfortunate men had they remained with Lewis, and shared his heroic death: as it was, they perished in a more painful and protracted manner, being sacrificed by the natives to the manes of their friends with all the lingering tortures of savage cruelty. Some time after their death, the interpreter, who had remained a kind of prisoner at large, effected his escape, and brought the tragical tidings to Astoria.

Such is the melancholy story of the Tonquin, and such was the fate of her brave but headstrong commander, and her adventurous crew. It is a catastrophe that shows the importance, in all enterprises of moment, to keep in mind the general instructions of the sagacious heads which devise them. Mr. Astor was well aware of the perils to which ships were exposed on this coast from quarrels with the natives, and from perfidious attempts of the latter to surprise and capture them in unguarded moments. He had repeatedly enjoined it upon Captain Thorn, in conversation, and at parting, in his letter of instructions, to be courteous and kind in his dealings with the savages, but by no means to confide in their apparent friendship, nor to admit more than a few on board of his ship at a time.

Had the deportment of Captain Thorn been properly regulated, the insult so wounding to savage pride would never have been given. Had he enforced the rule to admit but a few at a time, the

savages would not have been able to get the mastery. He was too irritable, however, to practice the necessary self-command, and, having been nurtured in a proud contempt of danger, thought it beneath him to manifest any fear of a crew of unarmed savages.

With all his faults and foibles, we cannot but speak of him with esteem, and deplore his untimely fate; for we remember him well in early life, as a companion in pleasant scenes and joyous hours. When on shore, among his friends, he was a frank, manly, sound-hearted sailor. On board ship he evidently assumed the hardness of deportment and sternness of demeanor which many deem essential to naval service. Throughout the whole of the expedition, however, he showed himself loyal, single-minded, straightforward, and fearless; and if the fate of his vessel may be charged to his harshness and imprudence, we should recollect that he paid for his error with his life.

The loss of the Tonquin was a grievous blow to the infant establishment of Astoria, and one that threatened to bring after it a train of disasters. The intelligence of it did not reach Mr. Astor until many months afterwards. He felt it in all its force, and was aware that it must cripple, if not entirely defeat, the great scheme of his ambition. In his letters, written at the time, he speaks of it as "a calamity, the length of which he could not foresee." He indulged, however, in no weak and vain lamentation, but sought to devise a prompt and efficient remedy. The very same evening he appeared at the theatre with his usual serenity of countenance. A friend, who knew the disastrous intelligence he had received, expressed his astonishment that he could have calmness of spirit sufficient for such a scene of light amusement. "What would you have me do?" was his characteristic reply; "would you have me stay at home and weep for what I cannot help?"

Washington Irving's Astoria

CHAPTER XII.

Gloom at Astoria- An Ingenious Stratagem.- The Small-Pox Chief. - Launching of the Dolly.-An Arrival. - A Canadian Trapper.-A Freeman of the Forest- An Iroquois Hunter.- Winter on the Columbia.-Festivities of New Year.

THE tidings of the loss of the Tonquin, and the massacre of her crew, struck dismay into the hearts of the Astorians. They found themselves a mere handful of men, on a savage coast, surrounded by hostile tribes, who would doubtless be incited and encouraged to deeds of violence by the late fearful catastrophe. In this juncture Mr. M'Dougal, we are told, had recourse to a stratagem by which to avail himself of the ignorance and credulity of the savages, and which certainly does credit to his ingenuity.

The natives of the coast, and, indeed, of all the regions west of the mountains, had an extreme dread of the small-pox; that terrific scourge having, a few years previously, appeared among them, and almost swept off entire tribes. Its origin and nature were wrapped in mystery, and they conceived it an evil inflicted upon them by the Great Spirit, or brought among them by the white men. The last idea was seized upon by Mr. M'Dougal. He assembled several of the chieftains whom he believed to be in the conspiracy. When they were all seated around, he informed them that he had heard of the treachery of some of their northern brethren towards the Tonquin, and

was determined on vengeance. "The white men among you," said he, "are few in number, it is true, but they are mighty in medicine. See here," continued he, drawing forth a small bottle and holding it before their eyes, "in this bottle I hold the small-pox, safely corked up; I have but to draw the cork, and let loose the pestilence, to sweep man, woman, and child from the face of the earth."

The chiefs were struck with horror and alarm. They implored him not to uncork the bottle, since they and all their people were firm friends of the white men, and would always remain so; but, should the small-pox be once let out, it would run like wildfire throughout the country, sweeping off the good as well as the bad; and surely he would not be so unjust as to punish his friends for crimes committed by his enemies.

Mr. M'Dougal pretended to be convinced by their reasoning, and assured them that, so long as the white people should be unmolested, and the conduct of their Indian neighbors friendly and hospitable, the phial of wrath should remain sealed up; but, on the least hostility, the fatal cork should be drawn.

From this time, it is added, he was much dreaded by the natives, as one who held their fate in his hands, and was called, by way of preeminence, "the Great Small-pox Chief."

All this while, the labors at the infant settlement went on with unremitting assiduity, and, by the 26th of September, a commodious mansion, spacious enough to accommodate all hands, was completed. It was built of stone and clay, there being no calcareous stone in the neighborhood from which lime for mortar could be procured. The schooner was also finished, and launched, with the accustomed ceremony, on the second of October, and took her station below the fort. She was named the Dolly, and was the first American vessel launched on this coast.

On the 5th of October, in the evening, the little community at Astoria was enlivened by the unexpected arrival of a detachment from Mr. David Stuart's post on the Oakinagan. It consisted of two of the clerks and two of the privates. They brought favorable accounts of the new establishment, but reported that, as Mr. Stuart was apprehensive there might be a difficulty of subsisting his whole party throughout the winter, he had sent one half back to Astoria, retaining with him only Ross, Montigny, and two others. Such is the hardihood of the Indian trader. In the heart of a savage and unknown country, seven hundred miles from the main body of his fellow-adventurers, Stuart had dismissed half of his little number, and was prepared with the residue to brave all the perils of the wilderness, and the rigors of a long and dreary winter.

With the return party came a Canadian creole named Regis Brugiere and an Iroquois hunter, with his wife and two children. As these two personages belong to certain classes which have derived their peculiar characteristics from the fur trade, we deem some few particulars concerning them pertinent to the nature of this work.

Brugiere was of a class of beaver trappers and hunters technically called "Freemen," in the language of the traders. They are generally Canadians by birth, and of French descent, who have

been employed for a term of years by some fur company, but, their term being expired, continue to hunt and trap on their own account, trading with the company like the Indians. Hence they derive their appellation of Freemen, to distinguish them from the trappers who are bound for a number of years, and receive wages, or hunt on shares.

Having passed their early youth in the wilderness, separated almost entirely from civilized man, and in frequent intercourse with the Indians, they relapse, with a facility common to human nature, into the habitudes of savage life. Though no longer bound by engagements to continue in the interior, they have become so accustomed to the freedom of the forest and the prairie, that they look back with repugnance upon the restraints of civilization. Most of them intermarry with the natives, and, like the latter, have often a plurality of wives. Wanderers of the wilderness, according to the vicissitudes of the seasons, the migrations of animals, and the plenty or scarcity of game, they lead a precarious and unsettled existence; exposed to sun and storm, and all kinds of hardships, until they resemble Indians in complexion as well as in tastes and habits. From time to time, they bring the peltries they have collected to the trading houses of the company in whose employ they have been brought up. Here they traffic them away for such articles of merchandise or ammunition as they may stand in need of. At the time when Montreal was the great emporium of the fur trader, one of these freemen of the wilderness would suddenly return, after an absence of many years, among his old friends and comrades. He would be greeted as one risen from the dead; and with the greater welcome, as he returned flush of money. A short time, however, spent in revelry, would be sufficient to drain his purse and sate him with civilized life, and he would return with new relish to the unshackled freedom of the forest.

Numbers of men of this class were scattered throughout the northwest territories. Some of them retained a little of the thrift and forethought of the civilized man, and became wealthy among their improvident neighbors; their wealth being chiefly displayed in large bands of horses, which covered the prairies in the vicinity of their abodes. Most of them, however, were prone to assimilate to the red man in their heedlessness of the future.

Such was Regis Brugiere, a freeman and rover of the wilderness. Having been brought up in the service of the Northwest Company, he had followed in the train of one of its expeditions across the Rocky Mountains, and undertaken to trap for the trading post established on the Spokane River. In the course of his hunting excursions he had either accidentally, or designedly, found his way to the post of Mr. Stuart, and had been prevailed upon to ascend the Columbia, and "try his luck" at Astoria.

Ignace Shonowane, the Iroquois hunter, was a specimen of a different class. He was one of those aboriginals of Canada who had partially conformed to the habits of civilization and the doctrines of Christianity, under the influence of the French colonists and the Catholic priests; who seem generally to have been more successful in conciliating, taming, and converting the savages, than their English and Protestant rivals. These half-civilized Indians retained some of the good, and many of the evil qualities of their original stock. They were first-rate hunters, and dexterous in the management of the canoe. They could undergo great privations, and were admirable for the ser-

vice of the rivers, lakes, and forests, provided they could be kept sober, and in proper subordination; but once inflamed with liquor, to which they were madly addicted, all the dormant passions inherent in their nature were prone to break forth, and to hurry them into the most vindictive and bloody acts of violence.

Though they generally professed the Roman Catholic religion, yet it was mixed, occasionally, with some of their ancient superstitions; and they retained much of the Indian belief in charms and omens. Numbers of these men were employed by the Northwest Company as trappers, hunters, and canoe men, but on lower terms than were allowed to white men. Ignace Shonowane had, in this way, followed the enterprise of the company to the banks of the Spokan, being, probably, one of the first of his tribe that had traversed the Rocky Mountains.

Such were some of the motley populace of the wilderness, incident to the fur trade, who were gradually attracted to the new settlement of Astoria.

The month of October now began to give indications of approaching winter. Hitherto, the colonists had been well pleased with the climate. The summer had been temperate, the mercury never rising above eighty degrees. Westerly winds had prevailed during the spring and the early part of the summer, and been succeeded by fresh breezes from the northwest. In the month of October the southerly winds set in, bringing with them frequent rain.

The Indians now began to quit the borders of the ocean, and to retire to their winter quarters in the sheltered bosom of the forests, or along the small rivers and brooks. The rainy season, which commences in October, continues, with little intermission, until April; and though the winters are generally mild, the mercury seldom sinking below the freezing point, yet the tempests of wind and rain are terrible. The sun is sometimes obscured for weeks, the brooks swell into roaring torrents, and the country is threatened with a deluge.

The departure of the Indians to their winter quarters gradually rendered provisions scanty, and obliged the colonists to send out foraging expeditions in the Dolly. Still the little handful of adventurers kept up their spirits in their lonely fort at Astoria, looking forward to the time when they should be animated and reinforced by the party under Mr. Hunt, that was to come to them across the Rocky Mountains.

The year gradually wore away. The rain, which had poured down almost incessantly since the first of October, cleared up towards the evening of the 31st of December, and the morning of the first of January ushered in a day of sunshine.

The hereditary French holiday spirit of the French voyageurs is hardly to be depressed by any adversities; and they can manage to get up a fete in the most squalid situations, and under the most untoward circumstances. An extra allowance of rum, and a little flour to make cakes and puddings, constitute a "regale;" and they forget all their toils and troubles in the song and dance.

On the present occasion, the partners endeavored to celebrate the new year with some effect. At sunrise the drums beat to arms, the colors were hoisted, with three rounds of small arms and three discharges of cannon. The day was devoted to games of agility and strength, and other amusements; and grog was temperately distributed, together with bread, butter, and cheese. The best dinner their circumstances could afford was served up at midday. At sunset the colors were lowered, with another discharge of artillery. The night was spent in dancing; and, though there was a lack of female partners to excite their gallantry, the voyageurs kept up the ball with true French spirit, until three o'clock in the morning. So passed the new year festival of 1812 at the infant colony of Astoria.

CHAPTER XIII.

Expedition by Land.- Wilson P. Hunt.- His Character.- Donald M'Kenzie.- Recruiting Service Among the Voyageurs. - A Bark Canoe.- Chapel of St. Anne.- Votive Offerings.- Pious Carousals, - A Ragged Regiment.- Mackinaw.- Picture of a Trading Post.- Frolicking Voyageurs.- Swells and Swaggerers.- Indian Coxcombs.- A Man of the North.- Jockeyship of Voyageurs- Inefficacy of Gold.- Weight of a Feather- Mr. Ramsay Crooks- His Character.- His Risks Among the Indians.- His Warning Concerning Sioux and Blackfeet.- Embarkation of Recruits.- Parting Scenes Between Brothers, Cousins, Wives, Sweethearts, and Pot Companions.

WE have followed up the fortunes of the maritime part of this enterprise to the shores of the Pacific, and have conducted the affairs of the embryo establishment to the opening of the new year; let us now turn back to the adventurous band to whom was intrusted the land expedition, and who were to make their way to the mouth of the Columbia, up vast rivers, across trackless plains, and over the rugged barriers of the Rocky Mountains.

The conduct of this expedition, as has been already mentioned, was assigned to Mr. Wilson Price Hunt, of Trenton, New Jersey, one of the partners of the company, who was ultimately to be at the head of the establishment at the mouth of the Columbia. He is represented as a man scrupulously upright and faithful his dealings, amicable in his disposition, and of most accommodating manners; and his whole conduct will be found in unison with such a character. He was not practically experienced in the Indian trade; that is to say, he had never made any expeditions of traffic into the heart of the wilderness, but he had been engaged in commerce at St. Louis, then a frontier settlement on the Mississippi, where the chief branch of his business had consisted in furnishing Indian traders with goods and equipments. In this way, he had acquired much knowledge of the trade at second hand, and of the various tribes, and the interior country over which it extended.

Another of the partners, Mr. Donald M'Kenzie, was associated with Mr. Hunt in the expedition, and excelled on those points in which the other was deficient; for he had been ten years in the interior, in the service of the Northwest Company, and valued himself on his knowledge of "woodcraft," and the strategy of Indian trade and Indian warfare. He had a frame seasoned to toils and hardships; a spirit not to be intimidated, and was reputed to be a "remarkable shot;" which of

itself was sufficient to give him renown upon the frontier.

Mr. Hunt and his coadjutor repaired, about the latter part of July, 1810, to Montreal, the ancient emporium of the fur trade where everything requisite for the expedition could be procured. One of the first objects was to recruit a complement of Canadian voyageurs from the disbanded herd usually to be found loitering about the place. A degree of jockeyship, however, is required for this service, for a Canadian voyageur is as full of latent tricks and vice as a horse; and when he makes the greatest external promise, is prone to prove the greatest "take in." Besides, the Northwest Company, who maintained a long established control at Montreal, and knew the qualities of every voyageur, secretly interdicted the prime hands from engaging in this new service; so that, although liberal terms were offered, few presented themselves but such as were not worth having.

From these Mr. Hunt engaged a number sufficient, as he supposed, for present purposes; and, having laid in a supply of ammunition, provisions, and Indian goods, embarked all on board one of those great canoes at that time universally used by the fur traders for navigating the intricate and often-obstructed rivers. The canoe was between thirty and forty feet long, and several feet in width; constructed of birch bark, sewed with fibres of the roots of the spruce tree, and daubed with resin of the pine, instead of tar. The cargo was made up in packages, weighing from ninety to one hundred pounds each, for the facility of loading and unloading, and of transportation at portages. The canoe itself, though capable of sustaining a freight of upwards of four tons, could readily be carried on men's shoulders. Canoes of this size are generally managed by eight or ten men, two of whom are picked veterans, who receive double wages, and are stationed, one at the bow and the other at the stern, to keep a look-out and to steer. They are termed the foreman and the steersman. The rest, who ply the paddles, are called middle men. When there is a favorable breeze, the canoe is occasionally navigated with a sail.

The expedition took its regular departure, as usual, from St. Anne's, near the extremity of the island of Montreal, the great starting-place of the traders to the interior. Here stood the ancient chapel of St. Anne, the patroness of the Canadian voyageurs; where they made confession, and offered up their vows, previous to departing on any hazardous expedition. The shrine of the saint was decorated with relics and votive offerings hung up by these superstitious beings, either to propitiate her favor, or in gratitude for some signal deliverance in the wilderness. It was the custom, too, of these devout vagabonds, after leaving the chapel, to have a grand carouse, in honor of the saint and for the prosperity of the voyage. In this part of their devotions, the crew of Mr. Hunt proved themselves by no means deficient. Indeed, he soon discovered that his recruits, enlisted at Montreal, were fit to vie with the ragged regiment of Falstaff. Some were able-bodied, but inexperienced; others were expert, but lazy; while a third class were expert and willing, but totally worn out, being broken-down veterans, incapable of toil.

With this inefficient crew he made his way up the Ottawa River, and by the ancient route of the fur traders, along a succession of small lakes and rivers, to Michilimackinac. Their progress was slow and tedious. Mr. Hunt was not accustomed to the management of "voyageurs," and he had a crew admirably disposed to play the old soldier, and balk their work; and ever ready to come to a

halt, land, make a fire, put on the great pot, and smoke, and gossip, and sing by the hour.

It was not until the 22d of July that they arrived at Mackinaw, situated on the island of the same name, at the confluence of lakes Huron and Michigan. This famous old French trading post continued to be a rallying point for a multifarious and motley population. The inhabitants were amphibious in their habits, most of them being, or having been voyageurs or canoe men. It was the great place of arrival and departure of the southwest fur trade. Here the Mackinaw Company had established its principal post, from whence it communicated with the interior and with Montreal. Hence its various traders and trappers set out for their respective destinations about Lake Superior and its tributary waters, or for the Mississippi, the Arkansas, the Missouri, and the other regions of the west. Here, after the absence of a year, or more, they returned with their peltries, and settled their accounts; the furs rendered in by them being transmitted in canoes from hence to Montreal. Mackinaw was, therefore, for a great part of the year, very scantily peopled; but at certain seasons the traders arrived from all points, with their crews of voyageurs, and the place swarmed like a hive.

Mackinaw, at that time, was a mere village, stretching along a small bay, with a fine broad beach in front of its principal row of houses, and dominated by the old fort, which crowned an impending height. The beach was a kind of public promenade where were displayed all the vagaries of a seaport on the arrival of a fleet from a long cruise. Here voyageurs frolicked away their wages, fiddling and dancing in the booths and cabins, buying all kinds of knick-knacks, dressing themselves out finely, and parading up and down, like arrant braggarts and coxcombs. Sometimes they met with rival coxcombs in the young Indians from the opposite shore, who would appear on the beach painted and decorated in fantastic style, and would saunter up and down, to be gazed at and admired, perfectly satisfied that they eclipsed their pale-faccd competitors.

Now and then a chance party of "Northwesters" appeared at Mackinaw from the rendezvous at Fort William. These held themselves up as the chivalry of the fur trade. They were men of iron; proof against cold weather, hard fare, and perils of all kinds. Some would wear the Northwest button, and a formidable dirk, and assume something of a military air. They generally wore feathers in their hats, and affected the "brave." "Je suis un homme du nord!" - "I am a man of the north," - one of these swelling fellows would exclaim, sticking his arms akimbo and ruffling by the Southwesters, whom he regarded with great contempt, as men softened by mild climates and the luxurious fare of bread and bacon, and whom he stigmatized with the inglorious name of pork-eaters. The superiority assumed by these vainglorious swaggerers was, in general, tacitly admitted. Indeed, some of them had acquired great notoriety for deeds of hardihood and courage; for the fur trade had its heroes, whose names resounded throughout the wilderness.

Such was Mackinaw at the time of which we are treating. It now, doubtless, presents a totally different aspect. The fur companies no longer assemble there; the navigation of the lake is carried on by steamboats and various shipping, and the race of traders, and trappers, and voyageurs, and Indian dandies, have vaped out their brief hour and disappeared. Such changes does the lapse of a handful of years make in this ever-changing country.

---

At this place Mr. Hunt remained for some time, to complete his assortment of Indian goods, and to increase his number of voyageurs, as well as to engage some of a more efficient character than those enlisted at Montreal.

And now commenced another game of Jockeyship. There were able and efficient men in abundance at Mackinaw, but for several days not one presented himself. If offers were made to any, they were listened to with a shake of the head. Should any one seem inclined to enlist, there were officious idlers and busybodies, of that class who are ever ready to dissuade others from any enterprise in which they themselves have no concern. These would pull him by the sleeve, take him on one side, and murmur in his ear, or would suggest difficulties outright.

it was objected that the expedition would have to navigate unknown rivers, and pass through howling wildernesses infested by savage tribes, who had already cut off the unfortunate voyageurs that had ventured among them; that it was to climb the Rocky Mountains and descend into desolate and famished regions, where the traveller was often obliged to subsist on grasshoppers and crickets, or to kill his own horse for food.

At length one man was hardy enough to engage, and he was used like a "stool-pigeon," to decoy others; but several days elapsed before any more could be prevailed upon to join him. A few then came to terms. It was desirable to engage them for five years, but some refused to engage for more than three. Then they must have part of their pay in advance, which was readily granted. When they had pocketed the amount, and squandered it in regales or in outfits, they began to talk of pecuniary obligations at Mackinaw, which must be discharged before they would be free to depart; or engagements with other persons, which were only to be canceled by a "reasonable consideration." It was in vain to argue or remonstrate. The money advanced had already been sacked and spent, and must be lost and the recruits left behind, unless they could be freed from their debts and engagements. Accordingly, a fine was paid for one; a judgment for another; a tavern bill for a third, and almost all had to be bought off from some prior engagement, either real or pretended.

Mr. Hunt groaned in spirit at the incessant and unreasonable demands of these worthies upon his purse; yet with all this outlay of funds, the number recruited was but scanty, and many of the most desirable still held themselves aloof, and were not to be caught by a golden bait. With these he tried another temptation. Among the recruits who had enlisted he distributed feathers and ostrich plumes. These they put in their hats, and thus figured about Mackinaw, assuming airs of vast importance, as "voyageurs" in a new company, that was to eclipse the Northwest. The effect was complete. A French Canadian is too vain and mercurial a being to withstand the finery and ostentation of the feather. Numbers immediately pressed into the service. One must have an ostrich plume; another, a white feather with a red end; a third, a bunch of cock's tails. Thus all paraded about, in vainglorious style, more delighted with the feathers in their hats than with the money in their pockets; and considering themselves fully equal to the boastful "men of the north."

While thus recruiting the number of rank and file, Mr. Hunt was joined by a person whom he

had invited, by letter, to engage as a partner in the expedition. This was Mr. Ramsay Crooks, a young man, a native of Scotland, who had served under the Northwest Company, and been engaged in trading expeditions upon his individual account, among the tribes of the Missouri. Mr. Hunt knew him personally, and had conceived a high and merited opinion of his judgment, enterprise, and integrity; he was rejoiced, therefore, when the latter consented to accompany him. Mr. Crooks, however, drew from experience a picture of the dangers to which they would be subjected, and urged the importance of going with a considerable force. In ascending the upper Missouri they would have to pass through the country of the Sioux Indians, who had manifested repeated hostility to the white traders, and rendered their expeditions extremely perilous; firing upon them from the river banks as they passed beneath in their boats, and attacking them in their encampments. Mr. Crooks himself, when voyaging in company with another trader of the name of M'Lellan, had been interrupted by these marauders, and had considered himself fortunate in escaping down the river without loss of life or property, but with a total abandonment of his trading voyage.

Should they be fortunate enough to pass through the country of the Sioux without molestation, they would have another tribe still more savage and warlike beyond, and deadly foes of white men.

These were the Blackfeet Indians, who ranged over a wide extent of country which they would have to traverse. Under all these circumstances, it was thought advisable to augment the party considerably. It already exceeded the number of thirty, to which it had originally been limited; but it was determined, on arriving at St. Louis, to increase it to the number of sixty.

These matters being arranged, they prepared to embark; but the embarkation of a crew of Canadian voyageurs, on a distant expedition, is not so easy a matter as might be imagined; especially of such a set of vainglorious fellows with money in both pockets, and cocks' tails in their hats. Like sailors, the Canadian voyageurs generally preface a long cruise with a carouse. They have their cronies, their brothers, their cousins, their wives, their sweethearts, all to be entertained at their expense. They feast, they fiddle, they drink, they sing, they dance, they frolic and fight, until they are all as mad as so many drunken Indians. The publicans are all obedience to their commands, never hesitating to let them run up scores without limit, knowing that, when their own money is expended, the purses of their employers must answer for the bill, or the voyage must be delayed. Neither was it possible, at that time, to remedy the matter at Mackinaw. In that amphibious community there was always a propensity to wrest the laws in favor of riotous or mutinous boatmen. It was necessary, also, to keep the recruits in good humor, seeing the novelty and danger of the service into which they were entering, and the ease with which they might at anytime escape it by jumping into a canoe and going downstream.

Such were the scenes that beset Mr. Hunt, and gave him a foretaste of the difficulties of his command. The little cabarets and sutlers' shops along the bay resounded with the scraping of fiddles, with snatches of old French songs, with Indian whoops and yells, while every plumed and feathered vagabond had his troop of loving cousins and comrades at his heels. It was with the utmost

difficulty they could be extricated from the clutches of the publicans and the embraces of their pot companions, who followed them to the water's edge with many a hug, a kiss on each cheek, and a maudlin benediction in Canadian French.

It was about the 12th of August that they left Mackinaw, and pursued the usual route by Green Bay, Fox and Wisconsin rivers, to Prairie du Chien, and thence down the Mississippi to St. Louis, where they landed on the 3d of September.

CHAPTER XIV.

St. Louis.- Its Situation.- Motley Population.- French Creole Traders and Their Dependants.- Missouri Fur Company- Mr. Manuel Lisa. - Mississippi Boatmen. - Vagrant Indians. - Kentucky Hunters - Old French Mansion- Fiddling- Billiards- Mr. Joseph Miller - His Character- Recruits- Voyage Up the Missouri. - Difficulties of the River.- Merits of Canadian Voyageurs.- Arrival at the Nodowa.- Mr. Robert M'Lellan joins the Party- John Day, a Virginia Hunter. Description of Him.- Mr. Hunt Returns to St. Louis.

ST. LOUIS, which is situated on the right bank of the Mississippi River, a few miles below the mouth of the Missouri, was, at that time, a frontier settlement, and the last fitting-out place for the Indian trade of the Southwest. It possessed a motley population, composed of the creole descendants of the original French colonists; the keen traders from the Atlantic States; the back-woodsmen of Kentucky and Tennessee; the Indians and half-breeds of the prairies; together with a singular aquatic race that had grown up from the navigation of the rivers - the "boatmen of the Mississippi;- who possessed habits, manners, and almost a language, peculiarly their own, and strongly technical. They, at that time, were extremely numerous, and conducted the chief navigation and commerce of the Ohio and the Mississippi, as the voyageurs did of the Canadian waters; but, like them, their consequence and characteristics are rapidly vanishing before the all-pervading intrusion of steamboats.
